mospheric structure during DIRECT COURSE tests at White Sands Missile Range (WSMR), additional measurement systems were employed in hope of aiding interpretation of any further anomalies that might occur. Besides regular WSMR rawinsonde balloon (raob) measurements launched from SOTIM-3 site, WSMR also provided a mobile 23 m meteorological tower equipped for continuous recording of wind and temperature at three levels. Sandia operated its Tethersonde to give a succession of ascending and descending recordings of wind, temperature, moisture, and pressure heights to above 800 m above ground. Finally, an experimental Doppler-laser remote sensing system was operated by NOAA, with results given in another presentation at this symposium. As with other large explosion tests, a weather-watch and blast prediction service was provided during the countdown, to provide warning to the Test Director of any possible damaging or hazardous airblast propagations to great distances. Six microbarograph (MB) stations were operated in various communities to document the actual airblast wave passage, for use in verifying predictions as well as in validation or rejection of any damage claims that resulted.

26907 **(UCID—19978) Grueneisen parameter measurements for high explosives.** Bloom, G.H.; Claar, J.H. (Lawrence Livermore National Lab., CA (USA)). 27 Dec 1983. Contract W-7405-ENG-48. 61p. NTIS, PC A04; 3; GPO Dep. Order Number DE84008863.

Paper copy only, copy does not permit microfiche production. Original copy available until stock is exhausted.

The Mie-Grueneisen equation of state $P - P_0 = \Gamma (E - E_0)$ rho is often used to describe the behavior of materials under pressure. P is the pressure, E is the specific internal energy, and rho is the material density. More specifically, the Grueneisen parameter $\Gamma = 1/\text{rho}\ (\partial P/\partial E)v$ is useful in determining the response of materials to rapid heating at constant volume. The Grueneisen parameter is dimensionless. The Grueneisen parameter can be calculated from lattice dynamics, from thermoelastic constants or from shock-wave data. There is good agreement on the values for metals. Not much work has been done on other materials. In some cases the value of Γ may be uncertain by an order of magnitude. This has prompted us to measure the Grueneisen coefficient for two high explosives of interest to use: PBX-9404 (94% HMX) and RX-03-BB (92.5% TATB), at both full and reduced density. This work is a continuation of an earlier study and represents a significant improvement in accuracy as well as extension to the reduced density materials. Our results are summarized in the tables at the end of this report.

26908 **(UCRL—90142) Dynamic powder compaction.** Wilkins, M.L. (Lawrence Livermore National Lab., CA (USA)). 22 Dec 1983. Contract W-7405-ENG-48. 8p. (CONF-840653—3). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006133.

From 8. international conference on high energy rate fabrication; San Antonio, TX, USA (17 Jun 1984).

This paper discusses the advantages of powder consolidation by dynamic compaction. With this technique, materials can be fabricated that cannot be made by any other means. Computer simulations are shown to be an effective method to guide an experimental program for optimizing the process. Examples are shown for the consolidation of powders of a metallic glass and the ceramic aluminum nitride.

26909 **(UCRL—90376) High performance, extrusion cast explosive.** Scribner, K.J. (Lawrence Livermore National Lab., CA (USA)). Feb 1984. Contract W-7405-ENG-48. 24p. (CONF-8406103—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008244.

From Technology of propellants and high explosives annual conference; Fraunhofer, F.R. Germany (27 Jun 1984).

The Lawrence Livermore National Laboratory has been developing a new high energy explosive system for use in precision, high performance munitions. It is a system because the composition and the manufacturing techniques are both unique. The explosive has an energy/density greater than 78% Octol. It is similar to modern type cast/cure explosives except that we can work with higher apparent viscosities since we use low pressure hydraulic systems for deaeration and casting of the explosive. We load any desired device configuration. The crystalline HMX has a nominal 60 μ particle size which contributes to an extremely smooth detonation front. This explosive is suitable for use in the most critical applications such as shaped charges and self forging fragment systems.

26910 **Utilization of accelerating rate calorimetry for the characterization of energetic materials at MRC-Mound.** Pickard, J.M. (Monsanto Research Corp., Miamisburg, OH). *Journal of Hazardous Materials;* 7: 291-302(1983). Contract AC04-76DP00053.

The technique of Accelerating Rate Calorimetry (ARC) was used to investigate the thermal stabilities of energetic materials used in production and manufacturing at MRC-Mound. Plots of heat rate versus temperature, along with temperature and pressure versus time plots, were determined for selected secondary explosives and one model compound. Analyses of these data were used to derive zero-order kinetic parameters, time-to-explosion plots, and approximate critical explosion temperatures.

4502 Nuclear

26911 **(LA-UR—84-1395) Fiber optic sensor applications in field testing.** Perea, J.A. (Los Alamos National Lab., NM (USA)). 11 Apr 1984. Contract W-7405-ENG-36. 23p. (CONF-8404138—3). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011364.

From 8. national engineering symposium of the Mexican American Engineering Society; Albuquerque, NM, USA (11 Apr 1984).

Fiber optic sensors (F.O.S.) are defined, and the application of this technology to measuring various phenomonon in diverse and hostile environments are discussed. F.O.S. advantages and disavantages both technically and operationally are summarized. Three sensor techniques - intensity, interferometric, and polarization - are then discussed in some detail. General environmental instrumentation and controls that support the Nuclear Weapons Test Program at the Nevada Test Site are discussed next to provide the reader with a basic understanding of the programmatic task. This will aid in recognizing the various difficulties of the traditional measurement techniques at the NTS and the potential advantages that fiber optic measurement systems can provide. An F.O.S. development program is then outlined, depicting a plan to design and fabricate a prototype sensor to be available for field testing by the end of FY84. We conclude with future plans for further development of F.O.S. to measure more of the desired physical parameters for the Test Program, and to eventually become an integral part of an overall measurement and control system.

26912 **(ORNL—6033) Nuclear electromagnetic pulse (EMP) and electric power systems.** Barnes, P.R.; Vance, E.F.; Askins, H.W. Jr. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 68p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84010665.

A nuclear detonation at high altitudes produces a transient electromagnetic pulse (EMP) of high-intensity electromagnetic fields. A single high-altitude burst can subject most of the continental United States to a strong EMP. These intense fields induce voltage and current transients in electrical conductors. Surges would be induced by EMP in transmission and distribution circuits and in control and communication elements in electric power systems throughout the national grid. Such widespread disturbances could upset the stability of electrical energy systems and result in massive power failures. The extent and nature of EMP-caused damages are not well known for utility electric power systems. Failures are likely to be associated with insulation damage and failures of low-voltage and solid-state components. It is concluded from a review of past studies that EMP may pose a serious threat to the nation's electrical energy supply.

4503 Explosion Detection

26913 **Fast imaging applications in the nuclear test program.** Lear, R. (Lawrence Livermore Nat'l. Lab., Livermore, CA 94550). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 495-503(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

Applications of fast imaging employ both streak cameras and fast framing techniques. Image intensifier tubes are gated to provide fast two-dimensional shutters of 2-3 ns duration with shatter ratios of greater than 10^6 and resolution greater than 10^4 pixels. Shutters of less than 1 ns have been achieved with experimental tubes. Characterization data demonstrate the importance of tube and pulser design. Streak cameras are used to simultaneously record temporal and intensity information from up to 200 spatial points. Streak cameras are combined with remote readout for downhole uses and are coupled to fiber optic cables for uphole uses. Optical wavelength multiplexing is being studied as a means of compressing additional image data onto optical fibers. Performance data demonstrate tradeoffs between image resolution and system sensitivity.

REFER ALSO TO CITATION(S) 26247

26914 (CONF-811048—Summs., pp 4p, Paper 78) **Models for human exposure to air pollution.** Duan, N. (Rand Corp., Santa Monica, CA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Three models for human exposure to air pollution, namely, the Fugas model, integrated personal monitoring and continuous personal monitoring are discussed and compared. (DT)

26915 (CONF-811048—Summs., pp 4p, Paper 81) **Aspects of efficient ventilation in office rooms.** Malmstroem, T.G.; Ahlgren, A. (Royal Inst. of Tech., Stockholm, Sweden). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

In industry in Scandinavia it is rather common to use stratification when designing ventilation systems. Our results indicate that for small offices a ventilation scheme using the natural tendencies for stagnation may be favourable. The supply air must then be brought directly into the working zone without causing excessive mixing and draught problems. If the building is designed for low cooling loads, the tests described indicate that this is possible for Swedish needs and standards. (DT)

26916 (CONF-811048—Summs., pp 5p, Paper 82) **Ventilation efficiency.** Skaret, E.; Mathisen, H.M. (Norwegian Inst. of Tech., Trondheim). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Expressions for ventilation efficiency are derived using a two-box theoretic model. The definition of ventilation efficiency arrived at in this manner can be used for practical measurements, and seems to be valid also for multi-box schemes. Diagonal ventilation schemes are hitherto proved to be the most efficient, and more efficient than having complete mixing. Diagonal schemes are defined to have air exhaust from the circulation box which are located in the remote end with respect to the supply box. (DT)

26917 (CONF-811048—Summs., pp 4p, Paper 83) **Control of indoor air pollution by hypernegionization (HNI) and passive electret filtration.** Wallach, C. (Behavorial Research Associates, Silver Spring, MD). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The two electrical properties of the atmosphere, which can be measured and controlled, are the positive-to-negative ion ratio and the total volumetric small-ion concentration in life-support airspace. Both of these are critical elements in the control of indoor air pollution under conditions where: the rate of generation of inimical pollutants is high, and massive air-exchange rates and high-cost filtration systems are not feasible. The technology for control of charged particles in air is relatively new, and expertise in systems design and engineering very limited; however, from results obtained in a wide spectrum of recent applications, it is confidently predicted that atmospheric ionization and microelectrostatic filtration techniques will quickly become a new wave of methodology within the larger discipline of air treatment and conditioning. (DT)

26918 (CONF-811048—Summs., pp 4p, Paper 84) **Effect of air control systems on the indoor distribution of viable particulates.** Sterling, D.A.; Clark, C.; Bjornson, S. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The physical characteristics of buildings interacting with the properties of particulates enable a natural filtering and sizing process to take place which usually seems to select for the smaller and more easily dispersed particulates to be found indoors. There was evidence of growth of viable particulates within the mechanical air systems which, in conjunction with increased relative humidity may have led to some of the increase of larger particulates found indoors at the central air systems. Air control systems may not be adequate for the control of viable particulate contamination of the indoor environment without modifications and proper maintenance. (DT)

26919 (CONF-811048—Summs., pp 6p, Paper 87) **Indoor air pollution simulations using dynamic multi-compartment models.** Oezkaynak, H.; Ryan, P.B.; Turner, W.A.; Allen, G.A. (Harvard Univ., Cambridge, MA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Conventional compartmental models developed for indoor environments that utilize solutions to pollutant mass balance equations often fail to account for the temporal and spatial variations in mixing coefficients, or in pollutant transfer/transport, conversion and removal rates. The key limitation of these predictive models, however, is especially recognized under conditions when peak exposure or sharp pollutant concentration gradients are expected. In this paper, alternative modeling options based on dynamic compartmental systems designed to simulate both the short and the long term reactive indoor pollutant concentration profiles are presented. Simulations and assessment of modeling requirements discussed here are related to results of recent measurements made in a house in Newton, MA. (DT).

26920 (CONF-811048—Summs., pp 3p, Paper 88) **Indoor air pollution due to organic gases and vapours of solvents in building materials.** Molhave, L. (Aarhus Univ., Denmark). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

A mathematical model was developed for the relation between air concentrations of organic gases and vapours in the indoor environment and the emission of the same compounds from building materials. The model was used to calculate the concentrations of organic gases and vapours to be expected in three hypothetical test rooms constructed with materials with known emissions of these compounds. Taking differences in ventilation, temperature and use of materials into account an acceptable agreement between model prediction and field measurements is therefore indicated. (DT)

26921 (CONF-811048—Summs., pp 6p, Paper 92) **Source emissions and predictive modeling of indoor air pollution.** Scheff, P.A.; Wadden, R.A. (Univ. of Illinois, Chicago). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Several approaches have been used to estimate expected indoor pollutant concentrations. These include deterministic models based on a pollutant mass balance around a particular indoor volume (or an activity balance for radioactive materials); a variety of stochastic approaches based on statistical evaluation of test data and usually least squares regression analysis; and a combination of both forms, empirically fitting the parameters of the mass balance with values statistically derived from experimental measurements. Each approach has advantages. The mass balance model provides more generality in application. But empirical models, for application within the range of measurements from which they were developed, may provide much more accurate information. (DT)

26922 (CONF-811048—Summs., pp 5p, Paper 93) **Dynamic modeling of indoor air quality using high resolution measurements.** Ahuja, D.; Kline, R.V.; Turner, W. (Harvard School of Public Health, Boston, MA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

In order to evaluate the effects of peak exposures, and to relate the concentrations of indoor air pollutants to sources within and outside the structure, it becomes imperative to make finely grained measurements of pollutants of concern. This paper describes some of the results of such measurements made in a house in Newton, Massachusetts, during April and May of 1981. The specific objectives of the study were to evaluate the suitability of using extant carbon monoxide to measure air exchange rates, to estimate the indoor source strength and loss rates of oxides of nitrogen, and to investigate the accuracy of a one compartment model using a mass-balance equation to predict indoor air pollution levels. (DT)

26923 (CONF-811048—Summs., pp 6p, Page 94) **Technique of urban mapping of potential indoor air pollution intensity for public health management.** Kim, M.K.; Schodek, D.L. (Harvard Univ., Cambridge, MA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The goal of the study was to arrive at the development of a method for producing maps instrumental for the identification of potentially hazard prone urban sectors. The design of the method is specifically aimed at the production of maps which show the distribution of the desired rate of ventilation/air cleaning in an urban area of interest, the distribution of the probable rate of actual ventilation/air-cleaning in the urban area, and a Diagnostic Map showing the discrepancy between the way it should be and the way it is. (DT)

26924 (CONF-811048—Summs., pp 3p, Paper 96) **Case for entirely removing the gas range from indoors.** Sterling, T. (Simon Fraser Univ., Burnaby, British Columbia); Weinkam, J.; Sterling, E. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We examined various socioeconomic models balancing costs and gains for the case of not using natural gas for cooking. In this model, costs are mainly of loss of energy during conversion and of initial investment, while gains are reduced costs for heating homes, for lessened needs to design, install and maintain very effective heat exchangers, cleaner urban air, and possibly decreased health costs. The computer model permits investigation of various options (including the addition of variables) and of costs factors. (DT)

26925 (DOE/EV/10081—T1) **Atmospheric transport and dispersion of pollutants and related meteorological studies. Progress report, FY 1982.** Draxler, R.R.; Ferber, G.J.; Heffter, J.L.; Cordella, R.H. Jr.; Miller, J.M. (National Oceanic and Atmospheric Administration, Rockville, MD (USA). Air Resources Labs.). Sep 1982. Contract AI01-76EV10081. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010867.

Portions are illegible in microfiche products.

Research emphasizes model simulation and experimental verification of the transport and dispersion of atmospheric pollutants. Field experiments of mechanisms affecting long-range transport which provide dispersion data for verification of regional and continental models are stressed. A multi-layer trajectory-dispersion model that incorporates the effects of wind shear was tested against long-range concentration data. Models for prognostic trajectory calculations, using wind fields, have been recoded to permit operational procedures on interactive terminals; and will be used in tracer experiments and emergencies. A new tracer system, using perfluorocarbons, has been developed to provide for long-range dispersion experiments and model validation studies. The tracer system was used in the DOE-ASCOT studies of nocturnal drainage flows in the Geysers geothermal development area. A long-range dispersion study, the Cross-Appalachian Tracer Experiments (CAPTEX) is planned. There will be a series of perfluorocarbon tracer releases in the Ohio Valley with tracer concentration measurements from Ohio to the East Coast. A trial run is planned for September 1982 and a full-scale program in the summer of 1983. A high voluem version of the automatic sequential sampler and an inexpensive adsorption tube sampler were developed. Another tracer experiment is being carried out in collaboration with the DOE Savnnah River Laboratory to provide long-term, regional-scale transport and diffusion data for air pollution model verification. Krypton-85, is sampled at five stations from 300 to 1000 km to the northeast. This one-year twice daily sampling program may be extended to 18 months.

26926 (EUR—8423) **Critical confrontation of standard and more sophisticated methods for modelling the dispersion in air of heavy gas clouds; evaluation and illustration of the intrinsic limitations of both categories.** Riethmuller, M.L. (Commission of the European Communities, Luxembourg). 1983. 66p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84700927.

Mathematical models of gas dispersion have evolved drastically since the 1930's. For a long time, the most widely used approach was the so-called Gaussian model as described in practical terms by Turner or box models which have shown relative merits. In the field of heavy gas dispersion, the use of such approaches appeared somewhat limited and therefore new models have been proposed. Some of these new generation models were making use of the latest progress in turbulence modelling as derived from laboratory work as well as numerical advances. The advent of faster and larger computers made possible the development of three dimensional codes that were computing both flow field and gas dispersion taking into account details of the ground obstacles, heat exchange and possibly phase changes as well. The description of these new types of models makes them appear as a considerable improvement over the simpler approaches. However, recent comparisons between many of these have led to the conclusion that the scatter between predictions attained with sophisticated models was just as large as with other ones. It seems therefore, that current researchers might have fallen into the trap of confusing mathematical precision with accuracy. It is therefore felt necessary to enlighten this question by an investigation which, rather than comparing individual models, would analyse the key features of both approaches and put in evidence their relative merits and degree of realism when being really applied.

26927 (LA-UR—84-808) **Some physical concepts in complex terrain meteorology derived from the US Department of Energy's ASCOT program.** Clements, W.E. (Los Alamos National Lab., NM (USA)). 24 Mar 1984. Contract W-7405-ENG-36. 44p. (CONF-8403118—1). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010059.

From International symposium on the Qinghai-Xizang Plateau and mountain meterorology; Beijing, China (20 Mar 1984).

Portions are illegible in microfiche products.

Since 1978 the United States Department of Energy's Atmospheric Studies in Complex Terrain program has conducted research fundamental to a better understanding of atmospheric transport and diffusion in complex topographies. Expertise in atmospheric physics theory, computer modeling, laboratory modeling, and field experimentation have been integrated into a balanced program. The initial emphases of the research were on nocturnal drainage winds, the effect terrain has on them, and their interactions with external flows. Highlights of some physical concepts of nocturnal drainage winds, derived mainly from the results of the field experiments, are presented. 21 references, 11 figures.

26928 (LBL—13500, pp 4.7-4.10) **Carbon particles in the arctic.** Rosen, H.J.; Novakov, T. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

To investigate the chemical composition, origins, and climatic impact of the aerosol, a collaborative sampling program was started by LBL and NOAA in October 1979. This program has emphasized the analyses of the carbonaceous aerosol and its optical properties, but it also has the capability to determine other major aerosol components. Preliminary results from this study show that large concentrations of combustion-generated particles are present in the Arctic and that they may have a significant impact on the heat balance over this region.

26929 **(PNL-SA—12119) Modification of plume models to account for dry deposition.** Horst, T.W. (Pacific Northwest Lab., Richland, WA (USA)). Mar 1984. Contract AC06-76RL01830. 22p. (CONF-8403119—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010778.

From OHOLO conference on boundary layer structure; Zichron Ya'acov, Israel (25 Mar 1984).

Portions are illegible in microfiche products.

The assumptions and predictions of four diffusion-deposition models are compared. Two simple plume depletion models are recommended. One model applies the analytical, constant eddy-diffusivity solution of the advection-diffusion equation with deposition to the general Gaussian plume model with an arbitrary variation of σ/ sub z/ with distance. Predictions of this model compare welll with those of the surface depletion model, an exact treatment of plume depletion, and it is particularly useful for estimating the transport and deposition of settling particles. The second model is a correction to the simple source depletion model that accounts for the change in the vertical concentration profile caused by deposition. This model is not as simple as that based on the constant eddy diffusivity solution, but its predictions near the surface are very close to those of the surface depletion model and it can be applied to any type of plume model. 27 references, 6 figures.

26930 **(UCRL—53526) Natural phenomena hazards modeling project: extreme wind/tornado hazard models for Department of Energy sites.** Coats, D.W. (Lawrence Livermore National Lab., CA (USA)). Feb 1984. Contract W-7405-ENG-48. 74p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84011157.

Lawrence Livermore National Laboratory (LLNL) has developed wind hazard models for the Office of Nuclear Safety (ONS), Department of Energy (DOE). The work is part of a three-phase effort aimed at establishing uniform building design criteria for seismic and wind hazards at DOE sites throughout the United States. In Phase 1, LLNL gathered information on the sites and their critical facilities, including nuclear reactors, fuel-reprocessing plants, high-level waste storage and treatment facilities, and special nuclear material facilities. In Phase 2, development of seismic and wind hazard models, was initiated. These hazard models express the annual probability that the site will experience an earthquake or wind speed greater than some specified magnitude. This report summarizes the final wind/tornado hazard models recommended for each site and the methodology used to develop these models. 19 references, 29 figures, 9 tables.

From 72. annual Air Pollution Control Association meeting; Cincinnati, OH, USA (24 Jun 1979).

Portions are illegible in microfiche products.

The wide range of estimates for annual losses in crops ($135 to 900 million) from pollutants indicates a lack of objective information on the subject. Estimates have been based primarily on the presence of foliar symptoms but little is known of the relationships between foliar symptoms, plant growth stage, and yield loss. For the most part, the previous estimates disregard subtle injury or yield loss in the absence of symptoms. Sound experimental evidence on the yield responses of plants to ambient levels of pollutants is needed before rational decisions on air pollution control strategies can be made. Recent efforts to experimentally quantify the effects of pollutants on plants in the field have centered on the use of protective chemicals, open-air exposures, ambient pollutant gradients, sensitive and resistant cultivars, or field exposure chambers. Each of these methods has advantages and disadvantages which are discussed. We feel that open-top field chambers are presently the best approach to a critical evaluation of the effects of gaseous pollutants on plant yield. The effects of the chambers on the environment are small, yet pollutant concentrations can be adequately controlled through exclusion and addition. Current methodologies used in open-top field chambers and results showing threshold concentrations of ozone for growth and yield effects of several crop species are presented. Estimates of losses for agricultural crops at different seasonal ozone levels are given. 44 references, 4 figures, 4 tables.

26932 (CONF-811048—Summs., pp 5p, Paper 2) **Trace organic components in office space.** Miksch, R.R.; Hollowell, C.D.; Schmidt, H.E. (Lawrence Berkeley Lab., CA). 1981. NTIS, PC A23/MF A01. Contract W-7405-ENG-48.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Occupants of new office buildings are exposed to elevated levels (relative to outdoor air) of a large variety of organic contaminants that are judged incapable of inducing adverse health effects by existing hygiene criteria. However, the criteria may be inadequate given that: (1) additive or synergistic effects are not adequately addressed; (2) the criteria are generally based on acute exposure studies whereas here the exposure is cronic; (3) the population at risk is more diverse including women and elderly workers; (4) annoyance from odorant effects is not considered. Several sources considered here (new building materials, photocopiers, tobacco smoke and building maintenance products) are of roughly equal magnitude with respect to emissions of organic contaminents. (DT)

26933 (CONF-811048—Summs., pp 3p, Paper 3) **Indoor nitrogen dioxide pollution in the Netherlands.** Lebret, E. (Agricultural Univ., Wageningen, Netherlands); Brunekreef, B.; Boleij, S.M. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Indoor NO_2 levels were 2 to 3 times higher in selected dutch households than the outdoor levels of the same period. Higher NO_2 concentrations were found in kitchens as well as in living rooms of houses with a geiser (water heater) without a flue and in houses with gas space heaters. Elevated NO_2 levels in the living room were associated with the absence of doors and rooms between kitchen and living rooms between kitchen and living room and with a higher number of inhabitants. Long use of the shower and the absence of a ventilation-hood were also found to explain statistically higher concentrations in the kitchen. (DT)

26934 (CONF-811048—Summs., pp 5p, Paper 5) **Carbon monoxide and aerosol concentrations in public access buildings.** Moschandreas, D.J. (IIT Research Inst., Chicago); Pelton, D.J.; Cade, D.R. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We attempted to ascertain that a component of total exposure to CO and respirable suspended particulates (RSP) that is associated with a variety of activities in public access buildings. The time a visitor is exposed to indoor pollutants in these buildings, is relatively short. This fact, combined with the data base generated in this survey, leads to a tentative conclusion that public access buildings should not be considered of high priority. Two additional points must be made: (1) individuals working in certain public access buildings are exposed to high concentrations of CO (especially in underground garages) and RSP (especially in lunges/bars). (DT)

26935 (CONF-811048—Summs., pp 4p, Paper 20) **Inexpensive passive formaldehyde monitor for indoor air quality measurements.** Hawthorne, A.R.; Matthews, TG. (Oak Ridge National Lab., TN). 1981. NTIS, PC A23/MF A01. Contract W-7405-ENG-26.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

This paper describes the development of an inexpensive, passive CH_2O sampler as a complement pumped impinger sampling methodology to provide an integrated exposure measurement. The sampling device is a small container with a dimenthylsilicone membrane opening through which the CH_2O permeates. The sampler's pumping is maintained by providing a concentration sink on the collection side of the sampler. The collection medium is usually water, although 13X molecular sieve has also been used. (DT)

26936 (CONF-811048—Summs., pp 4p, Paper 21) **New passive monitor for determining formaldehyde in indoor air.** Geisling, K.L.; Miksch, R.R.; Rappaport, S.R.; Tashima, M.K. (Lawrence Berkeley Lab., CA). 1981. NTIS, PC A23/MF A01. Contract W-7405-ENG-48.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We have developed a passive sampler that collects HCHO under the principle of diffusion and consists of a glass-fiber filter treated with sodium bisulfite ($NaHSO_3$) contained in a glass vial. Formaldehyde diffuses through the vial and reacts with the $NaHSO_3$ to form a stable addition product. The sampling rate of a passive sampler based on diffusion requires no correction for temperature and pressure variations over the typical range of conditions encountered in indoor air quality audits. (DT)

26937 (CONF-811048—Summs., pp 3p, Paper 22) **Formaldehyde release from formaldehyde-resin containing products: effect of conditioning at 100% relative humidity.** Pickrell, J.A.; Griffis, L.C. (Lovelace Inhalation Toxicology Research Inst., Albuquerque, NM). 1981. NTIS, PC A23/MF A01. Contract AI01-79EV10103.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The measured offgassing rate of CH_2O from plywood in a dessicator decreased after several days at ~ 100% relative humidity. The offgassing rate of CH_2O from particleboard appeared to be relatively stable as the sample was conditioned but day-to-day variability was present. The size of a sample of particle board tested in the dessicator had a profound effect on the measured offgassing of CH_2O with the rate being greatest with the smallest sample. (DT)

26938 (CONF-811048—Summs., pp 3p, Paper 23) **Comparison of the chromotropic acid and pararosaniline methods for HCHO determination using various collection techniques.** Eckmann, A.D. (State Lab. of Hygiene, Madison, WI); Dally, K.A.; Hanrahan, L.P.; Anderson, H.A. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

There has been increasing concern over possible adverse health effects due to off-gassing of formaldehyde from building materials containing urea-formaldehyde resin. Pararosaniline and chromotropic acid methods for analyzing formaldehyde were evaluated. These two methods showed excellent agreement for laboratory-prepared specimens, but correlation between the two methods for air-scrubbed specimens was erratic. Thus it is stressed that field testing is an important step when considering a new laboratory method for the analysis of air-scrubbed specimens. The data suggest that the presence of cigarette smoke and carbon monoxide may be related to the degree of correlation between the pararosaniline and chromotropic acid methods of analysis. (DT)

26939 (CONF-811048—Summs., pp 4p, Paper 24) **Follow-up study of indoor air quality in Wisconsin homes.** Dally, K.A. (State Lab. of Hygiene, Madison, WI); Eckmann, A.D.; Hanrahan, L.P.; Anderson, H.A.; Kanarek, M.S. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

In 1978 to 1979 the Wisconsin Division of Health evaluated 100 homes where occupants reported irritation symptoms and had a potential source of formaldehyde in their home. Mean home formaldehyde concentrations ranged from none detected to 3.68 ppM. In 1981, 24 homes that were part of the original study group and three homes studied at a later date, were revisited and formaldehyde samples were collected. (DT)

26940 (CONF-811048—Summs., pp 3p, Paper 26) **Comprehensive air pollution measurements in an environmental unit.** Edgar, R.T.; Rea, W.J. (Brookhaven Environmental Unit., Dallas, TX). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The Environmental Unit was specially constructed to decrease air contaminants due to building materials. Walls were made of porcelain, aluminum, and ceramic tile. Floors were made of hard vinyl or ceramic tile, and ceilings were either aluminum, porcelain, or made of gunite, a low outgassing plaster. A series of studies were then undertaken to monitor air pollution levels inside and outside the Brookhaven Environmental Unit where chemically sensitive patients are treated. (DT)

26941 (CONF-811048—Summs., pp 2p, Paper 27) **Simultaneous measurement of airborne amines, nitrosating potential and nitrosamines.** Fine, D.F.; Rounbehler, D.P.; Bradley, S.J. (New England Inst. for Life Sciences, Waltham, MA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Secondary and tertiary amines react with nitrogen oxides over a broad range of conditions to produce N-nitrosamines. The amine body burden can be considerably increased by exposure to exogenous amines such as air pollutants, ingredients in soaps and cosmetics, emissions from tobacco smoke, etc. A proper understanding of the problem, therefore, requires the simultaneous artifact-free measurement of nitrosamines, amines and oxides of nitrogen. The capability to carry out all three determinations on the same sample of air has only recently been developed. (DT)

26942 (CONF-811048—Summs., pp 4p, Paper 28) **Longitudinal study of air contaminants in a newly built preschool.** Berglund, B.; Johansson, I.; Lindvall, T. (Univ. of Stockholm, Sweden). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

In a longitudinal study, we are investigating the air quality in a newly built preschool over a 3-year period. The aim is to identify typical indoor air contaminants, to follow their variation over time, and to study the influence of the ventilation system on the contaminants. Volatile organic compounds in the air were sampled by adsorption, separated by gas chromatography, and identified by mass spectrometry. (DT)

26943 (CONF-811048—Summs., pp 4p, Paper 29) **Investigation of health concerns and environmental measurements in a large office building.** Levine, M.S.; Corn, M.; Billings, C.; Singh, J.; Blake, C.L. (Johns Hopkins Univ., Baltimore, MD). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Employees working in a large office building in Washington, DC reported a variety of health problems over a period of several years which were felt to be related to poor indoor air quality. Previous efforts to identify and correct the possible causes of this poor indoor air quality had met with only limited success. We have attempted to establish the nature and extent of the health effects being reported by use of a survey questionnaire, and to correlate these responses with environmental measurements. (DT)

26944 (CONF-811048—Summs., pp 4p, Paper 30) **Impact of different ventilation and lighting levels on building illness: an experimental study.** Sterling, E. (T.D.S. Ltd., Vancouver, British Columbia); Arch, B.; Sterling, T. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We investigated a problem building in Vancouver, British Columbia, in which symptoms of eye irritation, headaches, nausea, and drowsiness were documented by monitoring health and comfort complaints over an extended period of time. The results gained suggests that eye irritability in these offices is probably due to the build-up of photochemical byproducts and that this buildup is accelerated when light contains ultraviolet emissions. (DT)

26945 (CONF-811048—Summs., pp 4p, Paper 34) **Formaldehyde in indoor air: sources and toxicity.** Gupta, K.C.; Ulsamer, A.G.; Preuss, P.W. (Consumer Product Safety Commission, Bethesda, MD). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The Consumer Product Safety Commission has received over 3000 complaints to date involving consumer exposure to formaldehyde vapor released from building materials. Of these, about 2000 involve urea-formaldehyde foam insulation; most of the remainder involve plywood, panelling and other wood products in mobile homes; and a few due to other sources of formaldehyde. (DT)

26946 (CONF-811048—Summs., pp 6p, Paper 41) **Effect of cigarette smoking on residential NO_2 levels.** Good, B.W.; Vilcins, G.; Harvey, W.R.; Clabo, D.A. Jr.; Lewis, A.L. (Philip Morris, Inc., Richmond, VA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The increased level of NO_2 due to cigarette smoking is barely measurable over a seven-day period. Furthermore, while the NO_2 increment measured here for participants without gas appliances is 4 and 3 $\mu g/m^3$ in the summer and winter, respectively, the absolute levels are well below both the NAAQS of 100 $\mu g/m^3$ for annual exposure and the adjacent outdoor level. Also the contribution to the indoor NO_2 level due to gas kitchen appliances completely overpowers that due to the contribution from cigarette smoking. (DT)

26947 (CONF-811048—Summs., pp 3p, Paper 42) **Characterization of aerosols and inorganic gases in indoor environments.** Colome, S.D. (Univ. of California, Irvine); Spengler, J.D.; McCarthy, S. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The sources of indoor aerosols are plentiful. In this report we analyze for two cities a set of elements contained on particles that help to differentiate portions of the aerosol. One city (Steubenville, Ohio) is an industrial city in a river valley and the other (Portage, Wisconsin) is a rural farming community. (DT)

26948 (CONF-811048—Summs., pp 4p, Paper 43) **Spatial variation of carbon monoxide and oxides of nitrogen concentrations inside residences.** Moschandreas, D.J. (IIT Research Inst., Chicago); Zabransky, J. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Pollutants with strong indoor generation are observed to have interzonal statistical differences in gas cooking residences and offices, but not in electric cooking residences. In general, the observed differences in the magnitude of the pollutant concentrations are not large. While more than one zone would be preferable, hourly pollutant concentrations obtained from one indoor zone adequately characterize the indoor environment. (DT)

26949 (CONF-811048—Summs., pp 4p, Paper 44) **Pollutant emissions rates from indoor combustion appliances and sidestream cigarette smoke.** Girman, J.R.; Apte, M.G.; Traynor, G.W.; Hollowell, C.D. (Lawrence Berkeley Lab., CA). 1981. NTIS, PC A23/MF A01. Contract W-7405-ENG-48.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Gas-fired stoves and unvented space heaters (both kerosene- and natural gas-fired types) emit such potentially harmful pollutants as carbon monoxide (CO), carbon dioxide (CO_2), nitric oxide (NO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), formaldehyde (HCHO) and respirable particulates; sidestream tobacco smoking emits CO, CO_2, NO, NO_2, respirable particulates and a wide range of organic compounds. The degree of the indoor air pollution depends on the type and amount of pollutants entering the occupied space and the type and rate of removal processes occurring. In this paper, we report the pollutant emission rates derived from our studies of a gas-fired stove, gas-fired unvented space heater, kerosene-fired unvented space heater and sidestream cigarette smoke. (DT)

26950 (CONF-811048—Summs., pp 3p, Paper 46) **Indoor carbon monoxide pollution in the Netherlands.** Brunekreef, B. (Agricultural Univ., Wageningen, Netherlands); Lebret, E.; Boleij, J.S.M.; Biersteker, K. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Elevated CO levels in indoor air in kitchens equipped with geisers in the Netherlands are associated with burner type, presence of a flue and maintenance system. 27% of the geisers had a CO concentration in the flue gases above the level required by the local gas companies. Levels in excess of existing standards (50 ppM), occurred in 17% of the kitchens. (DT)

26951 (CONF-811048—Summs., pp 5p, Paper 47) **Aluminum, iron, and lead concentrations of personal, indoor, and outdoor respirable particles.** Tosteson, T.D.; Spengler, J.D.; Weker, R.A. (Harvard Univ. School of Public Health, Boston, MA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

This paper describes the indoor, outdoor, and personal concentrations for lead, iron, and aluminum experienced by 18 non-smoking individuals in Topeka, Kansas. The samples chosen for elemental analysis by atomic absorption (AA) spectroscopy are samples collected by volunteers during May and June of 1979. (DT)

26952 (CONF-811048—Summs., pp 4p, Paper 48) **Multipollutant sampler for indoor and outdoor ambient air.** Pengelly, L.D.; Kerigan, A.T.; Goldsmith, C.H.; Furlong, W.; Spurgeon, W.; Toplack, S. (McMaster Univ., Hamilton, Ontario). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The Gage Research Institute has developed, built and operated multi-pollutant personal samplers. We have modified these designs to produce a stationary instrument capable of 24-hour indoor and outdoor automatic sampling. The instrument was specifically designed to address our present survey requirements. However, with minor modifications, the design can be adapted to meet a wide variety of sampling needs. (DT)

26953 (CONF-811048—Summs., pp 4p, Paper 49) **Respiratory effects of household exposures to tobacco smoke and gas cooking on non-smokers.** Helsing, K.J.; Comstock, G.W.; Meyer, M.B.; Tockman, M.S. (Johns Hopkins Univ., Baltimore, MD). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Only recently have the effects of smoke from open fires in huts been documented as a cause of chronic respiratory diseases. There are disagreements between studies on the respiratory effects associated with gas cooking. Some studies have reported deleterious effects while others failed to find any. The present study was undertaken because of the unique opportunity that was presented to utilize data on hand from two studies conducted for other purposes and from a health census which provided additional household information. Our findings, if substantiated by other studies, emphasize the importance of providing for ventilating hoods over gas stoves, especially when a house is well constructed or retrofitted to reduce infiltrtaion. An effect of passive smoking could not be demonstrated with the number of subjects in this study. (DT)

26954 (CONF-811048—Summs., pp 4p, Paper 50) **Pulmonary functions of children and indoor NO_2 concentrations in Portage, Wisconsin.** Letz, R.; Ware, J.H.; Ferris, B.G. Jr.; Spengler, J.D. (Harvard School of Public Health, Boston, MA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We began this study with the assumption that the decreases in lung function and increases in respiratory illness found in large epidemiological studies for children living in gas-cooking homes were likely to be due to increased NO_2 exposure. We hoped that the gains from better quantifying exposure by directly measuring NO_2 levels in the homes would more than offset the losses from working with a smaller sample size. This was not the case. Several explanations are possible. NO_2 is not the offending agent. Gas stoves emit carbon monoxide, carbon dioxide, sulfur dioxide, nitrogen oxide, formaldehyde, hydrogen cyanide, water vapor, carbon and sulfate particles. In addition, different stoves and fuels may produce different mixes of these products. Only a sensitive sub-population is affected by the offending agents(s), and they were not represented well in this group. Peak levels of NO_2 cause the health effects and our long-term averages are poorly related to those peaks. Our failure and that of Florey et al. (1979) to relate NO_2 levels to respiratory function were due to chance variation. Perhaps such a relationship exists and can only be detected by a much larger sample size. (DT)

26955 (CONF-811048—Summs., pp 4p, Paper 51) **Effects of ambient urban air pollution on asthmatics.** Silverman, F.; Corey, P.; Mintz, S.; Oliver, P.; Hosein, R. (The Gage Research Inst., Toronto, Ontario). 1981. NTIS, PC A13/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The levels of pollutants measured in this study are very low. Differences in assessment of exposure to air pollution occur between personal, indoor, outdoor and fixed location (Ministry of the Environment) monitoring which confirm the need to use personal exposure measurements in studies of health effects of air pollution. The effects of air pollution on pulmonary function at the low levels that occur in the Toronto area are inconclusive. (DT)

26956 (CONF-811048—Summs., pp 3p, Paper 54) **Chemical dusts, vapours and fumes as causes of asthma.** Pepys, J. 1981. NTIS, PC A13/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Chemical agents causing occupational asthma are also encountered under general environmental conditions. Specific identification of the etiological cause can present problems because the chemical agents may be irritant, toxic or too potently allergenic and unsuitable for clinical testing as with common allergens. The use of simulated occupational type exposures enables precise etiological diagnosis to be made. These tests may be as short as a few breaths or a few minutes, showing that the reactions are probably of an allergic nature. The outstanding characteristic feature of allergy is the minute amounts which can provoke one or more patterns of asthmatic reaction.

26957 (CONF-811048—Summs., pp 6p, Paper 56) **Indoor air quality in new energy-efficient houses and retrofitted houses.** Hollowell, C.D.; Berk, J.V.; Brown, S.R.; Dillworth, J.; Koonce, J.F.; Young, R.A. (Lawrence Berkeley Lab., CA). 1981. NTIS, PC A23/MF A01. Contract W-7405-ENG-48.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Our studies of new energy-efficient residences (with air-exchange rates lower than 0.4 ach) indicate that indoor levels of radon, formaldehyde, and particulates sometimes exceed existing guidelines or standards for outdoor air, due to a number of factors, such as geographic variation of radon content in soil, indoor furnishings, and occupant activities. The impact of residential retrofit programs on indoor air quality appears to be minimal, based on this study of three retrofitted houses where no pollutants reached levels approaching health guidelines or standards. We can conclude that retrofit programs such as that of Pacific Power and Light Company improve the thermal integrity of houses and should continue without fear of significantly increasing indoor air pollution. In the Cranbury house, the super retrofit had no appreciable effect on the infiltration rate already achieved by the homeowner's prior weatherization and thus little or no adverse impact on indoor air quality resulted from this super retrofit. (DT)

26958 (CONF-811048—Summs., pp 3p, Paper 62) **Indoor climate in low-ventilated day-care institutions.** Lundqvist, G.R.; Iversen, M.; Korsgaard, J. (Univ. of Aarhus, Denmark). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The air quality in two new day-care institutions fulfilling the requirements for energy savings, as made in the Danish building codes for housing, was found to be inadmissibly poor due to the low natural infiltration rate and to the degree of occupancy of the squad rooms. No special guidelines for air supply rates for children are given in the recommendations for ventilation requirements. This seems to be a problem to be solved for a more elaborate engineering design of the cimate of such indoor environments, a design which should fulfill hygienic Threshold Values as well as demands for energy savings. (DT)

26959 (CONF-811048—Summs., pp 5p, Paper 63) **Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality.** Offermann, F.J. (Lawrence Berkeley Lab., CA); Hollowell, C.D.; Roseme, G.D.; Rizzuto, J.E. 1981. NTIS, PC A23/MF A01. Contract W-7405-ENG-48.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The results of measurements of leakage area, air-exchange rate, and concentrations of Rn, NO_2, HCHO, and RH in the ten houses selected for a detailed study of indoor air quality are summarized. In the full sample of 60 houses, the specific leakage area varied from 1.3 to 9.0 cm/m^2. Of the 49 houses built by one of the builders, the 36 houses with special weatherization components, (e.g., polyethylene vapor barriers in the outside walls and sealing of all joints and electric outlets) had an average specific leakage area of 2.8 cm^2/m^2 which is 35% lower than the 4.3 cm^2/m^2 average measured in 13 similar houses without such components. The indoor concentrations of Rn, NO_2, HCHO, and RCHO measured during both ventilated and unventilated periods were below the various guidelines presently used to assess indoor air quality. (DT)

26960 (CONF-811048—Summs., pp 5p, Paper 71) **Personal exposure to carbon monoxide: nine person study data analysis and conclusions.** Ziskind, R.A. (Science Applications, Inc., Los Angeles, CA); Fite, K.R.; Mage, D.T. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

For 45 test days, 9 subjects chosen at random from the general population of Los Angeles county carried personal carbon monoxide samplers coupled to electronic output integrators and recorded their daily activities. The group included one bus commuter, one bicycle commuter, and two smokers. Their daily activities covered a wide geographical area. Exposure activity profiles were examined using data from the same subject on different days (autocorrelation) and among different subjects on the same day (cross correlation) in order to assist in formulating a sampling design for a large scale study. (DT)

26961 (CONF-811048—Summs., pp 4p, Paper 72) **Measurement of carbon monoxide concentrations in indoor and outdoor locations using personal exposure monitors.** Ott, W.; Flachsbart, P. (Environmental Protection Agency, Washington, DC). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

It appears that most commercial settings have indoor CO concentrations above zero due to seepage of CO into buildings from vehicular emissions. However, levels are not often above 5 ppM and seldom are higher than health-related ambient air quality standards. In buildings that have underground garages, in the ga-

rages themselves, and in some structures with unusually heavy traffic outside carbon monoxide levels can violate existing ambient air quality standards indoors. (DT)

26962 (CONF-811048—Summs., pp 4p, Paper 73) **Study on the personal exposure dose to nitrogen dioxide.** Maeda, K.; Nitta, H. (Univ. of Tokyo, Hongo Tokyo, Japan). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We have studied personal exposure dose to NO_2 for housewives and office workers in Tokyo using small passive NO_2 sampler, and observed things which relate to the extent of exposure dose to NO_2. (DT)

26963 (CONF-811048—Summs., pp 5p, Paper 74) **Personal monitoring for nitrogen dioxide exposure: methodological considerations for a community study.** Quackenboss, J.J. (Univ. of Wisconsin, Madison); Kanarek, M.S.; Spengler, J.D.; Letz, R. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

A pilot study to develop and test procedures and materials for determining average personal exposure to NO_2 for a general population group was undertaken in conjunction with the ongoing Harvard Six City air pollution health study. Small and easy to use passive diffusion monitors were used to give integrated averages of exposure during the total sampling period. (DT)

26964 (CONF-811048—Summs., pp 3p, Paper 75) **Individual human exposure to volatile organic compounds encountered during normal daily activities.** Wallace, L. (Environmental Protection Agency, Washington, DC); Pellizzari, E. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Monitoring individual exposures and body-burdens for a number of volatile organic compounds simultaneously are feasible and gives useful information even at normal ambient concentrations. The 10 compounds were detected most of the time in air and breath, but not in blood or drinking water. Wide ranges in air exposures were encountered, even among residents of a single small urban area.

26965 (CONF-811048—Summs., pp 6p, Paper 76) **Personal exposures to respirable particulates; a tale of two cities - Kingston and Harriman, Tennessee.** Spengler, J.D.; Treitman, R.D.; Tosteson, T.D.; Mage, D.T. (Harvard Univ. School of Public Health, Boston, MA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

This personal monitoring study was designed to test the feasibility of directly measuring the respirable particulate matter exposure on a subset of people involved in a large air pollution health study. The study was designed to obtain exposure data for several categories of persons during several days in late winter/early spring. The personal, indoor, and outdoor respirable particulate concentrations and the intergroup, between day, and between location relationships are described. (DT)

26966 (CONF-811048—Summs., pp 3p, Paper 77) **Personal exposure versus monitoring station data for respirable particles.** Sega, K.; Fugas, M. (Inst. for Medical Research and Occupational Health, Zagreb, Yugoslavia). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The aim of this investigation was to estimate actual exposure to man of respirable particles and how well it can be assessed from the data on suspended particulate matter (SPM) concentration as measured by a network station nearest to people's homes. Personal exposure measurements included 12 subjects, working at the same place but living in different parts of the city represented by four ambient network stations. Subjects' exposure was monitored for seven consecutive days in the course of four winter months in 1980/81. (DT)

26967 (CONF-811048—Summs., pp 4p, Paper 79) **Design of a personal sampler of three respiratory irritants.** Mintz, S.; Hosein, R.; Batten, B.; Silverman, F. (The Gage Research Inst., Toronto, Ontario). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We have designed a light, portable, quiet ambient three-pollutant sampler which can be used for assessment of personal exposure to air pollutants. Our sampler appears to be sensitive for SO_2, NO_2 and could be used for other gases. (DT)

26968 (CONF-811048—Summs., pp 3p, Paper 80) **Development and characterization of personal samplers for particulates and gases.** McKenzie, R.L.; Bright, D.S.; Cadoff, B.C.; Fletcher, R.A.; Hodgeson, J.A. (National Bureau of Standards, Washington, DC). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We have developed new personal samplers for NO_2 and for respirable and inhalable particulates that are capable of high sampling rates, making it feasible to measure these pollutants at very low ambient levels or at average ambient levels for shorter sampling periods than has been possible with earlier devices. (DT)

26969 (CONF-811048—Summs., pp 4p, Paper 86) **Control of the ventilation by CO_2 content.** Soedergren, D.; Petersson, P. (Konstruktionsbyra, Stockholm, Sweden). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

During this study on outdoor air control system based on the constant CO_2-concentration in the indoor air has been operated successfully. Determining a suitable set point for the CO_2-concentration needs, however more experimental work. (DT)

26970 (CONF-811048—Summs., pp 3p, Paper 89) **Investigation of the offgassing decay function in aging mobile homes with climate corrected formaldehyde readings.** Hanrahan, L.P. (Wisconsin Div. of Health, Madison); Anderson, H.A.; Dailly, K.A.; Eckmann, A.D.; Kanarek, M.S. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The repeated measurement of mobile homes for formaldehyde failed to exhibit a systematic correlation between the sequential readings taken in each home. The log of the home age in months was seen to be the single best predictor of both climate corrected and uncorrected formaldehyde readings. These findings are in accord with unpublished analyses previously performed by the Wisconsin Division of Health. An improvement in these models' predictive power is suggested by the inclusion of variables that begin to quantify ventilation rates found in the home at the time of sampling. (DT)

26971 (CONF-811048—Summs., pp 4p, Paper 98) **Indoor air-pollution: some Canadian experiences.** Ferahian, R.H. (Consulting Engineer, Westmount, Quebec). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The recent emphasis on energy conservation measures in buildings have created concern regarding their effect on the indoor air quality. There has been much research done on indoor air pollution and its health effects. But it is only very recently that it has begun to attract the attention it deserves in Canadian Governmental and Building Code Circles. Our laws must ensure good air quality in our living and working habitat as an environmental human right not only as it is introduced into the building but as it reaches the persons inside. All the research and findings about good air quality will be of no use to the average citizen if it is not applied and translated into rules incorporated in the building codes for design, construction, and - last but certainly not least - maintenance of our buildings. And scientifically-based, uptodate building codes are not

much use if they are not complemented by strict honest and competent building inspectors. (DT)

26972 (CONF-811048—Summs., pp 8p, Paper 99) **Strategy for reduction of toxic indoor emissions.** Andersen, I.; Seedorff, L.; Skov, A. (Danish National Inst. of Occupational Health, Hellerup, Denmark). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

A strategy for the reduction of toxic emissions from building materials is put forward where the effort is concentrated on three groups of indoor air pollutants: carciongens, irritants and odors. The experiences from the National Danish Inventory of Toxic Substances and Products are that a notification system makes it possible effectively to survey building materials and products and their areas of application. Based on this knowledge it is possible to determine where a need for regulations or investigations exists. Knowledge about the composition of building materials in the epoxy/polyurethane group has made it possible to select the products and materials with the least impact on human health and comfort and with the lowest need for supply of ventilating air. Producers of building materials are invited to make themselves acquainted with these principles of prevention and to utilize them for improvement of the quality of their products and consequently for an improvement of the quality of indoor air. (DT)

26973 (CONF-840612—5) **Clean air targets and the politics of urban travel: a case study.** Saricks, C.L. (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 18p. NTIS, PC A02; 3; GPO Dep. Order Number DE84010728.

From Air Pollution Control Association annual meeting; San Francisco, CA, USA (25 Jun 1984).

Paper copy only, copy does not permit microfiche production.

This study has among other findings substantiated the observation that, under the relaxed mobile-source NO/sub x/ standards of H.R. 5252, rapid vehicle motor travel (VMT) growth would produce a net increase in NO/sub x/ loading from mobile sources at least through the remaining years of the present decade. However, moderate VMT growth will result in stable or slightly declining mobile-source NO/sub x/. Consequently, any urbanized area that is currently in attainment with respect to ambient NO/sub x/ and expects neither high VMT growth (≧ 5% per year) nor a radical change in the distribution of its highway fleet mix (car/truck split) is probably safe from future NO/sub x/ attainment problems. If such problems are forecast, the relevant planning and air quality control agencies should probably reexamine the premises on which their regional travel projections are based. On the other hand, metropolitan areas that will experience high VMT growth must realize that this growth is associated with rapid residential development, a major factor in increasing area source NO/sub x/ burden. Even if such areas are not now subject to NO/sub x/ levels at or near the ambient standard, reevaluation of NO/sub x/ control strategies for a future in which automobile emission standards are relaxed would be appropriate.

26974 (EPRI-EA—3078) **Evaluation of three first-order closure models - Plains Site. Final report.** Reynolds, S.D.; Morris, R.E.; Myers, T.C.; Liu, M.K. (Systems Applications, Inc., San Rafael, CA (USA)). Feb 1984. 601p. Research Reports Center, Box 50490, Palo Alto, CA 94303.

This phase of the EPRI Plume Model Validation and Development (PMV and D) Project involves the evaluation of three first-order closure models using a data base collected over relatively flat terrain in the vicinity of the Kincaid Generating Station in Illinois during 1980 and 1981. The three models examined in this study were the Buoyant Plume Model (BPM), the Atmospheric Diffusion Particle-In-Cell (ADPIC) Model and the Plume Dispersion Model (PDM). In addition, the performance of ADPIC and PDM was compared with that of three Gaussian models using a common data set. BPM predictions of plume height and spread downwind of the stack were evaluated using 86 hours of ground-based lidar observations; predictions tended to be greater than the measurements. Both ADPIC and PDM simulated many of the basic phenomena observed during the field experiments. Model performance was evaluated using 100 hours of ground-level SF_6 observations collected with a movable array of 200 samplers. ADPIC tended to underpredict the highest observation, the set of highest hourly values paired in time, and the set of all values paired in time and location. PDM overpredicted both the highest value and the set of all values paired in time and location, and tended to underpredict the set of highest hourly values paired in time only. Neither model's performance was uniformly better than that of the Gaussian models examined in the operational validation phase of this project. 46 references, 27 figures, 29 tables.

26975 (LA—10025) **Dust particles in high-speed flows: calculations of small-particle re-entry hydrodynamics.** Sandford, M.T. II. (Los Alamos National Lab., NM (USA)). Feb 1984. Contract W-7405-ENG-36. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010998.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Numerical hydrodynamic calculations are used to model the dispersion of dust injected into a supersonic flow by the explosive disruption of a re-entry vehicle. The particles constitute an initial dustball that expands into the existing velocity field after the detonation. Dust grains subsequently form a plume along the vehicle path. The importance of aerodynamic and radiative heating of the dust is considered but not included in the calculations. Particles in the bow shock heat to the vaporization temperature because of drag and radiative heating, but particles in the dustball are shielded and consequently suffer only a small amount of vaporization. About 20% of the initial dust mass will be vaporized. Application of the results to dust grains entrained in the air blast of a near-surface nuclear explosion is briefly considered. 4 references, 6 figures, 1 table.

26976 (LBL—13500, pp 3.12-3.14) **Effects of ventilation on residential air pollution due to emissions from a gas-fired range.** Traynor, G.W.; Apte, M.G.; Dillworth, J.F.; Hollowell, C.D. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

This study investigates the effect of infiltration and two types of mechanical ventilation on indoor CO, CO^2, and NO/sub x/ concentrations from a gas-fired range: spot ventilation and whole-house ventilation. A range hood was used to evaluate spot ventilation; and an extensively ducted ventilation system, with three exhaust sites and five inlet sites which incorporated an air-to-air heat exchanger, was used in these studies are compared to those derived from an indoor air quality model.

26977 (LBL—13500, pp 3.18-3.21) **Organic contaminants.** Miksch, R.R.; Hollowell, C.D.; Schmidt, H.E. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

Preliminary data suggest that workers in office environments are exposed to a broad spectrum of compounds present at very low levels relative to permissible exposures but high levels relative to outdoor air. Preliminary data on the identities and relative amounts of organic contaminants in representative office spaces are discussed, as well as potential sources in new and aged building materials, wet-process photocopiers, smoking, and building maintenance products are presented.

26978 (LBL—13500, pp 3.21-3.23) **New passive monitor for determining formaldehyde in indoor air.** Geisling, K.L.; Girman, J.R.; Miksch, R.R.; Rappaport, S.M.; Tashima, M.K. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

The sampler reported here is lightweight and small, can be operated by untrained personnel, and is very inexpensive. Once in the field, the passive monitor is merely uncapped, placed in a vertical position, and left for the appropriate sampling period. Following exposure, the sampler is recapped and returned to the laboratory for analysis.

26979 (LBL—13500, pp 3.24-3.26) **Distribution of indoor radon concentrations and source magnitudes: measurements and policy implications.** Nero, A.V. Jr.; Boegel, M.L.; Doyle, S.M.; Moed, B.A.; Nazaroff, W.W. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

Indoor radon concentrations varied over a large range and did not correlate well with infiltration rate. Calculation of source magnitudes for the houses monitored yielded values ranging over three orders of magnitude, and this variation appeared to be the main cause of the variation in indoor concentrations. Radon emanation rates from building materials such as concrete do not account for the source magnitudes observed. On the other hand, the radon flux from soil averages ten times as much as that from concrete and could account for the source magnitudes observed. The observed distribution in indoor concentrations suggests that a significant portion of the population is subject to unusually high risks, and variations in source magnitude need to be considered in developing strategies for identifying this portion of the population and for reducing indoor concentrations.

26980 (LBL—13500, pp 3.27-3.29) **Insturmentation for a radon research house.** Nazaroff, W.W.; Nero, A.V. Jr.; Revzan, K.L.; Robb, A.W. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

The essential design and function of the instrumentation system as a whole are described, singling out those components that measure ventilation rate, radon concentration, and radon-daughter concentrations.

26981 (LBL—13500, pp 3.34-3.36) **Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality.** Offermann, F.J.; Dillworth, J.F.; Grimsrud, D.T.; Hollowell, C.D.; Koonce, J.F. Jr.; Nazaroff, W.W.; Pepper, J.H.; Robb, A.W.; Roseme, G.D.; Young, R.A. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

Results are presented of the leakage area, air-exchange rate, and indoor air quality for ten houses with and without mechanical ventilation systems. Indoor and outdoor temperatures, average daily humidity, concentrations of aldehydes, formaldehyde, nitrogen dioxide, carbon monoxide, carbon dioxide, nitric oxide, ozine, sulfur dioxide and particulates were measured. (PSB)

26982 (LBL—13500, pp 4.2-4.5) **SO_2 oxidation of soot particles exposed to water.** Benner, W.H.; Ljungstrom, E.; Novakov, T. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Enviornment Division, annual report, FY 1981.

The oxidation of SO_2 in the atmosphere leads to the formation of sulfuric acid, which, if incorporated into cloud and rain water and not neutralized by ammonia, can acidify the water. The oxidation of SO_2 can produce gas-to-particle transformations and can lead to haze formation. In the ambient atmosphere, SO_2 is oxidized by a variety of homogeneous and heterogeneous chemical reactions. The research reported here focuses on several heterogeneous (i.e., gas-droplet/particle) reaction pathways.

26983 (LBL—13500, pp 4.5-4.7) **Aqueous reactions of nitrite with bisulfite ions in sulfate aerosol formation.** Oblath, S.B.; Chang, S.G.; Markowitz, S.S.; Novakov, T. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Enviornment Division, annual report, FY 1981.

Results are reported for a continuing study of the kinetic reactions of nitrite ion with sulfur dioxide in aqueous solution as a model system for the aerosol droplets. These and other researchers found that under conditions which are likely to be found in a polluted atmosphere, the reactions can be briefly summarized as follows: nitrite and bisulfite ions react to form either nitrous oxide or hydroxylamine disulfonate, depending on the acidity; hydroxylamine disulfonate undergoes hydrolysis to hydroxylamine monosulfonate (HAMS) and sulfate ion. Hydroxylamine monosulfonate reacts with nitrite ion to form nitrous oxide and sulfate ion. Kinetic rate equations are presented. (PSB)

26984 (LBL—13500, pp 4.10-4.13) **Application of thermal analysis and photoelectron spectroscopy for the characterizatoin of particulate matter.** Dod, R.L.; Novakov, T. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

Analytical results are compared using thermal analysis in the evolved-gas-analysis mode to contrast photoelectron spectroscopy methods which may allow some volatile species to escape during analysis of sulfate, ammonium, and nitrate ions and other elements and species. Inconsistency of results was found and research continues. A tentative explanation is given. (PSB)

26985 (LBL—13500, pp 4.13-4.16) **Theoretical studies of the thermal decomposition of carbonaceous aerosol particulates.** Hansen, A.D.A.; Novakov, T. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

A theoretical approach to the interpretation of evolved gas analysis, which classifies sample components according to their thermal decomposition characteristics, is presented for the graphitic carbon component of aerosol particles. (PSB)

26986 (LBL—13500, pp 4.16-4.19) **Application of selective solvent extraction to carbonaceous aerosols.** Gundel, L.A.; Novakov, T. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

Carbonaceous components of particles from New York City, Los Angeles, and Berkeley are very similar when characterized by the selective solvent extraction-carbon analysis technique. Photochemical activity, as indicated by ozone level, was much less intensive in Berkeley and New York City than in Los Angeles, although fractions of polar and nonpolar carbon are very similar for the two locations. Automotive and diesel primary combustion particles differ from ambient particles by enrichment in amounts of nonpolar carbon; however, significant fractions of polar carbon are also associated with all combustion sources studied here.

26987 (LBL—13500, pp 4.20-4.22) **Relation between concentrations of polynuclear aromatic hydrocarbons and black carbon.** Gundel, L.A.; Rosen, H.J.; Novakov, T. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

Five fluorescent compounds have been identified in the extracts of particulate matter collected at every site: benzo(b)fluoranthene (BbF), benzo(k)fluoranthene (BKF), benzo(a)pyrene (BaP), benzo(ghi)perylene (BghiP), and indeno(1,2,3-cd)pyrene (IcdP). Some PAH compounds which fluoresce weakly under the same conditions were not detected: chrysene, benzo(e)pyrene, dibenz(a,h) anthracene, and perylene. The PAH compounds found in this study have been detected in urban praticulate matter collected in other cities and in particulate samples from combustion sources.

26988 (LBL—13500, pp 4.22-4.23) **Determination of low-Z elements simultaneously by charged particle activation analysis.** McKinney, M.; Markowitz, S.S.; Novakov, T. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

The experiments for simultaneous determination of C, N, and O were carried out using the stacked-foil technique, and the samples and standards were irradiated and counted within 2 to 3 minutes at the 88-inch Cyclotron. The 14-MeV ^3He beam was degraded to 10 MeV, and both the aerosol sample, on a silver filter, and the 1/2-mil nylon standard were bombarded at the same energy and

with the same number of microcoulombs. The samples were irradiated for 0.5 minutes at 0.5 μA beam intensity and were analyzed by detecting the 511-keV positron annihilation radiation in coincidence using 3-inch NaI crystals and Ortec single-channel analyzers. The carbon determinations agreed well with combustion analysis, but the nitrogen determinations were substantially higher. This was presumably caused by sulfur and silicon in the aerosol which produced ^{31}P with a 2.5-minute half-life, which interfered with the nitrogen determination. For this reason deuterons were chosen as the particle.

26989 (LBL—13500, pp 4.24-4.36) **Applied physics and laser spectroscopy research.** Amer, N.M.; Cooper, M.S.; Gerlach, R.W.; Hall, R.P.; Jackson, W.B.; Johnson, R.L.; Kohn, S.E.; Kulik, S.J.; Olmstead, M.A.; Skumanich, A. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

The research pilosophy of this group is to apply the knowledge of advanced laser spectroscopy and condensed-matter physics to energy and environmental problems. Because of the narrow line width and tunability of lasers, unsurpassed sensitivity and specificity can be achieved in detecting trace contaminants of the environment. The advanced state of condensed-matter physics makes it possible to apply such knowledge to energy production and to test novel methods for energy conversion such as photovoltaic solar cells, superionic electrical energy storage devices, and the recovery and extraction of oil from abandoned wells and oil shale with lyotropic liquid-crystal emulsifiers.

26990 (LBL—13500, pp 4.121-4.122) **Development and application of x-ray fluorescence analytical techniques.** Giauque, R.D.; Sindelar, L.E. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

X-ray fluorescence (XRF) techniques are being developed and applied to support programs which require trace multielement chemical analysis. Emphasis is placed on improving the sensitivity capability of XRF and establishing accurate methods which compensate for matrix effects. XRF methods are applied to support: (1) oil shale; (2) atmospheric aerosol; (3) waste management; and (4) geochemical research programs. A primary purpose of these programs is to study the distribution, speciation, and fate of numerous trace elements. An XRF method for the determination of forty elements of atomic number 22 (Ti) and higher, in oil shale and geochemical specimens, has been developed.

26991 (N—8410331) **Research program for effects of acidic deposition on materials and cultural resources.** Spence, J.W.; Haynie, F.H. (Environmental Protection Agency, Research Triangle Park, NC (USA). Environmental Sciences Research Lab.). Jul 1983. 12p. (PB—83-232074; EPA—600/D-83-087). NTIS, PC A02/MF A01.

The framework of a research program to develop the methodology and data bases for assessing the material related benefits of acidic deposition control policies and guidelines for protecting or restoring individual structures especially historical and cultural sites is given. Seven basic areas of research are identified.

26992 (PB—84-149632) **Characterization of carbon fiber emissions from current and projected activities for the manufacture and disposal of carbon fiber products. Final report.** Gieseke, J.A.; Reif, R.B.; Schmidt, E.W. (Battelle Columbus Labs., OH (USA)). Jan 1984. 59p. NTIS, PC A04/MF A01.

Composite materials formed by impregnating a carbon or graphite fiber mat with plastic binders are being used increasingly in military, aerospace, sports and automotive applications. Carbon fibers are formed primarily from synthetic fibers carbonized in the absence of oxygen. Possibilities exist for the release of these fibers to ambient air during their formation, handling, weaving or impregnation, or during the manufacturing or incineration of composites. This study was concerned with characterizing the rate and physical/chemical properties of such emissions. Samples were collected from manufacturing operations. Operations considered included fiber winding, prepregging and weaving, as well as composity cutting, grinding, drilling, machining, sanding, and incineration. Release rates (fiber mass released per unit of material processed) ranged over several orders of magnitude with the largest releases being associated with weaving and incineration. Except for incineration where fiber diameters were reduced somewhat by burning, the original fiber diameters were maintained in the emitted material. Fiber lengths varied over wide ranges from tens to thousands of micrometers. Incineration experiments suggested that mechanical agitation and air flow in the incinerator would strongly affect releases. Electrical characterization of the fibers demonstrated that fibers will move and form chains in electrical fields.

26993 (PB—264232) **Ozone and hydrocarbon measurements in recent oxidant transport studies.** Lonneman, W.A. (Environmental Protection Agency, Research Triangle Park, NC (USA). Environmental Sciences Research Lab.). Jan 1977. 14p. (EPA—600/3-77-001a; CONF-7609221—1). NTIS, PC A02/MF A01. Order Number DE84900921.

From International conference on photochemical oxidant pollution and its control; Raleigh, NC, USA (12 Sep 1976).

In recent years, field studies were undertaken to investigate ozone and ozone-precursor transport. In these studies samples were collected and analyzed for hydrocarbon concentration. The analytical results indicate that rural ambient air downwind of urban centers consists largely of diluted urban mix, with loss of the more reactive hydrocarbon components. Hydrocarbon and nitrogen oxides analyses at Wilmington, Ohio, indicate that high ozone concentrations are probably due to transport processes and are not the result of local photochemical formation. 5 references, 9 figures, 3 tables.

26994 (PNL-SA—11531) **Monitoring indoor pollutants in two small office buildings to support a modeling study.** Parker, G.B.; Lee, R.N.; Dennis, G.W. (Pacific Northwest Lab., Richland, WA (USA)). Oct 1983. Contract AC06-76RL01830. 13p. (CONF-8311122—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010900.

From 20. annual meeting of PNWIS-APCA; Seattle, WA, USA (16 Nov 1983).

Portions are illegible in microfiche products.

A study was undertaken to monitor outdoor and indoor pollutants and to determine air exchange rate in two small office buildings, both constructed in the mid 1970's. Pollutant levels of radon particulate matter, carbon monoxide, oxides of nitrogen, and formaldehyde, were measured over approximately a 3-day period in each office building during the heating season. Measurements of air exchange, temperature, relative humidity and windspeed were also taken. Average workday indoor pollutant levels of formaldehyde, carbon monoxide, oxides of nitrogen and radon were near ambient (outdoor) levels. Indoor concentrations of particulate matter were greater than outdoor levels in both office buildings and significantly greater in the second office building compared to the first. This paper describes the measurement protocol and measurement results. The hourly variation in radon, and particulate matter concentration measured in the second building is also given. 9 references, 2 figures, 3 tables.

26995 **Elemental carbon concentrations: estimation of an historical data base.** Cass, G.R.; Conklin, M.H.; Shah, J.J.; Huntzicker, J.J.; Macias, E.S. (California Inst. of Tech., Pasadena). *Atmospheric Environment;* **18**: No. 1, 153-162(1984). Contract FG03-76ER10058.

While recent advances in instrumentation permit routine determination of elemental carbon concentrations in atmospheric aerosol samples, historical data on elemental C concentrations are absent. Two methods are available for the estimation of an historical data base for elemental C concentrations: calibration of reflectance-based tape samplers and analysis of archived high volume sampler filters. These methods are described and applied to the problem of reconstructing an historical data base for elemental C concentrations in Los Angeles. Twenty-four year average elemental C concentrations at seven monitoring sites in the Los Angeles area are estimated to range from 6.4 $\mu g\ m\sqrt{^{3}}$ at Downtown Los Angeles to 4.5 $\mu g\ m^{-3}$ at West Los Angeles. At most monitoring sites studied, elemental C concentrations were lower in recent years than during the late 1950s and early 1960s.

26996 Cooling tower plume rise analyses by airborne lidar. Uthe, E.E. (SRI International, Menlo Park, CA). *Atmospheric Environment;* **18**: No. 1, 107-119(1984).

As part of the Atmospheric Studies in Complex Terrain (ASCOT) program, five cooling-tower plume experiments were conducted at The Geysers geothermal area in California during August 1981. The experiments were designed to investigate plume behavior during conditions of valley nocturnal drainage flow and daytime vertical mixing on a mountain ridge. The Airborne Lidar Plume and Haze Analyzer (ALPHA-1) system was used during the experiments to observed plume geometry and aerosol structure of the boundary layer. Subvisible plume rise derived from the backscatter signatures is related to visible plume-rise results recently published. This analysis indicates that the lidar-observed plumes are about 10 times higher than visually observed plumes. The lidar-observed plume rise seemed to correspond with heights of elevated aerosol layers that typically indicate presence of temperature inversions. Pictorial displays are presented which provide information on atmospheric behavior mountainous terrain.

26997 Ventilation requirements in buildings. II. Particulate matter and carbon monoxide from cigarette smoking. Leaderer, B.P.; Cain, W.S.; Isseroff, R.; Berglund, L.G. (J.B. Pierce Foundation Lab., New Haven, CT). *Atmospheric Environment;* **18**: No. 1, 99-106(1984).

Current efforts to reduce ventilation rates in buildings may conserve energy, but may also possibly empair human health and welfare through increased levels of indoor contaminants. Combustion of tobacco is one important source of indoor pollution. The authors measured both steady state levels and decays of total suspended particulate mass between 0.01 and 10 μm (TSP) and carbon monoxide (CO) generated during various rates of cigarette smoking and at various rates of ventilation. The measurements took place in an aluminum-lined environmental test chamber. 98% of the particulate mass fell between 0.05 and 1.0 μm, with a volume median diameter of 0.225 μm. For many combinations of smoking rate and ventilation rate, including ventilation rates above normal, TSP exceeded levels considered acceptable outdoors. This rarely occurred, however, with CO. Although ventilation above governed the removal of CO from the chamber, adsorption on surfaces (e.g. ductwork, walls) provided an additional mechanism for the removal of TSP. Even with the additional clearance offered by adsorption, however, particulate levels will exceed commonly accepted background levels unless ventilation during smoking equals the high value of about 35 cfm (17.5 s^{-1}) per occupant. An electrostatic precipitator, on the other hand, will drive TSP levels down to very low values in very short periods of time.

26998 Study on the reaction between CO_2 and alkanolamines in aqueous solution. Blauwhoff, P.M.M.; Versteeg, G.F.; van Swaaij, W.P.M. (Twente Univ. of Tech., Enschede, Netherlands). *Chemical Engineering Science;* **39**: No. 2, 207-225(1984).

Literature data on the rate of reaction between CO_2 and alkanolamines, mono-ethanolamine (MEA), di-ethanolamine (DEA), di-isopropanolamine (DIPA), and methyl-di-ethanolamine (MDEA), in aqueous solution are discussed. These data served as a basis for experiments to study the absorption of CO_2 into aqueous DEA, DIPA, TEA, and MDEA solutions from which the respective rate constants were derived. The experimental technique used for the studies was similar to that used by Laddha and Danckwerts [30]. The results for DEA and DIPA were analyzed by means of a zwitterion-mechanism which was derived from the mechanism originally proposed by Danckwerts [16] and were found to fit the model well. The reaction rate of CO_2 with aqueous TEA and MDEA solutions shows a significant base catalysis effect which is also reported by Donaldson and Nguyen [17] and Barth et al. [4]. The results for TEA corresponded very well with those reported in references 4 and 17.

26999 Comparison of R- and Q-modes in target transformation factor analysis for resolving environmental data. Hwang, S.K.; Severin, K.G.; Hopke, P.K. (Univ. of Illinois, Urbana). *Atmospheric Environment;* **18**: No. 2, 345-352(1984). Contract AC02-80EV10403.

Target transformation factor analysis has been used for the quantitative resolution of environmental data. The initial studies have utilized the correlation between individual samples over the set of measured properties of those samples as the matrix defining the relationships within the data. The analysis of this matrix is a Q-mode analysis. For large data sets, this technique requires the diagonalization of a large matrix. An alternative approach is to examine the matrix of correlations between the measured properties of the samples over all of the individual samples in the data set. The analysis of this matrix is called an R-mode analysis. It is found that for several typical data sets, equivalent results are obtained for the two modes and, in some cases, R-mode may resolve the sources more accurately. 25 references, 3 figures, 8 tables.

27000 Characterization of particles from several sources and three urban areas by solvent extraction. Gundel, L.A.; Novakov, T. (Lawrence Berkeley Lab., CA). *Atmospheric Environment;* **18**: No. 2, 273-276(1984). Contract AC03-76SF00098.

Selective solvent extraction was used to characterize source and ambient particulate matter collected during conditions of low photochemical activity, and the results were compared with those for samples collected during smog episodes. If the technique can correctly distinguish ozone-related, photochemically produced secondary compounds from primary (source) compounds, it should yield very different results for the two sampling conditions. The results of our comparison, however, indicate that selective solvent extraction is unable to uniquely identify the contribution of photochemical processes to the production of ambient particulate matter. 12 references, 2 figures, 1 table.

27001 Mercury emissions from a modified in-situ oil shale retort. Hodgson, A.T.; Pollard, M.J.; Brown, N.J. (Lawrence Berkeley Lab., CA). *Atmospheric Environment;* **18**: No. 2, 247-253(1984). Contract AC03-76SF00098.

Gaseous Hg emissions were measured during the processing of a large modified in-situ oil shale retort (4×10^4 m^3) in Colorado. A continuous, on-line, gas monitor based upon the principal of Zeeman atomic absorption spectroscopy was the primary analytical method. The on-line monitor technique was shown to be well suited for this application and compared favorably with an independent reference method which collects gaseous Hg by Au-amalgamation. Forty-two hours of on-line data were obtained over a 35-day period during the latter half of the retort burn. Hg emission rates in g day^{-1} were calculated from Hg concentration and offgas flow rate data. The predicted total gaseous Hg mass emission for the retort was 4 kg. Extrapolation of the data to a hypothetical modified in-situ oil shale facility with a daily production of 8×10^6 l (5×10^4 bbl) of oil results in a projected emission rate of $\approx$ 8 kg day^{-1}. This estimated value is higher than Hg emission rates recorded for coal fired power plants. Emission rates were found to be highly variable both within and between days. Factors which may limit Hg emissions from a modified in-situ retort are discussed. Adsorption losses to unretorted shale at the bottom of a retort are suggested as a major sink for Hg. Losses of Hg to the extensive offgas plumbing system may also be substantial. 21 references, 4 figures, 2 tables.

27002 Climatic effect of CO_2: a different view. Ellsaesser, H.W. (Lawrence Livermore National Lab., CA). *Atmospheric Environment;* **18**: No. 2, 431-434(1984).

The current eager acceptance of oceanic thermal lag as the explanation as to why CO_2 warming remains undetected, reemphasizes that the atmosphere cannot warm until the oceans do. The logical implication follows that most current climate models are lacking in relevance; they have not been constructed with ocean surface temperature as the fundamental variable. When the problem is attacked from this view, sensitivity to CO_2 is significantly reduced; a position also strongly supported by the available palaeoclimatic data. 30 references.

27003 Rates and mechanisms of cloud water deposition to a subalpine balsam fir forest. Lovett, G.M. (Oak Ridge National Lab., TN). *Atmospheric Environment;* **18**: No. 2, 361-371(1984). Contract W-7405-ENG-26.

A resistance model for deposition of cloud droplets to a balsam fir forest canopy is described. The model accounts for im-

paction and sedimentation of cloud droplets, as well as evaporation and condensation of cloud water on canopy surfaces. It considers multiple height strata in the canopy, seven canopy component types in each stratum, and three size classes of cloud droplets. The model was tested against field data and was found to predict cloud water deposition rates in good agreement with measured values. Analysis of the model shows that in the windy, subalpine zone of New England for which the model was developed, advected cloud water can be deposited at rates on the order of tenths of a millimeter per hour, with deposition velocities ranging from 1 to 80 cm s^{-1}. Most of the cloud water deposition takes place in the top 3 m of the canopy. Inertial impaction is the dominant deposition mechanism, but sedimentation can be important at low wind speeds and in the interior of the canopy. Increases in wind speed cause increased deposition via impaction and decreased deposition via sedimentation. 55 references, 6 figures, 1 table.

27004 **Deposition of sulfuric acid mist in the respiratory tracts of guinea pigs and rats.** Dahl, A.R.; Griffith, W.C. (Lovelace Inhalation Toxicology Research Inst., Albuquerque, NM). *Journal of Toxicology and Environmental Health;* **12**: No. 2-3, 371-383(Aug-Sep 1983). Contract AC04-76EV01013.

Radiolabeled sulfuric acid mists in the size range of 0.4-1.2 μm mass median aerodynamic diameter (MMAD) were generated at 20 and 80% relative humidity at concentrations from 1.3 to 20 μg/l. Guinea pigs and rats were exposed to these aerosols by the nose-only route for short periods (30 s) and were quickly sacrificed and dissected. The regional respiratory-tract deposition patterns were measured. The results indicate that regional deposition fraction is positively correlated with droplet size of the sulfuric acid but is not correlated with atmospheric concentration or relative humidity over the ranges of the parameters studied. A comparison of the data obtained in these studies with those from earlier studies indicates that the deposition of sulfuric acid in the respiratory tract of rats is greater than for nonhygroscopic aerosols having similar MMADS. This may be due to the growth of the droplets in the high humidity of the respiratory tract.

27005 **Detection of chlorine and fluorine in air by laser-induced breakdown spectrometry.** Cremers, D.A.; Radziemski, J. (Los Alamos National Lab., NM). *Analytical Chemistry;* **55**: No. 8, 1252-1256(Jul 1983).

The use of laser-induced breakdown spectrometry (LIBS) to spectrometrically detect chlorine and fluorine in air directly is investigated. A laser-generated spark is used to atomize chlorine- and fluorine-bearing molecules. The atoms are then electronically excited by the high temperatures of the spark. Emission from the neutral atoms is spectrally and temporally resolved to maximize the signal-to-noise ratio. Optimization of the time window and laser power for minimum detection limits is discussed. The use of LIBS to determine the ratios of the numbers of different types of atoms on a molecule is considered. Minimum detectable concentrations of chlorine and fluorine in air are 8 and 38 ppM (w/w), respectively. Minimum detectable masses of chlorine and fluorine are, respectively, 80 ng and 2000 ng in air and 3 ng for both atoms in He. The precision for replicate sample analysis is 8% RSD. 11 references, 3 figures, 4 tables.

27006 **Photoacoustic spectroscopy in gases based on wavelength modulation.** Yip, B.C.; Yeung, E.S. (Iowa State Univ., Ames). *Analytical Chemistry;* **55**: No. 6, 978-981(May 1983). Contract W-7405-ENG-82.

In an attempt to reduce background contribution in photoacoustic spectrometry (PAS), wavelength modulation of a commercial CO_2 laser was undertaken. The necessary adaptations and experimental verification of its advantages are reported. The determination of ethylene in nitrogen at atmospheric pressure was used as a test case. In order to evaluate the real advantage using this scheme for PAS measurements, the signal obtained was plotted as a function of concentration of ethylene in nitrogen for the cases of amplitude modulation using the P(14) line of the CO_2 laser and wavelength modulation using the P(12)/P(14) lines. Detection limits of about 15ppB were noted. Since the background seemed to be independent of intensity of the laser, the use of high intensity lasers could be used to extend the useful range of PAS measurements.

27007 **New instrumentation for airborne acid rain research.** Tanner, R.L.; Daum, P.H.; Kelly, T.J. (Brookhaven National Lab., Upton, NY). *International Journal of Environmental Analytical Chemistry;* **13**: 323-335(1983). Contract AC02-76CH00016.

From 12. annual symposium on the analytical chemistry of pollutants; Amsterdam, Netherlands (Apr 1982).

Instrumental methods have been developed for continuously measuring sulfur dioxide, aerosol, sulfur, nitrogen oxides, nitric acid, and ammonia from an aircraft sampling platform. Emphasis has been on modifications to reduce limits of detection to allow sampling at ambient concentrations in the vicinity of cloud water composition and knowledge of the interphase behavior of nitrogen and sulfur oxides and oxyacids, will be used for quantitative evaluation of species contributions to the ionic content of precipitation. A flame photometric instrument with enhanced sensitivity for airborne measurements of both gaseous and aerosol sulfur compounds has been designed and constructed. Ambient airborne levels of less than 1 ppb may be detected using sensitivity enhancement, and effects of pressure changes on instrumental response have been eliminated. Sensitive, real-time measurements of NO/sub x/ and HNO_3 have been achieved by modified commercial ozone-chemiluminescence detectors. These modifications include: (a) operation at low pressure and large throughput; (b) use of an enlarged, more efficient reaction chamber; and (c) use of a pre-reactor to obtain more stable background. The detection limit for a dual channel instrument for aircraft use is <0.2ppb (5 second time constant). Nitric acid is determined continuously by difference using a nylon filter in one stream. An instrument has been constructed for airborne measurements of atmospheric ammonia based on a continuous, fluorescence-derivatization technique. Ammonia is scrubbed into aqueous acid, derivatized and measured in a small filter fluorimeter (HPLC detector). Current detection limit is about 0.25ppb NH_3 with response time of $\sim$ 2.5min. Data acquired from instrument test flights and preliminary characterization flights with this instrument package are discussed.

27008 **Estimation of wet and dry deposition of pollutant sulfur in eastern Canada as a function of major source regions.** Shannon, J.D. (Argonne National Lab., IL); Voldner, E.C. *Water, Air, and Soil Pollution;* **18**: 101-104(1982).

The contributions of major anthropogenic source regions to wet and dry deposition of total S in eastern Canada are estimated for a winter month and a summer month with the ASTRAP model. Results indicate that the US and Canada contribute approximately equal amounts to total S deposition in Canada; Canadian sources contribute more than one half of dry deposition and less than one half of wet deposition.

27009 **Coal gasification.** Hartman, H. *Oak Ridge National Laboratory Review (United States);* **13**: No. 1, 53-57(1980).

Applications, gas preparation, status and prospects of coal gasification technology are reviewed.

5003 Radioactive Materials Monitoring And Transport

REFER ALSO TO CITATION(S) 26874, 26957, 26959, 27063, 27064

27010 **(ANL—84-14) Environmental monitoring at Argonne National Laboratory. Annual report for 1983.** Golchert, N.W.; Duffy, T.L.; Sedlet, J. (Argonne National Lab., IL (USA)). Mar 1984. Contract W-31-109-ENG-38. 110p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84011530.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The results of the environmental monitoring program at Argonne National Laboratory for 1983 are presented and discussed. To evaluate the effect of Argonne operations on the environment, measurements were made for a variety of radionuclides in air, surface water, soil, grass, bottom sediment, and milk; for a variety of chemical constituents in air, surface water, ground water, and Argonne effluent water; and of the environmental penetrating radiation dose. Sample collections and measurements were made at the site boundary and off the Argonne site for comparison purposes.

Some on-site measurements were made to aid in the interpretation of the boundary and off-site data. The potential radiation dose to off-site population groups is also estimated. The results of the program are interpreted in terms of the sources and origin of the radioactive and chemical substances (natural, fallout, Argonne, and other) and are compared with applicable environmental quality standards. 19 references, 8 figures, 49 tables.

27011 (CONF-811048—Summs., pp 6p, Paper 7) **Indoor radon levels. Field experience using the track etch method.** Alter, H.W. (Terradex Corp., Walnut Creek, CA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

This work demonstrates that the radon concentrations in significant numbers of homes exceed 20 pCi/1 (0.1 WL). This concentration approaches the maximum permitted exposure in uranium mines. Should current attempts to reduce the 4 WLM mine limit to 0.7 WLM be successful, up to 50% of homes monitored in the current work would exceed the mine standard. We note also that present indoor provisional standards in the 0.02 WL (4 pCi/1) range may be considerably below the actual levels in many normal homes. Much additional US indoor radon data is needed to establish firmly the magnitude of a possibly major public health problem. (DT)

27012 (CONF-811048—Summs., pp 5p, Paper 8) **Distribution of indoor radon concentrations and source magnitudes: measurements and policy implications.** Nero, A.V.; Nazaroff, W.W. (Lawrence Berkeley Lab., CA). 1981. NTIS, PC A23/MF A01. Contract W-7405-ENG-48.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Indoor radon concentrations measured by our group vary over a large range and do not correlate with infiltration rate. Calculation of source magnitudes for the houses monitored yields values ranging over three orders of magnitude, and this variation appears to be the main cause of the variation in indoor concentrations. Radon emanation rates from building materials such as concrete do not account for the source magnitudes observed; on the other hand, the radon flux from soil averages ten times as much as that from concrete, and could account for the sourse magnitudes observed. The observed distribution in indoor concentrations suggests that a significant portion of the population is subject to unusually high risks, and variations in source magnitude need to be considered in developing strategies for identifying this portion of the population and for reducing indoor concentrations. (DT)

27013 (CONF-811048—Summs., pp 5p, Paper 9) **Radon concentrations in buildings and regional geology.** Sachs, H.M. (Princeton Univ., NJ); Manlowe, R.; Hernandez, T.L.; Ring, J.W. 1981. NTIS, PC A23/MF A01. Contract AC02-77CS20062.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The radon concentration in a given closed house is a time-varying function of a fairly small number of factors. In order of decreasing expected variability, these are the water suply (1000x if from wells), soil and geological substrate (20x or more), meteorological conditions (10x if short-term measurements are used), building materials (5x in most cases), and ventilation rate (usually less than 3x). (DT)

27014 (CONF-811048—Summs., pp 3p, Paper 10) **Air filtration and radon daughter levels.** Johassen, N. (Technical Univ. of Denmark, Lyngby). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

An investigation of the effect of filtration on the randon daughter population in a virtually unventilated room is described. The main results showed an equilibrium factor decrease with increasing ventilation. It is shown that the extra reduction primarily is caused by the removal rate of ^{218}Po exceeding the filtration rate. (DT)

27015 (CONF-811048—Summs., pp 4p, Paper 11) **Measuring and modeling the time variations of airborne ^{222}Radon concentrations in houses in Maine, USA.** Hess, C.T.; Weiffenbach, C.V.; Norton, S.A. (Univ. of Maine, Orono). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Indoor and outdoor radon concentrations have been measured in air and water samples for more than 100 houses in Maine using a variety of radon detection methods. Concentrations ranged from 0.05 to 210 pCi/1. Concurently, water samples were collected from the wells for these houses and radon measured by the method of Pichard. (DT)

27016 (CONF-811048—Summs., pp 5p, Paper 12) **Indoor radon levels: effects of energy-efficiency in homes.** Fleischer, R.L.; Mogro-Campero, A.; Turner, L.G. (General Electric Research and Development Center, Schenectady, NY). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Energy-efficient homes tend to be significantly more radon-rich than are the more conventional homes, particularly in the first and second story living areas that are most relevant to human exposure. Summer radon levels in these homes are usually different from winter in a variable manner, so that a full year of integration is required for careful monitoring. (DT)

27017 (CONF-811048—Summs., pp 3p, Paper 13) **Indoor radon concentrations.** Moschandreas, D.J. (IIT Research Inst., Chicago); Rector, H.E. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Indoor sampling in an energy efficient Experimental Residence (ER) at a subrub of a Washington, DC showed high radon (Rn) and Rn progeny concentrations. This paper presents results from an indoor air quality-Rn concentration survey. Survey homes were recruited from three concentric zones centered on the Experimental Residence. This design sought to distribute surveyed homes spatially as evenly as possible. (DT)

27018 (CONF-811048—Summs., pp 5p, Paper 14) **Instrumentation for a radon research house.** Nazaroff, W.W.; Revzan, K.L.; Robb, A.W. (Lawrence Berkeley Lab., CA). 1981. NTIS, PC A23/MF A01. Contract W-7405-ENG-48.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We have designed and built a highly automated monitoring and control system for studying radon and radon-daughter behavior in residences. The system's instrumentation is capable of measuring air-exchange rate, four-point radon concentration, individual radon daughter concentrations, indoor temperature and humidity, and outdoor weather parameters (temperature, humidity, wind speed, and wind direction). It is also equipped with modules that control the injection of radon and tracer gas into the test space, the operation of the forced-air furnace, the mechanical ventilation system, and the mixing fans located in each room. A microcomputer controls the experiments and records the data on magnetic tape and on a printing terminal. We injected radon into the test space up to a concentration of about 50 pCi/1 - the end of the range of concentrations found in houses. Setting the concentration at this level allows us to measure radon and radon daughters fairly precisely and is also high enough to assure that contributions of outdoor levels of radon and daughters will not affect indoor levels. (DT)

27019 (CONF-811048—Summs., pp 3p, Paper 15) **Modelling radon daughter concentrations in non-equilibrium situations.** Robertson, A.; Scott, A.G. (DSMA ATCON Ltd., Dundas, Toronto). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Simultaneous measurements of radon and radon daughter concentrations in several hundred houses found that the variability of the ratio of daughters to radon was much higher than was expected from the known measurement errors. A program was start-

ed to identify the causes of this variability, and if possible, to measure the variations of these parameters with time and location in the field. This was possible for aerosol concentration, ventilation rate, deposition velocity of free and attached daughters, and radon concentration. (DT)

27020 (CONF-811048—Summs., pp 4p, Paper 16) **Eberline's new microcomputer based radon daughter instrument.** Beard, R. (Eberline Instrument Corp., Santa Fe, NM); Geiger, E.L.; Waligora, S.J.; Fraim, F.; Gunther, B.; Tafreshi, A. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

A microcomputer based radon daughter working levels (WL) monitor has been designed for use in a nationwide survey of indoor air pollutants. This method of measuring WL has been used since 1977 but the earlier version was not designed for use in homes. The new design makes it possible for a local person with minimal training to place, retrieve and read out many small (survey instrument size) WL monitors, using a single read-out device mounted in a suitcase. (DT)

27021 (CONF-811048—Summs., pp 4p, Paper 17) **Sources of indoor radon in houses.** Bruno, R.C. (Environmental Protection Agency, Washington, DC). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Radon sources are listed along with their potential range of contribution to indoor radon levels in the model house located in both normal and mineralized regions. The totals without including the soil gas transport contribution are particularly interesting since they are much lower than the high end of the measurements of radon levels in the studies cited. This indicates that the transport pathway must generally be a major source of radon, and furthermore, that soil gas transport is probably by far the largets source in houses with the highest radon levels in a given region. (DT)

27022 (CONF-811048—Summs., pp 3p, Paper 18) **Activity of radon daughters in high rise buildings and the influence of soil emanation.** Abu-Jarad, F. (Univ. of Petroleum and Minerals, Dhahram, Saudi Arabia); Fremlin, J.H. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

From the previous results one may conclude that it is not necessarily true that the sub-floor emanation will increase the radon activity in the ground floor rooms and it seems clear that in the cases studied there is no appreciable effect due to emission from the sub-soil to the rooms above the first floor. The exposure from the radon daughters to the people living in the two-high rise buildings studies was less than the exposure to the people living in houses or flats near the ground surface. (DT)

27023 (CONF-811048—Summs., pp 4p, Paper 25) **Formaldehyde monitoring in domestic environments.** Matthews, T.G.; Howell, T.C. (Oak Ridge National Lab., TN). 1981. NTIS, PC A23/MF A01. Contract W-7405-ENG-26.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Three CH_2O monitoring methodologies have been developed which have undergone a successful preliminary field evaluation in domestic environments. A modified CEA Instruments, Inc. colorimetric analyzer is a potentially suitable device for quasi-real-time CH_2O monitoring in environmentally controlled homes. A practical methodology for the application of 13X molecular sieve as a CH_2O sorbent medium has been developed. The stability analyses suggest that CH_2O-exposed molecular sieve may be conveniently transported without environmental control from measurement sites to a laboratory for analysis. A pumped molecular sieve-based CH_2O collection unit has been developed for rapid sampling applications at CH_2O concentration levels of $\geqq$ 25 ppB. A visual colorimetric method has been suggested as a semi-quantitative formaldehyde screening analysis technique. The method is particularly suited for screening homes with respect to a recognized concentration guideline of $\geqq$ 100 ppB. (DT)

27024 (CONF-811048—Summs., pp 3p, Paper 52) **Indoor radon and lung cancer: models and methods.** Rasmussen, S.; Neuberg, D.; DuMouchel, W. (Massachusetts Inst. of Tech., Cambridge). 1981. NTIS, PC A13/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Research plans to evaluate the relationship between indoor radon levels of houses in Maine with the incidence of lung cancer are described.

27025 (CONF-811048—Summs., pp 6p, Paper 90) **Predicting radon fluxes and source locations using multichamber analysis.** Hernandez, T.L. (Princeton Univ., NJ); Ring, J. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Eight tracer gas injections in three Princeton houses revealed that houses with higher basement radon levels had the decay profiles of two-chamber systems. This was true regardless of the degree of coupling at the time of measurement between basement and living area. Dominant eigenvalues and eigenvectors determined from different injections in different chambers on the same day correlated well. Values obtained for transient parameters were far less reliable, with poor linear correlations for a particular injection and wide variation between separate injections common. (DT)

27026 (CONF-811048—Summs., pp 6p, Paper 91) **Dynamic simulation of radon daughter exposure in apartments using solar rockbed heat storage systems.** Rogozen, M.B. (Science Applications, Inc., Los Angeles, CA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The use of granitic rock as a heat storage medium in solar-based active heating systems has been cited as a potential source of radon gas emissions in houses and apartments. Previous mathematical modeling showed that certain constant infiltration rates and source strengths could lead to potentially hazardous equilibrium concentrations of radon and its daughters. The purpose of this study was to develop a more realistic model, in which hourly variations in infiltration rate and source strength were accounted for. In addition, radon emanation from granite was to be better characterized. (DT)

27027 (CONF-811048—Summs., pp 5p, Paper 95) **Integrated and grab sample radon data from dwellings in Maine and Texas.** Prichard, H.M. (Univ. of Texas School of Public Health, Houston); Hess, C.T.; Nyberg, P.; Weiffenbach, C.; Gessell, T. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The indoor radon concentrations in Maine are markedly higher than the corresponding levels in Houston. While differences in building style and the season of measurement exert some influence, it is tentatively assumed that geological and hydrological factors are primarily responsible for this difference. Assuming an equilibrium factor of 0.5 between radon and its daughters, it is seen that the average bedroom working level in Maine is 6 mWL, while 16% of the bedroom measurements suggest daughter levels in excess of 15 mWL. (DT)

27028 **(DOE/ID/12082—83) 1983 Environmental monitoring program report for Idaho National Engineering Laboratory Site.** Hoff, D.L.; Chew, E.W.; Dickson, R.L. (Idaho National Engineering Lab., Idaho Falls (USA)). May 1984. Contract AS07-80ID12082. 41p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84009634.

Portions are illegible in microfiche products.

The results of the various monitoring programs for 1983 indicated that radioactivity from the Idaho National Engineering Laboratory (INEL) Site operations could not be distinguished from worldwide fallout and natural radioactivity in the region surrounding the Site. Although some radioactive materials were discharged during Site operations, concentrations and doses to the surrounding population were of no health consequence and were far less than State of Idaho and Federal health protection guidelines. This report

describes the air, water, and foodstuff samples routinely collected at the INEL boundary locations and at locations distant from the INEL Site. 11 figures, 14 tables.

27029 **(DOE/NV/10327—4) Environmental surveillance report for the Nevada Test Site, January 1983 through December 1983.** Scoggins, W.A. (Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA)). Apr 1984. Contract AC08-84NV10327. 211p. NTIS, PC A10/MF A01. Order Number DE84011606.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report documents the environmental surveillance program at the Nevada Test Site as conducted from January 1983 through December 1983. The results and evaluations of measurements of radioactivity in air and water, and of direct gamma radiation exposure rates are presented. Relevancy to DOE concentration guides (CG's) is established. 20 references, 15 figures, 22 tables.

27030 **(EML—427) Environmental Measurements Laboratory program review, December 1983.** Volchok, H.L.; de Planque, G. (EDS.). (USDOE Environmental Measurements Lab., New York). Mar 1984. 114p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84010758.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This volume contains all of the written material that was submitted to the panel of Reviewers in advance of a Program Review conducted by the US Department of Energy, Office of Health and Environmental Research at the Environmental Measurements Laboratory (EML) December 7-9, 1983. In addition to a general introduction there are nineteen papers grouped into the five broad program categories covering all of the scientific and engineering projects of the Laboratory: Natural Radioactivity and Radiation, Anthropogenic Radioactivity and Radiation, Non-nuclear, Quality Assurance, and Development and Support. These short articles, for the most part, focus on the rationale for EML's involvement in each project, emphasizing their relevance to the EML and Department of Energy missions. Project results and their interpretation were presented at the Review and can be found in the material referenced in this volume.

27031 **(GAT—4012) Portsmouth Uranium Enrichment Complex environmental monitoring report for calender year 1983.** (Goodyear Atomic Corp., Piketon, OH (USA)). Apr 1984. Contract AC05-76OR00001. 61p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84010939.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

At the Portsmouth Uranium Enrichment Complex all effluent streams are sampled regularly and analyzed to assess compliance with applicable environmental standards. Radioactivity is measured in air, water, fish, produce, soil, and sediments; and radiation doses to the public are calculated. All public radiation doses from process effluents are well within Department of Energy standards. An extensive amount of engineering effort is also being exerted at the present time to modify existing airborne radioactivity emissions sources to further reduce emissions in compliance with DOE policy. Nonradioactive effluents either presently comply with federal standards or will comply upon completion of planned projects. CY-1983 was the third full year under the current National Pollutant Discharge Elimination System (NPDES) permit for liquid effluents, and the first year the Ohio Environmental Protection Agency (EPA) assumed responsibility for administering the NPDES Program. Compliance with the permit's discharge limits, with the exception of the high suspended solids in effluent from the South Holding Pond, did not present any significant problems. Overall compliance was 94.0 percent. Engineering is working on projects that are scheduled through 1985 for construction to further reduce the impact of liquid effluents. Although neither the State of Ohio nor the federal government has established standards for fluoride in the atmosphere or in vegetation, fluorides are monitored because they are used extensively in the uranium enrichment process. 13 references, 23 tables.

27032 **(GEPP-EM—806) Pinellas Plant environmental monitoring report, 1983.** (General Electric Co., St. Petersburg, FL (USA). Neutron Devices Dept.). Apr 1984. Contract AC04-76DP00656. 35p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011161.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The results of the effluent and environmental monitoring programs are presented. Small quantities of tritium gas, tritium oxide, carbon-14 labeled solvent and krypton-85 gas were released from the plant during the year. Average maximum ground level concentrations of these radioisotopes were all less than 3/10 of 1 percent of the standard for continuous nonoccupational exposure. The plant's combined sanitary and industrial liquid effluents were analyzed for arsenic, barium, biochemical oxygen demand, boron, cadmium, total chromium, trivalent chromium, hexavalent chromium, copper, cyanide, iron, lead, manganese, mercury, nickel, phenolics, selenium, silver, sulfides, suspended solids and zinc. Small quantities of radioactive tritium were released to the POTW and from the East Pond. Analyses showed the levels were less than 1/10 of one percent of the applicable standards. Site perimeter and off-site air samples for tritium gas and tritium oxide, as well as off-site surface water samples obtained to distance of 9.6 kilometers (6 miles) from the plant site and analyzed for tritium content, showed levels significantly less than 1/10 of 1 percent of the standard for continuous nonoccupational exposure. Calculations were made to determine the radiation doses resulting from releases of tritium oxide, krypton-85 and carbon-14. The calculated doses are exceedingly small when compared to the applicable standards. The total dose commitment to the population residing within 80 kilometers (50 miles) was determined to be 0.40 man-rem as compared to the annual dose from natural radiation of 243,117 man-rem. 10 references, 3 figures, 12 tables.

27033 **(ISH—22) Assessment of variability of radiation doses emanating from emission of airborne radioactive substances during normal operation of nuclear facilities.** Bretschneider, J. (Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene; Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Maschinenbau). Feb 1983. vp. (In German). Bundesgesundheitsamt, Neuherberg (Germany, F.R.).

Mathematical methods are compiled and developed that help to determine statistical characteristics of parameters used in radioecological models. The analytic method of approximation may replace the Monte-Carlo method to assess mean value and standard deviation of radiation exposure in accordance with the statement reliability that can be achieved for radioecological models. It provides the advantage of less calculations, plus the advantage that only mean values and standard deviations of the model parameters need to be known. It also allows easy estimation of the influence of single model parameters on radiation exposure variability. The logarithmic Gaussian distribution is an appropriate approximative function for the probability distribution of radiation exposure. This is tone for radioecological models of various structures and also for different statistical characteristics of the parameters. 99% of the fractiles of the numerically calculated probability distributions are by less than a factor of 10 above the respective values anticipated for probability distributions.

27034 **(LA—9993-MS) Fallout prediction as of 1957.** Stopinski, O.W. (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 21p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011000.

The development of models by which to predict fallout from tests of nuclear devices in the atmosphere has evolved from better understanding of the processes and from evaluation of data from previous explosions. The development of the models as of operation Plumbbob (1957) is discussed in the report, as well as a brief description of the models in use at that time. The draft report written in 1957 is being published as part of an effort to document atmospheric nuclear test data.

27035 **(PNL—4545) Multimedia radionuclide exposure assessment modeling. Annual report, October 1980-September 1981.** Whelan, G.; Onishi, Y.; Simmons, C.S.; Horst, T.W.; Gupta, S.K.; Orgill, M.M.; Newbill, C.A. (Pacific Northwest Lab., Richland, WA (USA)). Dec 1982. Contract AC06-76RL01830. 160p. NTIS, PC A08/MF A01; 1; GPO Dep. Order Number DE84010924.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Pacific Northwest Laboratory (PNL) and Los Alamos National Laboratory (LANL) are jointly developing a methodology for assessing exposures of the air, water, and plants to radionuclides as part of an overall development effort of a radionuclide disposal site evaluation methodology. Work in FY-1981 continued the development of the Multimedia Contaminant Environmental Exposure Assessment (MCEA) methodology and initiated an assessment of radionuclide migration in Los Alamos and Pueblo Canyons, New Mexico, using the methodology. The AIRTRAN model was completed, briefly tested, and documented. In addition, a literature search for existing validation data for AIRTRAN was performed. The feasibility and advisability of including the UNSAT moisture flow model as a submodel of the terrestrial code BIOTRAN was assessed. A preliminary application of the proposed MCEA methodology, as it related to the Mortandad-South Mortandad Canyon site in New Mexico is discussed. This preliminary application represented a scaled-down version of the methodology in which only the terrestrial, overland, and surface water components were used. An update describing the progress in the assessment of radionuclide migration in Los Alamos and Pueblo Canyons is presented. 38 references, 47 figures, 11 tables.

27036 **(PNL—5079) US Department of Energy Quality Assessment Program data evaluation report.** Jaquish, R.E.; Kinnison, R.R. (Pacific Northwest Lab., Richland, WA (USA)). Apr 1984. Contract AC06-76RL01830. 36p. NTIS, PC A03; 3; GPO Dep. Order Number DE84011400.

Paper copy only, copy does not permit microfiche production. Original copy available until stock is exhausted.

The results of radiochemical analysis performed on the Quality Assessment Program (QAP) test samples are presented. This report reviews the results submitted by 26 participating laboratories for 49 different radionuclide-media combinations. 5 tables. (ACR)

27037 **(SAND—84-0429) 1983 environmental monitoring report, Sandia National Laboratories, Albuquerque, New Mexico.** Millard, G.C.; Gray, C.E.; O'Neal, B.L. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1984. Contract AC04-76DP00789. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011170.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Sandia National Laboratories (SNL) is located south of Albuquerque on Kirtland Air Force Base. Because radionuclides are potentially released from its research activities, SNL has a continuing environmental monitoring program which analyzes for cesium-137, tritium, uranium, alpha emitters, and beta emitters in water, soil, air, and vegetation. Measured radiation levels in public areas were consistent with local background in 1983. The Albuquerque population received an estimated 0.250 person-rem from airborne radioactive releases, whereas it received greater than 49,950 person-rem from naturally occurring radionuclides. 23 references, 6 figures, 15 tables.

27038 **(UCRL—50027-83) Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report.** Griggs, K.S.; Myers, D.S.; Buddemeier, R.W. (Lawrence Livermore National Lab., CA (USA)). Feb 1984. Contract W-7405-ENG-48. 66p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84011165.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The 1983 annual average airborne gross beta activity in Livermore Valley air samples, 1.4×10^{-14} μCi/ml, was less than 1982. Airborne ^{238}U concentrations at Site 300 were higher than those at Livermore because of the depleted uranium (a byproduct of ^{235}U enrichment) used in high-explosive tests at the Site. However, these concentrations were well below the standards set by DOE. The average gross alpha activity shows no significant change from 1982. The annual average beryllium concentrations were less than 1% of the local air pollution standard at both sites and can be accounted for by the natural concentrations in airborne dust. The total tritium released to the atmosphere in 1983 was 3245 Ci. Water samples exhibited gross beta and tritium activities within the ranges previously observed in these areas. Two water samples from Site 300 showed an above-average level of gross alpha activity. This activity is due to naturally occurring uranium. The discharge of tritiated water (HTO) into the sanitary sewer system in 1982 was 1.7 Ci, unchanged from the previous year. Tritium concentrations observed in local wells in 1983 were generally the same as previous years measurements. Tritium levels found in the Livermore Valley and Site 300 vegetation were comparable to 1982. The 1983 average annual gamma-radiation doses at the Laboratory perimeter and off-site locations were 51 mrem and 50 mrem, essentially unchanged from previous year. A 14-MeV neutron generator (Bldg. 212) near the south perimeter continued to be a source of elevated radiation. 19 references, 19 figures, 36 tables. (MDF)

27039 **(WINCO—1004) Revised ICPP effluent data 1976 through 1983.** (Westinghouse Idaho Nuclear Co., Inc., Idaho Falls (USA)). Mar 1984. Contract AC07-84ID12435. 49p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010283.

Portions are illegible in microfiche products.

This report corrects all effluent data for the years 1976 thru 1982. Included herein are the gaseous radionuclide and service waste radionuclide and inorganic releases for this time period. Some numbers may differ from those previously reported due to the discovery of previous computational errors.

27040 **Stack effluent monitoring for an operating four reactor unit Candu Nuclear Station.** McDonald, A.M.; Booth, R.J.; Kupca, S.; Walker, R.A.P. (Atomic Energy of Canada Ltd. CANDU Operations Sheridan Park Research Community Mississauga, Ontario L5K 1B2). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 706-710(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

Gaseous effluents from an operating four reactor unit CANDU power station are monitored for radioactive particulates, iodines, noble gases and tritium to ensure compliance with approved derived emission limits. The four types of stack effluent monitors used on each of ten stacks are described. The total stack flow at a four reactor unit station is about 10 times that at a single unit station, hence there is the need for monitors with an order of magnitude greater sensitivity at the four unit stations. This need has been met by optimizing standard measurement techniques for particulate and iodine detection, and by introducing a novel technique for noble gas loss determination that provides several orders of magnitude increased sensitivity over traditional methods of detection. In addition, the use of a simple silica-gel desiccant to extract moisture from the sample stream has proven highly accurate and reliable for tritium monitoring purposes.

27041 **High precision ^{85}Kr monitor.** Fernandez, S.J.; Anderson, M.D.; Chapman, T.D.; Emel, W.A.; Motes, B.G.; Tkachyk, J.W. (Exxon Nuclear Idaho Co., P.O. Box 2800, Idaho Falls, ID 83401). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 682-685(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

The development of a ^{85}Kr off-gas monitor for nuclear fuel reprocessing plants is presented. Discussed are the parameters used in the design of the monitor, including the sensitivity, the dynamic measurement range, and the radionuclide composition of the off-gas stream. Detailed are the associated isokinetic sampling system, the components of the monitor, and the data acquisition microprocessor. Lastly, ^{85}Kr releases measured during in-plant demonstration of the monitor are compared with known ^{85}Kr releases.

27042 **Violinist: sophisticated pu field monitor.** Umbarger, C.J.; Trujillo, F.; Wolf, M.A. (Los Alamos Nat'l. Lab., Los Alamos, NM 87545). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 659-660(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

A new, smart, portable multichannel analyzer based plutonium field monitor has been developed that will significantly improve field monitoring capability by accident response teams. Called the Violinist, the system uses the ever-popular thin NaI (Tl) detector developed some years ago. The electronics weigh 1.7 lb and fit inside a package 7"x5"x1-3/4" deep. The device has: 256 channel MCA; microcomputer control; 32x84 dot matrix LCD alphanumeric and spectral display; three independent cursor sets for region of interest definition; keyboard-entered constants (3); computation algorithms; and internal battery power (15 hr lifetime). The package has wide radiation monitoring applications.

27043 **New generation low power radiation survey instruments.** Waechter, D.A.; Bjarke, G.O.; Trujillo, F.; Umbarger, C.J.; Wolf, M.A. (Los Alamos Nat'l. Lab., Los Alamos, NM 87545). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 655-658(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

A number of new, ultra-low-powered radiation instruments have recently been developed at Los Alamos. Among these are two instruments which use a novel power source to eliminate costly batteries. The newly developed gamma detecting radiac, nicknamed the Firefly, and the alpha particle detecting instrument, called the Simple Cordless Alpha Monitor, both use recent advances in miniaturization and powersaving electronics to yield devices which are small, rugged, and very power-frugal. The two instruments consume so little power that the need for batteries to run them is eliminated. They are, instead, powered by a charged capacitor which will operate the instruments for an hour or more. Use of a capacitor as a power source eliminates many problems commonly associated with battery-operated instruments, such as having to open the case to change batteries, battery storage life, availability of batteries in the field, and some savings in weight. Both line power and mechanical sources are used to charge the storage capacitors which power the instruments.

27044 **Preliminary analysis of four numerical models for calculating the mesoscale transport of Kr-85.** Pepper, D.W.; Cooper, R.E. (Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.). *Atmospheric Environment;* **17**: No. 10, 1881-1895(1983).

A performance study of four numerical algorithms for multidimensional advection-diffusion prediction on mesoscale grids has been made. Dispersion from point and distributed sources and a simulation of a continuous source are compared with analytical solutions to assess relative accuracy. Model predictions are then compared with actual measurements of Kr-85 emitted from the Savannah River Plant (SRP). The particle-in-cell and method of moments algorithms exhibit superior accuracy in modeling single source releases. For modeling distributed sources, algorithms based on the pseudospectral and finite element interpolation concepts exhibit comparable accuracy. The method of moments is felt to be the best overall performer, although all the models appear to be relatively close in accuracy.

5005 Site Resource And Use Studies

27045 **(BNL—34530) Adirondack tourism: perceived consequences of acid rain.** Metz, W.C. (Brookhaven National Lab., Upton, NY (USA)). Mar 1984. Contract AC02-76CH00016. 51p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84010292.

Portions are illegible in microfiche products.

This report seeks to place in perspective the perceived effects of acid precipitation on the tourist industry in the Adirondacks. The 9375-square mile park is host to almost nine million tourists annually, not including seasonal residents. Since the park was established almost 100 years ago, there have been many changes in tourist characteristics, available recreational facilities, kinds of activities, accessibility of the area, and land use and resource management policies. The tourist industry has been influenced by both controllable and uncontrollable factors. At present the overwhelming majority of recreational opportunities and natural resources important to the Adirondack tourist industry are relatively unaffected by acid precipitation. Fishing, a significant component of the tourist industry, is the most vulnerable, but any presumed adverse economic effect has to be weighed against the location of the impacted waters, total Adirondack fishing habitat, substitution available, habitat usage, fisherman characteristics, resource management, and the declining importance of fishing as an Adirondack recreational attraction. Concern is expressed as to whether present minimal acidification impacts are the precursor of major future impacts on Adirondack terrestrial and aquatic environments, and ultimately tourism. Tourism in the Adirondacks is increasing, while many other regional employment sectors are declining. It is becoming a more stable multiseason industry. Its future growth and character will be affected by government, private organization, business community, and resident controversies regarding land use and resource management attitudes, policies, budgets, and regulations. The acid precipitation issue is only one of many related controversies. 65 references, 2 figures.

5006 Regulations

REFER ALSO TO CITATION(S) 26972, 26973, 26979

27046 (CONF-811048—Summs., pp 4p, Paper 101) **Legal aspects of indoor air pollution in energy efficient residences.** Dreher, T.J. (AnaChem, Inc., Albuquerque, NM); Everett, J.J. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The present near absence of control of residential indoor air pollution cannot be expected to persist much longer. As more information regarding the recognition and control of indoor air pollutants becomes available, model codes, regulations, and civil law can be expected to assign the responsibility for the control of those pollutants to appropriate parties within the housing industry. Economic, regulatory, and judicial factors may be able to accomplish this assignment of responsibility without further federal legislative involvement. (DT)

27047 (CONF-811048—Summs., pp 2p, Paper 102) **Indoor air pollution: formaldehyde as an example of the approach in the Netherlands.** van der Kolk, J. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Early in 1978, the Minister of Public Health and Environmental Protection adopted the value of 120 $\mu g/m^3$ as highest acceptable concentration for houses, schools, hospitals etc. To achieve a situation where this limit would normally not be exceeded a quality standard for particle board was developed. The Minister of Housing prohibited the use of particle that did not meet the standard in the construction of houses where public funds were involved - which in the Netherlands is the case in over 80% of the houses built. (DT)

27048 (CONF-811048—Summs., pp 3p, Paper 103) **Approach to a national indoor air pollution policy.** Repace, J.L. (Environmental Protection Agency, Washington, DC). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Ventilation rate standards might be considered for the control of indoor concentrations of pollutants which have such generalized emissions that they cannot be controlled by product standards. Such standards would include air cleaning and air-to-air heat exchangers. Product standards might be established to limit the emissions of pollutants from building materials and consumer products which are capable of causing concentrations which exceed known health effects thresholds under typical building ventilation

rates. This would be a preferred method of control. Building code standards might provide for automatic spot ventilation of indoor combustion appliances; control of non-industrial work practices producing pollutants not controllable by normal ventilation; installation of vapor barriers to prevent radon penetration of dwellings; proper location of air intakes and exhausts; and precautions to limit infiltration of fumes from parking garages. Indoor air quality guidelines or standards would define appropriate maximum concentrations of indoor air pollutants, for the protection of sensitive groups in such buildings as hospitals, schools, single and multifamily dwellings, commercial office buildings, and places of recreation. (DT)

27049 (CONF-811048—Summs., pp 4p, Paper 104) **Indoor air pollution and public policy: regulatory issues.** Sexton, K.; Repetto, R. (Harvard School of Public Health, Boston, MA). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Recognition that indoor air quality is frequently bad enough to present health risks has raised the question of government regulation. A start has already been made with federal regulation of indoor ozone emissions from appliances, and state and local government legislation dealing with specific indoor pollutants, such as formaldehyde. Building codes represent an additional form of regulation. However, although some of the serious pollutants found indoors are the same as those regulated in the atmosphere and indoor concentrations are often much higher, creation of a regulatory framework for indoor air quality poses special policy issues. This paper attempts to address some of those issues. (DT)

27050 **(PB—84-114354) Vinyl chloride: a review of national emission standards.** (TRW, Inc., Research Triangle Park, NC (USA)). Feb 1982. 266p. NTIS, PC A12/MF A01.

This VC NESHAP Review Study assesses the current VC regulation through an investigation of emission control techniques and technological developments in the industry. The study encompasses evaluations of existing and new control technologies, sources not regulated by the standard, and enforcement and compliance experince since promulgation of the standard. Information and data evaluated during this study were obtained through literature searches, plant visits, and interviews with industrial representatives and EPA Regional Office personnel. The results of this review study will form the basis for possible revision of the existing standard.

27051 **(DOE/SF/10501—005) Paleontologic salvage, Southern California Edison Company Ten Megawatt Solar Generating Pilot Plant, Daggett, San Bernardino County, California.** Reynolds, R.E. (San Bernardino County Museum Association, Redlands, CA (USA)). Jan 1980. Contract FC03-77SF10501. 54p. (STMPO—488). NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84009974.

Portions are illegible in microfiche products.

Paleontologic monitoring and salvage operations were performed by the San Bernardino County Museum Association during the construction phase of the Ten Megawatt Solar Generating Pilot Plant at Daggett, San Bernardino County, California. A large and varied assemblage of significant Pleistocene fossils was recovered. The paleontologic specimens have been housed at the San Bernardino County Museum for further study. Excavation at the solar generating site yielded 28 fossil taxa which lived adjacent to the Mojave River in Pleistocene times. The most significant find was a human skeleton which was stratigraphically associated with fossil remains of horse, camel, rabbit, and smaller vertebrates. Mammoth remains were found at greater depth. The fossil remains of small vertebrates including rodents, birds, reptiles, and toads are a significant contrast to the contemporaneous fossils from Pleistocene Lake Manix to the east. Radiometric dates suggest that the Camp Cady local fauna from the Manix Lake sediments may range from 13,000 to 20,000 years Before Present. The fluviatile sediments at Daggett probably correlate with the fluviatile portion of the Manix formation and the fauna is probably from the same time span. Carbon samples are being radiometrically dated and should indicate the age of the human skeleton and the extinct vertebrate taxa.

27052 **Comparative winter diets of elk in New Mexico.** Rowland, M.M.; Alldredge, A.W.; Ellis, J.E.; Weber, B.J.; White, G.C. (Colorado State Univ., Fort Collins). *Journal of Wildlife Management;* **47**: No. 4, 924-932(1983). Contract W-7405-ENG-36.

Winter diet quality of elk (Cervus elaphus nelsoni) was studied in the Jemez Mountains, New Mexico, during January-April 1980 on a recently-burned montane area (BURN) and an unburned upper montane area (BACA). Grasses dominated diets in the BURN, but nearly equal proportions of browse and grass were eaten in the BACA. Botanical composition of diets did not vary during the study at either site. Crude protein and in vitro digestible organic matter (IVDOM) in forages did not differ between locations. Grasses were more digestible than browse, but crude protein content was similar between forage classes. IVDOM and protein increased significantly in grasses with advancing season, but not in browse. Dietary protein ranged from 3.5 to 7.2% in the BURN and from 4.7 to 7.5% in the BACA and was consistently superior in the BACA. Diet IVDOM in the BURN surpassed that in the BACA. Increases in diet quality were correlated with changes in quality of grasses ingested by elk. Forage quality was more variable than was diet quality, indicating the ability of elk to maintain relatively constant diet quality when confronted with large fluctuations in forage quality. 1 figure, 3 tables.

5102 Chemicals Monitoring And Transport

27053 **(BDX—613-3067) Environmental summary for calendar year 1983: US Department of Energy Bendix Kansas City Plant, Kansas City, Missouri.** (Bendix Corp., Kansas City, MO (USA)). Apr 1984. Contract AC04-76DP00613. 25p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010767.

Environmental monitoring for significant non-radioactive pollutants was conducted to allow evaluation of effluent effects on the environs of the Federal Complex. The monitoring data were compared to appropriate standards and guidelines. Ambient air and surface water analyses have shown no discernible effects on the environment from plant discharges. However, on-site ground water analyses conducted in CY1983 detected the presence of chlorinated solvents. The impact of the levels detected presently is unknown because no federal or Missouri State Standards exist for solvents in ground water. Studies to clarify this situation presently are being conducted. The plant's National Pollutant Discharge Elimination System permit required effluent monitoring of discharges entering Indian Creek and Blue River. Abatement activity and discharge monitoring reports have been routinely submitted to the State of Missouri as required by the permit. The Kansas City, Missouri, divisions of Air and Water Pollution Control routinely require monitoring and reporting of effluents to the atmosphere and to the City's Publicly Owned Treatment Works (POTW). In accordance with the technical requirements of the EPA regulations implementing the Resource Conservation and Recovery Act, hazardous waste disposal activities are reported to the EPA and the State of Missouri. 15 references, 4 figures, 4 tables.

27054 **(DOE/ER/10726—1) Reactor sharing grant 1980-82. Final report.** (State Univ. of New York, Buffalo (USA). Nuclear Science and Technology Facility). 1984. Contract FG02-80ER10726. 18p. NTIS, PC A02; 3; GPO Dep. Order Number DE84003023.

Paper copy only, copy does not permit microfiche production.

Results of activation analysis of Hawaiian soil samples submitted by Dr. Walter Barnard, are presented. (DLC)

27055 **(DOE/OR/21363—1) Sulfur input, output and distribution in two oak forests.** Kelly, J.M. (Tennessee Valley Authority, Knoxville (USA). Div. of Air and Water Resources). 1983. Contract AI05-83OR21363. 26p. (CONF-830692—2). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011139.

From 6. North American forest soils conference; Knoxville, TN, USA (19 Jun 1983).

Portions are illegible in microfiche products.

Atmospheric sources, based on a five-year study, introduce a total of 33.8 and 30.9 kg 2^1 y^{-1} of sulfur at the Cross Creek and Camp Branch sites. These inputs interact with the forest canopy resulting in average inputs to the forest floor of 29.2 and 22.5 kg ha^{-1} y^{-1}, respectively. Rainfall, dryfall particulates, and gaseous SO_2 contribute 37, 10, and 53% of the total atmospheric input at Cross Creek and 35, 11, and 53% at Camp Branch. Throughfall, stemflow, and litterfall contribute 58, 18, and 24%, respectively, to forest floor input at Cross Creek and 69, 12, and 19% at Camp Branch. Aboveground biomass has accumulated 42.1 kg ha^{-1} of sulfur at Cross Creek and 36.1 at Camp Branch, while belowground biomass contains 41.1 and 27.8 kg ha^{-1}, respectively. Litter layers were found to contain 22.0 and 14.9 kg ha^{-1}, while the average sulfur content of the mineral soil is 96% of the total ecosystem pool at both sites or 2646 kg ha^{-1} at Cross Creek and 1876.0 at Camp Branch. Comparison of the distribution, form, and factors influencing distribution revealed major differences when residual soils were compared to alluvial soils both within and between sites. Total sulfur content decreased with depth in all profiles as did the water soluble fraction, while insoluble inorganic sulfur increased with depth in the residual soils. Organic matter and exchangeable phosphate were strongly correlated with soluble sulfur distribution, while percent clay and pH provided the best correlations with insoluble inorganic sulfur distribution. Residual sulfur (the difference between the total and the sum of soluble and insoluble) appears to occur largely as an organically bound sulfate and its concentration and distribution is closely associated with soil organic matter content. 47 references, 13 figures, 5 tables.

27056 **(LA—10037-MS) Hydraulic testing of crushed Bandelier Tuff.** Abeele, W.V. (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011022.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report emphasizes large-scale testing, using the instantaneous profile method, for determination of unsaturated hydraulic conductivity. To allow for comparison, unsaturated conductivity was measured in the laboratory using the pressure plate method. Laboratory techniques and large-scale testing for determination of unsaturated hydraulic conductivity using the instantaneous profile method have been studied. It was found that in both cases the hydraulic conductivity could best be expressed as a power function of the water ratio by volume. Both graphical and analytical methods were used to analyze the moisture and tensiometric data provided by the instantaneous profile method and led to the determination of the hydraulic conductivity values. 13 references, 6 figures, 9 tables.

27057 (LBL—13500, pp 4.107-4.110) **Acid precipitation: microcosm applications and field studies.** Harte, J.; Lockett, G.P.; Schneider, R.A.; Tonnessen, K. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division annual report, FY 1981.

Research focused primarily on two regions, the western slope of the high Colorado Rockies and the western slope of the Californa Sierra Nevada. In addition, acid precipitation research was carried out in the Tibetan Plateau of China. The goals of these efforts are: to document instances of acid precipitation in areas not investigated by others; to determine the degree of sensitivity (buffering capacity) of high mountain watersheds and lakes in these areas; to predict chemical and ecological effects of acid precipitation in these regions; and to find the sources of the observed acid precipitation events. A combination of laboratory and field methods were used with emphasis on the use of microcosms to carry out experiments under controlled conditions.

27058 **(PB—84-151299) Cementing reactions in the hazardous waste environment.** Malone, P.G. (Army Engineer Waterways Experiment Station, Vicksburg, MS (USA)). Jan 1984. 16p. NTIS, PC A02/MF A01.

The use of chemical grout for bottom sealing waste sites requires careful consideration of interfering reactions from contaminated soil or ground water. The cementing reactions in the acrylates and urethanes are very specific. The presence of reducers, oxidizers and complexors can make the grouting solution ineffective. Sodium silicate grouts that form by gel formation from a soil are not affected by oxidizing or reducing compounds. They are however sensitive to pH and the concentration of divalent and trivalent cations. The major problem with silicate grouts is accelerated setting which prevents the grout from penetrating the zone being sealed. The variety of possible grout/waste reactions is so broad that field testing with water and soil (or sediment) samples from the zone to be grouted is the most practical approach to selecting grout formulations and designing the grout program.

27059 **(PB—84-152172) Leaching aluminum from calcined kaolinitic clay with nitric acid. Report of investigations/1983.** Olsen, R.S.; Gruzensky, W.G.; Bullard, S.J.; Beyer, R.P.; Henry, J.L. (Bureau of Mines, Albany, OR (USA). Albany Research Center). Dec 1983. 21p. (BM-RI—8834). NTIS, PC A02/MF A01.

Prior work by the Bureau of Mines demonstrated a feed preparation method that eliminates the formation of slime during leaching of calcined kaolinitic clay and makes leached residues fast settling and easy to filter. Nitric acid leaching rates determined for calcined kaolinitic clay prepared by this method were found to correspond to a zero-order reaction model for both batch and continuous, stirred-tank leaching. A rate constant of 0.136/min was determined. Separation of solid residues from the reacted slurry was examined, and filtration rates were determined.

27060 **(PNL-SA—11728) Quinoline partitioning in subsurface materials: adsorption, desorption, and solute competition.** Felice, L.J.; Zachara, J.M.; Schmidt, R.L. (Pacific Northwest Lab., Richland, WA (USA)). Mar 1984. Contract AC06-76RL01830. 19p. (CONF-8403114—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010773.

From International conference on ground water quality; Tulsa, OK, USA (26 Mar 1984).

Portions are illegible in microfiche products.

The adsorption/desorption behavior of quinoline, a basic N-heterocycle common to energy-derived liquid and solid waste, was evaluated at low solution concentration (0.066 μg/ml-12.9 μg/ml) on nine subsoil materials. The subsoils were low in organic carbon and varied in pH, texture, and chemical properties. Adsorption was studied under nitrogen using 0.01 M $CaCl_2$ as an electrolyte. The adsorption isotherms were curvilinear and were adequately represented by the Freundlich equation. Adsorption was high (> 95%) in acidic subsoils (pH < 6) and low in basic subsoils (pH > 7). Quinoline sorption did not correlate with subsoil organic carbon content, surface area, or clay content. However, desorption was significantly more reversible in the basic subsoil. Quinoline sorption on a basic subsoil was uneffected by the presence of pyridine. Pyridine reduced quinoline sorption on an acidic subsoil, with the greatest effect occurring at low quinoline concentrations.

27061 **(UCID—20031) Selection of representative organic compounds for in-depth studies of mobility in soil-water systems.** Harrison, F.L.; Mallon, B. (Lawrence Livermore National Lab., CA (USA)). Mar 1982. Contract W-7405-ENG-48. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011625.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A group of organic compounds was selected for in-depth study of their mobility in soil-water systems based primarily on their prevalence in wastes from energy technologies. To identify waste chemicals common to several energy technologies, we used the combined information from our study of the organic combustion by-products in fly ash and studies by others of organic compounds in wastes from oil-shale retorting, coal combustion and con-

version, coke production, petroleum processing, etc. Other important criteria in the selection process were the compounds' physical properties, chemical functional groups, resistance to degradation, toxicity, and mutagenicity carcinogenicity. Those given higher priority were phenol, aniline, naphthalene, quinoline, benzothiophene and benzo(a)pyrene; those given lower priority were hexadecane, pentane, tridecanoic acid, benzoic acid, o-phthalic acid, pyridine, and thiophene. Information available indicates that the fate and distribution of these compounds can be related to their physical-chemical properties. 39 references, 9 tables.

27062 (FERMILAB—84/34) Environmental monitoring report for calendar year 1983. Baker, S.I. (Fermi National Accelerator Lab., Batavia, IL (USA)). 1 May 1984. Contract AC02-76CH03000. 79p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84010925.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report gives the results of the environmental monitoring program at Fermi National Accelerator Laboratory (Fermilab) for Calendar Year 1983. The accelerator began an extended shutdown for installation of a superconducting magnet ring in June 1982. Injection of protons into the new accelerator ring began one year later. Extraction of protons to the Experimental Areas occurred in October 1983. The total number of protons accelerated in 1983. The total number of protons accelerated in 1983 was 4×10^{17}. This total is approximately 2% of the average of 1.9×10^{19} for the preceding five years. Thus, environmental monitoring in CY-1983 was done mainly to check on effects resulting from previous accelerator operations. During CY-1983 there were no abnormal occurrences which had an impact on the facility and its operation.

27063 (PNL-SA—11889) Hanford Environmental Data System. Cowley, P.J.; Sula, M.J. (Pacific Northwest Lab., Richland, WA (USA)). Nov 1983. Contract AC06-76RL01830. 7p. (CONF-840202—23). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008299.

From 17. midyear topical meeting of the Health Physics Society; Pasco, WA, USA (5 Feb 1984).

This comprehensive on-line, interactive data base used by the Pacific Northwest Laboratory's Hanford Environmental Surveillance Program. This program provides for monitoring and evaluation of environmental radiological parameters in the Hanford environs for the purpose of assessing environmental impacts of site operations. Through software developed to utilize the data base, the system generates pre-printed labels from an internally stored sample collection schedule and tracks the collection and analysis of samples - providing notification in the event a sample is not collected or analyzed according to schedule. The system screens all incoming data using sample-specific criteria and generates a report for any data not meeting all criteria. Comments may be stored with any environmental measurement result entry.

27064 (SAND—84-0430) Sandia National Laboratories Tonopah Test Range, Tonopah, Nevada: 1983 environmental summary. Millard, G.C.; Lathrop, L.W. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1984. Contract AC04-76DP00789. 8p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011152.

The Tonopah Test Range is located about 160 air miles northwest of Las Vegas, Nevada, and covers 525 square miles within the Nellis Air Force Base Bombing and Gunnery Range. The range is used for various DOE tests involving high and low altitude projectiles. Operations that affect the environment are mainly road construction, preparation of instrumentation sites, and disturbance of the terrain from projectile impacts. Monitoring of the test range is done annually by the US Environmental Protection Agency to supplement Sandia's monitoring effort. Monitoring results indicate that test range operations do not adversely affect the offsite environment or the public. 7 references.

27065 (UCID—20071) Update and inclusion of resuspension model codes. Porch, W.M.; Greenly, G.D.; Mitchell, C.S. (Lawrence Livermore National Lab., CA (USA)). Dec 1983. Contract W-7405-ENG-48. 19p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011602.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Model codes for estimating radiation doses from plutonium particles associated with resuspended dust were improved. Only one new code (RSUS) is required in addition to the MATHEW/ADPIC set of codes. The advantage is that it estimates resuspension based on wind blown dust fluxes derived for different soil types. 2 references. (ACR)

27066 (UCRL—53529) Results of calculations of external gamma radiation exposure rates from fallout and the related radionuclide composition from the SIMON Event of Operation Upshot-Knothole, 1953. Hicks, H.G. (Lawrence Livermore National Lab., CA (USA)). 9 Apr 1984. Contract W-7405-ENG-48. 21p. NTIS, PC A02; 3; GPO Dep. Order Number DE84010772.

Paper copy only, copy does not permit microfiche production. Original copy available until stock is exhausted.

This report presents data on calculated gamma radiation exposure rates and ground deposition of related radionuclides resulting from the SIMON Event that deposited detectable radioactivity outside the Nevada Test Site complex. This report differs from our previous calculations in that additional results are presented for eight time periods shorter than one hour.

27067 Evaluation of an automated assay system to measure soil radionuclides by L x-ray and γ-ray spectrometry. Nyhan, J.W.; Drennon, B.J.; Crowell, J.M. (Los Alamos National Lab., NM). *Soil Science Society of America Journal;* **47**: No. 3, 486-490(May-Jun 1983). Contract W-7405-ENG-36.

An automated radionuclide assay system was evaluated for performing soil radioassays using L x-ray and gamma-ray spectrometry. Wet chemistry assay procedures were shown to be considerably more time consuming than similar analyses of soils on this radionuclide assay system. The detection limits of ^{241}Am and Pu were determined, as well as the reproducibility of radionuclide assay results. The L x-ray spectrometric measurements were compared with radiochemical analysis on several tuff samples. The assay system's intrinsic germanium detector was found to respond linearly to varying low concentrations of ^{241}Am and Pu, both of which were easily detected in the presence of elevated concentrations of ^{137}Cs. 9 references, 7 figures, 1 table.

27068 Distribution of alpha activity from neptunium on rock fissures. Seitz, M.G. (Argonne National Lab., IL (USA)); Seliga, M. (Ustav Radioekologie a Vyuzitia Jadrovej Techniky, Kosice (Czechoslovakia)). *Nuclear Tracks;* **7**: No. 4, 155-161(1983).

Using the track-detecting plastic CR-39, we have examined the reaction of trace quantities of neptunium in solution with surfaces of an old fissure of granite rock. Radionuclides that were dissolved in a groundwater solution by leaching of solids that contained a variety of radionuclides were transmitted in flowing water into the rock fissure. The rock fissure was then dried and the rock split at the fissure for analysis by radiochemical and radiographic techniques. Radiochemical analyses have shown neptunium-237 to be the alpha-active nuclide adsorbed on the rock surface. An alpha radiograph of one fissure surface, analysed in detail, indicates that neptunium was adsorbed along the entire length of the rock fissure rather than strongly adsorbed at the inlet to the rock fissure as was another radioelement, cesium (as seen in a beta radiograph). Some inhomogeneities of neptunium concentration were observed on the fissure surface. They may be indicative of local mineralogical variation of the rock, which can affect adsorption of neptunium. Quantification of the alpha activity on the fissure surface by track counting on plastic and by radiochemical separation and electronic counting established that virtually all of the ^{237}Np on the rock fissure was detectable by the CR-39 plastic. This indicates that the

neptunium was on the surface of the rock fissure and did not penetrate deeply into the rock surface.

27069 (BNL—51755) 1983 breeding bird censuses and summary of 1977-1983 results. Raynor, G.S. (Brookhaven National Lab., Upton, NY (USA)). Nov 1983. Contract AC02-76CH00016. 12p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011529.

As part of a program to characterize the plant and animal life of the Laboratory site and the surrounding region, the two breeding bird censuses originated in 1977 were continued in 1983. Coverage was above average at BNL and below at Westhampton. Seventeen trips were made to the BNL plot and nine to the Westhampton plot. Five observers censused the BNL and two the Westhampton plot. The number of species on the BNL plot was near the seven-year average. The number of territorial males was the second highest. At Westhampton, the number of species was normal but the number of territorial males was the lowest ever due to a large decline in Prairie Warblers believed due to loss of scrub oak foliage caused by a late frost. A seven-year summary is included. 13 references, 7 tables.

27070 (EGG—10282-2032) Surveys for Astragalus beatleyae on Nellis Bombing Range, Nye County, Nevada. O'Farrell, T.P.; Collins, E. (EG and G, Inc., Goleta, CA (USA). Energy Measurements Group). Apr 1984. Contract AC08-83NV10282. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011622.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Aerial and ground surveys of western portions of the US Air Force's Nellis Bombing Range, Nye County, Nevada, were conducted to determine if the rare plant, Astragalus beatleyae (Barneby), was widely distributed there. Additional information on its distribution will assist the US Department of Energy and the Fish and Wildlife Service in assessing the need to provide federal protection for this plant under the Endangered Species Act of 1973. Eleven areas were surveyed on foot between 18 and 20 July 1983 in potential habitat identified during a helicopter reconnaissance. Astragalus beatleyae was found in seven discrete groups at three major locations on contiguous portions of Pahute Mesa. Plants were distributed between 4.75 and 8.5 miles west of the species' type locality on the Nevada Test Site. One population was growing on an atypical habitat having deep, clay soils. 11 references, 4 figures.

27071 (TVA/PUB—84/25c) Guntersville Reservoir land management plan. Appendix 2. (Tennessee Valley Authority, Norris (USA). Div. of Land and Forest Resources). 1984. 42p. NTIS, PC A03/MF A01. Order Number DE84900930.

Portions are illegible in microfiche products.

The TVA reservoir planning process seeks to formulate long-range management plans for the thirty-three thousand (33,000) acres of TVA land surrounding Guntersville Reservoir. This report presents recommendations for the management of Guntersville Reservoir's visual resources as a part of the reservoir planning process. The recommendations can be used as integral considerations in the development of land management plans and land use allocations, particularly in the resolution of land use conflicts.

27072 Determination of natural actinides and plutonium in marine particulate material. Anderson, R.F.; Fleer, A.P. (Woods Hole Oceanographic Inst., MA). *Analytical Chemistry;* **54**: No. 7, 1142-1147(Jun 1982). Contract AC02-76EV03566.

The natural actinides ^{227}Ac, ^{228}Th, ^{230}Th, ^{232}Th, ^{234}Th, ^{231}Pa, ^{238}U, and ^{234}U and the α-emitting plutonium isotopes are determined in samples of suspended marine particulate material and sediments. Analysis involves total dissolution of the samples to allow equilibration of the natural isotopes with added isotope yield monitors followed by coprecipitation of hydrolyzable metals at pH 7 with natural Fe and Al acting as carriers to remove alkali and alkaline earth metals. Final purification is by ion exchange chromatography (Dowex AG1-X8) and solvent extraction for Pa. Overall chemical yields generally range from 50 to 90%. The method has been successfully interfaced with published methods to include the determination of ^{55}Fe, ^{137}Cs, ^{90}Sr, and ^{241}Am on the same samples.

27073 Comparison of chlorophyll a measurements by fluorometric, spectrophotometric and high pressure liquid chromatographic methods in aquatic environments. Jacobsen, T.R. (Univ. Of Georgia, Athens). *Ergebnisse der Limnologie;* **16**: 35-45(Jun 1982). Contract AS09-76EV00639.

Significant differences ($P>F$ 0.0001) between chlorophyll a values by high pressure liquid chromatography (HPLC) and other chlorophyll methods were found on paired determinations of water samples from the continental shelf of the southeastern United States. Synoptic chlorophyll a determinations by fluorometric and HPLC methods showed considerable differences in perceived photoautotrophic distributions on an area basis. Values in some paired determinations differed by almost 2 orders of magnitude while other samples differed by less than 0.01 $\mu g\ l^{-1}$. Examination of chlorophyll distributions by in vivo and extracted fluorometric, spectrophotometric and HPLC methods in nearshore studies showed considerable differences in estimated values and perceived distributions of photoautotrophs. These studies emphasize the need for chromatographic separation of chlorophyll a pigments from the matrix of degradation products found in the aquatic environment.

27074 Oceanic distribution of ammonium-oxidizing bacteria determined by immunofluorescent assay. Ward, B.B. (Univ. of Washington, Seattle). *Journal of Marine Research;* **40**: No. 4, 1155-1172(1982). Contract AT06-76EV75026.

Marine ammonium-oxidizing bacteria in seawater were enumerated by means of immunofluorescent assays developed for Nitrosococcus oceanus and Nitrosomonas marina. Samples were collected from the coastal waters off the states of Washington and California, from the central North Atlantic and northeast Pacific Oceans, and from Chesapeake Bay. Total abundances of ammonium oxidizers ranged from 10^7 cells l^{-1} in Chesapeake Bay and 10^5 cells l^{-1} in inshore ocean waters to 10^3 to 10^4 cells l^{-1} in the open ocean. Using mean abundances from surface waters, a potential nitrification rate was calculated. Results imply that microbial nitrification rates in the water column can be substantial and may be sufficient to balance the annual new production demand for nitrate.

27075 Phytoplankton patchiness and frontal regions. Seliger, H.H.; McKinley, K.R.; Biggley, W.H.; Rivkin, R.B.; Aspden, K.R.H. (Johns Hopkins Univ., Baltimore, MD). *Marine Biology (Berlin);* **61**: 119-131(1981). Contract AC02-76EV03278.

In the Chesapeake Bay estuary there are persistent seasonal frontal and interfrontal regions that serve to deliver and retain different phytoplankton populations. The patchiness of phytoplankton, both in total chlorophyll a concentrations and in species compositions and abundances, is shown to be causally related to density flow forcing which results in these frontal and interfrontal regions. The delineation of these regions by on-line, two-dimensional profiling of density isopleths serves to identify stations within these regions for biological and chemical sampling as opposed to sampling on an arbitrary geographical grid. It is possible, by superposition of nutrient and organism concentration isopleths upon salinity isopleths, to infer conservative and non-conservative features of the system.

27076 (LBL—13500, pp 4.104-4.106) **Optimum microcosm design for ecotoxicology.** Harte, J.; Levy, D.J.; Lockett, G.P.; Oldfather, J.M.; Rees, J.T.; Saegebarth, E.I.; Schneider, R.A. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division annual report, FY 1981.

A facility was designed and constructed where microcosms are housed in two separate rooms, each capable of containing 12 tanks holding up to 50 liters in volume. Greater temperature control, reduced energy consumption, more uniform illumination intensity, a clock regulated illumination schedule, and a relatively dust-free environment are improved features. Baseline studies emphasized spatial distribution of plankton with effects created by variations of agitation, light, temperature and chemicals simulated. (PSB)

27077 (LBL—13500, pp 4.119-4.120) **Organic compounds in coal slurry pipeline water.** Newton, A.S.; Villarreal, H.M.; Walker, W.E.; Fox, J.P. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

This study shows that organic compounds, other than phenols, do not occur in environmentally significant levels in coal slurry waters from the subbituminous coals tested. Phenols do occur at the concentration levels of 1 to 100 ppb (μg/1). This concentration level is below the safe level set by EPA. If these slurry waters are chlorinated, these phenols will be converted to various polychloro phenols.

27078 **Extraction efficiency of anthracene form sediments.** Haddock, J.D.; Landrum, P.F.; Glesy, J.P. (Savannah River Ecology Lab., Aiken, SC). *Analytical Chemistry;* **55**: No. 7, 1197-1200(Jun 1983).

In a study to determine the effects of spiking techniques, extraction solvent composition, and sediment matrix variations on extraction efficiency of polynuclear aromatic hydrocarbons (PAH), anthracene was chosen as a model PAH. The extraction of anthracene from the sediments was dependent on the treatment of the samples and ranged from 30.9+/-4.0 to 97.2+/-8.7% at a 95% confidence level. Of the variables examined, mixing duration of spiked slurries was found to be the most significant factor. Significant effects on extraction efficiency were also noted for variations in extracting solvent composition, sediment type, and sediment moisture. The variables were found to affect each other in a nonadditive manner; thus, no accurate predictions of variable effects can be made from knowledge of the main effects alone.

27079 **Chemistry of western Atlantic precipitation at the mid-Atlantic coast and on Bermuda.** Church, T.M. (Univ. of Delaware, Newark); Galloway, J.N.; Jickells, T.D.; Knap, A.H. *Journal of Geophysical Research;* **87**: No. C13, 11,013-11,018(20 Dec 1982).

The major ion composition of western Atlantic precipitation falling at the coast of eastern United States (Lewes, Delaware) and at the Sargasso Sea (Bermuda Island) has been measured by event year round (May 1980 to April 1981) to assess the influence of the ocean on precipitation from storms that leave the North American continent and transit over the western Atlantic. Particular attention is paid to the oceanic influence on the sulfur and nitrogen precursors of acid rains. While sea salt contributes over half (by weight) of the salt in precipitation at the coast and over three quarters at Bermuda, most of the sulfate (90% at the coast and 50% at Bermuda) is in excess to sea salt sodium. Since Bermuda precipitation is still acidified some factor of 8 relative to pure equilibrium with atmospheric carbon dioxide, this strong acidity has been attributed to the long-range transport sulfur and nitrogen precursors in the marine troposphere during which the sulfuric acid component dominates. A sulfur budget for the western Atlantic troposphere shows that of the total amount of sulfur exported from the North American continent (>3.9 TgS/yr) less than 3% (0.1 TgS/yr) is from natural sources, the rest being from anthropogenic emissions. If Bermuda precipitation is taken as typical of wet fallout of sulfur over the western Atlantic, then no more than half (<2 TgS/yr) of North American excess (nonsea salt) sulfur export falls out to the western Atlantic and at least half undergoes potential transoceanic transport as acid rain precursors to the east of Bermuda.

5203 Radioactive Materials Monitoring And Transport

REFER ALSO TO CITATION(S) 25481, 25482, 25489, 25532, 25533, 25572, 25991, 26826, 27010, 27028, 27029, 27031, 27032, 27033, 27035, 27036, 27037, 27038, 27039, 27062, 27064

27080 **Aquatic chemistry of plutonium in seasonally anoxic lake waters.** Sholkovitz, E.R.; Carey, A.E.; Cochran, J.K. (Woods Hole Oceanographic Inst., MA). *Nature (London);* **300**: No. 5888, 159-161(11 Nov 1982). Contract AC02-81EV10694.

Data are presented on the distribution of the fallout radionuclides ^{55}Fe, $^{239,240}Pu$, ^{137}Cs and ^{90}Sr and the natural radionuclides ^{238}U and ^{234}U in a seasonally anoxic lake in an effort to determine their biogeochemical behavior. Results from Gull Pond, Massachusetts show that the oxygen-depleted and iron- and manganese-rich bottom waters contain five times more dissolved $^{239,240}Pu$ than oxygenated surface waters. This feature, also observed in anoxic hypolimnia of other lakes, indicates that the concentration of plutonium is significantly influenced by anoxicity and redox cycles. Such observations are important in understanding the fate of artificial radionuclides which are released to the aquatic environment through global fallout, planned disposal and localized accidents.

5204 Thermal Effluents Monitoring And Transport

REFER ALSO TO CITATION(S) 25989

27081 **(SREL—14) Evaluation of the Steel Creek ecosystem in relation to the proposed restart of the L-Reactor: interim report.** (Savannah River Ecology Lab., Aiken, SC (USA)). Sep 1983. 70p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84011126.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This interim report of findings from studies by SREL has updated information on several key components of the Steel Creek ecosystem. We have emphasized two categories of the Steel Creek biota: Endangered Species (American alligator) and species for which environmental degradation within SRP boundaries might result in changes in offsite resource abundance. Wintering waterfowl surveys in the vicinity of the Steel Creek delta have demonstrated a pattern of increased utilization over the duration of these studies (1981-83). Wood stork utilization of SRP swamp areas also appeared to be substantially increased relative to previous years. Thermal alteration of the Steel Creek delta areas will eliminate this area as wood stork foraging habitat. Anadromous fish utilization of the Steel Creek area was also substantially increased in 1983 relative to 1982. The differences in anadromous fish species utilization patterns between 1982 and 1983 are probably a result of the markedly different river flow conditions between the two years. Studies of the American alligator have continued. No further reproduction

by alligators has been observed in the Steel Creek system. 24 references, 14 figures, 13 tables.

27082 **Fish abundance and distribution near three heated effluents to Lake Michigan.** Spigarelli, S.A.; Goldstein, R.M.; Prepejchal, W.; Thommes, M.M. (Argonne National Lab., IL (USA)). *Canadian Journal of Fisheries and Aquatic Science;* **39**: No. 2, 305-315(Feb 1982).

A combined echo location-temperature mapping technique was used to determine the abundance and distribution of fish with depth and temperature in locally heated and unheated areas of Lake Michigan. Surveys were conducted between April and October at two adjacent power plants in the southern basin and at one plant in the northern basin of the lake. Fish densities in plume and reference areas differed seasonally. Densities typically differed by a factor of 2-4 although on one occasion plume area density was 90 times greater. Highest plume densities occurred during late spring when alewife (Alosa pseudoharengus) were spawning inshore. Consistently dense congregations of fish were found downstream of the interfaces between ambient shore-parallel currents and discharge flows. The general distribution of fish with depth was similar in all areas. Differences between plume and reference areas were related to the discharge type: at canal discharges fish tended to congregate inshore while at the offshore discharge they congregated in deeper zones. Fish also tended to occupy shallower depth strata in all plume areas. Positive correlation between fish density and increasing temperature was common at both plume and reference areas during all three seasons, but more frequent at plume areas. Temperatures selected by fish in plume areas were 1-3°C higher than maximum ambient temperatures.

27083 **(FERC/EIS—0037-Final-Draft) Eagle Rock hydroelectric project, FERC No. 2789 - Idaho. Final environmental impact statement.** (USDOE Federal Energy Regulatory Commission, Washington, DC. Office of Electric Power Regulation). Mar 1984. 212p. NTIS, PC A10/MF A01; 1; GPO Dep. Order Number DE84009774.

Portions are illegible in microfiche products.

The Raft River Rural Electric Cooperative, Inc. proposes to construct a hydroelectric project with a total installed capacity of 47.8 megawatts (MW) on the Snake River in the vicinity of American Falls, Idaho. The proposed project would consist of: (1) a 600-foot-long, 20-foot-high, ungated, gravity-arch, concrete spillway structure at River Mile (RM) 708.6 on the north channel; (2) a 550-foot-long, 40-foot-high, rockfill dam at RM 708.5 on the south channel; (3) a reservoir extending 4.7 miles upstream at a normal surface elevation of 4.242 feet; (4) a 3,100-foot-long power canal extending from the south channel; (5) a powerhouse at the power canal, containing two turbine-generating units, each with an installed capacity of 23.5 MW, and a powerhouse at the spillway, containing one turbine-generating unit with an installed capacity of 800 kilowatts (kW); and (6) a 3-mile-long transmission line interconnecting with an existing Idaho Power Company (IPC) distribution line. The proposed project would have an average annual output of 195,100 megawatthours (MWh). The proposed Eagle Rock Project would unavoidably impact the present resources and uses of the project reach of the Snake River. The loss of 4.7 miles of free-flowing river, the loss of natural reaeration, and the loss of a Class I trout fishery, which Staff considers irreplaceable, would not be fully mitigated. Additionally, whitewater boeating would be eliminated; bald eagle and waterfowl use of the project reach would be restricted; the loss of riparian communities would reduce wildlife populations; and prehistoric and historic resources would be impacted significantly. 97 references, 29 figures, 24 tables.

27084 **(FWS/OBS—83/04) Natural and modified pocosins: literature synthesis and management options.** Ash, A.N.; McDonald, C.B.; Kane, E.S.; Pories, C.A. (East Carolina Univ., Greenville, NC (USA). Dept. of Biology). Jun 1983. 173p. National Coastal Ecosystems Team, US Fish and Wildlife Service, 1010 Gause Blvd., Slidell, LA 70458.

Pocosins are ecosystems endemic to the southeastern Coastal Plain of the United States. A characteristically sparse canopy of pond pine and an impenetrable layer of evergreen shrubs and vines are the hallmarks of this wetland type. Due to their hostile nature, pocosins have historically received little human attention or use. Recent changes in technology and human needs have made pocosins attractive targets for alteration to agriculture, forestry and peat mining operations. Unfortunately, little is known concerning environmental effects of pocosin alteration, the needs of pocosin wildlife, or the effects of pocosin alteration on adjacent ecosystems. This document attempts to shed light on some of the problems of altering pocosins to human use by synthesizing the available literature on natural and modified pocosins, and by outlining management options for wildlife in natural and modified pocosin settings. 269 references, 68 figures, 20 tables.

27085 (LBL—13500, pp 5.5-5.7) **Estuarine impacts of fossil-fuel-based technologies: a case study.** Ritschard, R.L.; Berg, V.J.; Henriquez, M.A. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

The potential cumulative ecological impacts on a specific estuarine system resulting from fossil-fuel-based technollogies was studied. The upper reaches of San Francisco Bay were used as a case study because the majority of such activities in California occur in this region. The specific study area used in this project is divided into six zones in the northern reach. Available data indicate that energy-related discharges, as well as other industrial wastes, may not be the most significant contributors to pollutant loading of the Bay. Municipal outfalls and Delta outflow seem more important to the well-being of the Bay ecosystem, at least in terms of the volume and mass loading of different effluents.

27086 (LBL—13500, pp 5.8-5.11) **Environmental impacts of Marine Biomass.** Ritschard, R.L.; Berg, V.J.; Killeen, S. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

The workshop was conducted with three objectives. First, the participants were asked to identify both positive and negative potential environmental issues of an open ocean biomass system that employs artificial upwelling. Second, each issue was evaluated by an extensive discussion to determine how critical the issue was to the success of the marine biomass program. Finally, the attendees submitted recommendations for research in the environmental aspects of the kelp farm system.

27087 **(DOE/MI/02503—T1) Implications of the energy crisis on minorities in southcentral Texas.** Williams, S.R.; Slaughter, D. (Prairie View A and M Univ., TX (USA). Center for Energy Affairs). 1981. Contract FG01-80MI02503. 56p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84011129.

The purpose of the present research was the examination of the social and psychological correlates of the energy crisis, the analysis of whether the costs of energy force the choice between energy and other goods and services and to assess the survey population's attitude to and knowledge of alternative energy sources. The data source was the minority population in Harris

County, Texas. The results of the study indicate that low-income minorities do perceive some disruption in personal or interpersonal functioning that is due to the rising cost of energy. In examining social correlates of the energy crisis seventy-eight percent of those studied felt that their life-styles had been affected by the energy crisis. Most respondents felt worried or upset over the rising costs of energy, perceived tension in their households and were not as satisfied with their life as before the energy crisis. Almost one-half of the respondents reported more family quarrels as a result of rising energy costs. A large percentage of respondents reported consuming less energy in 1981 than in 1974. In terms of energy use patterns many of the respondents did make an effort to reduce energy consumption. Black respondents reported greater conservation efforts than Mexican-American respondents. The data indicates that when individuals are familiar with energy alternatives they are, by and large, willing to use those alternatives. The notable exception was nuclear energy; those respondents familiar with nuclear energy were almost evenly divided on willingness to use nuclear energy.

27088 **(LA-UR—84-1231) Impact of technology on the Hispanic community.** Vigil, J.C. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 17p. (CONF-8404138—2). NTIS, PC A02; 3; GPO Dep. Order Number DE84011331.

From 8. national engineering symposium of the Mexican American Engineering Society; Albuquerque, NM, USA (11 Apr 1984).

Paper copy only, copy does not permit microfiche production.

Technological innovation and its introduction into all aspects of American society are escalating rapidily. Traditional job areas are shrinking and new areas are developing that require greater preparation and sophistication. Increasingly higher educational levels are being required to compete for traditional jobs because of the increasing complexity of our society. Education, particularly in mathematics and science, is essential to participate knowledgeably and fully in a high-technology society. Individuals in our society who do not possess the levels of skills, literacy, and training essential to this new era will be effectively disenfranchised, not simply from material rewards, but also from a chance to participate fully in our national life. Hispanics have historically been under-represented in high technology jobs. The situation will not improve unless greater efforts are made to interest Hispanic youth in science and engineering. This will require a multi-pronged approach, since the insufficient participation of Hispanics in science and engineering is rooted in mutually reinforcing economic, social, and cultural factors.

27089 (LBL—13500, pp 5.17-5.20) **Growth and energy development in the rural west.** Sextro, R.G.; Bernier, J.M. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

This paper reviews the changes in rural employment and population growth over the past decade. Possible future energy activities and their implications for the rural areas of the western states are discussed.

27090 **Utilization of critical periods during development to study the effects of low levels of environmental agents.** Russell, L.B. (Biology Division, Oak Ridge National Lab., Oak Ridge, TN 37830). pp 143-162 of Measurement of risks. Berg, G.G.; Maillie, H.D. New York, NY; Plenum Publishing Corp. (1981). (CONF-800601—). Contract W-7405-ENG-26.

From 13. Rochester international conference on environmental toxicity--measurement of risks; Rochester, NY, USA (2 Jun 1980).

This chapter shows how careful definition of critical periods in the development of selected characters can result in experimental systems that may be highly useful in studying risk at low levels of exposure. Presents 3 systems that utilize critical periods to study low-level effects: 1) cell kinetics as an indicator of nervous-system maldevelopment; 2) oocyte depletion; and 3) homeotic shifts in the skeleton. Discusses application of the sensitive systems to the testing of chemicals and the role of sensitive stages in estimating risk. Suggests that tests such as the 3 discussed in this paper, which are developed with strict attention to specific critical periods, can provide rapid and sensitive means for revealing whether an agent is capable of causing developmental interference. Concludes that epidemiological investigations can lose much of their value unless critical periods are known for the endpoints being studied.

5303 Environmental Impact Statements

27091 **(DOE/EIS—0005-FS) Bonneville Power Administration proposed fiscal year 1979 program. Facility location supplement. San Juan Islands Area Service, 115-kV submarine transmission cable. Final supplement, final environmental impact statement.** (USDOE Assistant Secretary for Environment, Washington, DC). Jan 1981. 75p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84010949.

Portions are illegible in microfiche products.

A proposal for transmission facilities to serve the San Juan Islands is described. The proposal consists of four subprojects: (1) a 4.5 mile 115-kV submarine cable across Rosario Strait from Fidalgo Substation on Fidalgo Island to the eastern shore of Decatur Island; (2) a 1.5 mile 115-kV underground cable across Decatur Island; (3) a 2.2 mile 115-kV submarine cable across Lopez Sound from the western shore of Decatur Island to the Lopez Substation on the eastern shore of Lopez Island; and (4) replacement of approximately 1000 ft. of double-circuit wood-pole overhead line with two 34.5-kV underground cables on the eastern side of Decatur Island to move the existing terminal structure inland. 34 references, 2 figures.

27092 **(DOE/EIS—0005-FS-2) Bonneville Power Administration proposed fiscal year 1979 program, facility planning supplement Southwest Oregon Area Service. Final environmental impact statement, final supplement.** (USDOE Assistant Secretary for Environment, Washington, DC). Sep 1979. 307p. NTIS, PC A14/MF A01; 1; GPO Dep. Order Number DE84011249.

Portions are illegible in microfiche products.

This Final Facility Planning Supplement documents the environmental impacts of two electrical plans of service to provide power to southwestern Oregon and reinforce the Pacific Northwest power grid. BPA proposes construction of the following two transmission facilities: (1) a 500-kV line from Idaho Power Company's Brownlee Substation in Idaho to BPA's Slatt Substation near Arlington, Oregon, and (2) a 500-kV line from Buckley (near Maupin, Oregon) to Malin, Oregon. The new 500-kV transmission line would provide backup to the overall system in case of loss of existing lines. This backup would be available for power transfer in the Pacific Northwest as well as into the Idaho region when that system requires reinforcement. The impacts at this planning stage are generalized pertaining to normal construction and maintenance effects. Construction, operation, and maintenance of a transmission line along any of the alternate corridors would have minimal impact on air quality. Impacts to geology, soils, and vegetation, disturbance to wildlife and recreation facilities would occur during construction activities. All options, except the proposed plan of service, required some new right-of-way. Where new right-of-way is required, impacts would be greater.

27093 **(DOE/EIS—0030) Bonneville Power Administration proposed fiscal year 1980 program. Final environmental impact statement.** (USDOE Assistant Secretary for Environment, Washington, DC). Mar 1979. 563p. NTIS, PC A24/MF A01; 1; GPO Dep. Order Number DE84011234.

Portions are illegible in microfiche products.

This environmental statement describes BPA's proposed program for fiscal year 1980. This proposed program for which BPA is requesting approval consists of the construction of new additions and modifications to its existing transmission system as well as the

continued maintenance of existing facilities during the fiscal year. The proposed program would result in the diversion of approximately 450 acres (182 ha) of forest land to other land uses compatible with transmission line rights-of-way; the permanent removal of all vegetative cover from approximately 67 to 77 acres (27 to 31 ha) as a result of the construction of the new substations and transmission lines; control of all tall woody vegetative species on forest land that would be required for maintenance activities during fiscal year 1980; removal of up to 33 acres (13.3 ha) of cropland from production; vegetative control measures which will reduce vegetative cover on about 19,060 acres (7712 ha) of existing right-of-way and 920 acres (372 ha) of existing substation property; effects both beneficial and adverse on existing wildlife habitat which would occur as a result of construction and maintenance operations as indicated above; impacts to fishery and aquatic organisms as represented by the waterways or tributary streams that would be crossed during construction; visual impacts to recreational resources; introduction of combustion byproducts into the atmosphere as a result of open burning of slash timber from clearing approximately 450 acres (182 ha) of forest land; resultant soil erosion and losses attributable to the clearing, construction, and maintenance activities involved in the proposed program; audible noise during operation of construction equipment and transmission lines and substations; increased risk of man-caused accidents; and maintenance of a high standard of living and level of productivity for the Pacific Northwest through continued availability of reliable electric service.

27094 **(DOE/EIS—0030-FS-1) Bonneville Power Administration proposed fiscal year 1980 program. Facility location supplement, northwest Montana/north Idaho support and Libby integration. Final environmental impact statement, final supplement.** (USDOE Assistant Secretary for Environmental Protection, Safety and Emergency Preparedness, Washington, DC). Aug 1981. 284p. NTIS, PC A13/MF A01; 1; GPO Dep. Order Number DE84011248.

Portions are illegible in microfiche products.

The proposal involves rebuilding to higher capacity 93 miles (149 km) of transmission line primarily on existing right-of-way. Implementation of the proposal will divert about 48 acres (19 ha) of forest land to other land uses compatible with a transmission line right-of-way; remove 2.6 acres (1.1 ha) of farmland from range and crop production; remove all vegetation from about 11 miles (18 km) of new access roads; cause potential wildlife impacts, beneficial and adverse, as a result of the aforementioned vegetation removal; increase collision hazards to waterfowl and bald eagles; create visual impacts in recreational and residential areas; affect aquatic organisms and vegetation where the line crosses a wetland and streams; introduce small amounts of combustion byproducts into the atmosphere as the result of open burning of slash from clearing and construction activities; create audible noise during operation of construction equipment; maintain the quality and reliability of electrical service to the area; conserve energy by reducing transmission system losses. 104 references, 12 figures, 7 tables.

27095 **(DOE/EIS—0077-FS) Bonneville Power Administration: Crow Butte Slough Crossing. Supplement to final EIS, Ashe-Slatt (Pebble Springs) 500-kV transmission line.** (USDOE Assistant Secretary for Environmental Protection, Safety and Emergency Preparedness, Washington, DC). Apr 1982. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010950.

Portions are illegible in microfiche products.

The proposed action is to construct a 4700-foot segment of the Ashe-Slatt transmission line at Crow Butte Slough, overhead on towers on the existing right-of-way. Alternatives to the proposal include undergrounding the line on the right-of-way or on an existing causeway off the right-of-way, and no action (removing an existing temporary overhead line). The proposed action will result in: temporary disruption (along the right-of-way) and/or destruction (at tower sites) of the habitat, including a wetlands area, and localized noise during construction; both direct (aesthetic) and indirect (recreational) visual effects of the towers and lines, some waterfowl mortality from in-flight collisions, possible corona noise or electric/magnetic effects on some animals, and vegetative control by minor herbicide use during operation. Underground alternatives on the right-of-way cause greater temporary disruption and/or destruction of the habitat, temporary deterioration of the water quality, and possible interference with access to the Crow Butte State Park during construction; terminal station visibility, and possible impacts from accidental chemical (dielectric fluid) releases, from minor uses of herbicides, from cable heat on revegetation, or from cooling station noise to animals during operation. The underground alternatives off the right-of-way avoid the wetlands area and have less effect on aquatic elements, but are considerably more disruptive to Park access. The no-action alternative jeopardizes service in the Willamette Valley, a rapidly growing area in western Oregon. While the impacts differ for the proposed action and the different alternatives, and while the proposed action is not environmentally preferred, the overall impact of any of the action options is not significant or sufficient to preclude selection on an environmental basis. The economic advantage of the proposed action is considerable. 1 figure.

55 BIOMEDICAL SCIENCES, BASIC STUDIES

27096 **(NP—4770238) GBF scientific report 1982.** (Gesellschaft fuer Biotechnologische Forschung m.b.H., Braunschweig (Germany, F.R.)). 1983. 174p. (In German). Gesellschaft fuer Biotechnologische Forschung m.b.H., Braunschweig, Germany, F.R.

The Scientific Report 1982 of the GBF (Gesellschaft fuer Biotechnological Forschung mbH) reveals that research work continuos to be focussed on the search for, and preparation of substances for the fields of pharmacy and medicine. Results achieved were communicated in over 170 publications and some 150 lectures and a number of processes and substances have been patented. Cooperation has continued with a number of firms and questions of common interest tackled; contracts have been concluded with some companies for the scale of know-how or licences, especially on the preparation of enzymes and substances of use in gene technology. Greatest progress was achieved in the fields of cell culture techniques/cell biology, gene technology and enzyme technology.

27097 (CONF-811048—Summs., pp 4p, Paper 1) **Olfactory and chemical characterization of indoor air - towards a psychophysical model for air quality.** Berglund, B.; Berglund, U.; Lindvall, T.; Nicander-Bredberg, H. (Univ. of Stockholm, Sweden). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The odor strength of the total air samples was obtained with the aid of observers. These odor strength values were compared with different statistical measures obtained from the perceptio-olfactorygrams (POG) of corresponding samples. In line with our earlier research, some simple models of odor summation were tried. These were: (a) strongest POG value, (b) mean POG value, (c) frequency of odorous components detected by FID, (d) mean POG value of those FID-detected components that most frequently were reported to have a strong odor, and (e) frequency of the FID-detected components that were most frequently reported to have a strong odor. A liner regression analysis was performed on 88 air samples and a Pearson correlation coefficient of .73 was obtained for model (e) above. The next highest correlation (.25) was obtained for model (c) and all the other correlations fell close to zero. (DT)

27098 **Transport of oyster larvae in an estuary.** Seliger, H.H.; Boggs, J.A.; Rivkin, R.B.; Biggley, W.H.; Aspden, K.R.H. (Johns Hopkins Univ., Baltimore, MD). *Marine Biology (Berlin);* 71: 57-72(1982). Contract AC02-76EV03278.

Vertical and horizontal distributions of 3 larval stages of the oyster Crassostrea virginica were measured concurrently with phytoplankton species compositions, phytoplankton size distributions and physical hydrographic parameters in tributaries of the Chesapeake Bay (USA) during the oyster spawning seasons of 1980 and 1981. The superposition of the biological distributions upon the physical hydrographic data provide instantaneous distributions of

the entire system which are consistent with upstream transport of oyster larvae. Oyster larvae distributions in the Choptank River and its Broad Creek and Tred Avon River tributaries can be described in terms of three contiguous regions: a common spawning region; an intermediate, upstream transport region; and a seed bed region where major spat set occurs. The phytoplankton species compositions and abundances in the size fraction less than 10μm in the tributary system during the transport were sufficient to supply optimum growth requirements of developing larvae. The transport proposed can explain the 30 yr record of consistently higher spat set success in one tributary, the Tred Avon River. This may be a general mechanism whereby oysters maintain reproductive success and emigrate to seed bed regions in the Chesapeake Bay.

27099 **Continuous migration model with stable demography.** Sawyer, S. (Purdue Univ., West Lafayette, IN); Felsenstein, J. *Journal of Mathematical Biology;* **11**: 193-205(1981). Contract AT06-76EV71005;AM06-76RL02225.

A probability model of population undergoing migration, mutation, and mating in a geographic continuum R is constructed, and an integro-differential equation is derived for the probability of genetic identity. The equation is solved in one case, and asymptotic analysis done in others. Individuals at x, yεR in the model mate with probability V(x,y)dt in any time interval (t,t+dt). In two dimensions, if V(x,y) = V(x-y) where V(x) ≈ V(x/β)/β² approaches a delta function, the equilibrium probability of identity vanishes as β→0. The asymptotic rate at which this occurs is discussed for mutation rates u identical with $u_0 > 0$ and for β ≈ Cu/sup alpha/, α > 0, and u → 0.

27100 (CONF-811048—Summs., pp 4p, Paper 70) **Estimation of personal exposure to carbon monoxide from fixed and portable monitoring.** Atherton, M.J. (Frank E. Basil, Inc., Columbia, MD). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Carbon monoxide levels in excess of 200 ppM have been observed in urban highways during rush hour traffic and several occupational groups (i.e., garage attendants, traffic officers, cab drivers) have incurred markedly elevated COHb levels from work-related exposures sustained in urban traffic. Thus the selection and field use of accurate exposure monitoring techniques have become a singularly important issue whose resolution will hopefully advance new knowledge of pollution control efficacy. This report examines monitoring techniques in current use by comparing human exposures to CO derived from portable monitors, fixed-site monitors, and alveolar breath samples. (DT)

27101 (LBL—13500, pp 2.16-2.20) **Energy conversion by the retinal protein, bacteriorhodopsin.** Packer, L.; Quintanilha, A.T.; Mehlhorn, R.J.; Fry, I.; Herz, J.; Lam, E.; Tristam-Nagle, S. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

Bacteriohodopsin is found in the cell membranes of certain salt-requiring bacteria including Halobacterium halobium. Our research program is attempting to determine the molecular details of how this protein utilizes light from the sun to produce an electrical current across the bacterial membranes.

27102 **(SSRL—84/02) X-ray absorption spectroscopy of hemocyanin and hemerythrin.** Co, M.S. (Stanford Univ., CA (USA). Stanford Synchrotron Radiation Lab.). May 1983. Contract AC03-76SF00515. 202p. NTIS, PC A10/MF A01; 1; GPO Dep. Order Number DE84010930.

Portions are illegible in microfiche products; Thesis.

The oxygen binding site of hemocyanin has two copper atoms coordinated to the side chains from the polypeptide chain. Copper extended x-ray absorption fine structure (EXAFS) and absorption edges of the protein were studied. Comparison of EXAFS from three molluscan oxyhemocyanins (Megathura crenulata, the α/sub c/ and β/sub c/ of Helix pomatia) indicates that the structure of the binuclear copper sites is very similar in the three proteins. Four different forms (oxy, deoxy, dimer, and half-apo) of hemocyanin from M. crenulata were selected for a detailed study. A structural model of the oxygen binding site is proposed based on the EXAFS results. The oxygen binding site in hemerythrin contains two iron atoms coordinated to the side chains from the polypeptide chain. Iron EXAFS and absorption edges from Phascolopsis gouldii hemerythrin were studied. Five different forms (oxy, deoxy, aquomet, hydroxomet, and azidomet) of the protein were selected for this study. A structural model of the oxygen binding site in hemerythrin is proposed.

27103 **Reconstitution of the membrane-bound, ubiquinone-dependent pyruvate oxidase respiratory chain of Escherichia coli with the cytochrome d terminal oxidase.** Koland, J.G.; Miller, M.J.; Gennis, R.B. (Univ. of Illinois, Urbana). *Biochemistry;* **23**: No. 3, 445-453(31 Jan 1984). Contract AC02-80ER10682.

Pyruvate oxidase is a flavoprotein dehydrogenase located on the inner surface of the Escherichia coli cytoplasmic membrane and coupled to the E. coli aerobic respiratory chain. The role of quinones in the pyruvate oxidase system is investigated, and a minimal respiratory chain is described consisting of only two pure proteins plus ubiquinone 8 incorporated in phospholipid vesicles. The enzymes used in this reconstitution are the flavorprotein and the recently purified E. coli cytochrome d terminal oxidase. The catalytic velocity of the reconstituted liposome system is about 30% of that observed when the flavoprotein is reconstituted with E. coli membranes. It is also shown that electron transport from pyruvate to oxygen in the liposome system generates a transmembrane potential of at least 180 mV (negative inside), which is sensitive to the uncouplers carbonyl cyanide p-(trichloromethoxy)phenylhydrazone and valinomycin. A transmembrane potential is also generated by the oxidation of ubiquinol 1 by the terminal oxidase in the absence of the flavoprotein. It is concluded that: the flavoprotein can directly reduce ubiquinone 8 within the phospholipid bilayer; menaquinone 8 will not effectively substitute for ubiquinone 8 in this electron-transfer chain; and the cytochrome d terminal oxidase functions as a ubiquinol 8 oxidase and serves as a coupling site in the E. coli aerobic respiratory chain. These investigations suggest a relatively simple organization for the E. coli respiratory chain.

27104 **Comparison of the mechanism of cellulose biosynthesis in plants and bacteria.** Delmer, D.P. (Michigan State Univ., East Lansing); Benziman, M.; Klein, A.S.; Bacic, A.; Mitchell, B.; Weinhouse, H.; Aloni, Y.; Callaghan, T. *Journal of Applied Polymer Science: Applied Polymer Symposium;* 1-16(1983). (CONF-8205234—Vol.1). Contract AC02-76ER01338.

From 9. cellulose conference; Syracuse, NY, USA (24 May 1982).

Results of recent studies on the mechanism of cellulose biosynthesis in higher plants and in the bacterium Acetobacter xylinum are compared and contrasted. In higher plants, the synthesizing complex is thought to be mobile in the fluid-mosaic plasma membrane, whereas it is stationary in cells of A. xylinum. Similar patterns of sensitivity to inhibitors of cellulose synthesis as well as to changes in transmembrane electrical potential are shared by both plants and A. xylinum. In vivo tracer studies with both types of organisms support the concept the UDP-glucose is a precursor of cellulose. A characterization of additional compounds which may serve as precursors in A. xylinum beyond the level of UDP-glucose is described. UDP-glucose:β-glucan synthetases have been solubilized from plants and A. xylinum. Attempts at purification of solubilized soybean glucan synthetases indicate that a factor(s) is lost during purification which is necessary for activity; studies described elsewhere indicate that the A. xylinum β-1,4-glucan synthetase requires a protein factor for GTP activation. The stimulatory effect of polyethylene glycol (PEG) on glucan synthetases from both plants and A. xylinum may relate to stabilization by PEG of enzyme-factor associations. 34 references, 3 figures, 3 tables.

27105 **Inhibition of DNA synthesis, independent of DNA adduct formation, by benzo[a]pyrene diol epoxide in mammalian cells.** Lockhart, M.L.; Rosenberg, B.H. (Sloan-Kettering Inst. for Cancer Research, Rye, NY). *Carcinogenesis (New York);* **4**: No. 2, 125-130(1983).

Treatment of SV40-infected CV-1 cells with the ultimate carcinogen anti-benzo[a]pyrene diol epoxide (BPDE) at 1 x 10^{-4} mg/ml or higher reduced the rate of viral DNA synthesis to an extent dependent on the BPDE concentration; similar reductions in cellular DNA synthesis were produced in infected and uninfected cells. Treatment of cells with BPDE, followed by removal of BPDE, at various times before infection with SV40 gave the same results. Recovery or partial recovery of DNA synthesis occurred when the BPDE concentration was below 6 x 10^{-4} mg/ml; at higher concentrations the cells were killed. Simultaneously replicating viral DNA's from viruses infecting the same cells before and after BPDE treatment of the cells exhibited the same reduced rate of synthesis. The evidence indicates that covalent adducts in viral DNA are not responsible for its reduced replication rate; moreover, it is probable that an insignificant number of adducts is produced in intracellular viral DNA at BPDE concentrations that do not kill CV-1 cells. Rather, it appears likely that BPDE inhibits viral DNA synthesis by attacking cellular DNA or non-DNA targets. Caution is therefore required in relating the effects of BPDE and other carcinogens to DNA adduct formation.

27106 **Poliovirus RNA synthesis in vitro: structural elements and antibody inhibition.** Semler, B.L.; Hanecak, R.; Dorner, L.F.; Anderson, C.W.; Wimmer, E. (State Univ. of New York, Stony Brook). *Virology;* **126**: 624-635(1983).

The poliovirus RNA polymerase complex has been analyzed by immunoautoradiography using antibody probes derived from purified replicase (P3) region viral polypeptides. Antibody preparations made against the polio RNA polymerase, P3-4b, detected a previously unreported cellular protein that copurifies with the RNA polymerase. An IgG fraction purified from rabbit antiserum to polypeptide P3-2, a precursor fo the RNA polymerase, specifically inhibits poliovirus RNA synthesis in vitro. The authors have also immunoprecipitated a 60,000-dalton protein (P3-4a) with antiserum to protein P3-4b and have determined the precise genomic map position of this protein by automated Edman degradation. Protein P3-4a originates by cleavage of the RNA polymerase precursor at a glutamine-glucine amino acid pair not previously reported to be a viral cleavage site.

27107 **Generation and characterization of aerosols of dispersed surface active phospholipids by ultrasonic and jet nebulization.** Marks, L.B.; Oberdoerster, G.; Notter, R.H. (Univ. of Rochester School of Medicine, NY). *Journal of Aerosol Science;* **14**: No. 5, 683-694(1983). Contract AC02-76EV03490.

The aerosolization of a multicomponent lipid mixture extracted from bovine lung lavage was investigated in terms of the humidity dependence of the particle size distribution produced by both an ultrasonic and a jet nebulizer. Two methods, sonication on ice and mechanical vortexing, were used to disperse the lipid mixture in 0.15 M NaCl prior to aerosolization in each nebulizer. For both dispersion methods, the particle size dependence on humidity was affected by the presence of dispersed lipids (concentration ~ 1.5mg/ml) compared to the case of 0.15 M NaCl aerosols without surfactants. The aerosol from the jet nebulizer consisted of dry particles, and the typical deliquescent behavior for NaCl particles could be demonstrated when relative humidity was increased above 70%. However, when the lipid mixture was nebulized, no such particle growth was observed up to 95% relative humidity. The emerging aerosol from the ultrasonic nebulizer consisted of droplets due to high humidity. In the case of NaCl, these droplets evaporated and became smaller in size with decreasing humidity. For the lipid-saline mixture, the droplets were much more stable and started to evaporate only below 60-70% relative humidity Although both ultrasonic and jet nebulizers gave particle size distributions in the range for significant alveolar deposition (0.4-1.5 μm AMAD), the ultrasonic nebulizer aerosol sizes at high humidity were optional in this respect. Calculations of lipid surface and bulk concentration suggest that a significant part of the observed phospholipid dispersion effects on aerosol behavior may be related to bulk phase interactions.

27108 **Comparison of the kinetics fo ribooligonucleotide, deoxyribooligonucleotide, and hybrid oligonucleotide double-strand formation by temperature-jump kinetics.** 473194elson, J.W.; Tinoco, I. Jr. (Univ. of California, Berkeley). *Biochemistry;* **21**: 5289-5295(1982). Contract AC03-76SF00098.

The kinetics of double-strand formation were measured by using temperature-jump kinetic techniques for the DNA oligonucleotides $dCA_5G + dCT_5G$, the analogous RNA oligonucleotides $rCA_5G + rCU_5G$, and the hybrid $rCA_5G + dCT_5G$. The DNA oligonucleotides have a faster rate of recombination and a slower rate of dissociation at 12.0°C than the RNA oligonucleotides; the hybrid has about the same recombination rate and a slightly faster dissociation rate than the RNA oligonucleotides. The activation energies for recombination of the DNA and RNA oligonucleotides are both near 0 kcal/mol. The difference in dissociation and recombination activation energies is consistent with the thermodynamic results obtained earlier. The relaxation process is composed of two exponential components for the RNA and hybrid oligonucleotides at temperatures of 12.0°C and lower. One exponential component is observed for these oligonucleotides above 12.0°C and for the DNA oligonucleotides at all temperatures.

27109 (CONF-811048—Summs., pp 4p, Paper 19) **Measurements of radon daughters in 5 600 Swedish homes.** Hildingson, O. (Swedish National Testing Inst., Boras). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

In the beginning of the research it was estimated that 15,000 dwellings out of all buildings built of lightweight concrete with high radiumcontnet in Sweden would have a radon daughter concentration above 400 Bq/m^3. Extrapolating from our results sofar the number would be 50,000. One fifth of these dwellings would have radon daughter concentration abote 1000 Bq/m^3. these houses have to be rebuilt within two years according to the Swedish Building Code. The number will be still higher if radon exhalation from the ground is taken into account. This report describes the first 5600 measurements. Up to summer 1982 probably 15,000 dwellings will have been measured. so far we have found that radon from ground has more influence than we thought in the beginning. Currently research is made to investigate radonexhalation from building materials and ground, and to investigate different measures to decrease the Rnd concentration indoor. (DT)

27110 (CONF-811048—Summs., pp 4p, Paper 53) **Correlations between lung cancer and phosphates.** Fleischer, R.L. (General Electric Research and Development Center, Schenectady, NY). 1981. NTIS, PC A13/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The question raised here is whether elevated radon emission associated with the mining or processing or uranium-rich material could lead to increases in the incidence of lung cancer. For example, phosphate mining is a major industry (52.10^9 kG in the United States in 1977) and the deposits plus their mining and milling involve large amounts of uranium, radium, and radon, and associated radiochemical pollution including the release of ^{222}Rn. The amount of uranium contained in the annual production of processed phosphate rock is approximately equal to that mined as uranium ore. Both phosphates and uranium have been examined in this study. (DT)

27111 **Method and apparatus for fringe-scanning chromosome analysis.** Norgren, R.M.; Gray, J.W.; Hirschfeld, T.B. (to Dept. of Energy). US Patent Application 6-528,284. 31 Aug 1983. 26p. Contract W-7405-ENG-48.

Portions are illegible in microfiche products.

Apparatus and method are provided for analyzing submicron-sized features of microscopic particles. Two central features of the invention are (1) constraining microscopic particles to flow with substantially constant orientation through a predetermined in-

terference fringe pattern, and (2) estimating particle structure by analyzing its fringe profile. The invention allows nearly an order of magnitude higher resolution of chromosome structure than possible with currently available flow system techniques. The invention allows rapid and accurate flow karyotyping of chromosomes.

27112 **Hypersensitivity to cell killing and mutation induction by chemical carcinogens in an excision repair-deficient mutant of CHO cells.** Thompson, L.H.; Salazar, E.P.; Brookman, K.W.; Hoy, C.A. (Lawrence Livermore National Lab., CA). *Mutation Research;* **112**: 329-344(1983). Contract W-7405-ENG-48.

A strain of Chinese hamster ovary cells that is deficient in nucleotide excision repair, strain UV5, was compared with the normal parental CHO cells in terms of cytotoxicity and mutagenesis after exposure to several chemical carcinogens that are known to produce bulky, covalent adducts in DNA. Induced mutations were measured at the hprt locus using thioguanine resistance and at the aprt locus using azaadenine resistance. The compounds tested that required metabolic activation (using rate or hamster microsomal fractions) were 7,12-dimethylbenz(a)anthracene, 3-methylcholanthrene, benzo(a)pyrene, aflatoxin B1, 2-acetylaminofluorene, and 2-naphylamine. The direct-acting compounds (+/-)-r-7,t-8-dihydroxy-t-9,10-epoxy-7,8,9,10-tetrahydrobenzo(a)pyrene, N-acetoxy-2-acetylaminofluorene, and N-OH-2-naphththylamine were also studied. For all compounds except 2-napthylamine and its active metabolite, the repair-deficient cells were significantly more sensitive to killing than the normal CHO cells. Mutation induction at both loci was also more efficient in UV5 cells in each instance where enhanced cytotoxicity was observed. By using tritium-labeled N-acetoxy-2-acetylaminoflourene, normal and mutant cells were shown to bind mutagen to their nuclear DNA with similar efficiency, and a greater amount of adduct removal occurred in the normal cells. From this study it is concluded that the use of excision repair-deficient CHO cells provides enhanced sensitivity for detecting mutagenesis and that a positive differential cytotoxicity response gives an indication of repairable, potentially lethal genetic damage.

27113 **Induction of sister chromatid exchanges by 5-fluorodeoxycytidine: correlation with DNA methylation.** Chambers, J.C.; Taylor, J.H. (Florida State Univ., Tallahassee). *Chromosoma;* **85**: 603-609(1982). Contract AS05-78EV05854.

Chinese hamster ovary cells grown in medium containing 10 μM 5-fluorodeoxycytidine for forty-eight hours were found to have up to 5% of the deoxycytidine residues of the DNA substituted by this analog. Cytological studies of these cells showed that the incorporated 5-FdC caused a two-fold increase of sister chromatid exchanges (SCE) over the control level. However, 5-FdC was capable of inducing SCE only after it had been present in the cell for at least two cycles of DNA synthesis. This is in contrast to several other chemicals that were tested which induced SCE immediately after the first DNA synthesis. The authors consider the possibility that the delayed effect may be related to hypomethylation of cytosine in the newly replicated DNA.

27114 **Cell volumes, maximal growth rates of unicellular algae and ciliates, and the role of ciliates in the marine pelagial.** Banse, K. (Univ. of Washington, Seattle). *Limnology and Oceanography;* **27**: No. 6, 1059-1071(1982). Contract AT06-76EV75026.

A review of growth rates of diatoms and dinoflagellates in light-saturated, nutrient-replete cultures at 20°C confirms weak dependence on cell volume or mass. These maximal (intrinsic) rates are not linearly related to surface area or surface-to-volume ratio of the cells. The growth of most diatoms is materially faster than that of dinoflagellates; other algae fall in between or below the dinoflagellates. Small ciliates have appreciably higher intrinsic growth rates than algae of the same cell volume. The average food consumption per ciliate in the marine pelagic realm is inferred to be very low, so that the realized specific growth rates are much smaller than the intrinsic potentials. Also, a previously postulated refuge from predation, afforded by small size, is extended down to about 10-μm^3 cell volume.

27115 **Laboratory determined mortality, fecundity and growth rates of Thalia democratica Forskal and Dolioletta gegenbauri Uljanin (Tunicata, Thaliacea).** Deibel, D. (Skidaway Inst. of Oceanography, Savannah, GA). *Journal of Plankton Research;* **4**: No. 1, 143-153(1982). Contract AS09-76EV00936.

Laboratory experiments are reported which provide information on culture conditions, mortality, fecundity and growth of Thalia democratica and Dolioletta gegenbauri in relation to simulated environmental conditions. Thaliacenas were maintained in laboratory culture at 20°C. Culture vessels were 2.5 l glass bottles. Diets consisted of Isochrysis galbana and Peridinium trochoideum, offered alone or together at total concentrations of 0.25 to 0.70 $mm^3 \times l^{-1}$. Laboratory released aggregate stages of Thalia were maintained for one week and gonozooid, phorozooid and oozooid stages of Dolioletta were reared for up to three weeks with daily mortality rates of 5-10%. There was no effect of diet on mortality rate. Thalia did not reproduce sexually but Dolioletta did routinely. Each Thalia solitary relased a mean (+/- SE) of 54 +/- 8 aggregates of 1.1-2.1 mm length. Each Dolioletta gonozooid produced 2-6 larvae 0.6-1.2 mm long, and each phorozooid released a mean of 31 +/- 11 gonozooids. Aggregate growth was exponential for 7 days, with daily exponential growth coefficients (k) ranging from 0.03-0.36. Gonozooids grew exponentially for 17 days with a range of k from 0.08-0.25, and phorozooids grew exponentially for 5 days with k ranging from 0.17-0.69. There was no effect of food concentration on k. Generation times of Thalia and Dolioletta were estimated to be from 3-6 weeks. These are probably maximum generation times for these two species in the Georgia Bight.

27116 **Light-shade adaptation by the oceanic dinoflagellates pyrocystis noctiluca and P. fusiformis.** Rivkin, R.B.; Seliger, H.H.; Swift, E.; Biggley, W.H. (Johns Hopkins Univ., Baltimore, MD). *Marine Biology (Berlin);* **68**: 181-191(1982). Contract AC02-76EV03278.

Species-specific rates of photosynthetic carbon uptake (P), chlorophyll a content and P versus irradiance (P-I), have been measured for cells of Pyrocystis noctiluca and P. fusiformis collected in the Sargasso Sea. These same measurements and the assay for ribulose bis-phosphate carboxylase (RuBP-Case), have been made for cultures of P. noctiluca in a 12 h L:12 h D photoperiod at 9 different constant or at changing light intensities. The photosynthetic capacity (P/sub max/), of cells captured below the surface mixed layer was lower by a factor of 10 compared with cells collected from the surface mixed layer. The P/sub max/ for P. noctiluca collected and incubated within the surface mixed layer was the same as for cell cultures grown under high light, non nutrient-limiting conditions. In laboratory cultures under constant low light intensities, chl a $cell^{-1}$ increased by a factor of 5 while both p/sub max and RuBPCase activity decreased by a factor of ca 4 compared with high light intensities. For all irradiance conditions in culture, the P-I dependence could be described by the simple Michaelis-Menten formula. The ratio of P/sub max/ to K_1, (the light intensity where P=P/sub max//2) was a constant with a Coefficient of Variation of 12%: the constancy of this ratio, the parallel changes in RuBPCase activity with P/sub max/ and the constant chl a $cell^{-1}$ in the Sargasso Sea imply that for P. noctiluca and presumably P. fusiformis in nature, a dark enzymatic step rather than changes in photosynthetic pigment concentrations may regulate the photosynthetic capacity in the changing photic environment.

27117 **(DOE/EV/01300—48) Analysis by transposable element mutagenesis of tissue-specific R alleles in maize.** (Wisconsin Univ., Madison (USA)). Apr 1984. Contract AC02-76EV01300. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010929.

Portions are illegible in microfiche products.

Transposition of the mobile sequence Dissociation to an R allele which confers seed but not plant color (Sc) destabilizes expression giving spotted kernels. Removal of the corresponding regulator from the genome immobilizes Ds at R. The resulting (Sc)Ds

derivatives are colorless or pale seeded and stable as homozygotes. Strong seed color is rescued through recombination in heterozygotes of (Sc)Ds with an allele which confers only plant color, (P). Such crossovers provide a means of (1) mapping the position of Ds insertions within (Sc) relative to the site which distinguishes (Sc) from (P) action, and (2) systematically mutagenizing (P) and other such R elements by transferring Ds from (Sc) to homologous sites by recombination.

27118 **Application of restriction fragment length polymorphism to plant breeding.** Burr, B. (Brookhaven National Lab., Upton, NY); Evola, S.V.; Burr, F.A.; Beckmann, J.S. pp 45-59 of Genetic engineering: principles and methods. Vol.5. Setlow, J.K.; Hollaender, A. (eds.). New York, NY; Plenum Publishing Corporation (1983).

Restriction fragment length polymorphism (RFLP) is discussed in relation to its possible uses in agronomic improvement. It is shown that it is possible to construct genetic maps based on RFLPs in a number of crop plants. Experimental studies have found RFLPs are prevalent in maize. Six common maize inbreds whose DNA had been digested with two enzymes were examined and five alleles were found among them. It was then determined whether random DNA clones could detect the same degree of heterogeneity. Most of the zein clones hybridized to numerous restriction fragments. However, seven tested zein clones and all non-zein clones but one hybridized to one to three major bands. In maize as well as other crop plants RFLP markers should prove useful to plant breeders. Problems in plant breeding are discussed where molecular analytic techniques might increase the efficiency of the practitioner.

27119 **Dissection of a replication origin of Xenopus DNA.** Chambers, J.C.; Watanabe, S.; Taylor, J.H. (Florida State Univ., Tallahassee). *Proceedings of the National Academy of Sciences of the United States of America;* **79**: 5572-5576(Sep 1982).

A previously cloned 503-base pair (bp) EcoRI segment of genomic DNA from Xenopus laevis selected for enhancement of replication of its vector plasmid was moved to the EcoRI site of pBR322. This plasmid designated pJCC31 and five other clones, which were made by cleaving the 503-bp segment in relation to a dispersed repeated sequence and subcloning, were compared with pBR322 for replication by microinjection into Xenopus eggs. The replication measured by incorporation of a ^{32}P-labeled nucleotide as well as semiconservative segregation and dilution of N^6-methyladenine at the EcoRI sites showed pJCC31 to be about 15 times as efficient as pBR322. The next most efficient subclone, pJCC31-2, contains an insert with a complete 320-bp dispersed repeated sequence bracketed by an 8-bp direct repeat. This observation, along with the authors' previous report that repeated sequences of the Alu family in the human genome enhanced replication of the vector plasmid nearly as much as that of the presumptive Xenopus origin, leads to the hypothesis that members of a subset of the short dispersed repeated sequences in vertebrates function as origins for chromosomal replication. Preliminary studies also show that the presumptive Xenopus origin contains a RNA polymerase promoter that increases the transcription of the plasmid when it is microinjected into Xenopus oocytes.

27120 **(PNL-SA—12069) Clinical-pathological correlations in neoplasia.** Weller, R.E. (Pacific Northwest Lab., Richland, WA (USA)). Jan 1984. Contract AC06-76RL01830. 123p. (CONF-8404134—1). NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84010700.

From Veterinary Post-Graduate Institute seminar; Santa Cruz, CA, USA (27 Apr 1984).

Portions are illegible in microfiche products.

Hypercalcemia can cause serious morbidity and mortality among animals suffering from cancer. Cancer-associated hypercalcemia (pseudohyperparathyroidism, malignant hypercalcemia) in domestic animals is reviewed and described. It is the most common cause of elevated total serum calcium in veterinary medicine. The clinical signs and laboratory findings associated with several neoplasms are discussed, as well as the possible pathophysiologic pathways and substances by which those neoplasms cause osteoclastic skeletal resorption.

27121 **Bioelimination of ^{51}Cr and ^{85}Sr by cockroaches, Gromphadorhina portentosa (orthoptera: blaberidae), as affected by mites, Gromphadorholaelaps schaeferi (parasitiformes: laelapidae).** Schowalter, T.D.; Crossley, D.A. Jr. (Univ. of Georgia, Athens). *Annals of the Entomological Society of America;* **75**: No. 2, 158-160(Mar 1982). Contract AS09-76EV00641.

The rates of Chromium-51 and Strontium-85 assimilation and bioelimination by the hissing cockroach, Gromphadorhina portentosa (Schaum) are described when the symbiotic mite, Gromphadorholaelaps schaeferi Till, was present or removed. Mite-infested cockroaches had significantly higher rates of ^{51}Cr elimination relative to mite-free cockroaches, implying more rapid gut clearance times. The authors did not find a significant mite effect on ^{85}Sr elimination by the host, but mite effects could have been masked by the apparently unique process of nutrient assimilation and elimination by G. portentosa. Conventional models of radioactive tracer bioelimination predict a rapid initial loss of tracer due to gut clearance, followed by a slower loss due to excretion of assimilated tracer. The results indicated that assimilated ^{85}Sr was eliminated earlier than unassimilated ^{85}Sr, which was lost by defecation.

27122 **Digestive carbohydrase activities in individual marine copepods.** Hassett, R.P.; Landry, M.R. (Univ. of Washington, Seattle). *Marine Biology Letters;* **3**: 211-221(1982).

A digestive enzyme assay is presented that is applicable to small sample sizes, on the order of individual Calanus pacificus Brodsky. Responses to time and enzyme concentration were linear under the specified conditions. Assays of individual copepods revealed a high coefficient of variation for all three enzymes, indicating the potential for large variability in field samples. 90-95% of the variability was attributable to differences among animals. The digestive carbohydrases appear to be responding collectively, but it remains for controlled experiments to determine the extent of this relationship.

27123 **Nitrogen regeneration by the subtropical marine copepod.** Gardner, W.S.; Paffenhoefer, G.A. (Great Lakes Environmental Research Lab., Ann Arbor, MI). *Journal of Plankton Research;* **4**: No. 3, 725-733(1982). Contract AS09-76EV00936.

Ammonium release rates by individual marine copepods (Eucalanus pileatus) were examined kinetically over successive 10-min intervals after the animals were exposed to three concentrations of the diatom Thalassiosira fluviatilis as food. Food concentrations spanned those expected in the natural environment. Well-fed (3 mm^3 T. fluviatilis l^{-1}) copepods released ammonium significantly ($p<0.05$) faster than those fed zero or low concentrations of food, but differences were not dramatic. Mean excretion rates (+/- SE) for animals removed from food for 18-22 h [30 +/- 6 nmol NH_4 (mg ash free dry weight)$^{-1}$ h^{-1}] were ~60% of those for well-fed animals [49 +/-8 nmol NH_4 (mg ash free dry weight)$^{-1}$ h^{-1}. Continued high release rates after extended periods without food suggest that E. pileatus must feed frequently in nature to maintain an adequate nitrogen balance. Depending on food concentration, animals released ammonium at rates ranging from 40 to > 100% of their N ingestion rates over the previous 18-22 h. Long-term (4-6 h) kinetic excretion experiments with well-fed animals indicated that, on average, release rates decreased with time after food removal, but patterns varied among individual copepods. In addition to ammonium release, o-phthalaldehyde reactive amino acid nitrogen was occasionally released by E. pileatus in large spurt events lasting from 20 to 60 min.

27124 **Impact of copepod grazing on the phytoplankton of Georges Bank and the New York Bight.** Dagg, M.J. (Brookhaven National Lab., Upton, NY); Turner, J.T. *Canadian Journal of Fisheries and Aquatic Science;* **39**: No. 7, 979-990(1982). Contract AC02-76CH00016.

The grazing rate of the copepod community was calculated at 10-km intervals on transects of the continental shelf south of Long Island, New York, and across Georges Bank during April, July, and October 1978. During the spring when Calanus and Pseudocalanus dominated, grazing tended to be greatest on the outer shelf and slope regions, and community ingestion rates never exceeded primary production rates; much of the spring bloom was not grazed. During the fall when Centropages and Oithona dominated, grazing was greatest in the shallower regions, and community ingestion rates were often equivalent to or slightly greater than primary production rates. About 50% of the annual primary production was grazed by the copepod community in both regions.

27125 **Laboratory-measured grazing and ingestion rates of the salp, Thalia democratica Forskal, and the doliolid, Dolioletta gegenbauri Uljanin (Tunicata, Thaliacea).** Deibel, D. (Skidaway Inst. of Oceanography, Savannah, GA). *Journal of Plankton Research;* **4**: No. 2, 189-200(1982). Contract AS09-76EV00936.

Grazing and ingestion rates of laboratory-born Thalia democratica aggregates and Dolioletta gegenbauri gonozooids, phorozooids and oozooids were determined while fed Isochrysis galbana (4-5 μm diameter) alone or in combination with Peridinium trochoideum (16-18 μm diameter) at concentrations of 0.15-0.70 $mm^3 \times l^{-1}$. Grazing rates (ml x $zooid^{-1}$ x 24 h^{-1}) ranged from 10 to 355, and at zooid weights greater than 5μg carbon were in order oozooid > gonozooid > aggregate. Grazing rates increased exponentially with increasing zooid weight. Weight-specific grazing rates (ml x μgC^{-1} x 24 h^{-1}) were independent of the four-fold initial food concentration. Mean weight-specific grazing rates increased linearly with increasing zooid weight for the aggregates and oozooids, but gonozooid mean rates were independent of zooid weight. Aggregate and gonozooid ingestion rates ($10^6 \mu m^3$ x $zooid^{-1}$ x 24 h^{-1}) ranged from 4 to 134 while oozooid rates ranged from 3 to 67. All ingestion rates were independent of the initial food concentration but increased linearly with increasing zooid weight at similar rates. All mean weight-specific ingestion rates (ml x μgC^{-1} x 24 h^{-1}) were independent of zooid weight. The mean aggregate daily ration (μgC ingested x μg body C^{-1}) was 59% and the mean doliolid ration was 132%. Field studies indicate that normal concentrations of D. gegenbauri in the Georgia Bight clear their resident water volume (1 m^3) in about 4 months, but that highly concentrated, swarm populations which occur along thermohaline fronts clear their resident water volume in less than 1 day.

27126 **(AAEC/E—565) Technetium-99 levels in pertechnetate solutions from (n,γ) and (n,f) molybdenum-99 generators.** Moore, P.W. (Australian Atomic Energy Commission Research Establishment, Lucas Heights). Apr 1983. 46p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84700938.

There is increasing evidence that, in some radiopharmaceutical kits, Tc-99 has an adverse effect on the imaging and labelling performance of Tc-99m. For example, labelling efficiency with red blood cells can be affected when 99/99m ratios exceed about 4:1. The 99/99m ratio in a target is about 13.5:1 after a seven-day irradiation in a nuclear reactor. The ratio increases slightly during the time needed for processing. With the chromatographic generators used in hospitals, up to 90 hours may elapse between the final wash stage of manufacture and the first elution, during which time, 99/99m ratios can increase to about 90:1. If elution efficiencies are high and the time between elutions is between 12 and 24 hours, ratios in the generator, hence in the eluates, may actually increase with each elution. In the case of ready-to-inject pertechnetate solutions, the critical time at which 99/99m ratios increase rapidly is the time between elution and use. If production conditions are poor, ratios may increase to more than 600:1 by the time of use. With better conditions and production schedules Tc-99 levels at the time of use are comparable to those from chromatographic generators.

27127 **(ARL/TR—057) Derivation and use of nomograms in diagnostic radiography.** Veitch, S.; Young, B. (Australian Radiation Lab., Melbourne). Jul 1983. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700937.

The accuracy and use of nomographic techniques as a means of estimating the absorbed dose given to the skin of patients undergoing radiographic examinations is discussed for both single-phase and three-phase X-ray generating equipment. A comparison has also been made with previously published data for single-phase equipment.

27128 **(BNL—34523) Radiotracers in PETT: strategies for in vivo receptor activity, Schizophernia, and Alzheimer's Dementia studies.** Wolf, A.P. (Brookhaven National Lab., Upton, NY (USA)). 1984. Contract AC02-76CH00016. 3p. (CONF-8406107—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010224.

From 14. collegium internationale neuro-psychopharmacologicum; Florence, Italy (19 Jun 1984).

Using ^{18}F-spiperone, a one compartment system with a driving function as model, blocking agents such as butaclamol and ketanserin, assay of the live adult female baboon striatum over the 8 h period, and assay of the parent compound in plasma, it is apparent that residence times in the living tissue and those estimated from in vitro tritium data are at variance. Occupancy rises to a maximum for ^{18}F benperidol and ^{18}F haloperidol after ~ 25 minutes and for ^{18}F spiperone after ~ 75 minutes, but the striatum concentration of ^{18}F-spiperone and benperiodol remain nearly constant over an eight hour period whereas ^{18}F haloperidol concentration starts falling almost immediately to half its maximum value at 8 hrs. The best fit to our current data gives a preliminary off rate constant of 0.0057 min^{-1}.

27129 **(ISH—16) Measurement of population exposure by radiological screening in private companies in Berlin.** Dreyer, U. (Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene; Freie Univ. Berlin (Germany, F.R.). Medizinische Fakultaet). Jun 1982. 67p. (In German). Bundesgesundheitsamt, Neuherberg (Germany, F.R.).

In the first quarter of 1975, 21,647 employees (males: 16,336; females: 5,311) of private companies in Berlin were screened. The mean number of exposures per examination was 2.3 (2.3 in males, 2.2 in females). The genetically significant doses (GSD) of this group was calculated to be 1.514 mrem/a.

27130 **Imaging local brain function with emission computed tomography.** Kuhl, D.E. (UCLA School of Medicine, Los Angeles, CA). *Radiology;* **150**: No. 3, 625-631(Mar 1984). Contract AC03-76SF00012.

From 68. scientific assembly and annual meeting of the Radiological Society of North America; Chicago, IL, USA (28 Nov 1982).

Positron emission tomography (PET) using ^{18}F-fluorodeoxyglucose (FDG) was used to map local cerebral glucose utilization in the study of local cerebral function. This information differs fundamentally from structural assessment by means of computed tomography (CT). In normal human volunteers, the FDG scan was used to determine the cerebral metabolic response to conrolled sensory stimulation and the effects of aging. Cerebral metabolic patterns are distinctive among depressed and demented elderly patients. The FDG scan appears normal in the depressed patient, studded with multiple metabolic defects in patients with multiple infarct dementia, and in the patients with Alzheimer disease, metabolism is particularly reduced in the parietal cortex, but only slightly reduced in the caudate and thalamus. The interictal FDG scan effectively detects hypometabolic brain zones that are sites of onset for seizures in patients with partial epilepsy, even though these zones usually appear normal on CT scans. The future prospects of PET are discussed.

27131 **Recent developments in detectors for high spatial resolution positron CT.** Yamashita, Y.; Hayashi, T.; Uchida, H.; Yamashita, T. (Hamamatsu Photom'cs K.K, 1126-1 Ichino-Cho, Hamamatsu City). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 424-428(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

Experiments using three types of detectors for high spatial resolution positron computed tomography have been carried out as follows: one-to-one coupling between a BGO sciintillator and a thin rectangular photomultiplier tube (PMT); combining a small position sensing PMT with two BGO scintillators; and combining a large PMT with two or more BGO scintillators and using other detectors--small PMT's or silicon photodiodes (SiPD's) for scintillator identification. The time resolution obtained in the first method was poorer than that of the other methods due to the present status of thin PMT performance--poor cathode sensitivity. In the second method and in the third method utilizing the small PMT's, good time resolution and position sensing were obtained. In the third method utilizing the SiPD's, the peak-to-valley ratio of 1.8 in pulse height spectrum was obtained with a cooled BGO scintillator and a SiPD.

27132 **Some aspects of the construction of HISPET: a high spatial resolution positron emission tomograph.** Bellazini, R.; Del Guerra, A.; Massai, M.M.; Nelson, W.R.; Perez-Mendez, V.; Schwartz, G. (University of Pisa, Dept. of Physics, Piazza Torricelli 2, Pisa). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 645-648(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

The authors describe the improvements achieved toward the construction of a large solid angle Positron Camera, made of six dense drift space MWPC modules, arranged to form the lateral surface of a hexagonal prism. The tomograph will have an intrinsic spatial resolution of $\leqq$ 4.5 mm (FWHM) and a volume sensitivity of about100000 c/s per 0.1 μCi/ml, for a signal to noise of 3:1.

27133 **Modeling of accidental coincidences in both conventional and time-of-flight positron-emission tomography.** Holmes, T.J.; Ficke, D.C.; Snyder, D.L. (Inst. for Biomedical Computing, Mallinkrodt Inst. of Radiology, and Dept. of Electrical Engineering, Washington Univ., St. Louis, MO 63110). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 627-631(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

Mathematical predictions of the improvement in image signal-to-noise ratio that results when time-of-flight information is used in positron emission tomography are smaller than the improvement observed experimentally. It has been conjectured that the additional performance gain is due to the way in which accidental coincidences are suppressed by the time-of-flight data acquisition and reconstruction processes. This paper summarizes a mathematical model which has been extended to include the effects of accidental coincidences and which supports, upon analysis and comparison with experimental data, the above conjecture. For simplicity the authors analyze only two types of tomographic processing: the filtered-back-projection technique of conventional tomography and the confidence-weighting technique of time-of-flight tomography. Intuition about these techniques, both of which employ linear filtering methods, leads to the definition of an "effective coincidence-timing window" for time-of-flight instruments as a comparative metric of the suppression of accidental coincidences. The measurement processes underlying the model are given as is the photon detection instrumentation.

27134 **Performance figures and images from the therascan 3128 positron emission tomograph.** Cooke, B.E.; Alarie, K.; Evans, A.C.; Fanthome, E.O.; Sendyk, A.M. (Atomic Energy of Canada Limited, Medical Products Division 413 March Road, P.O. Box 13500, Kanata, Ontario CANADA K2K 1X8). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 640-644(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

The THERASCAN 3128 system has been designed to study cerebral function using positron emission tomography (PET) methods. Two rings of bismuth germanate (BGO) detectors define three image planes per scan. For the low resolution mode image resolution is 19 mm x 19 mm x 20 mm (axial) and the direct slice sensitivity for true coincidences is 88 kcps/(μCi.cm^{-3}). In the high resolution mode image resolution is 12 mm x 12 mm x 12 mm with a sensitivity of 33 kcps/(μCi.cm^{-3}). Deconvolution methods used to remove scattered events have been verified by repeated imaging of a phantom designed to provide a wide variation in contrast with time. Clinical images from ^{18}F-2-fluorodeoxyglucose (FDG) and ^{15}O studies are presented as practical examples of system performance and to illustrate the useful information obtained from coronal/sagittal sectioning of closely spaced transverse images.

27135 **Performance characteristics of the McMaster positron emission tomograph.** Nahmias, C.; Firnau, G.; Garnett, E.S. (Nuclear Medicine, Section of Radiology, McMaster University, 1200 Main Street West, Hamilton, Ontario L8N 3Z5). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 637-639(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

The McMaster Positron Emission Tomograph is an instrument designed for the high resolution cross sectional study of the human brain. The detector head comprises 160 Bismuth Germanate crystals, each coupled to a 12.7 mm photomultiplier tube, closely packed on a ring, 53.5 cm in diameter. The performance characteristics of the tomograph have been measured. The spatial resolution is 8 mm (FWHM) in the stationary mode. The slice thickness is 10 mm. The resolution element is a cube of side 8 mm. The sensitivity of the tomograph was measured using a cylindrical lucite phantom, 20 cm in diameter and 20 cm long, uniformly filled with a 1 μCi/ml solution of ^{68}Ga. The total number of coincident events is 18,200 cps for a 10 mm slice. Of these, 2200 cps are random coincidences. The instrument has been in clinical use for the past 8 months.

27136 **A stationary positron emission ring tomograph using BGO detector and analog readout.** Burnham, C.A.; Bradshaw, J.; Brownell, G.L.; Chester, D.; Kaufman, D. (Massachusetts General Hospital, Physics Research Lab., Boston MA 02114). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 632-636(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

A single ring PET camera has been constructed to demonstrate the use of one dimensional scintillation camera techniques in positron tomographic design. A pseudo-continuous BGO detector is used. The detector is 46 cm ID, 52 cm OD, 2 cm wide and is made using 360 elements. A narrow light guide and 90 PM Tubes are used for the readout. The position of coincident events are found using unique scintillation camera logic.

27137 **Initial characterization of a bgo-Photodiode detector for high resolution positron emission tomography.** Derenzo, S.E. (Donner Lab. and Lawrence Berkeley Lab., Berkeley, CA 94720). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 620-626(Feb 1984). (CONF-831015—). Contract AC03-76SF00098.

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

Spatial resolution in positron emission tomography is currently limited by the resolution of the detectors. This work presents the initial characterization of a detector design using small bismuth germanate (BGO) crystals individually coupled to silicon photodiodes (SPDs) for crystal identification, and coupled in groups to phototubes (PMTs) for coincidence timing. A 3 mm x 3 mm x 3 mm BGO crystal coupled only to a SPD can achieve a 511 keV photopeak resolution of 8.7% FWHM at -150°C, using a pulse peaking time of 10 μs. When two 3 mm x 3 mm x 15 mm BGO crystals are coupled individually to SPDs and also coupled to a common 14 mm diam PMT, the SPDs detect the 511 keV photopeak with a resolution of 30% FWHM at -76°C. In coincidence with an opposing 3 mm wide BGO crystal, the SPDs are able to identify the crystal of interaction with good signal-to-noise ratio, and the detector pair resolution is 2 mm FWHM.

27138 **Results of a comparative study of a reconstruction procedure for producing improved estimates of radioactivity distributions in time-of-flight emission tomography.** Politte, D.G.; Snyder, D.L. (Department of Electrical Engineering and Institute for Biomedical Computing Washington University St. Louis, Missouri 63110). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 614-619(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

Several reconstruction algorithms for estimating distributions of radioactivity in an emission-tomography system having time-of-flight measurements have previously been identified. We present here a comparative study of various images reconstructed from data acquired with an emission-tomography system having time-of-flight data. Preliminary results indicate that a new recursive algorithm provides substantial improvements in image quality.

27139 **Dynamic imaging with high resolution time-of-flight pet camera - TOFPET I.** Mullani, N.A.; Bristow, D.; Gaeta, J.; Gould, K.L.; Hartz, R.K.; Philipe, E.A.; Wong, W.H.; Yerian, K. (University of Texas Health Science Center Division of Cardiology 6431 Fannin, Houston, Texas 77030). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 609-613(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

One of the major design goals of the TOFPET I positron camera was to produce a high resolution whole body positron camera capable of dynamically imaging an organ such as the heart. TOFPET I is now nearing completion and preliminary images have been obtained to assess its dynamic and three dimensional imaging capabilities. Multiple gated images of the uptake of Rubidium in the dog heart and three dimensional surface displays of the distribution of the Rubidium-82 in the myocardium have been generated to demonstrate the three dimensional imaging properties. Fast dynamic images of the first pass of a bolus of radio-tracer through the heart have been collected with 4 second integration time and 50% gating (2 second equivalent integration time) with 18 mCi of Rb-82.

27140 **Recent developments in image reconstruction using a time-of-flight-assisted positron emission tomograph: Super Pett I.** Ficke, D.C.; Beecher, D.E.; Hoffman, G.R.; Holmes, T.J.; Ter-Pogossian, M.M. (The Edward Mallinckrodt Institute of Radiology and Institute for Biomedical Computing Washington University School of Medicine St. Louis, Missouri 63110). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 605-608(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

One recent development in image reconstruction utilizing time-of-flight information yields a compression of the three dimensional array used in forming the unfiltered "preimage." A reduction from 96 angles to 16 angles is shown to produce equivalent quality images and may form a basis for future architectural strategies. A second development in image reconstruction can strongly affect the quality of results when constraints such as cardiac gating are imposed, while not inherently sacrificing spatial resolution due to inadequate sampling. A correction for sampling density obtained by analyzing list mode data is shown to greatly reduce circular artifact production. This technique is extendable to systems without time-offlight measurements and to scanning motions other than wobbling.

27141 **Development of small in-vivo imaging probes for tumor detection.** Barber, H.B.; Barrett, H.H.; Wild, W.J.; Woolfenden, J.M. (Division of Nuclear Medicine, Univ. of Ariz. Health Sciences Center, Tucson, AZ 85724). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 599-604(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

The authors have developed coded-aperature γ-ray imaging devices which are small enough to be incorporated in medical probes that are inserted into the upper or lower gastrointestinal tract to image concentrations of tumor-seeking radiotracers. They have designed two different types of imaging probes, rotating and nonrotating, and have constructed and tested prototypes of each.

27142 **Germanium-scintillation camera coincidence detection studies for imaging single photon emitters.** Singh, M.; Doria, D. (Inst. for Physics and Imaging Science, 4676 Admiralty Way, Suite 932, Marina del Rey, CA 90292). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 594-598(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

A prototype system has been used to measure the point spread function (PSF) and sensitivity characteristics of a germanium-scintillation camera (GSC) system for imaging single photon emitters. A detector consisting of two 5mm x 5mm x 6mm elements, fabricated on a single piece of high purity germanium, and a Pho/gamma HP scintillation camera were used. Experiments were conducted with a point source of Tc-99m to specify the threshold and energy resolution required in the germanium detector and to study the timing characteristics of coincidence detection.

27143 **Dual energy attenuation correction for single photon emission computed tomography (SPECT).** Nalcioglu, O.; Bor, D. (Dept. of Radiological Sciences, Univ. of California, Irvine, CA). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 590-593(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

Absorption of gamma rays by matter causes the well known attenuation artifacts in SPECT. In this paper, the authors investigate a technique in which projections acquired at two different energies are used. The projections resulting from the two energies are manipulated to extract the true radioisotope distribution within the slice reducing the attenuation problems. Simulation results are presented for different phantoms investigating the amount of artifacts with and without the correction. It is shown that the dual energy technique can be used in obtaining accurate SPECT images with very little attenuation artifacts.

27144 **A modular scintillation camera for use in nuclear medicine.** Milster, T.D.; Arendt, J.; Barrett, H.H.; Easton, R.L.; Rossi, G.R.; Selberg, L.A.; Simpson, R.G. (Department of Radiology Arizona Health Sciences Center University of Arizona Tucson, Arizona 85724). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 578-580(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

A "modular" scintillation camera is discussed as an alternative to using Anger cameras for gamma-ray imaging in nuclear medicine. Each module is an independent gamma camera and consists of a scintillation crystal, light pipe and mask plane, PMT's, and processing electronics. Groups of modules efficiently image radionuclide distributions by effectively utilizing crystal area. Performance of each module is maximized by using Monte-Carlo computer simulations to determine the optical design of the camera, optimiz-

ing the signal processing of the PMT signals using maximum-likelihood (ML) estimators, and incorporating digital lookup tables. Each event is completely processed in 2 μsec, and FWHM of the PSF over the crystal area is expected to be 3 mm. Both one-dimensional and two-dimensional prototypes are tested for spatial and energy resolution

27145 **NMR microscopy.** House, W.V. (Mag Scan, Inc. P.O. Box 540324 Houston, TX 77254). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 570-578(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

There are theoretical and practical constraints which limit the resolution, and contrast obtainable from an NMR imaging microscope.

27146 **Dual gated nuclear cardiac images.** Zubal, I.G.; Bennett, G.W.; Bizais, Y.; Brill, A.B. (Medical Dept., Brookhaven Nat'l. Laboratory, Upton, NY 11973). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 566-569(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

A data acquisition system has been developed to collect camera events simultaneously with continually digitized electrocardiograph signals and respiratory flow measurements. Software processing of the list mode data creates more precisely gated cardiac frames. Additionally, motion blur due to heart movement during breathing is reduced by selecting events within a specific respiratory phase. Thallium myocardium images of a healthy volunteer show increased definition. This technique of combined cardiac and respiratory gating has the potential of improving the detectability of small lesions, and the characterization of cardiac wall motion.

27147 **Gated cardiac scanning using limited-angle image reconstruction technique and information in the neighboring phases.** Tam, K.C.; MacDonald, B.; Perez-Mendez, V. (G.E. Corporate Research and Development Center, Schenectady, NY 12345). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 562-565(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

It is known that there are gaps in scan angle in gated cardiac scanning due to lack of synchronization between heart beat and CT machine rotation. The missing projections in these gaps result in artifacts in the reconstructed images. In a previous paper an iterative limited-angle reconstruction technique was employed to fill in the missing projections to remove the artifacts. It was found there that the root-mean-square errors of the limited-angle images were reduced to a level comparable to those of reconstructions using complete-angle information. In the present paper the results are further improved by using the scans of a neighboring portion of the cardiac cycle as a first estimate of the missing scans in the phase of interest when initializing the iterations. Such a modification provides a better starting point for the iterations.

27148 **Geometry study of a high resolution pet detection system using small detectors.** Lecomte, R.; Lamoureux, G.; Schmitt, D. (Dept. of Nuclear Medicine, University of Sherbrooke, Quebec). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 556-561(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

The current trend in positron emission tomography (PET) towards very high spatial resolution tomographs raises the problem of detecting high energy gamma-rays with a high spatial accuracy while preserving the overall sensitivity of the camera. It is the purpose of this paper to investigate the effects of some geometrical parameters on the detection efficiency and intrinsic spatial resolution of a circular array of narrow closely packed detectors. Two approaches were employed: the first one uses the Monte-Carlo technique to simulate the interactions of gamma-rays in the detectors; the second one is based on the linear attenuation on a beam of gamma-rays impinging on a detector array. Aperture functions and modulation transfer functions were obtained for various configurations of the detectors and septas. Expressions for the resolution and the spectral signal-tonoise ratio were derived. It is shown that minor modifications to the geometry can improve both the efficiency and intrinsic resolution of the detector array.

27149 **Use of heavy water in boron neutron capture therapy of brain tumours.** Slatkin, D.N.; Levine, M.M.; Aronson, A. (Brookhaven National Lab., Upton, NY (USA)). *Physics in Medicine and Biology;* **28**: No. 12, 1447-1451(Dec 1983).

In this note the authors conclude that transient partial deuteration of body water for neutron capture therapy would significantly enhance radiation produced by the neutron-boron reaction at the deep margins of brain tumours and reduce effective gamma radiation to normal brain tissues by 50% or more. This analysis has dealt with totally thermalised incident neutrons.

27150 **High-resolution circular ring positron tomograph with dichotomic sampling: Dichotom-I.** Cho, Z.H.; Hilal, S.K.; Ra, J.B.; Hong, K.S. (Columbia Univ., New York (USA). Dept. of Radiology); Bigler, R.E.; Yoshizumi, T. (Department of Energy, Washington, DC (USA). Div. of Energy Storage Systems); Wolf, A.P.; Fowler, J.S. (Brookhaven National Lab., Upton, NY (USA)). *Physics in Medicine and Biology;* **28**: No. 11, 1219-1234(Nov 1983).

The circular ring transaxial positron camera developed earlier was refitted with a new dichotomic sampling scheme and aperture collimators on the detector array to improve the sampling and the overall system resolution. The z-axis slice thickness collimators were also limited to 1 cm, which corresponds to a slice thickness of 0.5 cm FWHM. Two different types of aperture collimators were adopted for high resolution (HR) and very high resolution (VHR) imaging, respectively. In HR mode a resolution of 6.5 mm FWHM was obtained without appreciable degradation of overall sensitivity, which represents a threefold improvement in resolution over the original system. In phantom studies with HR mode a sensitivity of 4500 counts s^{-1} μCi^{-1} cm^{-3} was obtained for a 20 cm diameter uniform phantom filled with water. A VHR mode experiment was also conducted to observe the ultimate resolution capability of the Dichotom-I system, and a resolution of 4.2 mm FWHM was obtained at the expense of sensitivity which was reduced by a factor of four from the HR mode experiment. The experience gained with Dichotom-I suggests a relatively simple and inexpensive modification of the existing NaI(T1) ring positron cameras, most of which suffer from low resolution due to poor sampling and poor intrinsic detector resolution.

27151 **Tin-117m-labeled stannic (Sn^{4+}) chelate of diethylenetriamine pentaacetic acid (DTPA) for application in diagnosis and therapy.** Srivastava, S.C.; Meinken, G.E.; Richards, P. (to Dept. of Energy). US Patent Application 6-526,251. 25 Aug 1983. 9p. Contract AC02-76CH00016.

Portions are illegible in microfiche products.

The radiopharmaceutical reagents of this invention and the class of Tin-117m radiopharmaceuticals are therapeutic and diagnostic agents that incorporate gamma-emitting nuclides that localize in bone after intravenous injection in mammals (mice, rats, dogs, and rabbits). Images reflecting bone structure or function can then be obtained by a scintillation camera that detects the distribution of ionizing radiation emitted by the radioactive agent. Tin-117m-labeled chelates of stannic tin localize almost exclusively in cortical bone. Upon intravenous injection of the reagent, the preferred chelates are phosphonate compounds, preferable, PYP, MDP, EHDP, and DTPA. This class of reagents is therapeutically and diagnostically useful in skeletal scintigraphy and for the radiotherapy of bone tumors and other disorders.

27152 **Radionuclide labeled lymphocytes for therapeutic use.** Srivastava, S.C.; Fawwaz, R.A.; Richards, P. (to Dept. of Energy). US Patent Application 6-491,132. 3 May 1983. 17p. Contract AC02-76CH00016.

Portions are illegible in microfiche products.

Lymphocytes labelled with β-emitting radionuclides are therapeutically useful, particularly for lymphoid ablation. They are

prepared by incubation of the lymphocytes with the selected radionuclide-oxine complex.

27153 **Particle beam accelerators for radiotherapy and radioisotopes.** Boyd, T.J.; Crandall, K.R.; Hamm, R.W. (Los Alamos National Lab., NM (USA)). *Proceedings of the Japan Conference on Radioisotopes;* No. 15, 272-281(1982). (CONF-811153—).

From 15. Japan conference on radioisotopes; Tokyo, Japan (26 Nov 1981).

The clinical trial on the radiation susceptibility of cancers to various types of particle beam has been under active study during the past 10 years. The effects of pions, heavy ions, protons and neutrons have been investigated. After the start of the pion program at LAMPF, a study was initiated by the US National Cancer Institute to develop the design and to test certain components of the accelerators exclusively used for cancer therapy in hospital environment. This program named "Pion Generator for Medical Irradiation" (PIGMI) was completed recently. Significant advance was made in the accelerator technology, and it was indicated that the economical and reliable dedicated machines can be produced. Moreover, the design can be made so as to produce any particle beam that may eventually be desired. The pion machine would be the longest (highest energy) using accelerated protons on a target to produce pion beam. For the production of neutrons, protons or heavy ions, the same components as those used for an initial pion machine would be used with suitable modification. The application to radiotherapy and radioisotopes, the PIGMI technology, PIGMI pion radiotherapy facility and PIGMI radioisotope production machine are described.

27154 (CONF-811048—Summs., pp 4p, Paper 85) **Containment facilities for pathological materials.** Clark, R.P. (Clinical Research Centre, Middlesex, England). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

An important area, often neglected in the design and installation of containment facilities, is that of ensuring that safety cabinets and fume cupboards are compatible with heating and ventilation systems. The Medical Research Council in the United Kingdom is currently extending the principles of numerically quantifying containment of safety cabinets and fume cupboards to the quantification of the overall containment provided by the rooms in which these facilities are housed. This containment is defined with respect to corridors and other adjacent areas which need to be isolated from the hazardous material. (DT)

27155 **(PB—84-149590) Tratamiento de mostos utilizando el filtro anaerobio (treatment of must using an anaerobic filter). Master thesis.** Negron, R.M. (Puerto Rico Univ., Mayaguez). Dec 1982. 160p. NTIS, PC A08/MF A01.

This study reports on the feasibility of treating the slops from rum distilleries with an anaerobic filter composed of an oxygen free reactor filled with a plastic filtering media, commercially known as 'Actifil' with a diameter of 5/8 inches (16mm). This filter is similar in appearance to an aerobic biofilter (trickling filter). The main difference between the two systems is that on the anaerobic filter the flow is upward so that the filter medium is always completely submerged.

27156 (CONF-811048—Summs., pp 8p, Paper 40) **Environmental control of indoor air pollution in hospital and home environment in relation to cardiovascular disease.** Rea, W.J. (Univ. of Texas Southwestern Medical School, Dallas); Smiley, R.E.; Sprague, D.E.; Edgar, R.T.; Fenyves, E.J.; Greenberg, M.; Johnson, A.R. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

A series of patients with environmentally triggered vascular phenomenon have been treated. These patients' symptoms included arrhythmias, spontaneous bruising and petechiae, Raynaud's Phenomenon and peripheral and periorbital edema. Symptoms and signs were cleared when placed in environmentally controlled rooms without medications. The signs and symptoms were reproduced with double blind challenge of subthreshold ambient chemicals. Follow-up of treatment in environmentally controlled homes over a period of two to five years was done. Results show marked improvement in a majority of the patients. (DT)

27157 **Evaluation of body composition and nitrogen content of renal patients on chronic dialysis as determined by total body neutron activation.** Cohn, S.H.; Brennan, B.L.; Yasumura, S.; Vartsky, D.; Vaswani, A.N.; Ellis, K.J. (Brookhaven National Lab., Upton, NY). *American Journal of Clinical Nutrition;* **38**: 52-58(Jul 1983). Contract AC02-76CH00016.

Total body protein (nitrogen), body cell mass (potassium), fat, and water were measured in 15 renal patients on maintenance hemodialysis (MHD). Total body nitrogen was measured by means of prompt γ neutron activation analysis; total body water was determined with tritium labeled water; total body potassium was measured by whole body counting. The extracellular water was determined by a technique utilizing the measurement of total body chloride and plasma chloride. When compared with corresponding values of a control group of the same age, sex, and height, the protein content, body cell mass, and total body fat of the MHD patients were within the normal range. The only significant change was an increase in the extracellular water/body cell mass ratio in the male MHD patients compared to the control. The lack of significant difference of the nitrogen values of the MHD patients compared to matched controls suggests that dialysis minimizes any residual effects of uremic toxicity or protein-calorie malnutrition. These findings further suggest that there is a need to reevaluate the traditional anthropometric and biochemical standards of nutritional status for MHD patients. It was concluded that it is particularly important to measure protein stores of MHD patients with low protein intake to ascertain nutritional status. Finally, in vivo measurement of total body nitrogen and potassium for determination of body composition provides a simple, direct, and accurate assessment of the nutritional status of MHD patients.

27158 **Periodic neutropenia and monocytopenia.** Adams, W.H.; Liu, Y.K. (Texas Tech Univ., Lubbock). *American Journal of Hematology;* **13**: 73-82(1982).

A patient with periodic neutropenia exhibited simultaneous monocytopenia, and epinephrine infusion revealed no monocytes in the marginating pool during neutropenia. Lymphocytes, eosinophils, and platelets also fluctuated periodically, but serial bone marrow studies and epinephrine infusion data indicate these fluctuations could have represented epiphenomena rather than a more global form of periodic hematopoiesis. Bone marrow descriptions of most cases of periodic neutropenia have indicated a "maturation arrest" at the promyelocyte or myelocyte stage prior to development of neutropenia; peripheral blood monocytes are usually normal or fluctuate out of phase with neutrophils. In the present

case, "maturation arrest" occurred at the myeloblast stage, and neutrophils and monocytes cycled together. Morphologically normal eosinophilopoiesis with a mean eosinophil to erythroid ratio in the marrow of 0.27 +/- 0.10 (SD) persisted despite a sustained disappearance of promyelocytes.

27159 **In vivo quantification of body nitrogen for nutritional assessment.** Cohn, S.H.; Vaswani, A.N.; Vartsky, D.; Yasumura, S.; Sawitsky, A.; Gartenhaus, W.; Ellis, K.J. (Brookhaven National Lab., Upton, NY). *American Journal of Clinical Nutrition;* **35**: 1186-1191(May 1982).

A series of experimental tests were carried out to study total body nitrogen (TBN), total body potassium (TBK), total body water (TBW) and total body calcium (TBCa). The prompt neutron activation and whole body counting techniques were used to measure TBN and TBK, respectively. TBW was measured with the use of the standard tritiated water radioisotopic technique. Three groups of subjects were studied: normal controls, obese women on protein sparing diets, and cancer patients on chemotherapy. In relation to TBN, the obese patients showed a minimal negative nitrogen balance 0.49 to 0.87 g/day. With regard to the cancer patients, the data obtained in this study clearly corroborate the clinical observations. In patients with severe wasting, it is the skeletal muscle mass that is predominantly lost, not the visceral life-supporting system.

27160 (ANL/CNSV-TM—127, pp 9-11) **Adoption and diffusion of agriculture technology.** Jennings, V.M. (Iowa State Univ., Ames). Jan 1984. NTIS, PC A05/MF A01. (CONF-830898—).

From 1. conference on energy from biomass: building on a generic technology base; Argonne, IL, USA (22 Aug 1983).

The processes whereby new techniques are adopted into use in agriculture are briefly described. Specifically, how the process works in a Land Grant Institution is explained. How the technology adoption works in research and how it is utilized by the Extension Service at the local level where it is adopted by clientele are addressed. The process consists of awareness, interest, evaluation, trial, and finally adoption. (DMC)

27161 **(TVA/ONRED/AWR—84/7) Summary of channel catfish and rainbow trout production at the Gallatin Waste Heat Aquaculture Facility, 1979-1980.** Collins, C.M.; Schweinforth, R.L.; Burton, G.L. (Tennessee Valley Authority, Knoxville (USA). Div. of Air and Water Resources). Feb 1984. 92p. NTIS, PC A05/MF A01. Order Number DE84900929.

These studies have indicated that channel catfish and rainbow trout can be intensively cultured in concrete raceways using waste heat effluent water from the Gallatin Steam Plant. Optimum production was attained, especially with channel catfish, when desirable water temperatures and proper environmental conditions occurred. High density culture is possible during the winter and early spring months.

27162 **Neutron radiography technique for studying young roots growing in soil.** Struss, R.G. (Ames Lab., IA (USA)). pp 581-590 of Neutron radiography. Proceedings of the first world conference San Diego, California, USA, December 7-10, 1981. Barton, J.P. From 1. world conference on neutron radiography; San Diego, CA, USA (7 Dec 1981).

Includes author index.

An indirect technique for taking neutron radiographs using indium collector foils has been used to study seed germination and root growth in soils. This paper describes the work done at Ames Laboratory Research Reactor, Ames, Iowa, in 1977-1978 to develop this technique for in situ studies to replace destructive sampling techniques. A diverging thermal neutron (.04 eV) beam of 10^7 n/cm^2/sec was used to irradiate samples for 8 to 10 min. to a total exposure of 5×10^9 n/cm^2. Plants grown in loamy sand soil wetted to 9% volumetric water content in aluminum boxes of 2.5 and 5 cm thickness were photographed with this technique. An indium collector plate attached to the back of the box produced a transfer screen during exposure in the neutron beam which was subsequently placed in direct contact with photographic film to produce an image of the plant roots.

27163 **(ARL/TR—054) Evaluation of Amerscan Technetium (tin colloid) Agent for liver scintigraphy.** Van Every, B. (Australian Radiation Lab., Melbourne). May 1983. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700909.

A study was made of the effect of elevated levels of aluminium ion and carrier technetium in the sodium pertechnetate (Tc-99m) used for the reconstitution of Amerscan Technetium (tin colloid) Agent. Up to 20 ppm aluminium or 50 ng Tc/mL in the sodium pertechnetate (Tc-99m) used for reconstitution had only a slight effect on both the biological distribution and radiochemical purity of the reconstituted product.

27164 **(CONF-830665—5) Analytical methods under emergency conditions.** Sedlet, J. (Argonne National Lab., IL (USA)). 1983. Contract W-31-109-ENG-38. 22p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010523.

From Health Physics Society summmer school on internal radiation dosimetry; Catonsville, MD, USA (12 Jun 1983).

This lecture discusses methods for the radiochemical determination of internal contamination of the body under emergency conditions, here defined as a situation in which results on internal radioactive contamination are needed quickly. The purpose of speed is to determine the necessity for medical treatment to increase the natural elimination rate. Analytical methods discussed include whole-body counting, organ counting, wound monitoring, and excreta analysis. 12 references. (ACR)

27165 **(DOE/EV/03382—22) Metabolic studies of neptunium in the adult baboon: retention, distribution, kinetics, and enhanced excretion by chelation therapy. Technical progress report summary.** (New York Univ., NY (USA). Inst. of Environmental Medicine). 1984. Contract AC02-76EV03382. 12p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010503.

These investigations provided additional data on the uptake, distribution, retention and excretion of Np-237, Np-239 and Pa-233 in baboons following single intravenous or gavage administration. The influence of oxidation state, chemical medium, pH, mass, etc. on the metabolism of these radionuclides is related.

27166 **(LA—9462-MS) Quality control activities in support of the plutonium workers study. Assessment of coding consistency for data collected at Rocky Flats.** Reyes, M.; Wilkinson, G.S.; Acquavella, J.F. (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 9p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011016.

The Plutonium Workers Study is a multifaceted epidemiologic investigation of workers at six Department of Energy (DOE) facilities: Los Alamos, Rocky Flats, Mound, Savannah River, Oak

Ridge, and Hanford. Information from a variety of record sources has been collected and abstracted for these studies. This report considers the accuracy of the demographic, occupational, and radiation exposure data collected for studies at Rocky Flats. the majority of the information was accurately abstracted, and analyses based on these data may be conducted.

27167 **(NUREG/CR—3677) Comparison of radon fluxes with gamma-radiation exposure rates and soil ^{226}Ra concentrations.** Young, J.A.; Thomas, V.W. (Pacific Northwest Lab., Richland, WA (USA)). Apr 1984. Contract AC06-76RL01830. 24p. (PNL—5016). NTIS, PC A02/MF A01; 1 - GPO $3.25; GPO Dep. Order Number DE84010937.

Portions are illegible in microfiche products.

Radon fluxes and contact gamma-radiation-exposure rates were measured at the grid points of rectangular grids on three properties in Edgemont, South Dakota that were known to have deposits of residual radioactivity relatively near to the surface. The coefficient of determination, r^2, between the radon fluxes and the contact gamma-radiation-exposure rates varied from 0.89 to 0.31 for the three properties. The property having the highest fluxes and residual radioactivity of relatively uniform depth showed the highest correlation between fluxes and exposure rates, and the property having residual radioactivity that varied considerably in depth showed the lowest. Correlations between fluxes and ^{226}Ra concentrations measured in boreholes that varied in depth from 60 to 195 cm were lower than those between fluxes and exposure rates, indicating that exposure rates are better than ^{226}Ra measurements for detecting elevated radon fluxes from near-surface deposits. Measurements made on one property at two different times indicated that if the average flux were determined from a large number (40) of measurements at one time, the average flux at a later time could be estimated from a few measurements using the assumption that the change in the flux at individual locations will be equal to the change in the average flux. Flux measurements around two buildings showing elevated indoor radon-daughter concentrations, but around which no residual radioactivity had been discovered by ^{226}Ra and gamma-radiation measurements, provided no clear indication of the presence of such material, possibly because none was present.

27168 **(ORNL/TM—9138) Bibliography of literature relevant to the reassessment of A-bomb radiation dosimetry in Hiroshima and Nagasaki.** Kerr, G.D. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 36p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84010667.

Radiation doses received by the survivors of the Hiroshima and Nagasaki bombings were estimated in increasingly sophisticated studies between 1950 and 1965. The latest of these estimates, designated as Tentative 1965 Doses or simply T65D values, were used as a basis for risk assessment throughout the 1970's. The T65D values have recently been subjected to critical review as a result of concern over possible changes in radiation protection standards. Thus, it is essential that the reassessment of A-bomb radiation dosimetry is well-documented and that the results are convincing to the scientific community. This bibliography provides a keyword index, author index, and master listing of over 100 published reports dealing with different aspects of the dosimetry reassessment effort.

27169 **(PNL-SA—11777) Factors affecting plant absorption, transport and fate of plutonium.** Garland, T.R.; Cataldo, D.A.; McFadden, K.M.; Wildung, R.E. (Pacific Northwest Lab., Richland, WA (USA)). Mar 1984. Contract AC06-76RL01830. 49p. (CONF-8311110—2). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011360.

This study determined the extent to which several agricultural plants control plutonium (Pu) uptake and provides a general understanding of the fate and behavior of Pu in plants after absorption. Investigations were directed toward variables affecting the accumulation of Pu by plants from soils, transport of Pu within the plant, factors affecting transport with plant age, effects of different plant species on transport processes, form of Pu deposited in plant tissues, and effect of chemical form on animal gut absorption of Pu. 18 references, 10 figures, 14 tables.

27170 **(PNL-SA—11778) Aspects of neptunium behavior in plants; absorption, distribution, and fate.** Cataldo, D.A.; Garland, T.R.; Wildung, R.E. (Pacific Northwest Lab., Richland, WA (USA)). Mar 1984. Contract AC06-76RL01830. 19p. (CONF-8311110—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010877.

From 6. workshop on environmental research for actinide elements; Hilton Head Island, SC, USA (7 Nov 1983).

Portions are illegible in microfiche products.

The availability of Np(V) for absorption by plants and its subsequent transport and fate are described. Plant uptake of Np from solutions containing 7×10^{-7} to 473 μg Np/ml is proportional to concentration, exhibiting some saturation at higher concentrations. Soil studies using Np concentrations of 5.2×10^{-7} to 4.1 μg/g soil show CR values to be constant at $\sim$ 2 at soil concentrations below 4×10^{-4} μg/g, and increase to 12 at higher soil levels. Soil/plant CR values vary with plant species and range from 0.5 to 4; seed concentrations are a factor of 10 lower than vegetative tissues. Fractionation of plant tissues show Np to be substantially more soluble than Pu, with $\sim$ 50% of the soluble Np being associated with plant ligands of $<$ 5000 MW. 6 references, 5 figures, 1 table.

27171 **(PNL-SA—12101) Statistical lung model for microdosimetry.** Fisher, D.R.; Hadley, R.T. (Pacific Northwest Lab., Richland, WA (USA)). Mar 1984. Contract AC06-76RL01830. 8p. (CONF-8403115—2). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010703.

From Workshop on lung modeling for inhalation of radioactive materials; Oxford, UK (26 Mar 1984).

To calculate the microdosimetry of plutonium in the lung, a mathematical description is needed of lung tissue microstructure that defines source-site parameters. Beagle lungs were expanded using a glutaraldehyde fixative at 30 cm water pressure. Tissue specimens, five microns thick, were stained with hematoxylin and eosin then studied using an image analyzer. Measurements were made along horizontal lines through the magnified tissue image. The distribution of air space and tissue chord lengths and locations of epithelial cell nuclei were recorded from about 10,000 line scans. The distribution parameters constituted a model of lung microstructure for predicting the paths of random alpha particle tracks in the lung and the probability of traversing biologically sensitive sites. This lung model may be used in conjunction with established deposition and retention models for determining the microdosimetry in the pulmonary lung for a wide variety of inhaled radioactive materials.

27172 **(PNL-SA—12130) Mean dose vs local dose to the respiratory tract: implications for radiological protection.** Cross, F.T.; Bair, W.J. (Pacific Northwest Lab., Richland, WA (USA)). Mar 1984. Contract AC06-76RL01830. 18p. (CONF-8403115—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010845.

From Workshop on lung modeling for inhalation of radioactive materials; Oxford, UK (26 Mar 1984).

Portions are illegible in microfiche products.

This paper explores data and concepts relevant to the use of mean lung doses versus local or regional lung doses in radiological protection systems. Exposures to different patterns of high-LET alpha radiations are compared on dosimetric and biological effects bases. We show that inhalation exposures to short-lived radon daughters and to insoluble plutonium produce comparable tumorigenic responses, when radiation doses are compared on a mean lung dose basis, in spite of very different regional lung-dose distributions. These data suggest that, for the pragmatic purposes of radiological protection, no greater refinements in dosimetry are required. Additional data are presented that support mean lung dose alpha-quality factors greater than 20 or an increase in the ICRP risk coefficient for lung cancer to provide consistency with current radon daughter epidemiologic data and experimental animal data.

27173 **Similar ultraviolet action spectra for the protection by glycerol of transforming DNA against single-strand breaks and inactivation of biological activity.** Peak, J.G.; Peak M.J. (Argonne National Lab., IL). *Radiation Research;* **97**: No. 3, 570-575(Mar 1984). Contract W-31-109-ENG-38.

An action spectrum for the protection of purified DNA by glycerol against the induction of single-strand breaks in the DNA by ultraviolet (uv) light is described. Protection was not observed below 300 nm, was maximal between 334 and 365 nm, and decreased at 405 nm. This spectrum closely matched the spectrum for the protection by glycerol against the inactivation of biological transforming activity by near uv, described previously. Also, deviations from the reciprocity rule are similar for inactivation of transforming activity and for induction of DNA breaks by 365-nm radiation. That is, the deviations for the two end points are quantitatively the same, such that high fluence rates are less effective than low fluence rates.

27174 **Increased yields of exchanges but not of deletions in X-irradiated human peripheral lymphocytes following phytohemagglutinin stimulation.** Gundy, S.; Bender, M.A. (Frederic Joliot-Curie National Inst. for Radiobiology and Radiohygiene, Budapest, Hungary). *Radiation Research;* **97**: No. 3, 519-525(Mar 1984).

Human peripheral lymphocytes have been irradiated after various intervals of phytohemagglutinin stimulation to determine the time course for exchange induction and to determine whether or not deletion yields increase with increasing intervals of stimulation. No increase in deletion yields were found for intervals up to 12 hr, and rings and dicentric yields increased by about 60% in the interval between 0 and 6 hr but then reached a plateau. Induced unscheduled DNA synthesis was also measured during the same interval and was found to generally increase during the first 6 hr like exchange yields, but then tended to decrease again.

27175 **Coulter volume cell sorting to improve the precision of radiation survival assays.** Freyer, J.P.; Wilder, M.E.; Raju, M.R. (Los Alamos National Lab., NM). *Radiation Research;* **97**: No. 3, 608-614(Mar 1984).

A new method for measuring cell survival at low doses of ionizing radiation has been developed through the use of flow cytometric cell sorting on the basis of Coulter volume signals. The cell sorter is capable of defecting a precisely known number of cells directly into culture dishes, thus eliminating any errors associated with cell dilution and volume sampling. The use of Coulter volume signals as the sorting parameter is shown to be noncytotoxic for a variety of cell lines. Comparison of radiation survival curves measured above the 10% survival level by either the cell sorter or standard dilution assay demonstrates the increased precision of the cell sorter technique. Because of these advantages of cell sorting over conventional methods of plating cells, this technique has many applications in the field of radiation biology and other studies of cell survival.

27176 **Role of hydroxyl radical svengers in preventing DNA strand breaks induced by X irradiation of toluene-treated Escherichia coli.** Billen, D. (Oak Ridge National Lab., TN). *Radiation Research;* **97**: No. 3, 626-629(Mar 1984). Contract W-7405-ENG-26;AS05-76EV04568.

The purpose of this study was to determine whether chemical protection against single-strand breaks observed in toluene-treated E. Coli subjected to X irradiation in air was due to the removal of OH radicals, or resulted from the production of secondary radicals. In toluene-treated cells, DNA strand-break production can be measured without the complication of strand ligation during or immediately following X-ray exposure since such cells are deficient in DNA ligase activity.

27177 **Tumor induction in BALB/c mice after fractionated or protracted exposure to fission-spectrum neutrons.** Ullrich, R.L. (Oak Ridge National Lab., TN). *Radiation Research;* **97**: No. 3, 587-597(Mar 1984). Contract W-7405-ENG-26.

This study has examined the effect of dose rate or fractionation on the carcinogenic effects of fission neutrons with emphasis on the dose range below 50 rad. The induction of lung adenocarcinomas, mammary adenocarcinomas, and ovarian tumors in female BALB/c mice was examined after whole-body neutron irradiation delivered at a high dose rate as a single exposure, or delivered as two equal fractions separated by intervals of 24 hr or 30 days and compared these effects to those after neutron irradiation at low dose rates. The dose responses for ovarian tumorigenesis after the split-dose fractionation regimen were similar to that observed after single high-dose-rate neutron exposure. However, lowering the dose rate reduced the incidence over the dose range of 0-50 rad. For lung and mammary tumors the results were more complex. These data suggest that fractionation and dose-rate effects are different for different tumor types presumably because of the different mechanisms of tumorigenesis that may be involved.

27178 **Link between the environment and cancer: DOE's research efforts. Hearing before the Subcommittee on Natural Resources, Agriculture Research and Environment, U.S. House of Representatives, Ninety-Eighth Congress, first session, 3 Mar 1983.** Washington, DC; Government Printing Office (1984). 126p.

Spokesmen for the Brookhaven and Oak Ridge National Laboratories, the Lovelace Inhalation Toxicology Research Institute, and the University of California Los Angeles School of Medicine described research programs which seek to link human exposure to radiation and chemicals used in energy production to cancer. They addressed the committee's concern that DOE budget cuts will limit the identification of causes of cancer and the effort to find cures. DOE's budget request of $210 million for environmental programs in 1984 is 21% less than the 1984 level. The witnesses described their research in detail in order to justify continued funding.

27179 **Current views on health effects of uranium mill tailings.** Marks, S.; Cross, F.T.; Denham, D.H.; Kennedy, W.E. Jr. (Battelle Pacific Northwest Lab., P.O. Box 999, Richland, WA 99352). *Transactions of the American Nuclear Society;* **45**: 46(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

27180 **Manned spacecraft radiation dosimetry.** Benton, E.V. (University of San Francisco, 2130 Fulton Street, San Francisco, CA 94117). *Transactions of the American Nuclear Society;* **45**: 226(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

27181 **Measurement of lymphoblastogenic activity from thorium workers.** Serio, C.S.; Henning, C.B.; Toohey, R.E.; Lloyd, E.L. (Argonne National Lab., IL (USA)). *International Journal of Radiation Biology and Related Studies in Physics, Chemistry and Medicine;* **44**: No. 3, 251-256(Sep 1983).

Mitogenic stimulation of peripheral blood lymphocyte cultures obtained from 36 thorium workers was studied to determine whether the response of these cells was affected by the individuals' occupational exposure to alpha irradiation. The standard assay involved incubating 2 x 10^5 lymphocytes per test well 72 hours in the presence of phytohemagglutinin (PHA), concanavalin A (Con A) or pokeweed mitogen (PWM). The results showed that there was a significant decrease in lymphocyte responsiveness of former thorium workers grouped by decade of life when compared with controls of the same decade of life for each mitogen tested with the exceptions of PHA in the 41-50 age group and PWM in the 51-60 age group. We are unable to correlate the decreased response observed with the measured body burdens, external gamma exposure, or thoron exhalation rates in these thorium cases. However, other occupational exposures (i.e., various chemicals used in processing thorium) cannot be eliminated as a possible cause.

27182 Irradiation of circular DNA with 254 nm radiation or sensitization in the presence of Ag^+ evidence for unwinding by photoproducts other than pyrimidine dimers. Ciarrocchi, G. (Istituto di Genetica Biochimica ed Evoluzionistica del C.N.R., Pavia (Italy)); Sutherland, B.M. (Brookhaven National Lab., Upton, NY (USA)). *Photochemistry and Photobiology;* **38**: No. 3, 259-263(Sep 1983).

Structural alterations of DNA irradiated with UV light were analyzed. Relaxed, circular pAT 153 DNA molecules were sensitized by broad band radiation with a maximum at 313 nm in the presence of silver ions or irradiated with 254 nm light in buffer only. In both cases the electrophoretic mobility of DNA topoisomers was altered as a linear function of UV exposure. For DNA irradiated in the sensitized reaction the unwinding angle per site sensitive to Micrococcus luteus pyrimidine dimer endonuclease was found to be -11.4°. The irradiated DNAs were a very good substrate for the Escherichia coli photoreactivating enzyme (PRE). However, the photoenzymic removal of all sites sensitive to the endonuclease specific for pyrimidine dimers was not coupled to a full restoration of the original electrophoretic mobility. Thirty and 23% of the unwinding were still present in the photoreactivated topoisomers and the unwinding angles per pyrimidine dimer were then recalculated as -10.1° and -8.7° for DNAs irradiated with 254 nm and sensitized, respectively. These results show that the tertiary structure of DNA is measurably altered by UV photodamages other than pyrimidine dimers.

27183 Role of the supX gene in sensitizing Salmonella typhimurium cells to respiration shutoff induced by far ultraviolet irradiation. Swenson, P.A.; Riester, L.; Palmer, T.V. (Oak Ridge National Lab., TN (USA)). *Photochemistry and Photobiology;* **38**: No. 3, 305-310(Sep 1983).

Salmonella typhimurium strains with supX mutations are known to be sensitive to UV (254 nm) irradiation and to be protected by plasmid pKM101. Wild type ($supX^+$) cells shut off their respiration after UV and are protected against their shutoff by pKM101. Respiration and survival studies were carried out on several supX strains. The supX strains shut off their respiration after low fluences of UV. Plasmid pKM101 protected a supX83 (nonsense mutation) strain against respiration shutoff and killing but did not protect a supX35 (deletion mutation) strain. When each of the two supX genes were in the genetic backgrounds of the other, however, full protection was provided by pKM101. The supX35 strain not protected by pKM101 may have accumulated a modifying mutation. The supX locus is identical with one specifying topoisomerase I which removes negative superhelical turns from DNA. In the absence of this enzyme, transcription of the DNA is increased. It is proposed that the exaggerated shutoff of respiration and increased killing of supX cells occurs because of the greater ease of transcription of an operon involved in UV-induced respiration shutoff.

27184 Natural chelates for radionuclide decorporation. Premuzic, E.T. (to Dept. of Energy). US Patent Application 6-526,246. 25 Aug 1983. 27p. Contract AC02-76CH00016.

Portions are illegible in microfiche products.

This invention relates to the method and resulting chelates of desorbing a radionuclide selected from thorium, uranium, and plutonium containing cultures in a bioavailable form involving pseudomonas or other microorganisms. A preferred microorganism is Pseudomonas aeruginosa which forms multiple chelates with thorium in the range of molecular weight 1000 to 1000 and also forms chelates with uranium of molecular weight in the area of 100 to 1000 and 1000 to 2000.

27185 The shapes of the radiation dose-mutation response curves in drosophila: Mechanisms and implications. Abrahamson, S.; DeJongh, C.; Meyer, H.U. (Dept. of Zoology, Univ. of Wisconsin, Madison, WI). pp 477-496 of Measurement of risks. Berg, G.G. New York, NY; Plenum Publishing Corp. (1981). (CONF-800601—).

From 13. Rochester international conference on environmental toxicity--measurement of risks; Rochester, NY, USA (2 Jun 1980).

This chapter proposes that radiation induced mutations, namely sex-linked recessive lethals in Drosophila and forward mutations at specific loci in Drosophila, mammals and lower eucaryotes, are the result of two sub-lesions or hits, induced by either single ionization tracks or by the interaction of two independent tracks for low LET radiations, when the dose is delivered in an acute fashion. Utilizes the well recognized linear quadratic expression $Y=C+\alpha D+\beta D^2$, where C is the spontaneous frequency of events scored and α and β represent the coefficients of the dose. Concludes that for low LET radiations, X or gamma rays, the linear-quadratic model can be used to predict the genetic response of germ cells and somatic cells to a variety of radiation regimes. Points out that the point of inflection in the curve, α/β value, can be determined specifically by target dimensions which vary with respect to DNA content. Considers the difference in RBE values observed for different species to be a reflection of their different target sizes.

27186 (CONF-811048—Summs.) International symposium on indoor air pollution, health and energy conservation. Extended summaries. (Harvard Univ., Cambridge, MA (USA)). 1981. 531p. NTIS, PC A23/MF A01; 1; GPO Dep. Order Number DE84004447.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Portions are illegible in microfiche products.

A collection of extended summaries prepared by the participants of the International Symposium on Indoor Air Pollution, Health and Energy Conservation held October 13 to 16, 1981 at the University of Massachusetts. The converence was divided into sections with papers addressing the characterization of the indoor environment, characterization of formaldehyde and other organic pollutants in the indoor environment, health effects of indoor pollutants, characterization of aerosols and inorganic gases in indoor environment, energy conservation and indoor air quality, ventilation and controls, exposure studies, models for indoor air quality and energy conservation, and policy and regulatory issues. (DT)

27187 Comparative temperature-dependent growth rates of largemouth and smallmouth bass fry. Coutant, C.C.; DeAngelis, D.L. (Oak Ridge National Lab., TN). *Transactions of the American Fisheries Society;* **112**: 416-423(1983). Contract W-7405-ENG-36.

First-month growth was temperture-dependent for fry of largemouth bass Micropterus salmoides and smallmouth bass M. dolomieui that were raised simultaneously under identical conditions. Similar temperatures (25-27 C) produced the fastest growth rates in both species, although largemouth bass grew most rapidly at the higher end of this range. Largemouth bass generally grew faster than smallmouth bass, particularly in 25 to 20 C range (average 1.4 times). Variance about the mean standard length increased at higher temperatures. Differing temperature-dependent growth rates and size distributions for the two species may influence their relative abilities to survive predation and to form strong year classes in temperature regimes that differ due to latitude or weather.

27188 (CONF-811048—Summs., pp 5p, Paper 4) **Indoor climate problems in Danish dwellings. Complaints and diseases referred to the type and materials of dwellings and the use of airings.** Valbjorn, O.; Nielsen, P.A.; Kjmer, J. (Danish Building Research Inst., Horsholm, Denmark). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

This investigation deals with dwellings where the occupants presumed that their complaints about nuisances were related to the indoor climate. The persons involved can be defined as a sensitive

group, while as well headache and nuisances in the respiratory system are frequent. As the most common complaints of those related to the psysical climate by the persons spontaneously, i.e., headache and dry upper airways also can be psychosomatic reactions, future investigations on the complaints should incorporate the psychological and social aspects. (DT)

27189 (CONF-811048—Summs., pp 4p, Paper 31) **Environmental control of indoor air pollution with subsequent challenge testing in humans.** Rea, W.J. (Univ. of Texas Southwestern Medical School, Dallas); Smiley, R.E.; Sprague, D.E.; Edgar, R.T.; Fenyves, E.J.; Greenberg, M.; Johnson, A.R. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Patients, thought to be environmentally sensitive, were placed in a specially designed hospital environmental unit in order to reduce exposure to gaseous and particulate contaminants. These individuals were taken off all symptom-suppressing medication and food for four to seven days. Laboratory parameters such as eosinophils, total complement, gamma globulins and T lymphocytes were monitored during the time in the environmental unit. Besides noting the improvement of signs and symptoms, many of the laboratory tests were noted to return to control levels. (DT)

27190 (CONF-811048—Summs., pp 2p, Paper 32) **Lung collagen metabolism in rats exposed to nitrogen dioxide.** Last, J.A. (Univ. of California, Davis). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Collagen synthesis rates were determined in lung minces from rats exposed to 5 to 25 ppM of NO_2 for 1 week. The results gained suggest that inhaled NO_2 is fibrogenic but that 15 to 20 fold higher concentrations of NO_2 are required to produce the same degree of fibrogenesis as seen with ozone. Exposure of rats to ozone or to NO_2 gas in the presence of an aerosol of $(NH_4)_2SO_4$ particles, in the respirable size range, resulted in enhanced fibrogenic and toxic response of rat lungs to these gases. (DT)

27191 (CONF-811048—Summs., pp 3p, Paper 33) **Respiratory irritation due to carpet shampoos.** Kreiss, K.; Gonzalez, M.G.; Conright, K.L.; Scheere, A.R. (Colorado Health Dept., Denver). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

We report here a novel indoor air pollutant, residue from carpet shampoo, which caused outbreaks of mucous membrane irritation in an office building and in a day-care center. (DT)

27192 (CONF-811048—Summs., pp 4p, Paper 35) **Survey of indoor formaldehyde levels and apparent building-related illness in conventional housing in Delaware County, Indiana.** Godish, T.J. (Ball State Univ., Muncie, IN). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Measurable levels of formaldehyde were recorded in all homes investigated. Most complaint homes investigated indicated patterns of building-related illness. The frequency of the most reported symptoms closely reflect those observed in Wisconsin mobile home studies. However, formaldehyde levels reported here are on the average only a fraction of those reported for mobile homes. Although building-related illness was indicated in most homes investigated, a causal relationship with formaldehyde contamination has yet to be determined. (DT)

27193 (CONF-811048—Summs., pp 3p, Paper 36) **Irritant symptomatology, clinical observations and formaldehyde exposure among Wisconsin mobile home residents.** Anderson, H.A.; Hanrahan, L.P.; Dally, K.A.; Rankin, J. (Univ. of Wisconsin, Madison). 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Mobile homes, which utilize a higher proportion of urea formaldehyde resin containing construction materials and home furnishings than conventional homes have been disproportionately represented among complaints received by the Wisconsin Division of Health form home owners concerned about mucous membrane irritation symptomatology. Significant concentrations of formaldehyde were found in many of these homes, several homes exceeding the OSHA occupational standard of 3.0 ppM. Observed formaldehyde concentration was positively associated with an increasing prevalence of irritant symptoms, especially those of the eyes, and was negatively correlated with the age of the home. (DT)

27194 (CONF-811048—Summs., pp 6p, Paper 37) **Multivariate analysis of health effects in a cohort of mobile home residents exposed to formaldehyde.** Hanrahan, L.P. (Wisconsin Div. of Health, Madison); Anderson, H.A.; Dally, K.A.; Eckmann, A.D.; Kanarek, M.S. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

The Wisconsin Division of Health has investigated 100 health complaints reported by mobile home occupants, along with a pilot randomly selected group of 65 mobile homes. A significant positive relationship was found between the log formaldehyde concentration in the home and the report of irritant symptomatology (i.e., eye irritation). (DT)

27195 (CONF-811048—Summs., pp 8p, Paper 38) **Health effects of indoor formaldehyde exposure.** Schenker, M.B.; Weiss, S.T. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Surveys of symptomatic subjects in homes with urea formaldehyde foam insulation (UFFI) have found most symptoms to involve the mucous membranes, respiratory tract, central nervous system or skin. We evaluated these systems in seventeen subjects from 4 homes with UFFI, self referred to an environmental health clinic. The study subjects did not demonstrate a significantly increased prevalence of lower respiratory tract symptoms. Baseline spirometry was normal in all subjects. Taken with the high prevalence of eye and throat irritation symptoms, these findings are consistent with the effects of a highly soluable irritant gas, affecting primarly the mucous membranes including the proximal airways. While memory storage deficits could not be demonstrated, 60% of the patients had either impaired span or capacity to sustain attention. This was associated with depression in six of the seven patients with elevated depression scores. These findings may be due to a generalized malaise that accompanies illness or to a physiological mechanism via alterations in neurotransmitters or other brain chemical. (DT)

27196 (CONF-811048—Summs., pp 3p, Paper 39) **Residential air quality measurements as a component of exposure assessment for a health effects study.** Stock, T.H. (Univ. of Texas Health Science Center, Houston); Kotchmar, D.J.; Holguin, A.H.; Buffler, P.A. 1981. NTIS, PC A23/MF A01.

From International symposium on indoor air pollution, health and energy conservation; Amherst, MA, USA (13 Oct 1981).

Two residential clusters of asthmatics in the Houston area are currently (May to October, 1981) being studied as part of an overall attempt to assess the health effects of air pollution in the Texas Gulf Coast area. Respiratory health status of each of the study participants is evaluated by means of several daily self-administered pulmonary function measurements and the recording of subjective symptomatology, medication use, and activity on personal daily log forms. Corresponding air pollutant exposure data are produced by continuously monitoring data from centrally-located fixed stations, residential indoor/outdoor measurements, and personal monitoring. (DT)

27197 **(CONF-7803144—1) Quantifying smoke hazards.** Martin, S.B.; McKee, R.G. (SRI International, Menlo Park, CA (USA)). 1978. 45p. NTIS, PC A03/MF A01. Order Number DE84900943.

From Joint meeting of Society of Plastics Engineers and the Fire Retardant Chemicals Association; Houston, TX, USA (12 Mar 1978).

A rationale is provided for the establishment of a bioassay protocol that properly accounts for the fire-related qualities of smoke toxicity. This paper summarizes test data selected to validate the methodology. From data records for test materials, and a similar set for carbon monoxide alone, values of tau and EC_{50} are read and 3 values are computed for incapacitation (50% deficit in avoidance and escape behavior) and lethality (50% loss of life in both shock motivated and quiescent animals). 17 references, 9 figures, 5 tables.

27198 **(LA-UR—84-1284) Molecular response of cadmium resistant Datura innoxia cells to heavy metal stress.** Jackson, P.J.; Naranjo, C.M.; McClure, P.R.; Roth, E.J. (Los Alamos National Lab., NM (USA); Utah Univ., Salt Lake City (USA). Dept. of Biology). 16 Apr 1984. Contract W-7405-ENG-36. 17p. (CONF-8404139—2). NTIS, PC A02; 3; GPO Dep. Order Number DE84011339.

From Solar central receiver annual meeting; San Diego, CA, USA (24 Apr 1984).

Paper copy only, copy does not permit microfiche production.

Datura innoxia suspension culture cells can be selected for the ability to grow rapidly for extended periods of time in normally toxic concentrations of cadmium ion. Resistance to this toxic heavy metal is correlated with the ability to rapidly synthesize large amounts of one or more low molecular weight, cysteine-rich, metal binding proteins. Resistance to increasing concentrations of cadmium is correlated with both the rate of de novo synthesis and the maximum accumulation of these binding proteins within cadmium resistant cells. The ability of one metal binding protein to tightly bind copper ion suggests that these proteins may normally play a role in trace metal metabolism and transport. Metal binding proteins are not easily detectable in the cadmium sensitive cells from which resistant cells were derived. 22 references, 8 figures.

27199 (LBL—13500, pp 3.15-3.17) **Pollutant emission rates from indoor combustion appliances and sidestream cigarette smoke.** Girman, J.R.; Allen, J.R.; Apte, M.G.; Hollowell, C.D.; Martin, V.M.; Traynor, G.W. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

Calculating emission rates of these combustion-generated pollutants is an essential step in assessing the degree to which these pollutant sources affect indoor air quality. In this paper, we report the pollutant emission rates derived from our studies of a gas-fired stove, gas-fired unvented space heater, kerosene-fired unvented space heater, and sidestream cigarette smoke. These experiments were carried out in an environmental chamber under controlled ventilation, and our Mobile Atmospheric Research Laboratory was used to measure gas-phase pollutant concentrations.

27200 (LBL—13500, pp 4.122-4.123) **Asymmetry of the mitochondrial membrane.** Mehlhorn, R.J.; Packer, L. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

Mitochondria were found to be unduly permeable to charge spin probes and other paramegnetic ions for routine studies. We therefore made preliminary studies with light-activated membrane systems which offered the opportunity to examine very rapid responses of spin probes to energy gradients.

27201 **(NP—4770236) Environmental research in forest damage.** Riesenhuber, H. (Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.)). 15 Aug 1983. 40p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84770236.

Portions are illegible in microfiche products.

Co-ordinated fighting of forest damage by science and technology and relative legislative measures belong to the foremost aims of the federal government. The damaging effects of air pollutions result predominantly from locally differentiated influences of "acid depositions" and direct influences. As yet it is not possible to verify the various hypotheses on cause-effect relationships experimentally. The question around which the efforts are centered is, what can be done to mitigate or avoid damage in addition to the reduction of pollutants emitted.

27202 **(NP—4770241) Cadmium load of the population in the over 50 age group in the South Bavarian region.** Renjut, A. (Muenchen Univ. (Germany, F.R.). Fachbereich Medizin). 1982. 90p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84770241.

Portions are illegible in microfiche products.

Liver and kidney tissue samples were collected from 103 people in the age range 51 to 90 from 1980 to 1981. Following wet maceration they were analysed for Cd-content using atomic absorption spectrometry. Mean values for Cd-concentration in the liver and kidney were 1.27 $\mu g/g$ and 41.05 $\mu g/g$ respectively. A statistically significant reduction in Cd-content with age in liver and kidney of persons over 50 was established. Higher Cd-values in both liver and kidneys were found in samples taken from people living in towns than in rural districts. Mean values for Cd-concentration in the liver of smokers (anti $x=1.33$ $\mu g/g$) were not significantly different from those of non-smokers (anti $x=0.96$ $\mu g/g$), whereas in the kidneys significantly higher values for smokers (anti $x=62.53$ $\mu g/g$) compared to non-smokers (anti $x=31.33$ $\mu g/g$) were obtained. The mean values for Cd-concentration of persons with cirrhosis of the liver or fatty livers were markedly lower than those for persons with other liver complaints or for those without liver damage.

27203 **(PNL—4614-Vol.2) Field evaluation of hazardous waste site bioassessment protocols. Volume 2.** Thomas, J.M.; Cline, J.F.; Gano, K.A.; McShane, M.C.; Rogers, J.E.; Rogers, L.E.; Simpson, J.C.; Skalski, J.R. (Pacific Northwest Lab., Richland, WA (USA)). Apr 1984. Contract AC06-76RL01830. 109p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84010763.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The overall goal of the plan was to demonstrate that honeybees could be used in detecting likely areas of chemical pollution, to demonstrate the usefulness of microbial and plant phytoassays, and to demonstrate a relationship between laboratory derived phytotoxicity results and field observations of plant community structure and diversity. Field studies were conducted through a cooperative arrangement with the US Army arsenal in Commerce City, Colorado.

27204 **(UCID—20030) Documentation of trichloroethylene for the material safety data sheet.** Fields, B.C.; MacDonald, L. (Lawrence Livermore National Lab., CA (USA)). 15 Apr 1984. Contract W-7405-ENG-48. 38p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84010922.

An investigation was made of all available research data to evaluate and determine the toxic effects of trichloroethylene (TCE) for the Material Safety Data Sheet. It is a study of the toxic effects on humans and animals of exposure to various concentrations of TCE. The study, which includes chronic exposure to TCE causing damage to the skin, eyes, and all internal vital organs, was made in order to establish safe levels, or further lower exposure levels, in the interest of biological safety. 35 references, 1 table.

27205 **Sulfur dioxide and ammonium sulfate effects on pulmonary function and bronchial reactivity in human subjects.** Kulle, T.J.; Sauder, L.R.; Shanty, F.; Kerr, H.D.; Farrell, B.P.; Miller, W.R.; Milman, J.H. (Univ. of Maryland, Baltimore). *American Industrial Hygiene Association Journal;* **45**: No. 3, 156-161(Mar 1984). Contract AS05-81EV10586.

The effect of exposures to 1 ppm sulfur dioxide (SO_2) and 500 $\mu g/m^3$ respirable ammonium sulfate $[(NH_4)_2SO_4]$ was studied in 20 nonsmoking subjects to determine if a response can be measured at these atmospheric levels and if the response is additive or synergistic. Four-hour separate and combined exposures were employed. Each subject acted as his or her own control and performed two light-to-moderate exercise stints (612 kg-m/min) for 15 minutes on each day's confinement in the environmental chamber. Pulmonary function tests (body plethysmography and spirometry) and bronchi-

al reactivity to methacholine were performed to assess the response of these exposures. No significant changes in pulmonary function or bronchial reactivity were observed in the individual exposures [$(NH_4)_2SO_4$ or SO_3], the combined exposure [$(NH_4)_2SO_4$ and SO_3], or 24 hours post-exposure. This study design and the observed results did not demonstrate any readily apparent risk to healthy subjects with these exposures. Since no significant changes were measured, it was not possible to conclude if these two pollutants in combination produce an additive or synergistic response.

27206 **Carcinogenicity of single and multiple intratracheal instillations of cadmium oxide in the rat.** Sanders, C.L.; Mahaffey, J.A. (Pacific Northwest Lab., Richland, WA). *Environmental Research;* **33**: No. 1, 227-233(Feb 1984). Contract AC06-76RL01830.

The carcinogenic effects of single or multiple exposures to intratracheally instilled cadmium oxide, resulting in total doses of 0, 25, 50, and 75 μg, were studied in groups of 41 to 48 male Fischer rats. Pulmonary-deposited cadmium oxide did not result in increased numbers of tumors, except in the mammary gland or in rats that had three or more tumor types. Cadmium oxide was not carcinogenic in the lung, liver, kidney, or prostate gland of rats.

27207 **Dose-response analysis of cadmium in man: body burden vs kidney dysfunction.** Ellis, K.J.; Yuen, K.; Yasumura, S.; Cohn, S.H. (Brookhaven National Lab., Upton, NY). *Environmental Research;* **33**: No. 1, 216-226(Feb 1984). Contract AC02-76CH00016.

The primary objective of this study was to develop dose-response relationships of cadmium in human beings. In vivo measurements of kidney, liver, urine, and blood cadmium, and urinary levels of β_2-microglobulin and total protein were obtained in 82 industrially exposed workers and 30 control subjects. The values of 200 μg/g creatinine for urinary β_2-microglobulin and 250 mg/g creatinine for urinary total protein were used to define the upper limit for normal kidney function. Forty-one of the cadmium workers (18 active, 23 retired) were classified as having abnormal kidney function; all control subjects had normal kidney function. Most workers with Cd above 70 ppm in the liver were judged to have some evidence of kidney abnormalities. The dose-response relationship for liver cadmium for the actively employed workers could be described by a linear logistic regression model: $\ln p/(1-p) = 0.118 \times$ liver cadmium (ppm) - 5.00 where p is the individual's probability of having kidney dysfunction. The loss of cadmium from the kidney following dysfunction prohibited a direct logistic analysis of the kidney cadmium data. However, when the linear relationship between kidney and liver cadmium for the subjects with normal kidney function was combined with the logistic equation for the liver, a predicted-response curve was obtained for the kidney. The logistic models predict a 50% probability of having kidney dysfunction at 38.4 mg for the kidney and 42.3 ppm for the liver, respectively.

27208 **Population biology in the courtroom: the Hudson River controversy.** Barnthouse, L.W.; Boreman, J.; Christensen, S.W.; Goodyear, C.P.; Van Winkle, W.; Vaughan, D.S. (Oak Ridge National Lab., TN). *BioScience;* **34**: No. 1, 14-19(Jan 1984). Contract W-7405-ENG-26.

In support of more than a decade of litigation, scientists devoted unprecedented effort to modeling the impact of electric power generation on the Hudson River striped bass population. When the Cornwall pumped storage facility was first proposed, opponents of the project argued that enormous numbers of striped bass eggs and larvae would be entrained with the pumped water and killed. Several years later, when the US Atomic Energy Commission held hearings to investigate the potential environmental impacts of Indian Point Unit 2, a nuclear power plant nearing completion 25 km downriver from Cornwall, it was argued that young striped bass would be entrained through the condensers with the cooling water and killed by thermal and mechanical stress. In addition, fish would be killed by impingement on the trash screens. The AEC staff recommended that a cooling tower be built at Indian Point to reduce cooling-water requirements and, therefore, entrainment and impingement mortality. The most sophisticated models failed to provide useful long-term impact predictions. However, simpler models, used to evaluate alternatives for mitigation, were instrumental in arranging a negotiated settlement.

27209 **Comparative toxicities of coal- and shale-derived crude oils and a petroleum-derived fuel oil to the fresh water snails Helisoma trivolvis and Physa gyrina.** Millemann, R.E.; Tumminia, S.J.; Forte, J.L.; Daniels, K.L. (Oak Ridge National Lab., TN). *Environmental Pollution, Series A: Ecological and Biological;* **33**: No. 1, 23-38(1984). Contract W-7405-ENG-26.

The water-soluble fractions (WSFs) of coal- and shale-derived crude oils and a No. 2 diesel fuel oil were tested for acute and chronic toxicity to the pulmonate snails Physa gyrina and Helisoma trivolvis. The 48-h HC_{50}s (WSF dilutions that killed 50% of the animals in 48h) of coal oil WSF and shale oil WSF for adult H. trivolvis were 5.4% and 16%, respectively, and for adult P. gyrina they were 3% and 3.6%. Full-strength diesel fuel oil WSF did not kill adult snails of either species in 48h. In the chronic toxicity tests, snail embryos were exposed continuously to sublethal WSF concentrations from the time of oviposition through 1 week post hatching (11-23 days). The lowest concentrations of coal oil, shale oil and diesel fuel oil WSFs that significantly reduced hatching of H. trivolvis were 0.125%, 0.5% and 32%, respectively, and for P. gyrina they were 1.1%, 2.5% and 8%. Some of the high WSF concentrations significantly delayed hatching of both snail species by about 2 days as compared with the controls. There were no effects of the WSFs on survival of hatched snails. The data suggest that the WSFs may be teratogenic for snail embryos.

27210 **Effects of a synthetic crude oil on pond benthic insects.** Cushman, R.M.; Goyert, J.C. (Oak Ridge National Lab., TN). *Environmental Pollution;* **33**: No. 1, 163-186(1984). Contract W-7405-ENG-26.

The effects on pond benthic insects of a synthetic (coal-derived) crude oil at doses equivalent to 375, 75 and 15 ml oil m^{-3} pond water was described. Total insect abundance and abundance by taxon, total biomass and biomass by taxon, number of taxa, and aspecies diversity based on abundance and biomass were all used as measures of community-level stress. The highest dose caused immediate and drastic effects, evident in all indices of stress. These effects were observed at concentrations of total phenols and oil:water ratios lower than those found to be toxic in laboratory acute bioassays. Populations of the midge Chironomus decorus in one of the medium dose ponds were stimulated, apparently an indirect effect of toxicity of the oil to the macrophyte Elodea canadensis. Three months after the dosing, there was some recovery of the pond insects, even at the highest doses examined. In comparison with indices based solely on numerical abundance, indices of stress incorporating data on biomass of individual organisms did not add appreciably to the understanding of effects.

27211 **Persistence and transfer of ^{36}Cl-DDT in the soil and biota of an old-field ecosystem: a six-year balance study.** Forsyth, D.J.; Peterle, T.J.; Bandy, L.W. (Ohio State Univ., Columbus). *Ecology;* **64**: No. 6, 1620-1636(Dec 1983).

The fate of a 1 kg/ha application of granular chlorine-36-labeled DDT made by helicopter on 10 June 1969 to a 4-ha old-field study area near Urbana, Ohio was traced and quantified in soil and biota through November 1974. Between 1970 and 1974, residues of DDT (DDTR, includes DDT plus metabolites) declined from 22.0 to 3.8 mg/kg tissue in earthworms (Lumbricus terrestris) and from 9.3 to 2.1 mg/kg in slugs (Deroceras laeve). Levels of DDTR in foliage of grasses and forbs increased from 2-3 mg/kg in 1970 to 7.6 mg/kg in 1974, but remained relatively constant at 1.6 mg/kg in roots. Amounts of residues in samples of air collected at the surface of the soil were positively correlated with amounts in soil and with air temperature. The total quantity of DDTR in the top 12 cm of soil was estimated to be 1779 g in October 1974, or 38% of the amount applied in 1969. Earthworms, which comprised the largest component of animal biomass, contained 5% of the total DDTR in the ecosystem in 1969, compared to 3% in the plants and other biota. As residues declined in earthworms and increased in plants over time, the total DDTR bound in the biota increased until it accounted for 22% of the total DDTR in the ecosystem in 1974. Losses of DDTR from the ecosystem each year were attributed primarily to volatilization from soil, because losses in runoff and emigrating insects and small mammals were negligible. 12 references, 7 figures, 6 tables.

27212 Health effects of air pollution due to coal combustion in the Chestnut Ridge Region of Pennsylvania: results of cross-sectional analysis in adults. Schenker, M.B.; Speizer, F.E.; Samet, J.M.; Gruhl, J.; Batterman, S. (Harvard Medical School, Boston, MA). *Archives of Environmental Health;* **38**: No. 6, 325-330(Nov-Dec 1983).

Respiratory questionnaires (ATS-DLD-78) were administered to 5557 adult women in a rural area of Western Pennsylvania to evaluate the health effects of air pollution resulting from coal combustion. Air pollution data were derived from 17 air quality monitor sites and stratified to define low, medium, and high pollution areas. The means of 4 yr (1975-1978) annual averages for sulfur dioxide in each strata were 62, 66, and 99 $\mu g/m^3$, respectively. Total suspended particulates were not tested as a risk factor because they reflected air pollution from sources other than coal combustion (e.g., agricultural, road dusts). Risks of respiratory symptoms were evaluated in a multiple logistic model that adjusted for several potential confounding factors. The risk of wheeze most days or nights in nonsmokers residing in the high and medium pollution areas was 1.58 and 1.26, respectively, relative to residents in the low pollution area. In the subject of residents who had lived in the same location for at least 5 yr, relative risks increased to 1.95 and 1.40, respectively. An increased risk of grade 3 dyspnea in nonsmokers was associated with sulfur dioxide but did not achieve statistical signficance, and there was no association of cough or phlegm and air pollution in nonsmokers. Cigarette smoking characteristics were the major determinant of respiratory symptoms in smokers, and no independent association of air pollution was found. This study suggests that wheezing may be associated with ambient exposure to sulfur dioxide in nonsmokers, but no effect of sulfur dioxide on cigarette smokers was observed. Chronic cough and phlegm production were not associated with sulfur dioxide at the concentrations observed in this study.

27213 Distribution and elimination of inhaled phenanthridone in Fischer-344 rats. Dutcher, J.S.; Mitchell, C.E. (Inhalation Toxicology Research Inst., Albuquerque, NM). *Journal of Toxicology and Environmental Health;* **12**: No. 4-6, 709-719(Oct-Dec 1983). Contract AC04-76EV01013.

Rats were exposed nose-only to an aerosol of [^{14}C] phenanthridone, a mutagenic aza-arene found in coal tar. Tissues, urine, feces, and expired air were collected at specified times and assayed for radioactivity. Radioactivity was rapidly absorbed from the respiratory tract and distributed to all tissues examined. It was rapidly eliminated from tissues (< 80% in 12 h), being concentrated only in the large intestine at later timepoints. Excretion of radioactivity in both feces and urine was complete within 4 d. Virtually none of the dose was eliminated as [^{14}C]CO_2. [^{14}C] Phenanthridone was also administered orally to assess its absorption from the gastrointestinal tract. Absorption was nearly complete (83 +/- 6%), indicating that phenanthridone ingested as a result of mucociliary clearance and swallowing, grooming, or coprophagy could also contribute to tissue exposure. These results are similar to those obtained from inhalation studies of other polycyclic aromatic hydrocarbons, indicating that as a class, inhaled polycyclic aromatic hydrocarbons may be rapidly absorbed from the respiratory tract, widely distributed throughout the body, and readily eliminated in both urine and feces.

27214 Preparation of oils for bacterial mutagenicity testing. Ma, C.Y.; Ho, C.; Quincy, R.B.; Guerin, M.R.; Rao, T.K.; Allen, B.E.; Epler, J.L. (Oak Ridge National Lab., TN). *Mutation Research;* **118**: 15-24(1983). Contract W-7405-ENG-26.

Four procedures used to prepare fossil-derived oils for bacterial mutagenicity testing have been examined. These are dewaxing by partitioning the oil between dimethyl sulfoxide (DMSO) and cyclohexane, incorporating a surfactant to increase compatability of the oil with the bioassay media, directly slurrying the oil in DMSO, and computing the mutagenicity of the oil by summing the contributions of individual chemical class fractions. DMSO slurries generally exhibit higher mutagenicities than computed by summing the contributions of chemical class fractions. Results of testing DMSO-slurries correlate ($r = 0.87$) well, however, with those obtained by summation. Mutagenicity results agree within a factor of two for the samples tested by 4 sample preparation procedures.

27215 Lichen communities on conifers in Southern California mountains: an ecological survey relative to oxidant air pollution. Sigal, L.L.; Nash, T.H. III. (Oak Ridge National Lab., TN). *Ecology;* **64**: No. 6, 1343-1354(1983). Contract W-7405-ENG-26.

In comparison with collections from the early 1900's when oxidant air pollution was essentially absent, 50% fewer lichen species were found on conifers during 3 yr (1976-1979) of collecting and sampling in the mountains of Southern California. Among the five mountain ranges studied, the San Bernardino Mountains, the region with the highest oxidant levels, had lower lichen frequency and cover values. Within the San Bernardino study sites, lichen cover was inversely related to estimated oxidant doses. Furthermore, at sites with high oxidant levels, marked morphological deterioration of the common species Hypogymnia enteromorpha was documented. Transplants of this species from the relatively unpolluted Cuyamaca Rancho State Park into the San Bernardino Mountains exhibited similar deterioration after a year's exposure. 4 figures, 9 tables.

27216 Photosynthetic recovery in Arctic caribou forage lichens following a long-term field sulfur dioxide fumigation. Moser, T.J.; Nash, T.H. III; Olafsen, A.G. (Arizona State Univ., Tempe). *Canadian Journal of Botany;* **61**: No. 1, 367-370(1983). Contract W-7405-ENG-36;AC06-76RL01830.

The gross photosynthetic response of Cladonia stellaris, cladonia rangiferina, and Cetraria cucullata was monitored during three growing seasons subsequent to a long-term, in situ SO_2 fumigation conducted in 1978 at Anaktuvuk Pass, AK. The lichen vegetation which had experienced the greatest SO_2stress during the 1978 fumigation remained photosynthetically inactive. Significant photosynthetic recovery was discovered in the test species which had experienced sublethal concentrations of SO_2; however, their photosynthetic capacities remained less than controls.

27217 Growth analysis of soybean exposed to simulated acid rain and gaseous air pollutants. Norby, R.J.; Luxmoore, R.J. (Oak Ridge National Lab., TN). *New Phytologist;* **95**: 277-287(1983). Contract W-7405-ENG-26.

Greenhouse-grown soybean plants were exposed to simulated acid rain (pH 2-6 to 5-6) and gaseous air pollutants ($SO_2 + O_3$) to determine how effects on short-term physiological processes are integrated into whole-plant response. Injury to expanding leaves, characterized by marginal necrosis and leaf deformation, was induced by twice-weekly exposure to simulated rain of pH 2-6 and to a lesser extent pH 3-4. Growth inhibition resulted only from exposure to rain of pH 2-6, and there were no significant pH x air pollution interactions. Growth analysis from periodic harvests indicated that inhibitory effects of rain of pH 2-6 were mediated through a reduction in leaf area ratio (LAR). The alteration in LAR was not attributable to reduced allocation of dry matter to leaves but to lower specific leaf area caused by leaf deformation. There were no effects of rain pH on unit leaf rate. A second experiment confirmed the lack of growth inhibition from simulated rain with pH>3-4. Cumulative water use, a measure that integrated aspects of root size, leaf area, and physiology, was remarkably similar in plants exposed to pH 3-4,4-2, or 5-6 simulated rain. These experiments suggest that vegetative growth of soybeans may be adversely affected by acid rain if pH is low enough to cause physical injury to leaves and loss of photosynthetic area.

27218 Delayed behavioral toxicity of lead with increasing exposure concentration. Cory-Slechta, D.A. (Univ. of Rochester School of Medicine and Dentistry, NY). *Toxicology and Applied Pharmacology;* **71**: 342-352(1983). Contract AC02-76EV03490.

Twenty-one day-old male Long-Evans hooded rats were exposed chronically to drinking solutions containing 500 ppm sodium acetate (controls) or 50, 100, or 500 ppm lead acetate. Performance on a fixed interval 1-min schedule of food reinforcement was assessed over 155 sessions. Blood lead values were monitored serially and brain lead determinations made at the end of testing (355 days of lead exposure). The lowest concentration of lead in the drinking water was associated with increases in the rate of fixed-interval responding over the first 30 sessions. At the two higher concentra-

tions, response rate values similar to controls over the first 40 sessions were followed by rate increases. The latency to maximum rate depended on concentration; the highest concentration was associated with the longest latency. Response rates of rats exposed to 50 ppm lead gradually returned to control levels after 120 sessions, while increased rates were sustained in rats at 100 and 500 ppm lead, even 100 days after lead exposure was terminated. Marked individual differences in susceptibility to lead-induced rate increases were observed in all treatment groups. Serial blood lead values were related both to exposure concentrations. Blood-brain ratios averaged 0.743 to 0.913, which agree with other data for the rat and human. These results confirm the vulnerability to lead of rats beyond the neonatal period, and extend the range of conditions under which such effects occur.

27219 **Somatosensory thresholds in monkeys exposed to acrylamide.** Maurissen, J.P.J.; Weiss, B.; Davis, H.T. (Univ. of Rochester School of Medicine and Dentistry, NY). *Toxicology and Applied Pharmacology;* **71**: 266-279(1983). Contract AC02-76EV03490.

Six monkeys were trained to report detection of a vibratory or electrical stimulus applied to the fingertip. The vibratory stimuli were presented at two frequencies (40 and 150 Hz). Thresholds were determined with a tracking procedure before, during, and after dosing. Each monkey served as its own control. Four monkeys were dosed orally with 10 mg/kg of acrylamide 5 days a week until the appearance of toxic signs. The total administered dose varied between 320 and 450 mg/kg. The other two monkeys served as time-matched controls. All the monkeys were observed 5 days a week. They were also weighed and presented with a visuomotor task twice a week. Weight loss usually preceded the onset of gross behavioral disturbances, such as loss of balance, tremor, or decreased activity. Impaired coordination, as revealed with the pickup test, paralleled weight loss. Electrical sensitivity was not affected. Vibration sensitivity, however, fell during dosing and remained impaired for several months after dosing ended. These data indicate that vibration sensitivity testing can trace the time course of intoxication and recovery in toxic peripheral neuropathies. Furthermore, the differential results obtained with vibratory and electrical stimulation are consonant with a primary effect on end-organ receptors.

27220 **Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair.** Toribara, T.Y. (Univ. of Rochester School of Medicine and Dentistry, NY); Jackson, D.A.; French, W.R.; Thompson, A.C.; Jaklevic, J.M. *Analytical Chemistry;* **54**: No. 11, 1844-1849(Sep 1982). Contract AC02-76EV03490;AC03-76SF00098.

Concentrations of trace elements in hair are finding increasing value in nutritional studies (essential trace elements) and in toxicology (toxic metals). Previously available methods have been tedious, time-consuming, and expensive. A new development in X-ray fluorescence instrumentation that provides automatic longitudinal scanning for some 16 elements in consecutive hair segments is discussed. The mass (in $\mu g/mm$) is determined simultaneously at each point, and the absolute concentrations are computed in parts per million for the elements. The method is nondestructive, and results (including mass) show much reproducible detail. The millimeter by millimeter longitudinal analysis allows recapitulation for previous toxic metal exposures for months or years, depending upon the length of the hair strand. This instrument, in a clinical setting, opens up many new research opportunities.

27221 **Effects of simulated acidic rain on yields of Raphanus sativus, Lactuca sativa, Triticum aestivum and Medicago sativa.** Evans, L.S.; Gmur, N.F.; Mancini, D. (Brookhaven National Lab., Upton, NY). *Environmental and Experimental Botany;* **22**: No. 4, 445-453(1982). Contract AC02-76CH00016.

Experiments were performed to determine effects to simulated acidic rain on radishes (Raphanus sativus), lettuce (Lactuca sativa), wheat (Triticum aestivum) and alfalfa (Medicago sativa) grown under greenhouse conditions. Experimental designs allowed the detection of statistically significant differences among means that differed by less than 10%. Simulated rainfalls of 2.5, 25, 63, 398, 100 and 2512 $\mu eq\ H^+\ l^{-1}$ (pH 5.6, 4.6, 4.2, 3.4, 3.0 and 2.6, respectively) decreased root yields (fresh mass) of radishes 26, 42, 37, 41, 66 and 73% compared with plants not exposed to rainfalls, Similar reductions were present in radish shoot fresh mass, leaf area, and root diameter. Fresh mass yields of lettuce plants exposed to 100, 794 and 1995 $\mu eq\ H^+\ l^{-1}$ (pH 4.0, 3.1 and 2.7, respectively) were 11, 10 and 14%, respectively, below heads of plants not exposed to rainfalls. Yields of plants exposed to simulated rainfalls of 2.0 $\mu eq\ H^+\ l^{-1}$ (pH 5.7) were similar to plants not exposed to rainfalls. Although visible foliar injury occurred to lettuce, this injury was present only on wrapper leaves and would not affect marketable quality. Yields of wheat which were applied during anthesis and caryopsis development were not influenced by exposure to 46 simulated rainfalls even as high as 1996 $\mu eq\ H^+\ l^{-1}$ (pH 2.7). Alfalfa plants exhibited no overall differences in fresh mass of forage among treatments even after 57 simulated rainfalls of 1996 $\mu eq\ H^+\ l^{-1}$ (pH 2.7) over 105 days. 22 references, 2 figures, 7 tables.

27222 **The risks of measuring risk.** Berg, G.G. (Dept. of Radiation Biology and Biophysics, Univ. of Rochester School of Medicine and Dentistry Rochester, NY 14642). pp 3-8 of Measurement of risks. Berg, G.G.; Maillie, H.D. New York, NY; Plenum Publishing Corp. (1981). (CONF-800601—). Contract AC02-76EV03490.

From 13. Rochester international conference on environmental toxicity--measurement of risks; Rochester, NY, USA (2 Jun 1980).

This chapter summarizes the proceedings of the Thirteenth Rochester International Conference on Environmental Toxicity, which examined both the logical soundness of the inference of risk and the validity of the experimental evidence of damage. Topics include the statistical inference of risks; risks of prenatal exposures; risks of contaminated air and drinking water; comparative risks of energy sources; genetic and cancer hazards; and extrapolation to low doses. Discusses single factor models, population responses, conservative inferences, and linear extrapolation. Offers examples from current research by the participants on environmental hazards of toxic chemicals and ionizing radiation. Emphasizes the current trend in risk assessment and suggests alternative approaches.

27223 **Simulated deposition rates for SO_2 on a Southeastern US landscape.** Murphy, B.D.; Johnson, W.C.; Schlatter, E.C. (Oak Ridge National Lab., TN). *Agricultural Meteorology;* **21**: 179-193(1980).

Atmospheric transport and deposition of SO_2 are simulated over a circular area (22 km in radius) of representative landscape in East Tennessee. Data from aerial photographs were used to determine surface parameters which in turn allowed estimated deposition rates on the different ground cover types by taking account of both aerodynamic and surface related components of the process. Patterns of deposition rates are shown and are compared with spatial patterns of ground cover type. Area averaged values of deposition velocity are deduced for representative times of the year. The influence of various physical factors as they bear upon the perceived sensitivity of different species to SO_2 damage was speculated on.

27224 **Effects of SO_2 dosage kinetics and exposure frequency on photosynthesis and transpiration of kidney beans (Phaseolus vulgaris L.).** McLaughlin, S.B.; Shriner, D.S.; McConathy, R.K.; Mann, L.K. (Oak Ridge National Lab., TN). *Environmental and Experimental Botany;* **19**: 179-191(1979). Contract W-7405-ENG-26.

The effects of variations in SO_2 dosage kinetics on bean plants (Phaseolus vulgaris L. red kidney) were studied at SO_2 levels equal to or below the current secondary ambient air quality standard. Response of photosynthesis, transpiration and growth were measured to evaluate the extent and duration of effects following repeated treatment at weekly (Experiment I) and daily (Experiment II) intervals. Depression of photosynthesis was the most consistent response observed. Transpiration was either stimulated or depressed by SO_2 concentrations which reduced photosynthesis. This effect indicates a probable biochemical rather than stomatal basis for observed photosynthetic depressions noted in these experiments. Increasing the peak:mean concentration ratio from 1.0 to 1.7 during exposure had no obvious effect on short-term photosynthetic response but caused apparent stimulation of photosynthesis one day

later. Increasing the peak:mean ratio from 1.0 to 6.0 caused a threefold average greater depression of short-term photosynthetic response even though the 3 hr av. concentration was reduced by 25% (0.50-0.37). Residual effects from this treatment were generally small on the day after exposure. No strong evidence was obtained to indicate that plants were sensitized to SO_2-induced suppression of photosynthesis by previous exposure to SO_2. Predisposition was not apparent when exposures were repeated at weekly or daily intervals. Visible foliar injury did not occur. Analysis of harvest data at the end of these experiments indicated that plants could undergo a repeated short-term (1 day) cycle of photosynthetic inhibition and still retain an essentially unimpaired capacity for growth during a subsequent recovery period. When exposures were spaced a week apart, some indication of a residual effect on growth, particularly with the highest peak:mean ratio (6.0), was apparent. 26 references, 6 figures, 2 tables.

27225 **Influence of strong magnetic fields on genetic endpoints in Tradescantia tetrads and stamen hairs.** Baum, J.W.; Nauman, C.H. (Brookhaven National Lab., Upton, NY). *Environmental Mutagenesis;* 6: No. 1, 49-58(1984). Contract AC02-76CH00016.

Inflorescences from Tradescantia clones 4430 and 02 were subjected to mean magnetic field intensities of 0.16 or 0.76 to 0.78 tesla for 6 to 11 days. Following exposures to both intensities, damage to pollen mother cell chromosomes at early prophase was determined by scoring the frequency of micronuclei in early tetrads. Pink mutations in stamen hair cells of clone 4430 were scored for 15 days after a 6-day exposure to the higher intensity level while clone 02 was scored during and for 6 days after an 11-day exposure to the 0.16 tesla field. Comparison of micronuclei results from exposed groups to those for control groups that were scored concurrently showed that there was no significant difference in frequency for either clone or either field intensity (P values in contingency table analyses were between 0.42 and 0.6); similarly, pink mutation frequencies for clone 4430 exposed and control groups did not differ significantly (a contingency test yielded $chi^2 = 1.4$ and $P = 0.26$).

57 HEALTH AND SAFETY

27226 **(BNL—34597) Hazardous materials information hotline using System 2000.** Brower, J.E.; Fuchel, K. (Brookhaven National Lab., Upton, NY (USA)). 30 Apr 1984. Contract AC02-76CH00016. 13p. (CONF-8404120—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010791.

From Association of system 2000 users for technical exchange conference; Austin, TX, USA (30 Apr 1984).

Portions are illegible in microfiche products.

The Center for Assessment of Chemical and Physical Hazards (CACPH) at Brookhaven National Laboratory (BNL) has developed a computer hotline service for the Department of Energy (DOE) and its contractors. This service provides access to health and safety information for over 800 chemicals and hazardous materials. The data base uses System 2000 on a CDC 6600 and provides information on the chemical name and its synonyms, 17 categories of health and safety information, composition of chemical mixtures, categories of chemicals, use and hazards, and physical, chemical and toxicity attributes. In order to make this information available to people unfamiliar with System 2000, a user-friendly interface was developed using a Fortran PLEX Program. 1 reference, 1 figure.

27227 **(DOE/ER—0194) Health and environmental research. Summary of accomplishments.** (USDOE Office of Energy Research, Washington, DC). Apr 1984. 17p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010764.

This is a short account of a 40-year-old health and environmental research program performed in national laboratories, universities, and research institutes. Under the sponsorship of the federal agencies that were consecutively responsible for the national energy mission, this research program has contributed to the understanding of the human health and environmental effects of emerging energy technologies. In so doing, it has also evolved several nuclear techniques for the diagnosis and treatment of human ills. The form of this presentation is through examples of significant, tangible accomplishments in each of these areas at certain times to illustrate the role and impact of the research program. The narrative of this research program concludes with a perspective of its past and a prospectus on its future.

27228 (LBL—13500, pp 4.116-4.118) **Precise characterization of new world obsidian sources and the cost-effective determination of provenience of selected artifacts.** Stross, F.H.; Asaro, F.; Michel, H.V. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098.

In Energy and Environment Division, annual report, FY 1981.

A substantial portion of the work reported here concerned obsidian from the heartland of the Maya culture. Included are the large region often designated as Rio Pixcaya or San Martin Jilotepeque, northwest of Guatemala City, and some smaller source areas within a 50-mile radius of Guatemala City. Artifacts from two well-known sites, Tikal and Quirigua, both in guatemala, were analyzed by special techniques developed for their economy. Source investigations were also made of Ecuadorian obsidian, and artifacts from the Quito Valley were assigned to sources. Procedures also have been developed to intercalibrate analytical data published by other laboratories with our own when direct comparisons, for one reason or another, are not possible.

27229 **(NP—4770235) Warmwassersphaere - handling and processing of hydrographic data.** Sy, A. (Kiel Univ. (Germany, F.R.). Inst. fuer Meereskunde). 1983. 93p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84770235.

Portions are illegible in microfiche products.

This report reviews CTD data handling and the principle of processing for the profiling instrument 'Multisonde' as it is presently in use at the Institut fuer Meereskunde in Kiel, F.R.G., in the frame of the research programme 'Warmwassersphaere'. An introduction to the shipboard system of measuring and logging is given. An outline of both laboratory and in situ calibrations is presented. The main subject of this report is the processing of the data. Possible sources of errors in field measurements and their influence on data accuracy are discussed and the standard processing stages are described. A specific problem lies in data errors, which inhibit a routine processing. In order to edit these data a special filter, the median filter, is introduced. Its efficiency as well as the experiences gained through its practical application is described and discussed by means of comparison with conventional techniques. The data used for these tests were collected during the experiment Nordostatlantik '81.

27230 **Mixing rates in Shagawa Lake, Minnesota, sediments as determined from ^{106}Ru profiles.** Van Sickle, J. (Oregon State Univ., Corvallis (USA). School of Oceanography); Weimer, W.C. (Battelle Pacific Northwest Labs., Richland, WA (USA)); Larsen, D.P. (Environmental Protection Agency, Corvallis, OR (USA). Corvallis Environmental Research Lab.). *Geochimica et Cosmochimica Acta;* 47: No. 12, 2189-2197(Dec 1983).

Rates of surficial sediment mixing and sediment burial are measured in Shagawa Lake, Minnesota, using radionuclide tracers. Based on ^{106}Ru profiles in 16 cores, mixing rates average 13 cm^2/yr within the upper 9 cm of sediment. Two other nuclides, ^{210}Pb and ^{137}Cs, provide further evidence for calculation of mixing rates. In addition, ^{210}Pb profiles estimate sediment burial rates (about 0.4 cm/yr). Mixing estimates are shown to be fairly insensitive both to

uncertainties in sediment burial rates and to temporal patterns of ^{106}Ru deposition.

27231 (BMFT-FB-T—83-264) Interactive seismic interpretation system ISAS. Sattlegger, J.; Rosenbach, O. (Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.)). Nov 1983. 62p. (In German). NTIS (US Sales Only), PC A04 MF/A01. Order Number DE84750926.

Portions are illegible in microfiche products.

Processing and interpretation of seismic data are well separated in most cases. Thus, results of interpretation relevant for processing may not be taken into account during processing. The objective of system ISAS is to perform the last important steps of processing at the time of interpretation and under control of the interpreter, interpretation taking place in the migrated domain. This makes it possible to optimize the result and to determine additional parameters such as seismic velocities. In order to achieve this migration before stack is performed in common offset planes taking account of refraction. The results of migration are stacked in various ways at the time of interpretation, the results being displayed on an interactive graphics terminal. Interpretation of interfaces and velocities takes place on the graphics terminal. The results of interpretation with ISAS are a migrated section, migrated before stack and taking account of refraction, along with the field of interval velocities.

27232 (LA—10033-PR) Earthquake catalog for northern New Mexico. Progress report, July-September 1983. Cash, D.J.; Olsen, K.H.; Stewart, J.N.; Wolff, J.J. (Los Alamos National Lab., NM (USA)). Feb 1984. Contract W-7405-ENG-36. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011008.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report is a summary of the earthquakes located in northern New Mexico by the Los Alamos National Laboratory seismic array. Data are presented in the form of tables and epicenter maps, with a brief explanatory text. 6 references, 4 figures, 2 tables.

27233 (NUREG/CR—3768) New Madrid seismotectonic study. Activities during fiscal year 1982. Buschbach, T.C. (Saint Louis Univ., MO (USA)). Apr 1984. 179p. NTIS, PC A09/MF A01 - GPO*. Order Number DE84901151.

Portions are illegible in microfiche products.

The New Madrid Seismotectonic Study is a coordinated program of geological, geophysical, and seismological investigations of the area within a 200-mile radius of New Madrid, Missouri. The study is designed to define the structural setting and tectonic history of the area in order to realistically evaluate earthquake risks in the siting of nuclear facilities. Fiscal year 1982 included geological and geophysical studies aimed at better definition of the east-west trending fault systems - the Rough Creek and Cottage Grove systems - and the northwest-trending Ste. Genevieve faulting. A prime objective was to determine the nature and history of faulting and to establish the relationship with that faulting and the northeast-trending faults of the Wabash Valley and New Madrid areas. 27 references, 61 figures.

27234 (NUREG/CR—3769) Description and significance of the gravity field in the Reelfoot Lake region of northwest Tennessee. Stearns, R.G.; Towe, S.K.; Hagee, V.L.; Nava, S.J.; Wilson, S.L. (Vanderbilt Univ., Nashville, TN (USA)). Apr 1984. 48p. NTIS, PC A03/MF A01 - GPO* $4.00. Order Number DE84901184.

Portions are illegible in microfiche products.

Gravity surveys at various levels of detail have been made at approximately 1200 stations in the Reelfoot Lake region of northwest Tennessee and adjacent portions of Missouri and Arkansas. Individual features were surveyed in detail. At Reelfoot Scarp, six lines of stations having a 100 to 500 foot spacing with close elevation control (+0.1 foot) were measured. Anomalies on these lines are caused by near-surface geology (faulting, clay-filled channel of abandoned course of Mississippi River). A survey of less accuracy discovered an anomaly along a fault at Henning in the Ripley South Quadrangle. In the Reelfoot Lake region the area of abundant earthquake occurrence is related to the gravity anomaly pattern. The earthquake area is sharply limited on the south by an abrupt change in anomaly trends, and the earthquakes diminish in number at a similar change in trend to the north. Some positive gravity anomalies appear to mark plutons where they coincide with positive magnetic anomalies. 13 references, 21 figures, 1 table.

27235 (USGS-OFR—82-893) Tilt measurements at Long Valley Caldera, California, May-August 1982. Dzurisin, D.; Cashman, K.; Sylvester, A.G. (Geological Survey, Vancouver, WA (USA). David A. Johnston Cascades Volcano Observatory; California Univ., Santa Barbara (USA). Dept. of Geological Sciences). 1982. 34p. NTIS, PC A03/MF A01. Order Number DE84900979.

Portions are illegible in microfiche products.

The Mammoth Lakes area in east-central California has experienced unusual seismicity and ground deformation since 1978, highlighted by four $M > 6$ earthquakes in May 1980 and by the discovery soon thereafter of a broad uplift within Long Valley caldera. Recurrent seismic swarms during June 1980-May 1982 raised concern over the possibility of renewed volcanic activity in the foreseeable future, prompting a USGS Notice of Potential Volcanic Hazard on 28 May 1982. As part of an intensified Long Valley monitoring effort sponsored by the USGS Volcanic Hazards program, a network of nine tilt sites was established near mammoth lakes in May and July 1982. This report describes those stations and presents results from three tilt resurveys during July-August 1982. 8 references, 10 figures, 8 tables.

27236 (USGS-OFR—83-326) Drilling report and core logs for the 1981 drilling of Kilauea Iki lava lake, Kilauea volcano, Hawaii, with comparative notes on earlier (1967-1979) drilling experiences. Helz, R.T.; Wright, T.L. (Geological Survey, Reston, VA (USA)). 1983. 68p. USGS-OFS, Box 25425-Denver Federal Center, Denver, CO 80225.

The purpose is: (1) to describe the 1981 drilling of Kilauea Iki lava lake, (2) to present the logs for the drill core recovered during the 1981 drilling, and (3) to present a summary of some of the field observations made during the 1967, 1975, 1976 and 1979 drillings that are relevant to the crystallization history of Kilauea Iki lava lake. This report supplements logs for the 1967-1979 core presented in Helz et al. (1980). 21 references, 4 figures, 4 tables.

27237 (LBL—17521) Cross-hole acoustic measurements in basalt. King, M.S.; Myer, L.R.; Rezowalli, J.J. (Lawrence Berkeley Lab., CA (USA)). Mar 1984. Contract AC03-76SF00098. 12p. (CONF-840633—12). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010781.

From 25. US symposium on rock mechanics; Evanston, IL, USA (25 Jun 1984).

Portions are illegible in microfiche products.

A series of cross-hole acoustic measurements have been performed in a columnar-jointed basaltic rock mass around an underground opening mined by the drill-and-blast method. The purposes of the test program were: to evaluate the rock mass characteristics around the opening; to determine the zone of blast damage; and to evaluate seismic methods for anomaly detection ahead of mining in this type of rock. The cross-hole measurements were made between four 76-mm diameter horizontal boreholes diamond-drilled 12 m into a wall of the underground opening. Repetitive pulses of compressional (P) and shear (S) waves of frequencies in the range 1 kHz to 100 kHz were propagated from a transmitter sonde through the rock mass to a receiver sonde, both of which were clamped hydraulically to the borehole wall. After amplification the received P- and S-wave signals were digitized at the surface by a digital oscillo-

scope and stored on floppy discs. The results indicate considerable reductions in P- and S-wave velocities at distances less than 2 m from the face. Beyond 2 m, the velocities in a vertical direction indicate almost constant values. The velocities in the horizontal direction beyond 2 m appeared erratic, but showed a general tendency to increase as a function of distance from the face. 19 references, 10 figures.

27238 **(UCRL—90234) Application of molecular dynamics to macroscopic particles.** Walton, O.R. (Lawrence Livermore National Lab., CA (USA)). Jan 1984. Contract W-7405-ENG-48. 13p. (CONF-830141—5). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011066.

From Workshop on media with microstructure and wave propagation; Houghton, MI, USA (24 Jan 1983).

Portions are illegible in microfiche products.

Molecular dynamics research is reviewed with emphasis on current nonequilibrium calculational techniques used to calculate transport coefficients in systems of polyatomic molecules. Many of the numerical methods and numerical-experiment evaluation techniques of that field could be adapted to macroscopic granular material studies. There are, however, significant differences between macroscopic and molecular interactions - differences that considerably modify some of the computational methods and also the interpretation of the calculational results. Macroscopic particles interact with nonconservative interaction forces. Macroscopically available energy is lost from the system during most dynamic interactions - through plastic deformation, friction and breakage. Cundall and Strack are using simplified models of the interaction forces acting between essentially rigid macroscopic particles to study quasi-static deformations in assemblies of two-dimensional circular particles. We are using somewhat similar two-dimensional models in a study of nonequilibrium shearing flow of granular materials. Several verification calculations and tests have confirmed the ability of these computer models to predict the dynamic interactions of macroscopic particles. Preliminary results from shearing flow calculations and corresponding laboratory tests are also in qualitative agreement. Plans for a quantitative study of shear stress dependence on shear rate and other parameters are discussed.

27239 **(UCRL—90257) Rapid technique for counting cracks in granitic rocks.** Durham, W.B.; Beiriger, J.M.; Weed, H.C. (Lawrence Livermore National Lab., CA (USA)). 23 Jan 1984. Contract W-7405-ENG-48. 28p. (CONF-8404131—1). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84008801.

From Scanning electron microscopy conference; Philadelphia, PA, USA (15 Apr 1984).

Portions are illegible in microfiche products.

Using a scanning electron microscope and an image analyzer, we have developed a technique for counting and measuring cracks in rocks which is more efficient than traditional techniques in which an operator performs all image analysis functions. The key aspect of the technique is that black-on-white tracings of fresh cracks, which can be made rather quickly by an operator, are fed to an image analyzer which then digitizes and tabulates data. The most time-consuming step in the process has now become the generation of SEM micrographs and pertinent chemical (mineralogical) information, not the quantification of crack structure. The technique has been applied to two studies involving nuclear waste isolation in a granitic rock, Climax Stock (Nevada Test Site) quartz monzonite, a rock which is structurally very inhomogeneous. One study detected a relationship between crack structure and distance from a hammer-drilled borehole; the other study was unable to detect a relationship between crack structure and gamma irradiation treatment in rocks loaded to near failure. 12 references, 6 figures, 3 tables.

27240 (LBL—13500, pp 4.113-4.115) **Iridium anomaly approximately synchronous with terminal eocence extinctions.** Alverez, W.; Asaro, F.; Michel, H.V.; Alverez, L.W. Sep 1982. NTIS, PC A15/MF A01. Contract AC03-76SF00098. In Energy and Environment Division, annual report, FY 1981.

To determine whether the impact that produced the North American strewnfield also gave rise to an iridium anomaly, 30 elements were measured by high-precision techniques of neutron activation analysis in 9 samples from Deep Sea Drilling Project site 149 in the eastern Caribean. Conclusions are: (1) the association of iridium anomalies with major impact events, inferred for the Cretaceous-Teritiary boundary, is strengthened by recognition of an iridium anomaly at the microtektite horizon; (2) although not all impacts which produce detectable iridium enrichments are necessarily related to extinctions is strengthened by the synchronous disappearance of five species of radiolaria with the appearance of the irridium and microtektite anomalies near the Eocene-Oligocene boundary.

27241 **Phosphorus dynamics in a woodland stream ecosystem.** Newbold, J.D.; Elwood, J.W.; O'Neill, R.V.; Sheldon, A.L. (Oak Ridge National Lab., TN). *BioScience;* **34**: No. 1, 43-44(Jan 1984).

The term spiraling has been used to describe the combined processes of nutrient cycling and downstream transport in a stream ecosystem. The concept is used for describing and analyzing phosphorus dynamics in a 120-m reach of Walker Branch, a small woodland stream in Tennessee, during a period of summer base flow. A tracer of 10 mCi $^{32}PO_4$ was released to Walker Branch for 30 minutes after which measurements were made of the uptake of ^{32}P from water, coarse particulate matter, fine particulate matter, particulate organic matter, aufwuchs, grazers, shredders, collectors, net-spinning filter feeders and predators over a six-week period. The relatively short particulate and consumer turnover lengths in Walker Branch indicate that the overall rate of nutrient utilization would be relatively insensitive to changes in particulate transport rates or downstream drift rates. On the other hand, the long uptake length indicates that nutrient utilization would be strongly influenced by factors controlling the rate of phosphorus uptake from the water.

27242 **(LALP—84-18) Institutional supporting research highlights in physics and mathematics, fiscal year 1983.** Vigil, J.C. (comp.). (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011025.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Highlights of FY 1983 Institutional Supporting Research and Development activities within the six Physics and Mathematics divisions and the Center for Nonlinear Studies are presented. The highlights are but a fraction of the ISRD activities in the Directorate and are intended to be a representative sample of progress in the various research areas. FY 1983 ISRD activities within the Physics and Mathematics divisions included both basic and applied research and were divided into 11 research areas: mathematics and numerical methods, low-energy nuclear physics, medium- and high-energy nuclear physics, atomic and molecular physics, solid-state physics and materials science, fluid dynamics, plasma physics and intense particle beam theory, astrophysics and space physics, particle transport methods, accelerator and fusion technology, and biophysics. Highlights from each of these areas are presented.

27243 **(EFI—591(78)-82) Theory of nonstationary long-term modulation of cosmic rays.** Bagdasaryan, M.B.; Dorman, L.I. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701407.

The nonstationary equation of diffusion with a moving boundary condition is solved, on the basis of which the effect of "stepwise" variations of solar activity, leading to "stepwise" vari-

ations of solar wind velocity and of transport length for scattering in the interplanetary space, on the intensity of galactic cosmic rays is investigated. Analytical solutions are obtained in the form of series by means of which one can estimate the dimensions of the modulation volume of 11-year variations.

27244 **(INIS-mf—8704) Anglo-Australian Telescope 1981/82.** (Anglo-Australian Telescope Board, Canberra (Australia)). 1982. 51p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84700886.

Operations of the Board for the period July 81 to June 82 are summarised. Major areas under study are galaxies, quasi-stellar objects, stars, supernova remnants and interstellar material. Research on dwarf novae, an infrared view of our galactic centre, the nucleus of the Seyfert galaxy NGC 1068, galaxies at great distances, the highest redshift quasar, the origin of quasar absorption lines and the unseen mass in our galaxy is briefly reported.

27245 **(LA-UR—84-919) Hugoniot of water ice.** Gaffney, E.S. (Los Alamos National Lab., NM (USA)). 19 Jan 1984. Contract W-7405-ENG-36. 52p. (CONF-840153—1). NTIS, PC A04; 3; GPO Dep. Order Number DE84010069.

From NATO workshop on ices in the solar system; Nice, France (16 Jan 1984).

Paper copy only, copy does not permit microfiche production.

Hugoniot data for water ice are available for pressures ranging from about 150 MPa to about 50 GPa from initial states near 260 K. Limited data on porous ice (snow) at the same initial temperatures are available from 3.5 to 38 GPa and initial densities of 600 and 350 Mg/m^3. Above about 5 GPa, the data are fairly well-fit by a linear relation between shock and particle velocity: D(km/s) = 1.79 + 1.42u. However, a quadratic form fits the data better: $D(km/s) = 1.32 + 1.68u - 0.035u^3$. At lower stresses the velocity is a very complicated function of particle velocity due to elastic propagation, yielding and several possible phase changes. The Hugoniot elastic limit (HEL) of ice at these temperatures is about 180 +- 20 MPa with the elastic waves travelling at about 3900 m/s. The mean stress at the HEL is 115 +- 14 MPa. Comparison with strength measurements at lower strain rate indicates that failure at the HEL probably involves fracture and is almost independent of both temperature and strain rate. Ice V has been reported at about 600 MPa, and ice VI at 1.9 GPa and possibly at 3.7 GPa. Transition to ice III probably commences at the HEL at 200 MPa. Relations between volume, enthalpy and internal energy indicate that states below about 1 GPa maintain their shear strength even after undergoing complete transition to a high pressure phase. Time-resolved stress measurements indicate that equilibrium is achieved in about three microseconds for a 695 MPa shock. Melting is definitely complete below 10 GPa.

27246 **(RL—83-036) Numerical model of a solar flare based on electron beam heating of the chromosphere.** MacNeice, P.; Burgess, A.; Spicer, D.S.; McWhirter, R.W.P. (Scientific and Technical Studies, London (UK)). May 1983. 44p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84700887.

The hydrodynamic response of the solar atmosphere to the injection of an intense beam of electrons is calculated in a numerical simulation of a solar flare and the spectroscopic consequences of the hydrodynamic behaviour calculated are predicted by solving the equations of conservation of mass, momentum and energy. The latter is expressed as two temperature equations; one for the electrons and the other for the neutral atoms and positive ions of hydrogen. The equations are solved in one dimension and the geometric form is of a semi-circular loop having its ends in the photosphere. The results show how the loop is filled at supersonic speed with plasma at temperatures characteristic of flares. At the same time a compression wave is predicted to propagate down towards the photosphere. After the heating pulse stops, the plasma that has risen into the loop, starts to decay and return to the condition it was in before the pulse started. In predicting the spectrum that would be emitted by such a plasma calcium was chosen for illustration.

27247 **(UCID—20062) Cosmic bombardment.** Hyde, R.A. (Lawrence Livermore National Lab., CA (USA)). 19 Mar 1984. Contract W-7405-ENG-48. 8p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011402.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Throughout its history, the earth has been constantly bombarded by interplanetary bodies. In the maelstrom of the earth Solar System, such collisions created our planet and then fed its growth. With time, the rate of such collisions has dropped enormously, as most of the loose matter has been swept either up or out of the Solar System. However, because our planet has evolved and acquired an increasingly sophisticated biosphere, the significance of cosmic bombardment has not decreased. Cosmic bombardment kills; in the past, individuals, species, even entire branches of the evolutionary tree have been terminated by it. Unlike our predecessors, we have the ability to protect ourselves from this danger. To do this, we need a two-part system, featuring passive surveillance to identify threats, followed by an active defense to deflect or destroy incoming projectiles. We should first build a set of automated telescopes, using them to warn us of first-pass deadly comets and asteroids. As this surveillance continues, we will develop a catalog of the Apollo asteroids, enabling us to predict collisions with ever smaller asteroids many years in advance. Such anticipated threats can be dealt with leisurely; with neutron-rich bombs, such as presently exist, or with magnetic guns, which need not be developed until the requirement arises. Comets and small asteroids will not give us much warning; when the alarm sounds there will be no time for dithering. Hence, we should position a small number of interceptor rockets in earth orbit; their warheads can be kept on the ground and delivered to them as needed. These interceptors will destroy comets by impact detonation, and deflect small asteroids by neutron ablation.

27248 **Theoretical radial pulsation analyses of DA white dwarfs.** Starrfield, S. (Los Alamos National Lab., NM); Cox, A.N.; Hodson, S.W.; Clancy, S.P. *Astrophysical Journal;* **269**: 645-656(15 Jun 1983).

A linear, nonadiabatic, radial pulsation analysis of DA white dwarfs in the range of effective temperatures: $7 \times 10^3 < T/sub\ e/ < 1.25 \times 10^4$ K has been performed. The 0.6 M/sun mass/, 0.013 R/sub sun mass/ model envelopes consist of layers of pure hydrogen (masses of $\sim 10^{-15}$ M/sub star/ to $\sim 10^{-8}$ M/sub star/) overlying layers of pure helium and then pure carbons. The authors find that these envelopes are unstable to radial pulsations with periods less than 1.0s and that the cause of the instability is the k-mechanism operating in the hydrogen and the helium partial ionization regions. Convection is assumed to be frozen in so that it does not contribute to either driving or damping. The blue edge is at $\sim 1.23 \times 10^4$ K, and the red edge is $\sim 7 \times 10^3$ K. The most unstable modes exceed mode 20 (19 nodes). These results are in excellent agreement with other radial studies of DA white dwarfs and suggest that these oscillations should be observable in white dwarfs just to the blue and just to the red of the observational blue and red edges of the ZZ Ceti nonradial variables.

27249 **(LA—9648-MS) Evolution of structure in the PLACES barium clouds.** Simons, D.J.; Lebeda, C.F.; Pongratz, M.B.; Fitzgerald, T.J.; Dupre, R.R. (Los Alamos National Lab., NM (USA)). Feb 1984. Contract W-7405-ENG-36. 181p. NTIS, PC A09/MF A01; 1; GPO Dep. Order Number DE84010996.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The PLACES (Position Location and Communications Effects Simulations) experiment took place at Eglin Air force Base in December 1980. Los Alamos fielded intensified optical instruments to examine the barium ion and neutral resonance fluorescence light from the four barium ionospheric thermite releases. The primary purpose of the PLACES experiment was to determine the effects of structured ionospheric plasmas on transionospheric radio communi-

cation lines. As part of theis experiment, it was necessary to characterize the evolution of the structure (striations) in the barium ionospheric plasma. We examine the motivation for using barium to simulate these effects ad discuss the theoretical and empirical basis for using optical diagnostics for deriving the electron column content of the ion clouds. Data and derived column densities are presented for the PLACES GAIL and IRIS events as determined from the two camera stations. The time evolution of the power spectral density (PSD) of striations for the electron column density perpendicular to the magnetic field is derived for the two clouds. The power is integrated over several wavelength intervals to present the temporal behavior of spectral sums. Initial striation growth occurs in a broad band of spatial frequencies, which is in agreement with the linear gradient drift instability theory. Nonlinear evolution of the striations occurs in a few, well-separated spatial frequency modes. The equilibrium PSD shape seems to have power in many more modes than the initial nonlinear stage PSD. We find some quantitative indications of a forward cascade process.

27250 **(RL—83-027) Acceleration mechanisms for auroral particles: the observations, their current interpretation, and the need for a new approach.** Bryant, D.A. (Scientific and Technical Studies, London (UK)). Jun 1983. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700923.

Experiments performed over the last 20 years have demonstrated that the electrons which produce the structured forms such as auroral arcs are accelerated en route from their source in the magnetosphere to the atmosphere. Evidence for this lies in the electron intensities being considerably higher than they are at the same energy in the source region of the plasma sheet. Electron velocity space densities are shown as a function of energy, measured at different times during a rocket flight through a stream of particles producing an auroral arc. The distributions, which have peaks at 3 keV and 10 keV, are typical of those found in this environment. They are sometimes described as being 'mono-energetic', but this does seem to overstate the case. The usual interpretation is that the peak is produced because the electrons have been accelerated through a potential difference. However, there are many features of the electron distributions and related quantities that appear to be inconsistent with this interpretation. It is the purpose of this paper to present each of these features, and to suggest that another type of process - resonant acceleration by plasma waves deserves careful consideration.

27251 **(RL—83-028) Acceleration of auroral electrons by waves.** Hall, D.S. (Scientific and Technical Studies, London (UK)). Jun 1983. 16p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700924.

The evolution of the auroral electron distribution function as the electrons traverse a region of plasma turbulence is discussed. Electron measurements are used to illustrate that if the energy densities of the waves associated with the turbulence are distributed in a particular way, various features of the electron distributions can be accounted for by changes in the details of the wave spectra without changes in the overall form.

27252 **(RL—83-029) Wave generation in the aurora.** Bingham, R.; Bryant, D.A.; Hall, D.S. (Scientific and Technical Studies, London (UK)). Jun 1983. 5p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700925.

Wave generation mechanisms by a number of free energy sources in the magnetosphere are discussed. These include the temperature difference between the plasma sheet and the tail lobes, the temperature anisotropy, and field aligned currents. It is shown that a number of wave-modes can be generated via a Weibel-type instability by the above free energy sources, also the production of Langmuir waves can be created by ion-acoustic turbulence. Various wave-particle interaction mechanisms are presented as possible processes for the production of high energy electrons which are responsible for the aurora.

(EG and G, Inc., Goleta, CA (USA). Energy Measurements Group). 1984. Contract AC08-83NV10282. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010656.

From 2. symposium on resonance ionization spectroscopy and its applications; Knoxville, TN, USA (16 Apr 1984).

Portions are illegible in microfiche products.

In recent years resonance ionization spectroscopy (RIS) has found increasing application to various problems involving detection of low levels of atomic, and more recently molecular, species. This work demonstrates the usefulness of RIS in measuring vapor pressure curves of molecular species at very low pressures. Specifically, the vapor pressures versus temperature relationship for rubidium iodide (RbI) and potassium iodide (KI) was measured by applying RIS to atomic Rb and K, using a two-laser system. A pulsed molecular nitrogen laser first dissociated the RbI to produce ground-state Rb atoms in the experimental cell. A flashlamp-pumped dye laser then ionized the Rb in a process wherein two photons of the same wavelength are absorbed, the first exciting Rb via an allowed transition to an upper state ($5^2S/sub\ 1/2/ \rightarrow 6^2/sub\ 1/2$ or $3/2/$) lying in energy slightly more than half the distance to the ionization limit, and the second photon ionizing the excited Rb. In the case of KI, an excimer-laser-pumped dye laser was used in a similar way. An applied dc electric field swept the photoelectrons to a proportional counter for subsequent amplification and detection. The photoelectron signal was then related back to RbI and KI concentrations.

From 13. international quantum electronics conference; Anaheim, CA, USA (18 Jun 1984).

Resonantly enhanced multiphoton ionization (REMPI) affords the opportunity to select a specific ionization pathway in order to produce a particular ionic state for further study (such as state-selected ion-molecule reactions) or to investigate detailed aspects of excited state photoionization dynamics. The production of electronic and vibrational state-selected ions has been achieved, and in some instances rotational state-selection may be possible. State-selected ions are obtained by first preparing an intermediate Rydberg state that has a potential energy curve similar to that of the desired final ionic state, and then ionizing the Rydberg state with a single additional photon. Under these circumstances, the Franck-Condon factors governing the final ionization step strongly favor the preservation of the vibrational level of the Rydberg state core. In addition, the photoionizing transition is expected to favor the

further excitation of the Rydberg electron, while retaining the electronic state of the ion core. Thus REMPI through a Rydberg state having an ion core in a particular vibronic state is expected to produce ions in the same vibronic state.

27256 **(FIAS-R—116) Electron coincidence spectroscopy - momentum space wave functions of electrons in atoms and molecules.** Weigold, E. (Flinders Univ. of South Australia, Bedford Park. Inst. for Atomic Studies). Aug 1983. 17p. (CONF-8306131—3). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700882.

From Asia Pacific Physics conference; Singapore, Singapore (12 Jun 1983).

Paper copy only, copy does not permit microfiche production3 refs.

The application of electron coincidence spectroscopy to obtaining detailed information on the dynamic structure of atoms and molecules is discussed. The method gives electron separation energies and electron momentum distributions for each valence orbital (in the independent particle approximation). The sensitivity of the technique as a probe of electron wave functions (e.g. correlation effects) is discussed.

27257 **(GSI—83-37-Prepr.) Observation of a peak structure in positron spectra of U + Cm collisions.** Schweppe, J.; Gruppe, A.; Bethge, K.; Bokemeyer, H.; Cowan, T.; Folger, H.; Greenberg, J.S.; Grein, H.; Ito, S.; Schule, R. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Nov 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751268.

A narrow peak structure has been observed in positron spectra from U+Cm collisions at bombarding energies near the Coulomb barrier whose origin cannot be associated with established dynamic mechanisms of positron production involving Rutherford trajectories only. The peak's energy is centered at 316+-10 keV. Its width of proportional 80 keV, dominated by Doppler broadening, implies that the emitting system exists for longer than proportional 10^{-20} sec.

27258 (INIS-SU—203, pp 46-48) **Radiation spectrum of superhigh energy positrons reflected from the solid surface.** Dyul'dya, S.V.; Nasonov, N.N.; Rozhkov, V.V.; Vit'ko, V.I.; Vojtsenya, A.V. 1982. (In Russian). NTIS (US Sales Only), PC A06/MF A01.

In Radiation damage physics and radiation technology.

The spectral distribution of the energy emitted by superhigh energy positrons during their reflection at small angles from the solid surface (the reflection radiation) has been calculated. As the positron energy increases, the form of the reflection radiatian spectrum changes qualitatively as compared with the dipole case. At sufficiently high energies the radiation spectrum shows a characteristic maximum. The field of application of the obtained results is discussed. The spectral characteristics of the reflection radiation of superhigh energy positrons are compared to those of the synchrotron radiation.

27259 (INIS-SU—203, pp 49-57) **Electromagnetic radiation of relativistic positrons during a small-angle reflection from a solid surface.** Dyul'dya, S.V.; Nasonov, N.N.; Rozhkov, V.V.; Vit'ko, V.I.; Vojtsenya, A.V. 1982. (In Russian). NTIS (US Sales Only), PC A06/MF A01.

In Radiation damage physics and radiation technology.

Polarization- and spectral-angular characteristics of the electromagnetic radiation of ultrarelativistic positrons for the small-angle reflection from the solid surface have been calculated in the dipole approximation of classical electrodynamics. Studies have been made of the orientation effects in the radiation spectrum that are observed in the positron reflection from the monocrystal surface and are connected with the coherent interaction of the reflected particle with atomic chains on the crystal surface. Interference effects accompanying the multiple positron reflection from two parallel atomic planes have been considered.

27260 **(LA-UR—84-1235) Reactive resonances and angular distributions in the rotating linear model.** Hayes, E.F.; Walker, R.B. (National Science Foundation, Washington, DC (USA); Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 44p. (CONF-840415—20). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011354.

From 187. national meeting of the American Chemical Society; St. Louis, MO, USA (8 Apr 1984).

Portions are illegible in microfiche products.

This paper describes the way in which resonances in reactive scattering may affect the angular distribution of the products of reaction. A simple 3D model of reactions, the Bend-Corrected Rotating Linear Model was employed, and angular distributions were computed for several reactive systems in which resonances contribute to the scattering dynamics. The reactions studied were $F + H_2 \rightarrow HF + H$ and $He + H_2^+ \rightarrow HeH^+ + H$.

27261 **(NBS-LP—92-Suppl.4) Multiphoton bibliography, 1981-1982.** Eberly, J.H.; Piltch, N.D.; Gallagher, J.W. (eds.). (Joint Inst. for Lab. Astrophysics, Boulder, CO (USA); Rochester Univ., NY (USA)). Jan 1984. Contract AS03-76DP01118. 118p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84010868.

Portions are illegible in microfiche products.

This bibliography is a continuation and expansion of a collection of references describing studies of the interaction of more than one photon with individual atoms and molecules in the gas phase. (GHT)

27262 **Semiclassical parametrization of the 6snh-6sni-6snk intervals in BaI.** Curtis, L.J.; Ramanujam, P.S.; Theodosiou, C.E. (Univ. of Toledo, OH). *Physical Review* [*Section*] *A: General Physics;* **28**: No. 2, 1151-1153(Aug 1983). Contract AS05-80ER10676.

A semiclassical core-polarization-penetration model is used to parametrize the 6snh-6sni and 6sni-6snk intervals in BaI which were recently measured by Gallagher, Kachru, and Tran. The parametrization represents the existing data to within experimental uncertainties, and extrapolative predictions along these Rydberg series are presented.

27263 **Excitation-autoionisation of Ti^{3+}, Zr^{3+} and Hf^{3+} in the distorted-wave approximation with exchange.** Bottcher, C. (Oak Ridge National Lab., TN); Griffin, D.C.; Pindzola, M.S. *Journal of Physics B: Atomic and Molecular Physics;* **16**: L65-L70(1983). Contract W-7405-ENG-26

Full distorted-wave calculations have been carried out on $Np^6nd \rightarrow np^5nd^2$ transitions to test the formalism for complex atomic configurations, and to provide a more meaningful comparison with experiment than was possible from earlier calculations. Agreement with experiment is certainly improved, but some discrepancies remain.

27264 **Comparison of radiationless decay processes in osmium and platinum porphyrins.** Ponterini, G.; Serpone, N.; Bergkamp, M.A.; Netzel, T.L. (Brookhaven National Lab., Upton, NY). *Journal of the American Chemical Society;* **105**: 4639-4645(1983).

Two osmium porphyrin complexes, $Os(OEP)L_2$ [OEP = octaethylporphin, L = py(pyridine) or NO], and PtOEP were investigated by picosecond laser spectroscopy with use of a double-beam, mode-locked Nd:glass system delivering 6-ps (fwhm) pulses at 527 nm with 1-2mJ/pulse. Time-resolved excited-state spectra were recorded from the time of photoexcitation to 5 ns after photoexcitation. The initial excited state, S_1, decayed in $\leq$9 ps for the two osmium complexes and in $\leq$15 ps for the platinum porphyrin. A second excited state, T_1, lived for 1, 9, and >50 ns respectively for $Os(OEP)(py)_2$, $Os(OEP)(NO)_2$, and PtOEP. The ΔA spectra of the T_1 states of the osmium complexes were similar to those of previously reported (d/sub π/,π^*) states for $Os(OEP)(py)_2$ and (π,π^*) states for $Os(OEP)(NO)_2$. This finding supports prior assignments of these states on the basis of expected axial and equatorial backbonding of the osmium's d electrons. Additionally, a long-lived (tau

> 5 ns) photochemical product (probably a result of ligand loss) was found in the case of Os(OEP)(py)$_2$.

27265 **Diatomics-in-molecules approximation for Rydberg states of H_3.** Raynor, S.; Herschbach, D.R. (Harvard Univ., Cambridge, MA). *Journal of Physical Chemistry;* **86**: No. 7, 1214-1217(1982).

Electronic energies for excited Rydberg states of H_3 in D/sub 3h/ or C/sub 2nu/ nuclear configurations are calculated by use of the diatomics-in-molecules method and spline fits to accurate potential curves for 22 states of the H_2 molecule. Explicit formulas expressing the energy levels of H_3 for D/sub 3h/ configurations in terms of the H_2 potential curves are given for all states corresponding to two ground-state atoms in consort with a third atom excited to any s or p state. The available data permit evaluation of the elevels for all states involving 2s or 2p excitation or II-type 3p excitation, as well as a few higher excitation. The results agree well (within ~ 0.01 hartree) with ab initio calculations. 12 references, 2 figures, 3 tables.

27266 **Tunable atomic line molecular (TALM) spectrometer.** Hadeishi, T.; Koizumi, H.; McLaughlin, R.D.; Millaud, J.E. (Lawrence Berkeley Lab., CA). *Spectrochimica Acta, Part B: Atomic Spectroscopy;* **37B**: No. 6, 501-509(1982).

A highly specific technique for real time monitoring of simple and complex molecules is described. This technique depends on using the Zeeman effect to tune an atomic emission line to coincide with a sharp molecular absorption feature and has been named TALMS (Tunable Atomic Line Molecular Spectroscopy). Results are presented on the determination of di-atomic (NO), tri-atomic (NO_2, SO_2), tetra-atomic (H_2CO) and more complex molecules, which suggests that the method should be highly specific. It is concluded that work in this area will lead to instrumentation that will be valuable for process control or environmental monitoring.

27267 **Theory of x-ray emission satellite band shapes.** Dow, J.D.; Mehreteab, E.; Swarts, C.A. (Univ. of Illinois, Urbana). *Philosophical Magazine, [Part] B: Electronic, Optical and Magnetic Properties;* **45**: No. 5, 519-527(1982). Contract AC02-76ER01198.

A change of self-consistent-field (ΔSCF) model is used to compute the effects of electron-hole interactions on the shapes of satellite X-ray bands of free-electron metals. These bands are emitted when a conduction electron annihilates one of two core holes orbiting a single atom.

27268 **Sulfur poisoning of a Ni(111) crystal with small angle boundaries (SAB) and its effect on CO adsorption.** Sargent, G.A.; Lih-Ren Chao, J.; Freeman, G.B. (Univ. of Kentucky, Lexington). *Applications of Surface Science;* **7**: 104-114(1981). Contract AS05-79ER10447.

The sulfur poisoning of a Ni(111) crystal with small angle boundaries (SAB) and its effect on CO adsorption were studied using the techniques of low energy electron diffraction (LEED) and Auger electron spectroscopy (AES). The sulfur poisoned Ni(111)-SAB surface was prepared by heating the crystal to 850°C for 20 min. The bulk sulfur impurity was diffused to the surface. The sulfur Auger peak intensities taken at and between boundary lines, show that sulfur distribution is uniform on the Ni(111)-SAB surface. No LEED pattern due to sulfur presence was observed. Sulfur atoms do not form an ordered structure in the Ni(111)-SAB surface. The Auger spectra showed that the boundary lines at the sulfur-free crystal surface provide favorable sites for the adsorbed CO to dissociate at temperatures as low as 25°C. After sulfur is diffused to the surface, it blocks the active sites as well as the boundary sites. The boundary line enhanced dissociation of CO is no longer seen. Sulfur and nickel Auger intensities were taken during the CO adsorption. From the change of the intensities, sulfur only interacts with nickel and physically inhibits the CO adsorption and, thereby, further CO dissociation.

27269 **Frame transformation relations and multipole transitions in symmetric polyatomic molecules.** Harter, W.G. (Univ. of Colorado, Boulder); Patterson, C.W.; da Paixao, F.J. *Reviews of Modern Physics;* **50**: No. 1, 37-83(Jan 1978).

The theory of transformation relations between states of Born Oppenheimer and weak coupling approximations is developed for polyatomic molecules. The relations are a generalization of frame transformation relations used by Chang and Fano for symmetric-top molecules, and they lead to a more convenient symmetry labeling system than was previously available. A key internal symmetry label (named "soul") is defined so that it remains a constant label for frame transformation relations, and is conserved during vibronic transitions, ionization, and even dissociation provided the nuclear spin-rotation interaction is relatively small. Various nomograms, graphs, and tableaus associated with the soul label make it easy to predict and visualize the form of many types of complex high-resolution spectra. Simplified procedures are given for obtaining selection rules, statistical weights, and matrix elements of multipole operators for common molecules having various point symmetries. Simplifications of computational theory using the new level cluster bases for high J are discussed.

27270 **Translational expansion of radiative interaction operators in molecules.** Chow-Chiu, L.Y. (Howard Univ., Washington, DC). *Chemical Physics Letters;* **49**: No. 2, 386-389(15 Jul 1977).

The translational expansion of radiative magnetic-dipole operators L_0 and L/sub +/-1 from the center of mass of a molecule to atomic centers is derived here in the right-handed coordinate system. It is shown that the expansion of L/sub +/-3/ at the atomic centers produces an extra gradient operator which operates on the atomic wavefunction of angular momentum l to generate wavefunctions of different angular momenta l +/- 1. This operation is illustrated by applying L/sub +/-1 (which is referred to the center of mass) to a LCAO molecular orbital π/sub u +/-/ (np), resulting in a linear combination of molecular orbital functions σ/sup u/(np), σ/sup u/(s) and σ/sub u/(d). The translational expansion of radiative electric-multipole operators is also given.

27271 **Vibrational and rotational energy transfer upon molecular collisions.** Chow Chiu, L.Y. (National Bureau of Standards, Washington, DC). *Chemical Physics (Amsterdam);* **16**: 269-279(1976).

The cross section of the rotational and vibrational energy transfer is derived by using the first Born approximation which quantizes the translational motion of the colliding particles. The theory developed here integrates the intermolecular potential V(R) over all regions of the internuclear distance R by obtaining a Fourier transform of V(R). This differs from previous semiclassical (impact-parameter) treatments which either considered the short-range repulsive interaction or expanded V(R) into a long-range multipole expansion. The cross section obtained here is expressed in a very simple algebraic expression which can be readily calculated. This will be illustrated by examples of $CO_2(001) + N_2(nu=0) = CO_2(000) + N_2(nu=1) + 18.6\ cm^{-1}$ and $CO(nu=1) + CO(nu=1) = CO(nu=0) + CO(nu=2) + 27cm^{-1}$. Calculations have been made both for the exothermic and for the endothermic reactions. The comparison of the present results with experimental results as well as with previously calculated results will be discussed.

6404 Fluid Physics

27272 **(EFI—579(66)-82) Electromagnetic wave energy characteristics in a moving medium.** Ter-Pogosyan, A.D. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701359.

Expressions for energy and energy flow in moving dispersive medium are obtained. The presence of frequency dispersion in the medium resting system is shown to result in spatial dispersion in laboratory system. The supplementary flow caused by this phenomenon is defined. Waves are divided into two groups according to the type of polarization. In a special case the propagation of both types in moving cold plasma is considered.

6450 High Energy Physics

27273 (DOE/ER/40082—T1) Summary of the Eighth Irvine conference on high energy physics. (California Univ., Irvine (USA)). 1984. Contract FG03-83ER40082. 4p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010346.

The two day conference was attended by 260 physicists with about half from the western states and the others from the rest of the country and abroad. The funding was provided by the National Science Foundation, the US Department of Energy, and the University of California, Irvine. The nine speakers presented the most recent results and a current summary of the experimental or theoretical status of the most important areas of elementary particle physics. The selection of speakers allowed western US physicists to hear current results from the major European labs of DESY and CERN, and from the European and US labs in proton decay. Also presented were the recent results from CESR, and the status of the worldwide search for neutrino oscillations. The theoretical talks included the recent results from lattice QCD, of physics beyond the W, and an insightful talk into the basis of super gravity.

27274 (BNL—34582) Hypernuclear research at the AGS. Chrien, R.E. (Brookhaven National Lab., Upton, NY (USA)). 1984. Contract AC02-76CH00016. 32p. (CONF-8403112—2). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84010282.

From International symposium on nuclear spectroscopy and nuclear interactions; Osaka, Japan (21 Mar 1984).

Although the field of hypernuclear research is over 30 years old, progress in exploring the detailed behavior of hypernuclei has been slow. This fact is due mainly to the technical problems of producing and studying these strange objects. Indeed each step in the improvement of technique has been accompanied by a breakthrough in our understanding of this fascinating subject. In this paper, the aim is to describe the evolution of hypernuclear research, stressing especially the contributions of the program based on the Brookhaven AGS. 23 references, 17 figures, 1 table.

27275 (BNL—34592) Status of the glueballs. Lindenbaum, S.J. (Brookhaven National Lab., Upton, NY (USA); City Coll., New York (USA)). 3 Aug 1983. Contract AC02-76CH00016. 43p. (CONF-8308166—1). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010896.

From 21. meeting of the International School of Subnuclear Physics; Erice, Italy (3 Aug 1983).

Portions are illegible in microfiche products.

If you assume as input axioms: (1) QCD is correct; and (2) the OZI rule is universal for weakly coupled glue in disconnected Zweig diagrams where the disconnection is due to the creation or annihilation of new flavor(s) of quark(s), then the BNL/CCNY g/sub T/(2010), g/sub T/'(2220) and g/sub T/(2360) observed in π^-p → phi phi n are produced by 1-3 primary glueballs. One or two broad primary glueballs could in principle break down the OZI suppression and mix with one or two quark states which accidentally have the same quantum numbers and nearly the same mass. However the simplest explanation of the rather unusual characteristics of our data is that we have found a triplet of J/sup PC/ = 2^{++} glueball states. Since our input axioms are in good agreement with experiments and merely represent modern QCD practice, we have very probably discovered 1-3 J/sup PC/ = 2^{++} glueballs. The iota(1440) and the θ(1700) observed in J/psi radiative decay are glueball candidates. The pros and cons of which are discussed briefly here. 41 references.

Portions are illegible in microfiche products.

We observe the production of D and E mesons in the reactions π^-p → K^+K/sub s/π^-n at 8 GeV/c and anti pp → K^+K/sub s/π^- + X at 6.5 GeV/c. A qualitative study of the Dalitz plot indicates that, unlike the D mesons, the E mesons observed in the π^-p induced reaction have different decay characteristics from those observed in the anti pp induced reaction. 7 references.

From 3. international conference on physics in collision; Como, Italy (31 Aug 1983).

Recent data on the multiplicity distribution of charged particles produced in non-diffractive panti p collision at $\sqrt{s}$ = 540 GeV are presented. A definite change of the normalized multiplicity distribution is observed when compared to lower energy data up to 62 GeV. A significant violation of KNO scaling is also clearly evidenced by the moments of the multiplicity distribution. The analysis of short range two particle correlations gives results for the mean cluster decay multiplicity consistent with previous results from a study of long range forward-backward correlations. The mean cluster is compatible with decaying into 1.5 resonances or directly produced stable particles which contribute in average 1.4 charged secondaries.

27278 (DESY—83-088) Contributions to the two-photon session at the 14. international symposium on multiparticle dynamics. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Sep 1983. 68p. (CONF-8306174—Exc.). NTIS (US Sales Only), PC A04 MF/A01. Order Number DE84750941.

From 14. international symposium on multiparticle dynamics; Granlibakken, CA, USA (22 Jun 1983).

This report contains four review articles concerning high Psub(t) reactions in photon-photon collisions, photon structure functions and determination of αsub(s), resonances in two-photon scattering, and Q^2 dependence of single meson production in γγ collisions. Separated abstracts were prepared for the single articles in this report.

27279 (DESY—83-102) Review of e^+e^--physics with PETRA. Lohrmann, E. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1983. 71p. (CONF-8307117—1). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751274.

From SLAC topical conference on particle physics; Menlo Park, CA, USA (27 Jul 1983).

The author reviews the most recent experiments at PETRA. These concern studies of toponium, magnetic monopoles, excited leptons, supersymmetric particles, lepton pair production as test of the standard model, branching ratios for the decays of the tau and heavy quarks, and studies of inclusive hadron production.

27280 (DESY—83-103) Electroweak interference. Boehm, A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1983. 28p. (CONF-830718—25). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751275.

From International Europhysics conference on high energy physics; Brighton, UK (20 Jul 1983).

Recent experimental results on electro-weak interference are reviewed. New data come mostly from e^{+-} experiments at PETRA and PEP. The precise measurements of leptonic reactions are used to determine the weak neutral current parameters and to test the pointlike nature of leptons. Attempts are also made to extend these studies to the reaction e^{+-} -> qanti q -> hadrons with the aim of measuring the weak neutral current couplings of heavy quarks. The review includes a brief discussion of the search for new particles and limits on alternative models to the standard electroweak theory.

27281 **(DESY—83-108) First results from the Crystal Ball at DORIS II.** Schwarz, A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1983. 25p. (CONF-830718—24). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751271.

From International Europhysics conference on high energy physics; Brighton, UK (20 Jul 1983).

The Crystal Ball has been installed at DORIS II and taking data since the fall of 1982. Data have been obtained at the Y(1S), Y(2S) and the continuum region just below the Y(2S). Preliminary results of the analyses of these data are presented. These results include inclusive photon spectra from the Y(1S) and Y(2S) and the transitions Y' -> $\pi^0\pi^0$Y and Y' -> $\gamma\gamma$Y.

27282 **(DESY—83-111) Electroweak interference, neutrino electron scattering and related topics.** Naroska, B. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1983. 35p. (CONF-8308101—11). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751272.

From International symposium on lepton and photon interactions at high energies; Ithaca, NY, USA (4 Sep 1983).

The main topic of this review will be the measurement of electroweak interference in e^+e^- interactions. At the end new results on neutrino electron scattering from a BNL experiment will be described and a few new results on the structure of charged weak currents will be given.

27283 **(EFI—596(83)-82) Measurement of Psub(γ) component of the polarization vector of recoil protons in π^0-meson photoproduction reaction for the angle THETAsub(πsub(0))*=60deg in resonance region.** Avakyan, R.O.; Avakyan, Eh.O.; Avetisyan, A.Eh. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701449.

Measurements of energy dependence of Psub(γ)-component of polarization vector of recoil protons in the reaction for $\gamma p \rightarrow p\pi^0$ for the pion production angle THETA*sub(πsup(0))=60 deg in the range of γ-quanta energies Esub(γ)=(0.8+1.5) GeV. The measurement results are compared with predictions of various theoretical analyses.

27284 **(EFI—602(89)-82) Experimental estimation of the contribution of secondary inelastic interactions in the multiplicity of πp mesons in pA-interactions.** Gulkanyan, G.R.; Korchagin, S.A.; Ravinovich, I.M. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701439.

Making use of the experimental data obtained with a 2 meter propane bubble chamber HEL of JINR with an internal tantalum target, the contribution of secondary inelastic processes in the multiplicity of π^--mesons in the interactions of protons with nuclei of carbon and tantalum in the momentum interval (2+10) GeV/c is estimated.

27285 **(IC—83/53) Proton decay.** Fonda, L.; Ghirardi, G.C.; Weber, T. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1983. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700903.

The problem of the proton decay is considered taking into account that in actual experiments there is an interaction of the proton with its environment which could imply an increase of its theoretical lifetime. It is seen that, by application of the time-energy uncertainty relation, no prolongation of the lifetime is obtained in this case.

27286 **(IFVE-OEIPK—83-73) Study on the Δii and Δ^0 isobar inclusive production in K^-p interactions at 32 GeV/c.** Babintsev, V.V.; Bogolyubskij, M.Yu.; Bumazhnov, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701450.

The paper presents main features of the inclusive production of Δ^{++} and Δ^0-isobars in K^-p-interactions at 32 GeV/c. The estimates of the inclusive cross sections of Δ^{++} and Δ^0-production are 1.71+-0.14 mb and 1.27+-0.25, respectively. Some inclusive invariant differential cross sections of these isobars are reconstructed and the angular decay characteristics of Δ^{++} are discussed.

27287 **(ITEF—108(1982)) πi meson production under 118 deg angle in the inclusive $\pi^- A \rightarrow \pi^+ x$ reaction at 1.5 GeV/c incident momentum.** Buklej, A.E.; Burgov, N.A.; Vlasov, M.K. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1982. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701440.

New data on invariant cross sections of π^+ meson production in $\pi^- A \rightarrow \pi^+ X$ reactions at 1.5 GeV/c momentum of π^--meson are presented. The measurements were carried out using C, Cu, Pb and H_2O targets. The energy losses of the recorded pions in the targets were about 6 MeV for carbon and 3 MeV - for other nuclei. The efficiency of the set was calculated by the Monte Carlo method. The efficiency for carbon target depending on insident pion momentum is given in arbitrary units. An average escape angle of π^+ mesons varied from 129 deg to 100 deg. At momentum changing from 300 MeV/c to 800 MeV/c. Full width of angular distribution of recorded pions at fixed momentum was approximately 11 deg. The dependence of invariant cross sections on kinetic energy T and the escape angle THETA of the secondary pion is presented. E, p - is pion total energy and momentum. Systematic errors of section absolute normalizing constituted 10%.

27288 **(JINR—1-83-73) Cumulative proton production in pion-carbon interactions at 5 GeV/c.** Abdinov, O.B.; Bajramov, A.A.; Budagov, Yu.A.; Valkar, Sh.; Dvornik, A.M.; Lomakin, Yu.F.; Mailov, A.A.; Flyagin, V.B.; Kharzheev, Yu.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 3p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701451.

The dependence between the divergence angle and the sum of kinetic energies of two protons, one of which being emitted into the backward hemisphere, and another into the forward one in lab. c. s. in π^{-12}C interactions at p=5 GeV/c is investigated. The results obtained seem to be evidence that one of the possible mechanisms of proton cumulative production in π^{-12}C-interactions in (0.2-0.6) GeV/c momentum range is a mechanism of slow π-meson absorption by a correlated pair of nucleus nucleons.

27289 (JINR—D-2-82-568, pp 74-77) **Investigation of antideuteron-deuteron interactions on the baSe of "Lyudmila" set data.** Gremenitskij, I.M. 1982. (In Russian). NTIS (US Sales Only), PC A09/MF A01. (CONF-8205252—).

From Meeting on investigations in the field of relativistic nuclear physics; Dubna, USSR (25 May 1982).

Antideuteron-deuteron interaction processes are investigated at the Ludmila device using a separated antideuteron beam and internal track-sensitive target (ITT). The evaluations performed gives the annihilation antideuteron-deuteron cross section value σsup(A)=2-4 mb, at that, the non-annihilation cross section σsup(NA)=16-18 mb. Results of deuteron and antideuteron separation are given. The ITT structUre is described. Characteristics of simultaneous sensitivity conditions in deuterium and hydrogen are given as well. Peculiarities of deuteron-antideuteron interactions are discussed.

27290 **(JINR—E-1-82-387) Search for axion on IBR-2 pulse reactor.** Alekseev, G.D.; Kalinina, N.A.; Kruglov, V.V.; Kulikov, A.V.; Kulinich, P.A.; Lushchikov, V.I.; Micelmacher, G.V.; Pokotilovsky, Yu.N.; Khazins, D.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems; Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1982. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701441.

A search for axions with plastic scintillation counters has been performed on IBR-2 pulse reactor. Behind the reactor shielding no photon pairs have been observed that contradicts the data of

Faissner on observing axions at the reactor in Julich and agrees with the conclusion of Zehnder et al. on the absence of the "standard" axion in the nature. The limitation on the axion production probability from excited states of ^{7}Li and d* is given.

27291 **(JINR—E-1-82-607) Interference of secondary pions and time-space characteristics of their emission volume in πp p interactionS at 40 GeV/c.** Akhababian, N.; Angelov, N.; Grishin, V.G.; Kowalski, M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1982. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701442.

The interference of positive and negative pions produced in π^-p interactions at 40 GeV/c is studied. It is shown that negative pions are emitted from large distance than positive ones. The influence of resonance state production on the size of pion emission volume is observed.

27292 **(JINR—E-1-82-759) Study of Λsub(c)sup(+) charm baryon production in approximately 58 GeV neutron beam.** Aleev, A.N.; Arefiev, V.A.; Balandin, V.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1982. 8p. (CONF-820718—51). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701443.

From 21. international conference on high energy physics; Paris, France (26 Jul 1982).

The production of charm baryons Λsub(c)sup(+) has been observed using the spectrometer BIS-2 on a neutron beam of the Serpukhov accelerator. The charm baryons decay into anti $K^0\pi^+\pi^-$ and $\Lambda^0\pi^+\pi^+\pi^-$ with confidence levels of approximately 10 and approximately 4 standard deviations from background, respectively. The average mass M(Λsub(c)sup(+))=(2275+-6) MeV/c^2. The estimates of the product of the decay probabilities to the partial interaction cross sections are, respectively, (33.5+-5.2) μb and (4.5+-1.1) μb per carbon nucleus, and their ratio is (7.4+-2.2).

27293 **(JINR—E-1-82-802) Asymmetries in angular distributions of nucleon emission intensity in high energy hadron-nucleus collisions.** Strugalski, Z. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1982. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701444.

Asymmetry in nucleon emission intensity angular distributions relatively to the hadron deflection plane and to two planes normal to it and related to it uniquely is analyzed, using appropriate experimental data on pion-xenon nucleus collisions at 3.5 GeV/c momentum. Quantative characteristics of the asymmetries found are presented in tables and on figures.

27294 **(JINR—R-1-83-252) Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon.** Agakishief, G.N.; Arnutlijski, D.; Akhababyan, N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701437.

Size of the secondary pion emission region are measured by means of the second-order-interferometry method in collisions of light nuclei D, He and C with C and Ta at 4.2 GeV/c per nucleon. In the laboratory frame the root-mean-square of the radius of the pion emission region increases with the atomic weight of the projectile nucleus as well as with deepening the "centrality" of the collision. In the nucleon-nucleon c. m. s., the radius of the emission region is smaller than that in the laboratory frame.

27295 **(JINR—R-1-83-423) Average number of neutrons in πp p, π^-n and π^-^{12}C interactions at p=4 GeV/c.** Bekmirzaev, R.N.; Grishin, V.G.; Muminov, M.M.; Suvanov, I.; Trka, Z.; Trkova, Ya. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701448.

The average number of secondary neutrons has been obtained in π^-p-, π^-n- and π^-^{12}C interactions at p=4 GeV/c by means of studying secondary neutral stars induced by neutrons in propane bubble chamber. The following values of coefficients of charge exchange have been obtained: $\alpha(p \rightarrow n)$=0.39+-0.04 and $\alpha(n \rightarrow p)$=0.37+-0.08. It is shown that charge exchange coefficients don't depend on energy.

27296 (JINR-D—2-82-568, pp 47-53) **Device and main results of the NA-4 experiment: deep inelastic muons scattering and investigating multimuons states.** Argento, A.; Bollin, D.; Kamporezi, T. (Bologna Univ. (Italy). Ist. di Fisica) . 1982. (In Russian). NTIS (US Sales Only), PC A09/MF A01. (CONF-8205252—).

From Meeting on investigations in the field of relativistic nuclear physics; Dubna, USSR (25 May 1982).

A NA-4 cylindrical-symmetrical focusing spectrometer operating since 1979 in a muon beam at the CERN 400 GeV accelerator is described. The device is intended for the investigation of deep inelastic muons interactions with nucleons and nuclei at 120, 200, 240 and 280 GeV to study their structure at small distances to 10^{-3} cm. Results of analysis of experimental data obtained using carbon targets are given. Conclusions obtained earlier for lower energies, that the nucleon composition includes fractional charge particles-quarks or partons, were confirmed. The parameter necessary for the quark interaction description within the framework of quantum chomodynamics was determined, the lower boundary of the product of upsilon particles by the probability of decay into two muons was established. The NA-4 carbon targets were replaced by liquid hydrogen (deuterium).

27297 (JINR-D—2-82-568, pp 67-73) **Investigation of pion-nucleon interactions at energies up to 1 GeV at the "Kaspij" device.** Golubev, S.L.; Kurepin, A.B. (AN SSSR, Moscow. Inst. Yadernykh Issledovanij). 1982. (In Russian). NTIS (US Sales Only), PC A09/MF A01. (CONF-8205252—).

From Meeting on investigations in the field of relativistic nuclear physics; Dubna, USSR (25 May 1982).

A Kaspy device located on the JINR synchrophasotron 8.1 GeV extracted proton beam and intended for using pion-nucleus interactions at energies of Up to 1 GeV is described. The device consists of a magnetooptical channel, magnetooptical spectrometer, a set of scintillation counters, a set of multiwire proportional and drift chambers a system for data pick-up from detectors, Chambers and equipment necessary for the operation and control of some separate parts of the Kaspy device. Calculated parameters of the magnetooptical channel and spectrometer of pions are given as well as measured values of pions plus yields in the magnetic channel for a brass target of 88 cm length. A program of physical investigations into elastic and inelastic pion scattering with nuclei at the Kaspy device which are necessary for the development of the microscopic theory of pion-nuclear interactions is described.

27298 **(LBL—17673) Recent results on weak decays from the Mark II experiment.** Trilling, G.H. (Delaware Univ., Newark (USA). Inst. of Energy Conversion). Apr 1984. Contract AC03-76SF00098. 15p. (CONF-8403113—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010720.

From Europhysics conference; Erice, Italy (4 Mar 1984).

Portions are illegible in microfiche products.

The MARK II Collaboration's work on several aspects of weak decays is described. Results on the nu/sub tau/ mass, and on tau, D^0 and B lifetimes are discussed. A brief description of the MARK II detector is given. (WHK)

27299 **(LUIP—8312) Method for analyzing elastic scattering data sampled with the SFM-detector at the CERN ISR.** Claesson, G. (Lund Univ. (Sweden). Dept. of Cosmic and Subatomic Physics). Aug 1983. 12p. (LUNFD6/NFFK—7035/1-12(1983)). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700905.

This paper describes a method for determination of the squared 4-momentum transfer, t, in elastic collisions sampled with the Split-Field-Magnet detector (SFM) at the CERN ISR. The t-values are calculated from the measured scattering angles and initial momenta of the beam particles. The method determines t with a relative error of 2 percent in Monte-Carlo generated elastic events.

The method seems to be effective in rejecting inelastic events by means of a X^2-test.

27300 **(RL—83-015) Evidence for the t-quark in p-barp collider data.** Barger, V.; Martin, A.D.; Phillips, R.J.N. (Rutherford Appleton Lab., Chilton (UK)). Feb 1983. 9p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700894.

A simple method is proposed to identify semileptonic weak decays $t \rightarrow e\nu b$ of any heavy particle t and to determine its mass independent of the t-production mechanism, using p-barp collider events that contain a single electron (or muon) and missing transverse momentum. Events with transverse mass Msub(T)(eν) > 3 GeV originate either from t-decays of mass msub(t) > Msub(T)(eν) + msub(b) or from $W \rightarrow e\nu$ decays; the latter is a distinctive background that can be subtracted. The Msub(T)(eν) distribution of electron events may be interpreted as being due to a t-quark with mass 25 to 40 GeV.

27301 **(RL—83-016) Finding the t-quark in W boson decay debris.** Barger, V.; Martin, A.D.; Phillips, R.J.N. (Rutherford Appleton Lab., Chilton (UK)). Feb 1983. 9p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700895.

A spectacular jet plus electron signature of t-quark production at p-barp colliders via W boson decay $W \rightarrow$ t-barb with subsequent $b \rightarrow$ jet, and t-bar $\rightarrow$ be-barν decays is pointed out. The b jet momentum transverse to the beam has a Jacobian peak near psub(T)(b) = (Msub(W)²-msub(t)²)/(2Msub(W)); this jet is expected to be highly collimated. Electrons from t-bar-decay occur with large momentum components normal to the b jet in the plane transverse to the beam. Both the b Jacobian peak and transverse momenta of the t-bar-decay fragments can be used in making further determinations of msub(t).

27302 **(UCRL—90687) Calculation of molecular final states and their effect on a precision neutrino mass experiment.** Fackler, O.; Mugge, M.; Sticker, H.; Winter, N.; Woerner, R. (Lawrence Livermore National Lab., CA (USA); Rockefeller Univ., New York (USA); Fermi National Accelerator Lab., Batavia, IL (USA)). Feb 1984. Contract W-7405-ENG-48. 9p. (CONF-840150—4). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011071.

From 4. Moriond workshop on massive neutrinos in particle and astro-physics; La Plagne, France (15 Jan 1984).

Portions are illegible in microfiche products.

An experiment to determine the electron neutrino mass is being performed with the precision of a few electron volts by measuring the tritium beta decay energy distribution near the endpoint. At the few electron volt level, a major consideration in the choice of a tritium source is the effect of excited final atomic or molecular states on the beta decay distribution. It is important to choose a source for which the initial and final states can be accurately calculated. Frozen tritium was chosen as the source since the states of molecular tritium and those of the HeT^+ daughter ion have electronic wavefunctions that can be calculated with high accuracy. The effects of final excited states on the neutrino mass determination and the results of these calculations are described.

27303 **Measurement of high-psub(T) correlations in 340 GeV/c pp and 280 GeV/c πp p reactions.** Oliver, W.P. (Tufts Univ., Medford, MA (USA)); Limon, P.; Mantsch, P.; Orr, J.R.; Pruss, S. (Fermi National Accelerator Lab., Batavia, IL (USA)); Cook, V.; Hicks, G.; Mockett, P.M.; Rothberg, J.E.; Williams, R.W. *Nuclear Physics* [*Section*] *B;* **228**: No. 3, 439-463(5 Dec 1983).

We have measured correlations between single high-psub(T) (1.5<psub(T)<3.5 GeV/c) trigger particles on one side of the beam line and groups of particles entering a calorimeter on the opposite side of the beam line. The mean transverse momentum measured in the calorimeter is found to increase with the trigger-particle transverse momentum. The coplanarity of the events increases with trigger-particle transverse momentum. We have compared our data with the predictions of a phenomenological four-jet model. To fit our data we find that we must give large (0.9 GeV/c) mean transverse momenta to the constituents of the initial hadrons.

27304 **Two-pion correlations in heavy ion collisions: measurement of source dimensions using pion interferometry.** Zajc, W.A.; Bistirlich, J.A.; Bossingham, R.J.; Bowman, H.R.; Clawson, C.W.; Crowe, K.M.; Frankel, K.A.; Hashimoto, O.; Kurck, J.P.; Martoff, C.J. (Lawrence Berkeley Lab., CA (USA)). *Helvetica Physica Acta;* **56**: No. 4, 978(3 Oct 1983). (CONF-8303127—).

From Swiss Physical Society spring meeting; Fribourg, Switzerland (24 Mar 1983).

Published in summary form only.

27305 **Limits on J/PSI and Y production in e^+e^- interactions at $\sqrt{s}$=29 GeV.** Matteuzzi, C.; Abrams, G.S.; Amidei, D.; Blocker, C.A.; Boyarski, A.M.; Breidenbach, M.; Burke, D.L.; Chinowsky, W.; Dieterle, W.E.; Dillon, J.B. (Stanford Linear Accelerator Center, CA (USA); California Univ., Berkeley (USA). Dept. of Physics; Lawrence Berkeley Lab., CA (USA); Harvard Univ., Boston, MA (USA). Dept. of Physics). *Physics Letters,* [*Section*] *B;* **129**: No. 1/2, 141-144(15 Sep 1983).

A search has been made for the inclusive production of J/psi (3.1) and tau (9.4) mesons in e^+e^- interactions at 29 GeV, via their decay into two leptons. No signal is observed in the J/psi region, nor in the tau region. The limits on the cross sections are sigma(e^+e^- -> psi X) < 4.4 x 10^{-36} cm^2, and sigma(e^+e^- -> tau X) < 4.7 x 10^{-36} cm^2. The same data yield limits on the branching ratios for the b quark BR (b -> psi X) < 4.9% and BR (b -> l^+l^- X) < 0.8%.

27306 **Production and decay of charmed particles in e^+e^- collisions.** Barbaro-Galtieri, A. (Lawrence Berkeley Laboratory, Univ. of California, Berkeley, CA 94720). pp 613-688 of The new aspects of subnuclear physics. Zichichi, A. New York, NY; Plenum (1980). (CONF-7807117—).

From 16. international school of subnuclear physics; Erice, Italy (31 Jul 1978).

This is a review of all the data available on production and decay of charmed particles in e^+e^- collisions. Production and decay of D and F mesons and charmed baryons are discussed. Comparisons with theoretical predictions, where available, are made.

27307 **(DESY—83-104) Fragmentation of quarks and gluons.** Soeding, P. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1983. 39p. (CONF-830718—23). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751269.

From International Europhysics conference on high energy physics; Brighton, UK (20 Jul 1983).

The author presents a review about quark and gluon jets. He describes the particle contents of the different types of jets. Finally he considers the hadronization mechanism with special regards to three-jet events in e^+e^- annihilation and hadronization in nuclear matter.

27308 **(DESY—83-105) Heavy quarks.** Khoze, V.A.; Shifman, M.A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1983. 128p. NTIS (US Sales Only), PC A07/MF A01. Order Number DE84751273.

We discuss the results accumulated during the last five years in heavy quark physics and try to draw a simple general picture of the present situation. The survey is based on a unified point of view resulting from quantum chromodynamics.

27309 **(DOE/ER/10957—3) Research in the theory of condensed matter and elementary particles. Progress report.** (Chicago Univ., IL (USA)). Apr 1984. Contract AC02-81ER10957. 21p. NTIS, PC A02; 3; GPO Dep. Order Number DE84010546.

Paper copy only, copy does not permit microfiche production.

Progress is described on research concerned with problems occupying the common ground between quantum field theory and statistical mechanics. Research was conducted on conformal field theory and two dimensional critical phenomena; on formation of large scale structures in dynamical systems; on fermion-boson mass relations in BCS type theories; on properties of quark-gluon plasmas; on random walks in random environments; on chiral symmetry breaking in lattice gauge theories, on supersymmetric derivations of anomaly formulas and index theorems; and on the problems of exact chiral symmetry in lattice fermion theories. Publications are listed. 46 references.

27310 **(EFI—547(34)-82) Angular distributions of three-jet events in polarized e^+e^--pair annihilation.** Shakhnazanyan, Yu.G. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 18p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701416.

The dependence of the hadronic three jet production cross section in e^+e^--annihilation, taking into account the primary particle polarization, on polar THETA and azimuthal phi angles of spatial orientation as well as on the value of the thrust vector T vector is studied in the first order in "constant" dsub(s) in the framework of quantum chromodynamics. If the jet in stuching the e^+e^--annihilation at THETA=0 or phi=90 deg is detected with the maximum momentum for which T=09 then the jet consists of guarks or antiquarks in 95 events aut of 100 events and in 5 events it consists of gluons. Under the same conditions the jet with minimum momentum consists of gluons in 75% of events.

27311 **(EFI—550(37)-82) Relativistic quark model in infinite momentum frame and static properties of hadrons.** Aznauryan, I.G.; Bagdasaryan, A.S.; Ter-Isaakyan, N.L. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 39p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701417.

A model of mesons and baryons composed of reiatavistic quarks is formulated in the infinite momentum frame. A variant of this model allowing the classification over SU(6)xO(3) group is constructed. In this variant of the model the analysis of the data on the magnetic moments, electromagnetic radii for nucleon is carried out and their selfconsistent description is obtained. Estimates for mass, anomalous magnetic moments and mean square momenta of quarks in nucleons are obtained. Using these parameters the radiative decay amplitudes of P_{33} (1232), P_{11} (1470), P_{11} (1780) resonances and nucleon resonances of [70, 1^-] multiplet are predicted.

27312 **(EFI—592(79)-82) How to deal with spin in the quark model at high energies.** Aznauryan, I.G.; Grigoryan, A.A.; Ter-Isaakyan, N.L. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701418.

The close connection between the spin effects in hadron-hadron collisions and the quark wave functions in hadrons is demonstrated. In the framework of additive quark model it is shown that the correct approach to the hadron wave functions construction at S → infinity leads to the S-channel helicity flip interaction of hadrons even in the absence of such interaction on the quark level. In the considered examples our predictions agree well with the experiment.

27313 **(IC—82/181) Baryon and baryonium in QCD_2.** Durgut, M.; Pak, N.K. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1982. 53p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84700896.

Quark-quark scattering in QCD_2 is studied by including also the contributions of the bound states other than the usual qq-bar bound states in the quark-quark scattering matrix. In particular diquark, baryon, and baryonium bound state equations are derived, and their semiclassical solutions are described. Their decays to other hadronic states are also considered.

27314 **(IC—82/229) Magnetic moments of light baryons in the harmonic model.** Khadkikar, S.B.; Gupta, S.K. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700897.

Anomalous magnetic moments of light baryons are calculated in a relativistic harmonic oscillator model to obtain good agreement with experiment.

27315 **(IC—83/33) Angular distributions of dileptons in polarized hadronic collisions: Test of electroweak gauge models.** Chaichian, M.; Hayashi, M.; Yamagishi, K. (International Centre for Theoretical Physics, Trieste (Italy)). Mar 1983. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700898.

The angular distributions of high-mass dileptons with large transverse momentum produced in longitudinally polarized hadronic collisions, hadron + hadron → (γ^*, Z_1sup(c), Z_2°,...) + X → l^+l^- + X, are calculated in the QCD lowest order. The formulas presented in general form, are applicable to any gauge model of underlying electroweak interactions. Numerical results are obtained for the angular distributions in p-barp-collisions at $\sqrt{s}$=540 GeV for the Weinberg-Salam, SU(2) x U(1) x U(1)' and SU(2) x SU(2)' x U(1) models. Clearly distinguishable signals are revealed.

27316 **(IFVE-OTF—83-75) Possibility of a measurement of the gluon structure function of pion from J/psi production data.** Kartvelishvili, V.G.; Likhoded, A.K. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701419.

The possibility of determination of the gluon structure function of pion from J/phi production data. The x-distribution of J/phi particle in πp-interactions measured experimentally has nothing to do with gluon distributions but is related to light quark annihilation.

27317 **(IFVE-OTF—83-90) Model for elastic scattering and diffraction dissociation processes of hadrons at high energies. 2. Asymptotic behaviour of hadron form factors.** Troshin, S.M.; Tyurin, N.E. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701420.

The asymptotic behaviour of hadron form factors is discussed on the base of the model of elastic scattering and diffraction dissociation processes. The results are compared with experimental data. The relation between the behaviour of form factors at Q^2 → reversible and the rate of the growth of total cross-sections is derived.

27318 **(ITEF—121(1983)) Scalar partners of the mesons of the n^- Nonet.** Shabalin, E.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1983. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701421.

Properties of the chiral partners of the mesons belonging to the pseudoscalar nonet are investigated in the framework of a nonlinear chiral model of effective Lagrangian of the system of 0^+ and 0^- mesons of the known scalar resonances. Only epsilon (800) and delta (980) seem to be like the chiral partners of the mesons of o^- nonet.

27319 **(ITP—82-122-E) Complete analysis of polarization in two-particle QCD processes.** Duplij, S.A.; Rekalo, M.P. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). Jul 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701422.

The helicity amplitudes of all two-particle quark-gluon processes qq → qq, q anti q → q anti q, qq → gg, gg → anti q anti q, gq → gq, gg → gg are obtained. Quark masses are assumed to be zero. The scattering amplitude for arbitrarily polarized particles is a linear combination of the obtained helicity amplitudes. Production

asymmetries of longitudinal polarized quarks and gluons are found. Weak and electromagnetic effects are taken into account in quark scattering.

27320 **(ITP—82-143-E) Gribov-Lipatov relation in perturbative QCD.** Pavlenko, O.P.; Snigipev, A.M.; Zinov'ev, G.M. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701423.

It is shown that at small X the violation of the Gribov-Lipatov relation between the distribution Dsub(A)sup(B)(X, Qsup(2)) (where X is a fraction of parton longitudinal momentum, Q^2 is a square of momentum transfer) and fragmentation anti Dsub(A)sup(B)(X, Qsup(2)) functions depends on the order in which their X- and Q^2-asymptotic behaviours are investigated.

27321 **(ITP—83-46-E) Q^2-dependence of multiparticle distribution and fragmentation functions in QCD.** Shelest, V.P.; Snigirev, A.M.; Zinovjev, C.M. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1983. 27p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701424.

Using a parton interpretation of the leading logarithm diagrams of perturbation QCD theory the equations for multiparton distribution and fragmentation functions are obtained. Under certain initial conditions these equations lead to the same solutions which coincide with the jet calculus rules. The factorization of soft and hard stages of ep-scattering and e^+e^- annihilation allows to generalize the equations for the description of parton fragmentation into hadrons and parton distribution in hadrons. The effect of the initial conditions on asymptotics of the solutions to the equations obtained is considered.

27322 **(JINR—E-2-82-651) Soft and hard quark collisions in large transverse-momentum hadron-nucleus processes.** Lykasov, G.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1982. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701445.

The contribution of soft multiple constituent quark collisions to the inclusive spectrum of large transverse-momentum psub(T) particles generating in hadron-nucleus reactions at high energies is studied. By analysing the reaction $pA \to \pi X$ it is shown that this contribution is considerable and determines basically the π-meson spectra at psub(T) < or approximately 3 (GeV/c), but it decreases at psub(T) > 3 (GeV/c). The inclusion of both soft and hard quark collisions inside the nucleus allows one to describe quite satisfactorily the A dependence of these π-meson spectra within a wide region of psub(T), psub(T)=1-6 GeV/c. The quark confinement effect on the results of π-meson spectrum calculations is studied.

27323 **(JINR—E-2-82-725) Interference correlations of identical particles in models with closely spaced sources.** Lednicky, R.; Lyuboshitz, V.L.; Podgoretsky, M.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1982. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701425.

The problem of interference correlations of identical particles in the base of closely spaced sources is investigated. It is shown that the formulae for interference correlations in pairs of identical particles with nearly equal momenta, obtained in a number of papers in the framework of coherent state theory, turn out to be limiting cases of more general relations. Moreover, the latter follow from essentially simple approach based on the model of independent one-particle sources.

27324 **(JINR—E-2-82-730) Scaling of semi-inclusive spectra of πp mesons from pp interactions.** Golokhvastov, A.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1982. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701446.

Semi-inclusive distributions on π^- meson rapidity in pp interactions at 6-400 GeV/c are analyzed. It is shown that a two-parameter dependence of spectra on energy ($\sqrt{s}$) and the multiplicity of negative particles (n) reduces to a single-parameter dependence on ratio s/n.

27325 **(JINR—E-2-83-1) Representations of Poincare group associated with unstable particles.** Exner, P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 16p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701368.

The problem of relativistically-covariant description of unstable particles is reexamined. We follow the approach which associates a unitary reducible representation of Poincare group with a larger isolated system, and compare it with the one ascribing a nonunitary irreducible representation to the unstable particle alone. It is shown that the problem roots in choice of the subspace Hsub(u) of the state Hilbert space which could be related to the unstable particle. Translational invariance of Hsub(u) is proved to be incompatible with unitarity of the boosts. Further we propose a concrete choice of Hsub(u) and argue that in most cases of the actual experimental arrangements, this subspace is effectively one-dimensional. A correct slow-down for decay of a moving particle is obtained.

27326 **(JINR—R-1-82-908) Comparison of space-time characteristics of the radiation region of secondary pions produced in πpN and π^-C interactions at 40 GeV/c in different frames of reference.** Angelov, N.; Akhababyan, N.; Grishin, V.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1982. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701447.

Space-time characteristics of the radiation region of secondary pions produced in π^-N and π^-C interactions have been obtained using the interference method of identical particles. They are compared in different moving frames of reference. It has been found that there is no significant difference in the size of the radiation region of π^+-mesons for the two processes considered. The size of the radiation region for π^--mesons is larger than that for π^+, particularly for the component including the lifetime of the source. This can be due to an active production of resonances in these interactions.

27327 **(JINR—R-2-83-100) Nonleptonic decays of charmed baryons in chiral theory.** Kalinovskij, Yu.L.; Pervushin, V.N.; Sarikov, N.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701426.

Nonleptonic decays of charmed baryons in chiral theory are considered. The Lagrangian of weak interaction is taken in the "current x current" form and satisfies exactly the rule. $\Delta T=1$ in ideal case THETAsub(c)=0. Currents are the nonlinear realization of the chiral group SU(4)xSU(4). The nonleptonic decays of strange baryons are considered. It follows from the experimentally known data that the theory describes satisfactorily only the S-wave part of decay amplitude in the "tree" approach.

27328 **(JINR—R-2-83-169) Spectral properties of parton correlation functions and multiparton wave functions.** Radyushkin, A.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701385.

Using a parameteric representation for Feynman integrals it is demonstrated that the functions F(xsub(l),...,xsub(k)), phi(xsub(l),...,xsub(k)) the generalized moments of which are proportional to reduced matrix elements of k-body composite operators, have the spectral properties necessary for their parton interpretation.

27329 **(JINR—R-2-83-400) Dependence on the target-nucleus atomic number of spectra of lepton pairs produced in hadron-nucleus interactions.** Lykasov, G.I.; Sherkhonov, B.Kh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1983. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701438.

The dependence of lepton pair spectra (especially $\mu^+\mu^-$ produced in hadron-nuclear interactions) on the atomic number A of the target-nucleus is analyzed over their effective mass m, longitu-

dinal momentum psub(z) and transverse momentum psub(t). The investigation is carried out with such m, psub(z) and psub(t) at which the multiple rescattering of a projectile hadron or of soft multiple quark collisions give the main contribution into these spectra. It is shown that, if the spectra of $\mu^+\mu^-$ over m and psub(t) are expressed in the form of Asup(α), taking into account such processes, it permits to describe the behaviour of α(m) and α(psub(t)) rather well with spectrum index α increasing from its minimum value to α approximately 1, if m or psub(t) increases.

27330 **(JINR—R-4-83-429) Limits of application of the nolocal quark model.** Efimov, G.V.; Ivanov, M.A.; Novitsyn, E.A.; Ryabtsev, A.D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701427.

The possibility of application of the nolocal quark model (NQM) to the physics of mesons, containing charmed quarks, is considered. A method for description of states with identical quantum numbers is suggested. In order to distinguish between such states different quark currents are introduced with additional condition of "orthogonality" implied. The latter allows one to neglect nondiagonal off-shell matrix elements in compositeness condition for coupling constants. In the framework of NQM with additional assumptions mentioned several decay widths of vector charmonium states have been computed, namely lepton c widths of J/psi(3100), psi'(3685) and psi(3770) an the decay width into charmed D-mesons psi(3770) → D nti D. It is shown that the two-parametric freedom of the model is not sufficient to fit the experimental data. It is concluded that the revision of basic concepts of NQM is necessary in the physics of mesons containing c-quarks.

27331 (JINR-R—1,2,13-83-81, pp 108-115) **Neutrino with Majorana masses and large oscillation amplitudes.** Bilen'kij, S.M.; Pontekorvo, B.M. 1983. (In Russian). NTIS (US Sales Only), PC A08/MF A01. (CONF-820192—).

From 3. working conference on IPHE-JINR neutrino detector; Dubna, USSR (18 Jan 1982).

The problem of oscillations of neutrinos with Majorana masses is described. For some special mixing schemes in this case high amplitude neutrino oscillations can appear. A situation with oscillation amplitude is considered for two schemes with two massive Majorana neutrinos. It is shown that the "real neutrality" of neutrino with Majorana mass (unlike neutrino with Dirac mass) makes rather probable the total analogy between neutrino oscillations and K^0 reversible anti K^0, n reversible anti n oscillations with maximum oscillation amplitude.

27332 (JINR-R—1,2,13-83-81, pp 152-156) **Numerical model for the mass spectrum of six generations of leptons.** Lipmanov, Eh.M. (Yaroslavskij Gosudarstvennyj Univ. (USSR)). 1983. (In Russian). NTIS (US Sales Only), PC A08/MF A01. (CONF-820192—).

From 3. working conference on IPHE-JINR neutrino detector; Dubna, USSR (18 Jan 1982).

A possibility of deriving the formula for the mass spectrum of a finite number of lepton generations is discussed. The two-parametric approximated formula chisub(n)=chisub(infinity)exp(kappa/2sup(n)) is considered where chisub(n)=msub(n+1)/msub(n) (m is a lepton mass); chisub(infinity) and kappa are parameters. The index n is chosen as n=... 0, 1, 2, 3 ... for ...ν_1, e, μ, tau ... leptons. In order to limit the spectrum the following rule of sums is proposed SIGMAsub(i=1)sup(N) msub(i)– sup(neutr) - SIGMAsub(i=1)sup(N)msub(i)sup(charg.)=msub(3), where summation is performed for all neutral and charged leptons, m_3 is a mass of tau lepton, N is the unknown.number of lepton generations. It is shown that the given equations are compatible with all available experimental data and mass limits for known and supposed charged and neutral leptons only for six generations of these particles.

27333 (JINR-R—1,2,13-83-81, pp 84-92) **Results of experiments on νsub(μ)e scattering and perspectives of its investigation at the neutrino detector of IHEP-JINR.** Vovenko, A.S.; Zhigunov, V.P.; Kulikov, A.V.; Spiridonov, A.A.; Shestermanov, K.E. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. (In Russian). NTIS (US Sales Only), PC A08/MF A01. (CONF-820192—).

From 3. working conference on IPHE-JINR neutrino detector; Dubna, USSR (18 Jan 1982).

Perspectives of investigation of elastic νsub(μ)(anti νsub(μ))esup(-) scattering at the IHEP-JINR neutrino detector are discussed. Experimental investigation of the νsub(μ)(anti νsub(μ))esup(-) scattering is extremely difficult because of smamchemical bond0cross section and high background level. According to the Salam-Weinberg model with the sinsup(2)THETAsub(w)=0.25 parameter the νsub(μ)(anti νsub(μ))esup(-) scattering and background reactions in the neutrino detector are simulated. THe calculations show that due to high accuracy of measuring electron angles and energies, possibility of separation of electron and hadron, electron and gamma quantum at the IHEP-JINR neutrino detector the νsub(μ)(anti νsub(μ))e scattering cases can be effectively isolated. The expected background level is considerably less than that attained in experiments with big electron detectors at present.

27334 (JINR-R—1,2,13-83-81, pp 97-107) **Single pion production in the νsub(μ)N→μ^-Nπ neutrino reactions.** Bel'kov, A.A.; Zudin, Yu.A.; Klimenko, L.A.; Komachenko, Yu.Ya. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. (In Russian). NTIS (US Sales Only), PC A08/MF A01. (CONF-820192—).

From 3. working conference on IPHE-JINR neutrino detector; Dubna, USSR (18 Jan 1982).

Resonance and nonresonance mechanisms of the νsub(μ)N→μsup(-)Nπ reactions are considered. Within the frames of the hard pion model the νsub(μ)N→μsup(-)Nπ reactions are analysed in the Δ_{33} isobar production range. It is shown that experimental data on differential cross section for the νsub(μ)p→μsup(-)pπsup(+) reaction can be described in the hard pion model at small pulse transfers $-k^2<0.2$ $(GeV/s)^2$. Analysis of the νsub(μ)p→μsup(-)pπsup(+) reaction within the frames of the discussed model can produce valuable information about π-, p-, A_1-meson interactions with the Δ_{33} isobar. Studying of other channels of the νsub(μ)N→μsup(-)Nπ reactions in the low energy range will permit to determine the constants of π-, p-, and A_1-meson coupling with other low baryon resonances. Theoretical estimations show that the IHEP-JINR neutrino detector opens up real possibilities for experimental investigations of single pion production in neutrino scattering on virtual mesons.

27335 (JINR-R—1,2,13-83-81, pp 116-119) **Study on the oscillations of muon neutrinos at the monochromatic beam of IHEP.** Bunyatov, S.A.; Tret'yak, V.I. (Joint Inst. for Nuclear Research, Dubna (USSR)); Vovenko, A.S.; Volkov, A.A.; Mukhin, A.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. (In Russian). NTIS (US Sales Only), PC A08/MF A01. (CONF-820192—).

From 3. working conference on IPHE-JINR neutrino detector; Dubna, USSR (18 Jan 1982).

Possibility of studying muon neutrino oscillations at the IHEP-JINR neutrino detectar is discussed. Oscillations between two types of neutrino νsub(μ) and νsub(e) are considered. Limits on the difference between neutrino mass squares and $\sin^2 2\theta$ (theta is a mixing angle) attained under the given experimental conditions at the 90 % confidence level are determined. It is shown that under the same restrictions on the difference of neutrino mass squares in other experimental conditions the considerably higher sensitivity to amplitude can be obtained in the given experiment.

27336 (JINR-R—1,2,13-83-81, pp 138-143) **Possibility of search for free quarks with a fractional charge.** Bel'kov, A.A.; Volkov, A.A.; Kochetkov, V.I.; Mukhin, A.I.; Sviridov, Yu.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. (In Russian). NTIS (US Sales Only), PC A08/MF A01. (CONF-820192—).

From 3. working conference on IPHE-JINR neutrino detector; Dubna, USSR (18 Jan 1982).

One of possibilities of searching quarks with a fractional charge in a 70 GeV proton beam is studied. A quark pair production reaction in the pN → NNQ anti Q proton-nucleon interactions is considered. It is assumed that free quarks outgoing as a result of the reaction have a small cross section of inelastic interaction with nucleons. It is shown that at proton flux intensity of Isub(p) approximately (3-5)x10^{18} protons the limiting value up to $\sigma >= 10^{-43}$ cm^2/nucleon for cross section of production of quarks with the fractional charge Q=1/3 can be attained in the whole mass range available for production.

27337 **(KFTI—82-45) Relations between quadrupole moments of dibarions.** Kulish, Yu.V. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701428.

It is shown that account of the gluon exchange between quarks in the spherical bag leads to the difference of the quadrupole moment from zero. Electric quadrupole moments of dibaryons with the positive evenness and the amplitude of quadrupole transitions of deuteron to dibaryons are expresses in terms of the quadrupote deuteron moment.

27338 **(KFTI—83-2) Polarized vector meson production in colliding e^+e^--beams.** Rekalo, M.P. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701432.

Density matrix elements of vector mesons in $e^+e^- \rightarrow V+P$ and $e^+ + e \rightarrow A+P$ (V, A and P-vector, axial and pseudoscalar mesons) are revealed within the frames of one-photon mechanism. Density matrix elements are calculated in two systems: rest system V or A as well as cis of e^+e^--beams. Matrix elements of V-mesons in $e^+ + e^- \rightarrow V+P$ can be calculated accurately (without involving data on electromagnetic structure of hadrons) because $e^+e^- \rightarrow V+P$ reaction is determined only by one electromagnetic formfactor. H-odd effects for.one-photon mechanism of polarized vector meson production in $e^+ + e^- \rightarrow V+P$ reaction are also investigated.

27339 **(KFTI—83-4) Relativistic-invariant analysis of deuteron electrodisintegration. 1. Polarization effects.** Rekalo, M.P.; Gakh, G.I.; Rekalo, A.P. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 23p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701435.

Dependence of $e^-d \rightarrow e^-pn$ differential cross section on vector and tensor polarization of a deutron target at scattering of non-polarized and longitudinally polarized electrons (all the other particles are non-polarized) is determined in the general form using conservation of electromagnetic current of hadrons and P-invariance of hadron electromagnetic interaction. Dependence of all the asymmetries on two of five kinematic variables and, namely, on azimuthal angle phi and linear polarization parameter x of a virtual photon is clearly established within the frames of one-photon mechanism for $e^-d \rightarrow e^-pn$ (without concrete definition of $\gamma^*d \rightarrow np$ reaction mechanism, γ^* is virtual photon). Polarization of protons produced in $\gamma^*d \rightarrow np$ is analyzed in the same way. Those polarization effects which are absent in impulse approximation and which are conditioned by strong np-interaction in the final state are stated.

27340 **(KFTI—83-10) Neutral weak current and the $\nu + d \rightarrow \nu + p + n$ process.** Rekalo, M.P.; Gakh, G.I.; Rekalo, A.P. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701429.

For the differential cross section for deuteron-fission in neutrino scattering ($\nu+d \rightarrow \mu^- + p + p$, $\nu+d \rightarrow \nu+p+n$) with detecting of two produced particles the dependence on deuteron vector and tensor polarizations has been investigated in a general form. The structure of the matrix elements of the vector and axial parts of the hadron neutral weak current operator for the $\nu+d \rightarrow \nu+p+n$ process has been obtained considering the deuteron as an elementary particle. The spin structure of the matrix element is essentially simplified near the threshold when both vector and axial parts of the matrix elements of the $Z^*+d \rightarrow p+n$ (Z^* is the virtual Z-boson) are determined by five real threshold formfactors. Using this approach all contributions to the differential cross section for the neutrino scattering by a nonpolarized target as well as to the asymmetry the neutrino scattering by the vector and tensor polarized target have been calculated.

27341 **(KFTI—83-11) Pion electroproduction on the ^{4}He nuclei and p-odd nuclear forces.** Rekalo, M.P. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701436.

P-odd effects conditioned by weak electron-hadron interaction (at the expense of neutral and charged weak currents) are investigated for one-photon mechanism of $e^- + {}^4He \rightarrow e^- + \pi^0 + {}^4He$ process. P-odd effects can arise in scattering of non-polarized electrons if the produced pion is detected in the $e^- + {}^4He \rightarrow e + {}^4He + \pi^0$ reaction alongside with scattered electron. Different mechanisms of p-invariance distortion during $\gamma^* + {}^4He \rightarrow {}^4He + \pi^0$, where γ^* is virtual photon are discussed in detail. Contribution of some pole mechanisms: exchange in annihilation channel by scalar epsilon-meson (p-parity is distorted in the electromagnetic γ^*epsilonπ^0-vertex), as well as exchanges in S- and U-channels by baryon resonances with J spin and P=Jsup(P)=1/2sup(+-) parity (for $\gamma+N \rightarrow N+\pi^0$ processes the amplitudes of which within the frames of pulsed approximation determine P-odd amplitudes of $\gamma + {}^4He \rightarrow {}^4He + \pi^0$) is determined in the near-threshold region. These mechanisms result in P-odd pion production in the S-state, that increase P-odd effects near the threshold.

27342 **(KFTI—83-12) Polarization effects in vector meson electromagnetic decay (rho $\rightarrow \pi + 1^+ + 1^-$, $A_1 \rightarrow \pi + 1^+ + 1^-$).** Rekalo, M.P. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701430.

Angular and energy distributions of decay products .of polarized vector and axial mesons with production of $V \rightarrow P + l^+ + l^-$ and $A \rightarrow P + l^+ + l^-$ lepton pair, where V, A and P are vector, axial and pseudoscalar mesons, l is a lepton, are investigated in the general form. Study of polarized phenomena in $A \rightarrow P + l^+ + l^-$ decay permits to determine both complex electromagnetic formfactors of the vertex APγ^* in the region of time-like momentum transferred. It is disclosed that $A_1 \rightarrow \pi + l^+ + l^-$ decays may turn to be most useful for study of p-odd effects in the processes of A_1-meson production. Analysis of p-odd effects in $V \rightarrow P + l^+ + l^-$ decays for one-photon mechanism (at the expense of distortion of P-invariance in the electromagnetic vertex VPγ^* ($\gamma.^*$ is virtual γ-quantum) is conducted.

27343 **(KFTI—83-14) Manifestation of weak interaction in the ep $\rightarrow e\mu^+\mu^-x$ reaction.** Barannik, V.P.; Stoletnij, I.V. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701431.

$ep \rightarrow e\gamma^*x \rightarrow e\mu^+\mu^-x$ (in the region of small invariant masses of $\mu^+\mu^-$-pair) and $ep \rightarrow ezx \rightarrow e\mu^+\mu^-x$ (z-boson on mass surface) reactions are studied within the frames of quark-parton model. x is nondetected sum of particles. It is revealed that squares of matrix elements of $eq \rightarrow e\gamma^*q$ and $eq \rightarrow eqz$ (q-quark) processes are expressed by means of the same six functions of standard invariant variables. Different differential cross sections of the considered processes are calculated. It is shown that differential cross section of $ep \rightarrow ezx$ process complying with detection of an electron with energy E_2 and angle of escape thetasub(l) as well as square of invariant mass of finite electron and z-boson S_1 considered as S_1 function has a sharp peak the value and position of which depend on E_2 and thetasub(l).

27344 (KFTI—83-23) Charm particle jet production at the neutrino-valent gluon interaction. Merenkov, N.P. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 31p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701433.

The process of C anti C and C anti S pair production caused by neutrino-valent gluon interaction is considered in the experiment when in the final state alongside with the pair produced C anti C(C anti S) also scattered neutrino (μ-meson) is registered. Near the threshold and in the high-energy range all the contributions to differential cross section, characterizing polarization states of intermediate Z- and W-bosons, are calculated. The limiting cases of small and big squares of momenta transfered are discussed. At high energies the contribution of P-odd interference of vector and axial currents to differential cross section, which is determined by antisymmetric longitudinal-trasverse part of hadron tensor in the range qsub(perpendicular)sup(2) vector $<< m^2$ and $-K^2 >> m^2$, behave as $\sqrt{}$ -ksup(2)/qsub(perpendicular)sup(2) as to transverse cross section. Non-conservation of vector current in the case of C anti S pair production results in the appearance of summands proportional to (msub(c)sup(2)-msub(s)sup(2))/Ksup(2) in longitudinal and longitudinal-transverse (connected with symmetric part of hadron tensor) cross sections.

27345 (LA-UR—84-1009) Stochastic methods for the description of multiparticle production. Carruthers, P. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 11p. (CONF-840275—5). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009981.

From Workshop on anti pp options for the SSC; Chicago, IL, USA (13 Feb 1984).

Dynamical questions in the evolution of excited hadronic matter are reviewed, with emphasis on KNO scaling and its possible violation. It is suggested that the KNO distributions is described by a stochastic evolution of the Fokker-Planck type related to underlying field theory by coupled rate equations approximated by Langevin equations with noise. Refined correlation analysis of data, especially the use of intensity interferometry techniques, is recommended for data analysis. 26 references.

27346 (RL—83-011) Perpendicular eν mass from W decay. Barger, V.; Martin, A.G.; Phillips, R.J.N. (Rutherford Appleton Lab., Chilton (UK)). Jan 1983. 5p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700892.

Properties of the perpendicular eν mass, defined in terms of transverse momenta p-vectorsub(T) by Msub(T)sup(2)(eν) = 2'p-vectorsub(eT)' 'p-vectorsub(νT)' - 2p-vectorsub(eT).p-vectorsub(νT), that make it particularly well suited to W mass and width determinations are examined. An analytic expression for its distribution in W production and subsequent W $\rightarrow$ eν decay at p-barp colliders, accurate to order <psub(WT)sup(2)/Msub(W)sup(2)> approximately equal to 1% is given. A maximum likelihood fit of this formula to the five UA1 events gives Msub(W) = 80.3 +- $_3{}^6$ GeV.

27347 (SLAC-PUB—3300) Heavy particle production at the SSC. Brodsky, S.J.; Haber, H.E.; Gunion, J.F. (Stanford Linear Accelerator Center, CA (USA); California Univ., Santa Cruz (USA). Dept. of Physics; California Univ., Davis (USA). Dept. of Physics). Mar 1984. Contract AC03-76SF00515. 6p. (CONF-840275—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010575.

From Workshop on anti pp options for the SSC; Chicago, IL, USA (13 Feb 1984).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Predictions for the production of heavy quarks, supersymmetric particles, and other colored systems at high energy due to intrinsic twist-six components in the proton wavefunction are given. We also suggest the possibility of using asymmetric collision energies (e.g., via intersecting rings at the SSC) in order to facilitate the study of forward and diffractive particle production processes. 9 references.

From 10. international conference on few-body problems in physics; Karlsruhe, F.R. Germany (21 Aug 1983).

Investigations of pion production and absorption in few nucleon systems is clearly the means for studying both the elementary pion creation and annihilation processes and the associated problem of the propagation of pions and excited nucleons within nuclear matter. In this paper I wish to discuss those aspects of the subject which have received most attention by the contributors to this conference. Since David Bugg has discussed the NN $\rightarrow$ NN π situation in some detail, I shall restrict my treatment of the NN system to involve only the specific reaction $\pi d \rightleftharpoons 2p$. In addition, I will discuss a few selected topics concerning pion production and absorption in few nucleon systems, primarily to point out areas in which significant activity is currently in progress. I shall also restrict all discussion to those situations in which only one pion is involved, excluding any mention of multi-pion processes. 64 references.

P-odd effects for one-photon mechanism of muon pair production in hadron collisions conditioned by contribution of π^{+-}+q

$\rightarrow q'+\mu^+ +\mu^-$ and q+ anti $q' \rightarrow \pi^{+-}+\mu^+ +\mu^-$ pion mechanisms are studied. The $\pi^{+-}+q \rightarrow qq+\gamma^*$ (γ^* is virtual γ-quantum) process is considered in Born approximation within the frames of which P-odd effects arise due to P-odd constant of $\pi^{+-}qq'$-interaction. It is shown that in collision of non-polarized particles P-odd effects in $a_1+a_2 \rightarrow \mu^+ +\mu^- +X$ (a_1 and a_2 - colliding hadrons, X-nondetected set of particles) are conditioned by imaginary part of pion electromagnetic formfactor in the region of time-like momentum transferred for the considered mechanism if non-polarized muons are produced. Detection of P-odd effects in $a_1+a_2 \rightarrow \mu^+ +\mu^- +X$ due to P-invariance breaking in πq-collisions is essential for determination of P-odd constant of $\pi^{+-}qq'$-interaction.

27354 **(RL—83-012) Geometric hierarchy for the supersymmetry breaking scale.** Oakley, C.; Ross, G.G. (Rutherford Appleton Lab., Chilton (UK)). Jan 1983. 5p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700893.

F type supersymmetry breaking through O'Raifeartaigh-Fayet (Nucl. Phys.; B96:331 (1975) and Phys. Lett.; 580:67 (1975)) potentials is considered. It is shown how a class of models gives rise to a supersymmetry breaking scale reduced relative to the fundamental scale M of the potential by powers of (M/Msub(Planck)). The role of R invariance in such potentials is discussed.

6454 Field Theory

27355 **(EFI—584(71)-82) Loops and strings in QCD.** Migdal, A.A. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 30p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701360.

Concepts and methods of the dynamics of loops and strings in QCD are discussed and illustrated after the example of the model of random matrices interacting with quark fields. The first terms of 1/N expansion are constructed for this model.

27356 **(EFI—585(72)-82) Loop kinematics.** Migdal, A.A. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 33p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701361.

Basic operators acting in the loop space are introduced. The topology of this space and properties of the Stokes type loop functionals are discussed. The parametrically invariant loop calculus developed here is used in the loop dynamics.

27357 **(EFI—586(73)-82) Loop equations.** Migdal, A.A. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 36p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701362.

The grounds, physical meaning and mathematical features of loop equations are discussed in detail for the Wilson averages in abelian and nonabelian gauge theories. A connection is established with planar diagrams. The law of areas is shown to serve as a self-consistent solution for large contours.

27358 **(IFVE-OTF—82-95) Modifications of forms of relativistic dynamics related to the Poincare transformations.** Sokolov, S.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1982. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701364.

On the basis of an algebraic definition of a modification of the form of relativistic dynamics a general form of modifying transformations is found and all the modifications of the point, instant, and front forms of dynamics and their limiting cases are described. It is shown that the limit of modifications of the instant form of dynamics (if it exists and is nontrivial) is in a general case the quasi-front form of dynamics with a 6-dimensional free subalgebra and, in cases of the absence of bound states and of the Bakamjian-Thomas model, it is the front form of dynamics.

27359 **(ITEF—52(1983)) Vector fields and projective transformations.** Petukhov, V.R. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1983. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701365.

Vector fields, invariant under monoparametric fraction-linear group of transformations of n-dimensional space, have been studied. Realization conditions of the vector fields in n-dimensional projective space are presented.

27360 **(ITEF—69(1983)) Vector fields and invariant symmetry groups.** Petukhov, V.R. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1983. 28p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701366.

Realization conditions of smooth tangent of vector fields, invariant under symmetry groups, on certain manifolds are presented. Also realization conditions of vector fields, invariant under regular homogeneous and heterogeneous covers of plane, sphere and crystallographical groups on the plane, are studied.

27361 **(JINR—E-2-83-28) Conformal invariance in gauge theories. Quantum electrodynamics.** Zaikov, R.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701374.

In the present paper another nontrivial model of the conformal quantum electrodynamics is proposed. The main hypothesis is that the electromagnetic potential together with an additional zero scale, dimensional scalar field is transformed by a nonbasic and, consequently, nondecomposable representation of the conformal group. There are found nontrivial conformal covariant two-point functions and an invariant action from which equations of motion are derived. There is considered the covariant procedure of quantization and it is shown that the norm of one-particle physical states is positive definite.

27362 **(JINR—E-2-83-44) Conformal invariance in the gauge theories. Yang-Mills theory.** Zaikov, R.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701379.

In the present paper the results of the first part are generalized to the nonabelian case. From the assumption that the Yang-Mills fields together with the one scalar zero-dimensional fields are transformed by the nonbasic representation of the conformal group, it follows that the covariant propagator has a nonzero transversal part. These fields are transformed also by an adjoint representation of a local gauge group SU(N). For the construction of an invariant action it is necessary to introduce a second zero-dimensional scalar field which is SU(N) invariant. There are derived the corresponding equations of motion as well as subsidiary conditions which are compatible with the equations of motion.

27363 **(JINR—E-2-83-49) Supersymmetric quasipotential equations. Supersymmetric generalization of the Todorov-type equations.** Zaikov, R.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701380.

A supersymmetric extension of the Todorov-type quasipotential equations is considered. Applying to the two-particle Bethe-Salpeter amplitude the supersymmetric Markov-Yukawa condition, the corresponding constraints are found which give the transition to the one-time wave function. The corresponding supersymmetric three-dimensional equations are written down. The Born terms of the quasipotential in the case of a self-interacting chiral superfield as well as of interaction with one massless chiral superfield are given.

27364 **(JINR—E-2-83-104) U(1)-supersymmetric extension of the Liouville equation.** Ivanov, E.A.; Krivonos, S.O. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701369.

The N=2 supersymmetric extension of the Liouville equation is presented. The zero-curvature representation is constructed (on superalgba osp(2/2)) together with an associated linear set, its general solution is found and the reduction to the N=1 case is discussed. An intrinsic connection of the N=0, N=1, and N=2 Liouville equations with the infinite dimensional contact (super) algebras K(1), K(1/1) and K(1/2) from Kac list is established.

27365 **(JINR—E-2-83-150) Representations of osp(1.4) in terms of three boson pairs and matrices of arbitrary even order. The basic theorem.** Bedner, M.; Blank, J.; Havlicek, M.; Exner, P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 20p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701370.

The study of the class of infinite-dimensional Schur-irreducible star representations of the Lie superalgebra osp(1,4), introduced in the first part of the paper, is continued. The matrix relations determining the structure of the class are analyzed in detail and all non-equivalent solutions of these relations are given explicitely.

27366 **(JINR—E-2-83-213) Mass renormalization in supersymmetric Yang-Mills theories.** Sazdovic, B.T.; Tarasov, O.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701371.

The mass renormalization in supersymmetric Yang-Mills theories are studied. It is found that at least in first orders of perturbation theory the mass and charge renormalization constants coincide.

27367 **(JINR—E-2-83-253) Stability properties of solutions to nonlinear models possessing a sign-undefined metric.** Barashenkov, I.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1983. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701372.

Multicomponent field systems possessing a sign-undefined internal space metric, in particular models with a noncompact global invariance group are investigated. It is shown that the energy cannot have even a conditional relative minimum. It is demonstrated, nevertheless, that the corresponding nonlinear equations of motion are permitted to possess stable particle-like solutions.

27368 **(JINR—E-2-83-264) Space-time structure of radiative corrections.** Vyshensky, S.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701373.

Method of obtaining equations for the total Green functions of quantum electrodynamics, exact and approximate solutions of which are free of nonphysical singularities and approximate ones are analytic in the coupling constant at zero, is developed on the base of the Schwinger source theory. The corresponding space picture of virtual- and real-process contributions to the total Green function is given. A comparison with quantum field theory equations is presented.

27369 **(JINR—E-2-83-283) Quantum effects in the Schwinger model.** Ilieva, N.P.; Pervushin, V.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701375.

The aim of the paper is to investigate some purely quantum effects of motions of the fermion and boson vacua in the massless Schwinger model. The Dirac vacuum collective motions are investigated. The gauge field vacuum is topologically degenerated. It is emphasized that the massless Schwinger model gives an example of dependence of the physical results in quantum theory on the choice of the vacuum and on the global properties of the gauge field configuration space.

27370 **(JINR—E-2-83-286) Nonlinear realization of the conformal group in two dimensions and the Liouville equation.** Ivanov, E.A.; Krivonos, S.O. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 16p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701376.

The Liouville equation usub(+-)=msup(2)esup(-2u) is shown to have an adequate descpiption in terms of the nonlinear realization of infinite parameter conformal group G in (1+1) dimensions. The (1+1) - Minkowski space coordinates x^+, X^- and the field u(x) are identified with certain parameters of the coset G/H, H=S0(1, 1) being the (1+1)-Lorentz group. The Liouville equation appears as one of the covariant constraints reducing this coset space to its connected geodesic subspace SL(2, R)/H. An alternative reduction to the subspace P(1, 1)/H (P(1, 1) is (1+1)-Poincare group), yields the free equation for u(x). It is demonstrated that the relevant zero-curvature representations and Becklund transformations get a simple group-theoretic interpretation within this approach and discuss a possibility of its extension to other integrable systems.

27371 **(JINR—E-2-83-323) Calculation of Feynman integrals by the method of "uniqueness".** Kazakov, D.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701377.

The applications of the method to calculate massless Feynman integrals based on the "uniqueness" relation are developed and discussed. The procedure consists of several algebraic steps and involves neither integration of elementary, special or any other functions, nor expansions in and summation of infinite series of any kind. The simplicity and efficiency of the method are illustrated by the calculation of two- and three-loop dimensionally regularized integrals. As an application of the proposed technique given is the analytical calculation of the remaining diagrams completing the five-loop renormalization group calculations in the phi^4 model.

27372 **(JINR—R-2-82-647) Embedding equations for the relativistic string world sheet in the many-dimensional spaces.** Barbashov, B.M.; Koshkarov, A.L.; Nesterenko, V.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1982. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701383.

The Gauss-Godazzi-Ricci equations which describe the world sheet of the relativistic string (two-dimensional minimal surface) in the six-dimensional pseudo-Euclidean space with the Minkowski signature of the metric, are reduced to the system of five nonlinear partial differential equations for five scalar functions of two independent variables. In this system there are three second order equations and two first order ones. The general solution of these equations can be constructed in an explicit form.

27373 **(JINR—R-2-83-266) Calculation of the Casimir effect for scalar fields with the simplest nonstationary boundary conditions.** Bordag, M.; Petrov, G.; Robashik, D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701386.

The starting point for the calculation of the Casimir force is the vacuum energy as a function of the distance a between the two plates. The question arises: Does the motion of one of the plates with constant velocity change the structure of the vacuum state and therefore the Casimir force essentially. It is shown that the Casimir force takes the form Fsub(K)=$C_0/a^4(1+8/3xv^2/c^2+...)$ that generalized the already known expression for v=0.

27374 **(JINR—R-17-83-171) Anisotropic solitons in a space of dimension n > 1 in theories with the abelian global gauge group.** Grishin, V.E.; Fedyonin, V.K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 18p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701382.

Solutions are found in the form of "isomeric n-solitons" defined on equipotential hyperplanes, σ=ksub(μ)xsub(μ), of an n-dimensional space (at x_0=const), i. e. in the planes σsub(i), where the

function rhosub(i) is a constant, rho(σsub(i))=Csub(i). This class of solitons is an analog of n-dimensional anisotropic solitons. A physical interpretation of such solutions is possible for n=1, 2, 3. This model admits also solutions in terms of elliptic functions for which it is enough to know exactly the roots of the polynomial Psub(2N)E-U(rho).

27375 **(TRI-PP—83-126) Supersymmetry and supergravity: a short review.** Campbell, B.A.; Fogleman, G. (Carleton Univ., Ottawa, Ontario (Canada). Dept. of Physics; British Columbia Univ., Vancouver (Canada). TRIUMF Facility). Dec 1983. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84900954.

Portions are illegible in microfiche products.

The purpose of this review is to give an introduction to the basic ideas of supersymmetry and supergravity. The first part of this review, on supersymmetry, treats the super-Poincare group and discusses the Wess-Zumino model and supersymmetric gauge theories in both superfield and component field language. The second part describes theories of supergravity and discusses the construction of locally supersymmetric Lagrangians. An attempt is made to give both the abstract point of view and a nuts and bolts description of these thories. 15 references.

27376 **Rho-$\pi\pi$ coupling constant in lattice gauge theory.** Gottlieb, S. (California Univ., San Diego, La Jolla (USA)); Mackenzie, P.B.; Thacker, H.B. (Fermi National Accelerator Lab., Batavia, IL (USA)); Weingarten, D. (Brown Univ., Providence, RI (USA)). *Physics Letters,* [*Section*] *B;* **134**: No. 5, 346-350(19 Jan 1984).

We present a method for studying hadronic transitions in lattice gauge theory which requires computer time comparable to that required by recent hadron spectrum calculations. This method is applied to a calculation of the decay rho -> $\pi\pi$.

27377 **Supersymmetry and non-compact groups in supergravity.** Ellis, J. (Stanford Linear Accelerator Center, CA (USA)); Gaillard, M.K.; Zumino, B. (California Univ., Berkeley (USA). Dept. of Physics; Lawrence Berkeley Lab., CA (USA)); Guenaydin, M. (Ecole Normale Superieure, 75 - Paris (France). Lab. de Physique Theorique). *Nuclear Physics* [*Section*] *B;* **224**: No. 3, 427-450(19 Sep 1983).

With 50 refs.

We study the interplay of supersymmetry and certain non-compact invariance groups in extended supergravity theories (ESGTs). We use the N=4 ESGT to demonstrate that these symmetries do not commute and exhibit the infinite-dimensional super-invariance algebra generated by them in the global limit. Using this result, we look for unitary representations of the full algebra. We discuss the implications of our results in the context of attempts to derive a relativistic effective gauge theory of elementary particles interpreted as bound states of the N=8 ESGT.

6455 Scattering Theory

27378 **(JINR—R-17-83-88) Some specific features of scattering on solitons in the model of current-current interaction. Phases and cross section of scattering in kinematic region of t=(q²) contains (0.4 m²).** Grishin, V.E.; Fedyanin, V.K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701393.

On the basis of calculated form factor of a soliton with pole specific properties in the kinematic region of t=q² contains (0.4 m²) momenta scattering phases at the transition through poles and the behaviour of the scattering cross section in these points are analysed. The connection between poles and resonances in total cross section is shown. The resonance number on q² contains (0.4 m²) range is final and is determined with a simple ratio. Each separate peak, taking into account background shift, is a resonance of Breit-Wigner type.

6510 Nuclear Physics

27379 **(EUR—8529) 1982 annual status report. Nuclear measurements.** (Commission of the European Communities, Geel (Belgium). Central Bureau for Nuclear Measurements). 1983. 7p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701452.

The Nuclear Measurement programme is briefly presented in this status report, it is divided in two main projects, Nuclear Data on the one hand (neutron data, non neutron nuclear data) and Nuclear Reference Materials and Techniques on the other (nuclear reference materials, samples and targets for nuclear measurements, development of reference techniques, study for the production of enriched actinide isotopes).

27380 (JINR-D—2-82-568, pp 26-46) **Program of experimental study at JINR synchrophasotron in the range of relativistic nuclear physics.** Kuznetsov, A.A. 1982. (In Russian). NTIS (US Sales Only), PC A09/MF A01. (CONF-8205252—).

From Meeting on investigations in the field of relativistic nuclear physics; Dubna, USSR (25 May 1982).

The modern state of the experimental investigation program at the JINR synchrophasotron in the area of relativistic nuclear physics is reviewed. Possibilities of the further program development are shown. Results of an experimental tests of consequences of the cumulative effect hypothesis and structural quark-parton nucleus function are discussed as well as results of search for and study of exotic particles, which are not described with usual quark schemes. Results of studying the multiple particle production process during the interactions of relativistic nuclei and nuclei produced lately at the synchrophasotron by HEL physicists are reviewed as well. It is concluded that at present relativistic nuclear physics is successfully developed at JINR as a new scientific area. During short time period JINR physicists obtained scientific results which are recognized all over the world. Present synchrophasotron possibilities and its further evolution as a relativistic and polarized nucleus accelerator will permit the JINR scientists not only to successfully accomplish the actual and competitive investigation program in the area of relativistivc nuclear physics but also to obtain in future new results considerably affecting the evolution of the fundamental investigation theory.

27381 (JINR-D—2-82-568, pp 108-113) **Principal results of nucleus-nucleus collisions and DISK-3 installation.** Stavinskij, V.S. 1982. (In Russian). NTIS (US Sales Only), PC A09/MF A01. (CONF-8205252—).

From Meeting on investigations in the field of relativistic nuclear physics; Dubna, USSR (25 May 1982).

Main results of investigations into nucleus-nucleus collisions obtained by techniques of scintillation and Cherenkov detectors, spark chambers, nuclear photoemulsions are discussed. Processes with small momentum transfers (< 300 MeV/c) obtained in JINR and ITEPh were considered as well as interactions with large momentum transfer (over 100 GeV/c) during the CERN-JINR experiment (cumulative processes). A derive flowsheet, which is constructed for studying correlations in the cumulative particle production, is given. The device operates on line With the ES-1040 electronic computer. The primary proton intensity is approximately 5 x 10^{11}. A minimum level of inclusive cross sections for a nucleon of a fragmenting nucleus, which can be studied at the device, constitutes approximately 10^{-36} cm² per unit of phase volume. A physical investigation program is presented.

27382 **(LA-UR—84-788) Fission product and actinide data status in ENDF/B.** England, T.R.; Young, P.G.; Schenter, R.E.; Mann, F.M.; Reich, C.W. (Los Alamos National Lab., NM (USA); Hanford Engineering Development Lab., Richland, WA (USA); Idaho National Engineering Lab., Idaho Falls (USA)). 1984. Contract W-7405-ENG-36. 23p. (CONF-840389—4). NTIS, PC A02; 3; GPO Dep. Order Number DE84010060.

From US-Japan information exchange seminar on photochemical energy solar conversion; Okazaki, Japan (12 Mar 1984).

Paper copy only, copy does not permit microfiche production.

The US Evaluated Nuclear Data Files (ENDF/B) have been very successful in this country and internationally. The data are used directly in calculations or as a reference for comparison with new measurements and other international data bases. The data formats, being particularly suited for computer processing codes, have been recommended by the IAEA as the preferred method of exchange for international data. Part of this success is due to a remarkably free exchange of data nationally and internationally. Additionally, of course, it is due to the many needs for such a comprehensive, evaluated data base. The current version, ENDF/B-V was released in 1979 and 1980. Both ENDF/B-IV and -V were greatly expanded in the areas of fission products and actinides, and the cross section evaluations have been improved in each new version. ENDF/B-VI was originally scheduled for completion in late 1986. However, this schedule is now questionable, as is, the extent of its content. Comments are directed at the improvements we feel are needed for ENDF/B-VI, irrespective of the time scale or probability of implementation. Additionally, we limit our considerations to fission products and heavy nuclides (which we loosely call actinides) and specifically to plans at Los Alamos National Laboratory (LANL), Hanford Engineering and Development Laboratory (HEDL), and Idaho National Engineering Laboratory (INEL). In cur coverage we emphasize cross sections and yields for fission products and decay data for both fission products and actinides. We do not attempt complete coverage of planned evaluations of actinide cross sections nor other ENDF/B general and special purpose files (e.g., General Purpose, Activation, Standards, etc.), although some of the data we cite lies in those files. However, our summary of data content in the current ENDF/B-V files is complete for fission products and actinides.

27383 (NEANDC(E)—232-U(Vol.5)) Progress report on nuclear data research in the Federal Republic of Germany for the Period April 1, 1981 to March 31, 1982. (Nuclear Energy Agency, 75 - Paris (France). Nuclear Data Committee). 1982. 103p. (INDC(GER)—24-L(Special)). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84700906.

This report has been prepared to promote exchange of nuclear data research information between the Federal Republic of Germany and the other member states of NEA and IAEA. The emphasis has been on measurement, evaluation and compilation of application-oriented nuclear data, such as those relevant to fission and fusion reactor technologies, development of intense spallation neutron sources, production of medically important short-lived radioisotopes, etc. Each contribution is presented under the laboratory heading where the work was done.

27384 (SLAC-PUB—3320) A-dependence of deep-inelastic electron scattering from nuclei. Arnold, R.G.; Bodek, A.; Bosted, P.E.; Chang, C.C.; Giokaris, N.; Gomez, J.; Katramatou, A.T.; Lombard, R.M.; Mecking, B.A.; Petratos, G.G. (Stanford Linear Accelerator Center, CA (USA); American Univ., Washington, DC). Apr 1984. Contract AC03-76SF00515. 6p. (CONF-840280—1). NTIS, PC A02; 3; GPO Dep. Order Number DE84010677.

From Recontre de Moriond meeting on electro weal interactions and unified theories; La Plaque, France (26 Feb 1984).

Paper copy only, copy does not permit microfiche production. Original copy available until stock is exhausted.

The deep inelastic electron scattering cross sections per nucleon σ/sub A/ for d, He, Be, C, Al, Ca, Fe, Ag, and Au were measured in the kinematic range $0.09 \leqq x \leqq 0.9$ and $2 \leqq Q^2 \leqq 15$ $(GEV/c)^2$ using electrons with energies ranging from 8 to 24.5 GeV. The ratio σ/sub A//σ/sub d/ is consistent with unity in the range $0.1 < x < 0.3$. For $0.3 < x < 0.8$, the ratio decreases logarithmically with atomic weight A, or linearly with average nuclear density. No Q^2 dependence in the ratio was observed over the kinematic range of the data. 12 references.

27385 Cross section and vector analyzing power iT_{11} of the processes ^{3}He(d vector,d)^{3}He(d vector,p)^{4}He between 15 and 40 MeV. Roy, R. (Lawrence Berkeley Lab., CA); Seiler, F.; Conzett, H.E.; Rad, F.N. *Physical Review* [*Section*] *C: Nuclear Physics;* **24**: No. 6, 2421-2434(Dec 1981).

Differential cross sections σ_0(theta) and angular distributions of the vector analyzing power iT_{11}(theta) have been measured for the processes ^{3}He(d vector,d)^{3}He(d vector,p)^{4}He from 15 to 40 MeV in intervals of 5 MeV. Data were obtained typically at 25 to 35 angles. In both reactions the angular distributions of the observables, expanded in terms of Legendre polynomials, clearly show structure near 20 and 35 MeV. In addition, an optical model fit to the elastic scattering data was used in an attempt at a distorted-wave Born approximation analysis of the reaction data.

27386 (IC—82/163) Additional evidence for the existence of the ^{12}C nucleus as three α-particles and not as ^{8}Besub(g.s.)+α. Abou Steit, S.A.H. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1982. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700900.

The probability 'A'^{2} for the existence of the ^{12}C nucleus as a ^{8}Be nucleus in its ground state plus an α-particle has been calculated in PWBA by comparing the differential cross-sections of the stripping reactions (^{12}C,^{8}Be) and (^{8}Be,α) for transitions between the same energy levels. The reactions ^{12}C(^{12}C,^{8}Be)^{16}O and ^{16}O(α,^{8}Be)^{12}C, available in the literature and leading to the ground states of the final nuclei, have been considered normally for the first one and by reciprocity in the reverse direction for the second one in order to have identical targets and residual nuclei in both cases. The results have shown, as expected, that this probability 'A'^{2} is very small which rejects the picture of the ^{12}C nucleus as a ^{8}Besub(g.s.) nucleus plus an α-particle and supports the 3α-particles structure for the ^{12}C nucleus.

27387 (IC—83/15) Electron scattering from ^{13}C. Il-Tong Cheon. (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1983. 22p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700902.

Transverse form factors for elastic and inelastic electron scattering from ^{13}C have been calculated with the Cohen-Kurath wave functions, by introducing an alteration into the nucleon form factor in nuclei. The results show good agreement with the data. We have concluded that the Cohen-Kurath wave function can reproduce the experimental results of photopion production and electron scattering from ^{13}C in the momentum transfer, q<or approx. 2 fm^{-1}.

27388 Resolution of a coulomb reorientation ambiguity in ^{18}O. Gross, E.E.; Fewell, M.P. (Oak Ridge National Lab., TN (USA)). *Nuclear Physics* [*Section*] *A;* **411**: No. 2, 329-336(19 Dec 1983).

Elastic scattering data and inelastic excitation of the lowest 2^+ state in ^{18}O from 120 MeV ^{18}O incident on ^{208}Pb are analyzed in coupled channels including couplings to the second 2^+ state of ^{18}O. This analysis favors the positive sign for the product of the four E2 matrix elements, $p_4 = M_{0121}M_{0122}M_{3122}M_{3121}$, where Msub(ij)=-<iparallelM(E2)parallelj>. This is in agreement with shell-model calculations.

27389 Polarized triton capture on ^{12}C. Drake, D.M.; Wender, S.A.; Roberson, N.R. (Los Alamos National Lab., NM (USA)); Weller, H.R. (Duke Univ., Durham, NC (USA). Dept. of Physics; Triangle Universities Nuclear Lab., Durham, NC (USA)). *Nuclear Physics* [*Section*] *A;* **410**: No. 3, 429-440(5 Dec 1983).

The 90° cross section for the ^{12}C(t,γ_0)^{15}N reaction was measured for E_t from 2.3 to 6.5 MeV. Polarized and unpolarized angular distribution data were obtained for E_t=2.27, 3.24 and 5.95 MeV. The resulting a_2 and b_2 coefficients are compared to the predictions of a direct capture (cluster) model. This model gives a reasonably good description of the qualitative behavior observed in the experiment, although it predicts an absolute cross section which is an order of magnitude smaller than any observed cross section.

27390 (CONF-8403101—4) Observation of a critical angular momentum for deep inelastic processes with light heavy ions. Thornton, S.T.; Parks, R.L.; Shapira, D.; Schull, D.; Ford, J.L.C. Jr.; Shivakumar, B. (Virginia Univ., Charlottesville (USA); Oak Ridge National Lab., TN (USA)). Mar 1984. Contract AC05-84OR21400. 5p. NTIS, PC A02; 3; GPO Dep. Order Number DE84008580.

From 3. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (5 Mar 1984).

Paper copy only, copy does not permit microfiche production.

Studies of collisions between nuclei have shown that the large incoming orbital angular momenta play an important role in systems where Coulomb and centrifugal repulsion for the dominant (near grazing) partial waves are of comparable magnitude (A/sub p/,A/sub t/ < 40). The kinetic energy of the fully damped fragments contains significant centrifugal energy contributions. Recent measurements have shown that the yield of fragments from strongly damped processes dominates the spectra at backward angles, and the angular distributions associated with this yield indicate that the fragments emerge from a long-lived rotating dinuclear complex (orbiting). These measurements at backward angles provide a means for studying the products from deep inelastic processes in the absence of contributions from quasielastic processes. In our study of deep inelastic processes in $^{28}Si + {}^{13}C$ at backward angles we show here results which demonstrate that the orbital angular momentum of the rotating dinuclear system formed in this collision reaches a critical value beyond which it ceases to increase with increasing bombarding energy.

27391 Beta-delayed two-proton decay of ^{26}P. Honkanen, J.; Cable, M.D.; Parry, R.F.; Zhou, S.H.; Zhou, Z.Y.; Cerny, J. (Lawrence Berkeley Lab., CA (USA); California Univ., Berkeley (USA). Dept. of Chemistry). *Physics Letters,* [*Section*] *B;* **133**: No. 3/4, 146-148(15 Dec 1983).

Beta-delayed emission of two protons has been observed in the decay of ^{26}P. A two-proton summed energy group at 4.914 MeV was assigned to the decay to the ^{24}Mg ground state following the superallowed beta-decay of ^{26}P. The mechanism for two-proton emission has, in this case, been shown to be a sequential process.

27392 Scattering of polarized protons on ^{24}Mg, ^{27}Al, and ^{32}S and anomalies in the giant resonance region of ^{28}Al, of ^{29}Si, and of ^{33}Cl. Roy, R.; Lamontagne, C.R.; Slobodrian, R.J. (Laval Univ., Quebec City (Canada). Lab. de Physique Nucleaire); Arvieux, J.; Birchall, J.; Conzett, H.E. (Lawrence Berkeley Lab., CA (USA)). *Nuclear Physics* [*Section*] *A;* **411**: No. 1, 1-16(12 Dec 1983). (In French).

Differential cross-section and analyzing power angular distributions have been measured for the elastic scattering of polarized protons on ^{24}Mg, ^{27}Al and ^{32}S between 13 and 27 MeV. An optical model analysis has been performed and the spin-orbit potentials display significant variations in the giant resonance region of ^{28}Al, ^{29}Si and ^{33}Cl. The ^{24}Mg and ^{32}S data have been examined in a phase-shift analysis.

27393 Resume and discussion of session on direct heavy ion reactions. Hansen, O. (Brookhaven National Lab., Upton, NY (USA)). *Nuclear Physics* [*Section*] *A;* **409**: 109-112(14 Nov 1983). (CONF-830340—).

From International conference on heavy-ion physics and nuclear physics; Catania, Italy (21 Mar 1983).

A conference divides into sessions, but the physics does not always respect such divisions. I found the subject of barrier penetrabilities viewed in a coupled channels picture new, exciting and central to all heavy-ion reaction dynamics. The subject was discussed in bits and pieces over three different sessions, partly in the talks by Winther, Landowne, Braun-Munzinger and Broglia, and partly from the floor by the same people and by Smilanski. I have concentrated on that subject alone and I therefore must apologize to the speakers in my session who covered different material, that definitely merited further discussions. Also, I apologize to other session chairmen, whose territory I have invaded.

27394 Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni. Rapaport, J.; Taddeucci, T.; Welch, T.P. (Ohio Univ., Athens (USA)); Gaarde, C.; Larsen, J. (Niels Bohr Inst., Copenhagen (Denmark)); Horen, D.J. (Oak Ridge National Lab., TN (USA)); Sugarbaker, E.; Koncz, P. (Ohio State Univ., Columbus (USA)); Foster, C.C.; Goodman, C.D. (Indiana Univ., Bloomington (USA)). *Nuclear Physics* [*Section*] *A;* **410**: No. 3, 371-398(5 Dec 1983).

With 42 refs.

Data on (p,n) reactions at 120 and 160 MeV have been used to study the excitation of spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni. In particular, transitions characterized by L=0 transfer are identified as spin-isospin transitions (excitation of Gamow-Teller states) or as isospin transitions (excitation of isobaric analog states). An effort is made to estimate Gamow-Teller strength, B(GT), at excitation energies between 20-40 MeV. A comparison between GT and M1 strengths is presented for sup(58,60)Ni. Shell-model calculations for total strengths, ΣB(GT), are compared with the observed results.

27395 Nuclear structure approach to the Coulomb correction of the imaginary nucleon-nucleus optical potential. Osterfeld, F. (Kernforschungsanlage, Juelich, West Germany); Madsen, V.A. *Physical Review* [*Section*] *C: Nuclear Physics;* **24**: No. 6, 2468-2474(Dec 1981). Contract AM06-70RL02227.

The imaginary optical potentials for proton and neutron scattering have been calculated for ^{40}Ca using random phase approximation transition densities to describe intermediate states. Both inelastic and charge-exchange intermediate states are considered. The protons propagate in a nuclear-plus-Coulomb potential, and Coulomb excitation is included both for direct and exchange terms in the scattering amplitudes. Differences in the calculated neutron and proton optical potentials due to Coulomb excitation and isospin impurity of the random phase approximation states are found to be small. The expected exclusion of high-lying intermediate states by the Coulomb potential is present but it is compensated by a larger proton wave function in positive kinetic energy regions and by a more favorable local equivalent potential for protons.

27396 Scattering of MeV neutrons from elemental iron. Smith, A.; Guenther, P. (Argonne National Laboratory, 9700 South Cass Avenue Argonne, Illinois 60439). *Nuclear Science and Engineering;* **73**: No. 2, 186-195(Feb 1980).

Neutron elastic and inelastic scattering cross sections of elemental iron were measured from 1.5 to 4.0 MeV with incident neutron resolutions of ≦50 keV and at incident neutron energy intervals of ≦50 keV. Cross sections for the excitation of observed levels at 0.853, 1.389, 2.097, 2.579, 2.677, 2.974, and 3.152 MeV are determined. The observed elastic and inelastic scattering angular distributions fluctuate strongly with incident energy. The experimental results are averaged over broad energy intervals and are compared with the predictions of spherical optical statistical and coupled-channel models, including consideration of direct inelastic excitations. The importance of a comprehensive data base in such energy-averaged interpretations and in the evaluation of data for technological use is stressed.

27397 (DOE/ER/10434—5) High resolution positron q-value measurements and nuclear structure studies far from the stability line. Progress report, 1983-1984. Avignone, F.T. III. (South Carolina Univ., Columbia (USA). Dept. of Physics). 1 Mar 1984. Contract AS09-79ER10434. 27p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84007402.

Results of studies of the beta-delayed proton spectra of ^{147}Dy and ^{149}Er are presented, and a preliminary report on measuring the masses of ^{77}Kr and ^{75}Kr is given. Studies on the beta decay of ^{76}Rb and the level structure of ^{76}Kr and a search for axions from the 1.1155 MeV transition of ^{65}Cu are briefly described. (WHK)

27398 **(LA-UR—84-1293) Study of giant resonances with pions.** Baer, H.W. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 27p. (CONF-8403112—4). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011383.

From International symposium on nuclear spectroscopy and nuclear interactions; Osaka, Japan (21 Mar 1984).

Portions are illegible in microfiche products.

Recent results on giant resonances obtained with pion-inelastic scattering and with single- and double-charge-exchange scattering are reviewed. The states discussed are isobaric analog states, double-isobaric analog states, and isovector L = 0, 1, and 2 collective states. 36 references.

27399 **(LBL—17575) High-spin gamma-ray spectroscopy.** Diamond, R.M. (Lawrence Berkeley Lab., CA (USA)). Mar 1984. Contract AC03-76SF00098. 19p. (CONF-8403112—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010716.

From International symposium on nuclear spectroscopy and nuclear interactions; Osaka, Japan (21 Mar 1984).

Portions are illegible in microfiche products.

Nuclei can carry angular momentum by single-particle alignments and by collective motion, as has been well illustrated in discrete-line spectroscopy. From continuum γ-ray studies in still higher spin regions, it appears that these modes both continue. In favorable cases in rare-earth nuclei, particle alignments from the valence shell separate from proton alignments from the next higher shell. A new generation of Compton-suppressed Ge detector arrays will greatly enhance high-spin studies, both continuum and discrete-line. 17 references.

27400 **Aligned *v*isub(13/2) bands coupled to different shapes in ^{186}Hg.** Janssens, R.V.F.; Chowdhury, P.; Frekers, D.; Khoo, T.L.; Kuehn, W. (Argonne National Lab., IL (USA)); Emling, H. (Argonne National Lab., IL (USA); Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)); Chung, Y.H.; Daly, P.J.; Grabowski, Z.W. *Physics Letters, [Section] B;* **131**: No. 1-3, 35-39(10 Nov 1983).

The structure of ^{186}Hg has been studied through the ^{156}Gd(^{34}S,4n) reaction. Three bands with even spin and parity are observed; two of them are established up to high spin and are found to cross with little interaction at I=16$^+$. Cranked shell model calculations suggest that these two bands can be associated with a decoupled *v*isub(13/2) pair based on a prolate and on an oblate or triaxial shape, respectively.

27401 **Level scheme of ^{183}Re and systematics of odd-A Re isotopes. Interplay of epsilon$_2$ and epsilon$_4$ deformations in the W-Re region.** Brenner, D.S.; Barkey, D.; Blair, S. (Clark Univ., Worcester, MA (USA). Jeppson Lab. of Chemistry); Warner, D.D. (Brookhaven National Lab., Upton, NY (USA). Physics Dept.); Meyer, R.A. (California Univ., Livermore (USA). Lawrence Livermore National Lab.). *Nuclear Physics [Section] A;* **408**: No. 2, 285-309(31 Oct 1983). Contract AC02-76CH00016;AC02-79ER10493;W-7405-ENG-48.

The levels of ^{183}Re populated in the decay of 13 h sup(183g)Os and 9.9 h sup(183m)Os have been studied using singles Ge(Li) detectors, a Compton-suppression spectrometer and a Ge(Li) γ-coincidence spectrometer. A detailed decay scheme has been developed with allows previously proposed Nilsson band assignments to be confirmed, and disagreements concerning assignments for the highly decoupled 1/2[541] band to be resolved. New Nilsson assignments are proposed as follows: 5+/2 5/2[642], 1040.7 keV; 1-/2[1/2[541], 0$^+$], 1414.7 keV; 3-/2[1/2[541],0$^+$], 1563.0 keV; 9-/2[9/2[514],0$^+$], 1711.7 keV. It is shown that the systematic behavior of the proton orbits throughout the odd-A Re isotopes can be understood in terms of the relative changes in epsilon$_2$ and epsilon$_4$ deformations, deduced from earlier studies of odd neutron nuclei in this region. However, while this analysis confirms the proposed peaking of the epsilon$_4$ deformation at N=108, a determination of the epsilon$_4$ value appropriate to ^{183}Re indicates that the absolute magnitudes of the hexadecapole deformations for odd-proton nuclei in this region are about a factor of two smaller than previously proposed for odd-neutron nuclei.

27402 **(ANU-P—861) Improved determination of the quadrupole moment of the first excited state of ^{208}Pb.** Spear, R.H.; Vermeer, W.J.; Esat, M.T.; Kuehner, J.A.; Baxter, A.M.; Hinds, S. (Australian National Univ., Canberra. Dept. of Nuclear Physics). Jun 1983. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700904.

Microfiche only, copy does not permit paper copy reproduction6 refs.

Coulomb-excitation studies of the 3$^-$ first excited state of ^{208}Pb using ^{12}C and ^{16}O projectiles for a range of angles give -0.34 +- 0.15 e b for the static quadrupole moment and 0.611 +- 0.012 e^2 b^3 for B(E3; 0$^+$ $\rightarrow$ 3$^-$). The value obtained for the quadrupole moment is substantially more precise and reliable than previous determinations, and is larger in magnitude than theoretical predictions.

27403 **(LBL—15562) Identification of new astatine isotopes using the gas-filled magnetic separator, SASSY.** Yashita, S. (Lawrence Berkeley Lab., CA (USA)). Feb 1984. Contract AC03-76SF00098. 69p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84007970.

Thesis.

A He-filled on-line mass separator system was built at the SuperHILAC and used to study the fusion products in the reaction ^{56}Fe + ^{141}Pr. The new neutron-deficient isotopes ^{194}At and ^{195}At were produced in this bombardment as three- and two- neutron-out products, respectively, and were identified by the α-α time-correlation technique. The measured α energies and half lives are 7.20 +- 0.02 MeV and 180 +- 80 msec for ^{194}At, and 7.12 +- 0.02 MeV and 200 +- 100 msec for ^{195}At. 66 references.

27404 **In-beam study of ^{213}Rn, ^{215}Ra and ^{217}Ra: strongly enhanced E3 transitions in odd-A N = 127 isotones.** Loennroth, T.; Baktash, C. (Brookhaven National Lab., Upton, NY (USA)). *Physica Scripta;* **28**: No. 4, 459-466(Oct 1983).

With the aim of searching for high-spin configurations involving the high-j neutron orbitals, excited states in ^{213}Rn, ^{215}Ra and ^{217}Ra were populated in the bonbardment of ^{208}Pb with ^{13}C ions. Gamma-ray singles, excitation functions and angular distributions, pulsed-beam-γ timing and γ-γ(t) coincidences were measured. Six isomeric levels were observed in ^{213}Rn, three in ^{215}Ra while none in ^{217}Ra. The lowest-lying 15/2$^-$ states in all odd-A N = 127 isotones are de-excited by E3 transitions with a strength of about 23 W.u. suggesting that they are all coupled to the octupole phonon. In ^{217}Ra no evidence for collective behavior is found despite its closeness to the actinide region. The low-lying states in the level scheme can be interpreted as arising from three-neutron configurations. The wave function of a Jsub(π)=(37/2$^+$) state in ^{213}Rn is proposed to include about 30% admixture from the two-octupole configuration πhsub(9/2)^{3}fsub(7/2)Xγgsub(9/2)X(3$^-$)^3 since the de-exciting E3 transition has a strength of about 40 W.u. This is the first indication of such an excitation in the lead region.

27405 **(GSI—83-12) Dynamical features of Coulomb-fission.** Schukraft, J.G. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Nov 1983. 116p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84751266.

Fission following quasielastic scattering was investigated in the reactions ^{208}Pb -> ^{238}U below the Coulomb Barrier and 7.5 MeV/u ^{238}U -> ^{238}U at scattering angles forward of the grazing angle (87°). A kinematically complete analysis of 3-body coincidences was carried out measuring position and time-of-flight of the scattered projectile-like particle and 2 fission fragments in large parallel plate detectors. In the reaction ^{208}Pb -> ^{238}U, measured at backward angles, the slope of the differential cross section at 5.4 MeV/u is in qualitative agreement with the theoretical expectation

for Coulomb-fission. The angular distribution of the fission fragments, measured with respect to the semisector axis (apex line towards the projectile), is close to 1/sinTHETA and does not show any of the significant structures predicted by several theories. The anisotropy is smaller in all other coordinate systems investigated. The fission probability in the reaction $^{238}U \rightarrow ^{238}U$, measured down to $5x10^{-4}$ at THETAsub(cm)=54° (corresponding to 75% Esub(cb) at the distance of closest approach) as well as the low excitation energy < 11 MeV, determined from the fission fragment mass distribution, behave at scattering angles <75° as expected for Coulomb-fission. The absence of a detectable final state Coulomb interaction yields a lower limit of $1\text{-}2x10^{-20}$s for the lifetime of the fissioning nucleus.

27406 **Evidence for near-stable octupole deformation in ^{225}Ra.** Sheline, R.K. (Australian National Univ., Canberra. Research School of Physical Sciences; Florida State Univ., Tallahassee (USA)); Decman, D. (Florida State Univ., Tallahassee (USA)); Nyboe, K.; Thorsteinsen, T.F.; Loevhoeiden, G. (Bergen Univ. (Norway)); Flynn, E.R.; Cizewski, J.A. (Los Alamos Scientific Lab., NM (USA)); Burke, D.K. (McMaster Univ., Hamilton, Ontario (Canada)); Sletten, G. (Niels Bohr Inst., Copenhagen (Denmark)). *Physics Letters, [Section] B;* **133**: No. 1/2, 13-16(8 Dec 1983).

The low lying level structure of ^{225}Ra, studied with the ^{226}Ra(d,t) reaction and ^{225}Fr β-decay, has approximately degenerate K=1/2sup(+-) and K=3/2sup(+-) bands. Hybrid absolute values of the decoupling parameters of the K=1/2sup(+-) bands, intermediate between the theoretical values expected for the pure Nilsson configurations, are deduced and presented as evidence for near-stable octupole deformation in the ^{225}Ra ground state.

27407 **Nuclear structure of ^{225}Ra.** Nyboe, K.; Thorsteinsen, T.F.; Loevhoeiden, G. (Bergen Univ. (Norway)); Flynn, E.R.; Cizewski, J.A. (Los Alamos Scientific Lab., NM (USA)); Sheline, R.K.; Decman, D. (Florida State Univ., Tallahassee (USA)); Burke, D.G. (McMaster Univ., Hamilton, Ontario (Canada)); Sletten, G. (Niels Bohr Inst., Copenhagen (Denmark)); Hill, P. *Nuclear Physics [Section] A;* **408**: No. 1, 127-149(24 Oct 1983).

The level structure of ^{225}Ra has been studied using the (d, t) reaction with both unpolarised and polarised deuterons and the β^- decay of ^{225}Fr. Cross sections and excitation energies have been measured for 41 levels below 1800 keV in the (d, t) reaction, and levels up to 724 keV have been established from the β^- decay measurements. The level structure is interpreted in terms of the Nilsson model.

6530 Nuclear Theory

27408 **(GSI—83-36-Prepr.) Dynamical single-particle basis in large-amplitude nuclear motion.** Cassing, W.; Wang, S.J.; Noerenberg, W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Nov 1983. 31p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751265.

Various approximations with respect to the solution of the time-dependent single-particle Schroedinger equation depending on a collective parameter q(t) are investigated. A travelling diabatic s.p. basis is found to provide a good and convenient approximation for a rather wide regime of collective energies per nucleon. Numerical calculations are performed for quadrupole vibrations within the deformed harmonic oscillator model as well as for central heavy-ion collisions in a diabatic two-center shell-model.

27409 **(IC—83/26) Comparison of model Hartree-Fock type calculation schemes involving various non-degenerate and quasi-degenerate intrinsic Hamiltonians.** Amusa, A. (International Centre for Theoretical Physics, Trieste (Italy)). Mar 1983. 29p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84700901.

Different Hamiltonians and their corresponding rotationally degenerate intrinsic counterparts are employed in the study of ^{18}O nucleus under the normal Hartree-Fock, as well as under six other Hartree-Fock type variational calculation schemes. The results are compared and then assessed in the light of their closeness or otherwise to the full 1s-0d basis shell model calculations for this nucleus. The use of these schemes for other shells is also considered.

27410 **(LA-UR—84-761) Nuclear inertia for fission in a generalized cranking model.** Kunz, J.; Nix, J.R. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 5p. (CONF-8403101—5). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010063.

From 3. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (5 Mar 1984).

Portions are illegible in microfiche products.

The Inglis cranking model has been widely used to calculate the nuclear inertia associated with collective degrees of freedom. After the inclusion of pairing correlations, theoretical results obtained with the cranking model for nuclear rotations and γ-vibrations were in relatively good agreement with experimental data. Calculations of β-vibrational inertias were also performed in the cranking model for fission deformations. Theoretical results were several times the irrotational values and gave reasonable agreement with experimental spontaneous-fission lifetimes, although in one study a renormalization factor of 0.8 was required. However, as pointed out by many authors, the Inglis cranking model possesses two serious deficiencies. First, problems arise when the single-particle potential contains momentum-dependence terms. Second, in the limit of large pairing strength the inertia approaches zero instead of a finite (irrotational) limit. Alternative approaches to the cranking model which did not lead to such unacceptable results were developed by Migdal, Belyaev and Thouless and Valatin. They showed that these deficiencies of the cranking model are due to a lack of self-consistency, since the reaction of the mean field to the collective motion is neglected in the Inglis model. Previously we used their arguments and developed a generalized cranking model for stationary collective motion. Here it is shown how to develop a time-dependent formalism appropriate to β-vibrations and fission. 10 references.

27411 **(LA-UR—84-823) High energy nuclear structures.** Boguta, J.; Kunz, J. (Lawrence Berkeley Lab., CA (USA); Los Alamos National Lab., NM (USA)). 9 Mar 1984. Contract W-7405-ENG-36. 5p. (CONF-8403101—6). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010062.

From 3. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (5 Mar 1984).

Portions are illegible in microfiche products.

In conventional nuclear physics the nucleus is described as a non-relativistic many-body system, which is governed by the Schroedinger equation. Nucleons interact in this framework via static two-body potentials, mesonic degrees of freedom are neglected. An alternative description of nuclear physics in terms of a relativistic field theory has been developed by Walecka. The model Lagrangian containing baryons, σ-mesons and ω-mesons was subsequently extended to include also π-mesons and rho-mesons. An essential feature of such a nuclear Lagrangian is its renormalizability. In addition to the description of known nuclear structure the field theoretical approach may reveal entirely new nuclear phenomena, based on the explicit treatment of mesonic degrees of freedom. The existence of such abnormal nuclear states was proposed by Lee and Wick employing the σ-model Lagrangian. There the non-linearity of the meson field equations allows for soliton solutions in the presence of nucleons, in particular the σ-field may exhibit a kink. Different types of soliton solutions occur in gauge theories with hidden symmetries. In the phenomenological Lagrangian the rho-meson is described by a non-abelian gauge field, that acquires its mass spontaneously due to the non-vanishing vacuum expectation value of a Higgs field. A general ansatz for soliton solutions of such a gauge theory was given by Dashen et al. A specific solution and its possible implications for nuclear physics like anomalous nuclear states were discussed by Boguta.

27412 **Comment on J-dependence in (α,d) transfer reactions.** Satchler, G.R. (Oak Ridge National Lab., TN (USA)); Pinkston, W.T. (Oak Ridge National Lab., TN (USA); Vanderbilt Univ., Nashville, TN (USA)). *Physics Letters, [Section] B;* **134**: No. 1/2, 7-10(5 Jan 1984).

We examine the structure of the second-order distorted-waves Born approximation amplitude for the two-nucleon (α, d) transfer reactions. It is found that the sign of the interference between simultaneous and sequential transfer amplitudes cannot depend upon the value of the total angular momentum transfer J within the context of the model that is usually assumed. This contradicts calculations reported recently for the (α, d) reaction. Since the observed cross sections do show an even-odd dependence on J, we conclude that the usual model is inadequate.

27413 **Flow patterns for collective quadrupole vibrations in heavy nuclei.** Schuh, A. (Giessen Univ. (Germany, F.R.). Inst. fuer Theoretische Physik; Washington Univ., Seattle (USA). Inst. for Nuclear Theory; Washington Univ., Seattle (USA). Dept. of Physics); Kunz, J. (Giessen Univ. (Germany, F.R.). Inst. fuer Theoretische Physik; Los Alamos National Lab., NM (USA). Theoretical Div.); Mosel, U. (Giessen Univ. (Germany, F.R.). Inst. fuer Theoretische Physik). *Nuclear Physics* [*Section*] *A;* **412**: No. 1, 34-60(2 Jan 1984).

With 31 refs.

By means of the adiabatic cranking model the properties of the current and velocity fields of nuclear quadrupole vibrations for even-even nuclei in the rare-earth region are investigated. BCS correlated wave functions based on the Nilsson single-particle hamiltonian have been used. The current fields are analyzed in terms of vector spherical harmonics. The realistic microscopic currents show a vortex structure not present in the classical irrotational flow. The microscopic origin of the vortex structure is investigated. Whereas irrotational flow is related to high-lying excitations, the vortical current is shown to represent low-lying excitations. The influence of pairing is demonstrated; high pairing gaps yield nearly irrotational flow. The effect of deformation is studied. The cranking-model velocity fields are compared with the results of classical first and zero sound calculations and are found to agree with the latter in important aspects.

27414 **Effects of magnetic monopoles on nuclear wave functions and possible catalysis of nuclear beta decay and spontaneous fission.** Lipkin, H.J. (Weizmann Inst. of Science, Rehovoth (Israel). Dept. of Nuclear Physics; Argonne National Lab., IL (USA). Physics Div.; Argonne National Lab., IL (USA). High Energy Physics Div.; Fermi National Accelerator Lab., Batavia, IL (USA)). *Physics Letters,* [*Section*] *B;* **133**: No. 5, 347-350(22 Dec 1983).

Mixing effects in nuclear wave functions by the strong magnetic field of a magnetic monopole are estimated. A monopole at a distance of 10 fm from a deuteron mixes the singlet and triplet spin levels with a strength comparable to the deuteron binding energy. Forbidden nuclear beta decay transitions can be enhanced by mixing nuclear wave functions with other states for which the beta decay transition is less inhibited. Particularly suitable candidates have nearby excited states connected by magnetic dipole transition to the ground state. Magnetic mixing can also strongly enhance spontaneous fission.

27415 **Properties of the transition amplitude for two-nucleon transfer reactions.** Satchler, G.R. (Oak Ridge National Lab., TN (USA)); Pinkston, W.T. (Vanderbilt Univ., Nashville, TN (USA); Oak Ridge National Lab., TN (USA)). *Nuclear Physics* [*Section*] *A;* **411**: No. 1, 144-150(12 Dec 1983).

A general discussion is given of the angular momentum structure of the transition amplitude for two-nucleon transfer, particularly in light-ion-induced reactions. For example, it is shows that, within the model which is usually assumed, the relative phase between simultaneous and sequential transfer parts of the amplitude, for a given two-nucleon configuration, cannot depend upon the value of J, the total angular momentum transfer. A dependence on the oddness or evenness of J can emerge when there are additional sources of angular momentum transfer. Some of these are indicated.

27416 **Relativistic nuclear structure physics.** Anastasio, M.R. (City Univ. of New York, NY (USA). Dept. of Physics; City Univ. of New York, NY (USA). With 100 refs.

We review a recently developed model of nuclear structure, and discuss the binding energy and saturation properties of nuclear matter, the density and momentum-transfer dependence of the effective force in nuclei and the parameters of a relativistic optical model. The model we describe is free of parameters other than those introduced in fitting free-space nucleon-nucleon scattering data. In contrast to standard models, the relativistic formulation is able to give a satisfactory description of the saturation properties of nuclear matter. The mechanism responsible for saturation in the relativistic model also accounts for the strong density dependence of the scalar-isoscalar part of the effective nuclear interaction found in phenomenological studies. The calculated values of the self-energy of a continuum nucleon in nuclear matter may also be used to estimate the parameters of the optical potentials used to fit nucleon-nucleus scattering data. Estimates based upon the local-density approximation are successful in reproducing both the energy and density dependence of the phenomenological potential.

27417 **Nucleus-nucleus potentials.** Satchler, G.R. (Oak Ridge National Lab., TN (USA). Physics Div.). *Nuclear Physics* [*Section*] *A;* **409**: 3-20(14 Nov 1983). (CONF-830340—).

From International conference on heavy-ion physics and nuclear physics; Catania, Italy (21 Mar 1983).

With 59 refs.

The significance of a nucleus-nucleus potential is discussed. Information about such potentials obtained from scattering experiments is reviewed, including recent examples of so-called "rainbow" scattering that probe the potential at smaller distances. The evidence for interactions involving the nuclear spins is summarized, and their possible origin in couplings to non-elastic channels. Various models of the potentials are discussed.

27418 **Phenomenology of deep-inelastic processes.** Moretto, L.G. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.); Lawrence Berkeley Lab., CA (USA)). *Nuclear Physics* [*Section*] *A;* **409**: 115-134(14 Nov 1983). (CONF-830340—). Contract AC03-76SF00098.

From International conference on heavy-ion physics and nuclear physics; Catania, Italy (21 Mar 1983).

With 40 refs.

The field of heavy-ion deep-inelastic reactions is reviewed with particular attention to the experimental picture. The most important degrees of freedom involved in the process are identified and illustrated with relevant experiments. Energy dissipation and mass transfer are discussed in terms of particles and/or phonons exchanged in the process. The equilibration of the fragment neutron-to-proton ratios is inspected for evidence of giant isovector resonances. The angular momentum effects are observed in the fragment angular distributions and the angular momentum transfer is inferred from the magnitude and alignment of the fragments spins. The possible sources of light particles accompanying the deep-inelastic reactions are discussed. The use of the sequentially emitted particles as angular momentum probes is illustrated. The significance and uses of a thermalized component emitted by the dinucleus is reviewed. The possible presence of Fermi jets in the prompt component is shown to be critical to the justification of the one-body theories.

27419 **Coulomb effects in nuclear structure.** Auerbach, N. (Tel Aviv Univ. (Israel). Dept. of Physics and Astronomy; Los Alamos National Lab., NM (USA)). *Physics Reports: A Review Section of Physics Letters (Section C);* **98**: No. 5, 273-341(Sep 1983).

With 114 refs.

A large class of nuclear structure phenomena and properties stemming from the action of the Coulomb force is reviewed. The isobaric multiplet mass equation, isospin forbidden decays, isospin mixing, Coulomb displacement energies, and widths of isobaric analog resonances are considered. The role of the isovector monopole resonance as a mediator of second-order Coulomb effects contributing to all the above phenomena is discussed in detail.

6540 Radiation And Shielding Physics

27420 (DL/SCI/R—19, pp 66-71) **X-ray diffraction using the time structure of the SRS.** Tanner, B.K. (Durham Univ. (UK). Dept. of Physics). 1983. NTIS (US Sales Only), PC A06/MF A01. (CONF-8211147—).

From Daresbury study on application of synchrotron radiation to problems in materials science; Daresbury, UK (13 Nov 1982).

The subject is discussed under the headings: introduction (advances in the techniques of X-ray topography; comparison with transmission electron microscopy); stroboscopic X-ray topography; stroboscopic X-ray topography of travelling surface acoustic waves; possible general diffraction experiments.

27421 (DL/SCI/R—19, pp 84-86) **Ultra-high resolution small-angle x-ray diffractometry: measurements of very large periods in biological fibres.** Siddons, D.P.; Deutsch, M. (King's Coll., London (UK). Wheatstone Physics Lab.); Nave, C. (Daresbury Lab. (UK)); Bradshaw, J. (Oxford Univ. (UK). Dept. of Zoology). 1983. NTIS (US Sales Only), PC A06/MF A01. (CONF-8211147—).

From Daresbury study on application of synchrotron radiation to problems in materials science; Daresbury, UK (13 Nov 1982).

The technique of small-angle x-ray scattering using a synchrotron source is described. Improved instrumentation is shown, using multiple-reflection crystal monoliths as high-quality collimators. A small-angle diffraction pattern from frog Sartorius muscle, using the improved apparatus, is shown.

27422 **(EFI—595(82)-82) Numerical simulation of trajectories and characteristics of high energy particle radiation in averaged potential of crystal axes.** Avakyan, A.R.; Glebov, V.I.; Goloviznin, V.V.; Zhevago, N.K.; Yan Shi. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 38p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701397.

The numerical simulation is carried out of the motion of high energy electrons and positrons in the averaged potential of the monocrystal axes which is the sum of potentials of separate axes with given Miller indices calculated in the Moliere-Appleton model. Characteristic trajectories of particles of various types are presented corresponding to the true channeling and quasichanneling cases. Distributions of particles in angles of exit from the crystal are presented and analyzed.

27423 **(EFI—610(97)-82) Photon asymmetry in coherent bremsstrahlung of polarized electrons.** Darbinyan, S.M.; Oganesyan, K.M. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701398.

The bremsstrahlung cross section of high energy polarized electrons in crystals is calculated taking account of the primary electron spin dependent Born corrections of the order $Z\alpha$. It is shown that in crystals the dependence of the cross section on the particle spin results in the asymmetry not only it the photon angular distribution but also in the total cross section integrated over the angles of the final particles that is connected with the discrete nature of momentum transfers. The calculations are carried out for electrons with arbitrary polarization taking account of the thermal vibration of the lattice atoms.

27424 **(EIR—443) Optimized broad energy group structures for radiation transport in air and in LWR-shields.** Herrnberger, V.; Padiyath, S. (Eidgenoessisches Inst. fuer Reaktorforschung, Wuerenlingen (Switzerland)). Oct 1981. 32p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84700899.

Basic ideas of the automatic group collapsing scheme AGRUKO are briefly described. The errors introduced by the collapsing process are controlled by criteria, which are constructed by the sensitivity profiles and the required target accuracies of the specific shielding type configurations. The group widths are optimized to reduce the calculation time with respect to the fine group calculations. Optimized group structures were generated for two rather different shielding benchmarks: Neutron and gamma transport in a LWR-shield and in air using a fusion source respectively. In the case of the LWR-shield the 100/20 groups EURLIB-3 structure was collapsed to 45/16 and 15/5 groups. In the case of the "air" problem the original 22/18 groups were collapsed to 4/8 groups. The accuracies achieved were in general within the required accuracies for the targets thermal flux (activation), radiation damage, radiation heating and dose rates. Because the broad group structures were optimized in view of basic physical and numerical principles, they are nearly free from arbitrary assumptions as constant lethargy width e.g. Therefore they may be recommended for further use in the field of more complex transport calculations or cross section adjustment procedures.

27425 **(EIR—459) FINELM: a multigroup finite element diffusion code. III. R-theta geometry and internal boundary conditions.** Pelloni, S.; Higgs, C.; Davierwalla, D. (Eidgenoessisches Inst. fuer Reaktorforschung, Wuerenlingen (Switzerland)). Apr 1982. 48p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84700958.

The authors describe the formalism of the finite element for r-theta geometry. The treatment of a four sided element with two circular arcs and two radial sides is presented. At the centre of the disc this element is collapsed into a three sided element by reducing the inner arc length to zero. The singularity of the leakage term of such an element at $r=0$ is described. The modelling of control and safety rods by introducing boundary conditions interior to the reactor is presented. This has the effect of converting the diffusion region from a simply connected to a multiply connected region. Dirichlet conditions with prescribed flux values zero are imposed on nodes in the interior of the non diffusion zones in order to decouple these nodes from the rest. The method is tested by calculating the effectiveness of control and safety rods for a 500 MW Th high temperature reactor. The results are compared with those obtained with DIFGEN using x-y geometry. The DIFGEN results and the problem data are by courtsey of Hochtemperatur Reaktor Bau AG, Mannheim.

27426 **(EIR—466) Integral methods for handling the slit problem in the reactor shield.** Dupont, M. (Eidgenoessisches Inst. fuer Reaktorforschung, Wuerenlingen (Switzerland)). Aug 1982. 109p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84701453.

Concerning neutron streaming in the reactor shield, the author develops a mathematical model for the handling of slit problems and other split-formed-cavity problems. Originating from the integral form of the Boltzmann equation a description of the angle dependence (using spherical functions) and the spatial dependence (using Legendre polynomials) for the neutron flux density in square meshes of the solution is given. The Boltzmann equation is solved using the Ssub(n)-method, using a full discretisation of the angle and spatial dependencies. The solution can have two variations, and these can be obtained using the DP0MIS and DP1MIS programs.

27427 **(EUR—8420) MORSE-E1, source and analysis routines to be used with the MORSE code.** Ponti, C.; Heusden, R. van. (Commission of the European Communities, Ispra (Italy). Joint Research Centre). 1983. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700959.

This report describes the content and the use of a set of source and analysis routines to be used with the MORSE code.

Uniformly distributed sources within simple geometrical shapes are implemented in the package. It calculates the flux of particles as the sum of the path travelled within a given volume; the corresponding relative errors are also provided. Particle currents through surfaces may also be computed. The MORSE-E1 package enables the user to solve many problems without further programming work.

27428 **(JINR—E-3-82-849) Slow neutron scattering on bismuth and lead and electric polarizability of the neutron.** Aleksandrov, Yu.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1982. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701454.

The paper reviews experimental data reported in literature on neutron interaction with nuclei of bismuth and lead in the energy range up to 200 keV. Least-square analysis data yields the coefficient of electric polarizability of the neutron: $(13+-8)x10^{-42}$ cm^3 (eV range of the neutron energies) and $(6+-3)x10^{-42}$ cm^3 (keV range of the neutron energies).

27429 **(JINR—R-1-83-294) Coherent bremsstrahling and radiation of relativistic papticles channeling in crystals.** Zimin, N.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701400.

Spectra of radiation for electrons (positrons) moving inside a crystal have been calculated uSing the Coherent bremsstrahlung theory. The calculations have been made for channeled and quasi-channeled particles taking into account incident beam angular divergenve. It is shown that the coherent bremsstahlung theory cannot describe. the radiation of relativistic channeled particles correctly. For nonchanneled particles the coherent bremsstrahlung intensity can exceed the incoherent radiation in a crystal by a factor of dozens.

27430 **(JINR—R-14-83-102) Proportionality between the structure factor and the intensity of the diffractional neutron scattering on mosaic crystal.** Kim Cnir Sen; Kubiak, S.; Nitts, V.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1983. 3p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701455.

The neutron scattering on a large-scale blocked mosaic crystal is considered in the framework of the dynamic theory of diffraction. It is shown that the proportionality between the intensity of scattering and structurai factor should take place if the Bragg angle is close to 90 deg. This circumstance could be used when choosing optimal conditions for neutronographical investigations.

27431 **(JINR—R-17-83-291) Radiation peak of 1-10 GeV positrons chenneling in Si.** Adam, G.; Adam, S.; Gavrilenko, G.M.; Mikhalake, D.; Fedyanin, V.K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 3p. (In Russian). (CONF-8305173—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701401.

From 23. conference on physics of interaction of charged particles with crystals; Moscow, USSR (1 May 1983).

The spectral intensity of the first dipole harmonics is evaluated within the quantum mechanical approach to the solution of the channeling radiation problem, with a realistic choice of the effective planar potential. The effects of anharmonicity and non-dipolarity are investigated for various momenta of the incident positrons (110) planar channeled in Si and it is concluded that a very intense and narrow emission of γ-radiation at Esub(γ)=13.5 MeV is expected to occur for 3 GeV/c positrons.

27432 **(KFTI—82-40) Dynamics of relativistic electrons(positrons) in a crystal.** Morokhovskij, V.L. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. 22p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701402.

On the basis of the solid-state theory methods, a convenient technique is developed for numerical solving of the Dirac equation for relativistic electrons (positrons) in the three-dimensional statistic potential of a crystal. The dynamics of relativistic electrons (positrons) in the crystal without an account for inelastic processes is considered in a supposition that the crystal fills the semi-space, whereas the momentum of the incident particle is directed normally to the flat vacuum-crystal boundary at a small angle to one of the main crystallogaphic directions.

6550 Medical Physics

27433 **(LA—9979-MS) In vivo assessment of lung burdens at the Los Alamos National Laboratory.** Vasilik, D.G.; Aikin, I.C.; Coop, K.L.; Umbarger, C.J. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011012.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The Los Alamos National Laboratory program for in vivo measurements includes the capability for the assessment of plutonium and americium lung burdens. This capability is an important part of the health and safety program at Los Alamos where a wide variety of radioisotopes are utilized. This report addresses the lung burden assessment portion of our in vivo measurement capabilities. Lung burden measurements at Los Alamos make use of a twin phoswich detector system placed over the lungs of a prone subject. Analysis results are interpreted in terms of two basic statistical measures of detection limits. One measure is called the minimum significant measured activity (MSMA), which is interpreted as meaning that there is some activity in the lungs. The second measure is called the minimum detectable true activity (MDTA), which is defined as the smallest amount of activity required to be in the lungs in order that a measurement of an individual can be expected to imply, correctly, the presence of activity with a predetermined degree of confidence.

27434 **Applying the reciprocal dose principle to heterogeneous phantoms: practical experience from Monte Carlo studies.** Cristy, M. (Oak Ridge National Lab., TN (USA)); Williams, L.R. (Indiana Univ., South Bend (USA). Dept. of Mathematics). *Physics in Medicine and Biology;* **28**: No. 11, 1289-1303(Nov 1983).

The reciprocity theorem states that for any pair of regions in a uniform isotropic or uniform scatterless model, the specific fraction (PHI) is independent of which region is designated source and which is designated target. Although the conditions of these models are not met by phantoms heterogeneous in tissue composition and density, calculations with a Monte Carlo radiation transport code show that in many cases the reciprocal PHIs from photon radiation are approximately equal. This 'reciprocity principle' is valid within a factor of 2(Snyder) or about 20% (Mayneord and Clarke), except when one of the organs in the pair considered is the skeleton, where the reciprocal PHIs may differ by as much as a factor of 4. The principle holds within at least 10% when both organs are of near-unit-density. When one of the organs is near the tissue-vacuum boundary (skin, breasts, or testes), reciprocal PHIs may differ by as much as 10% or so at energies where scattering is marked. When one of the organs is the lungs or the whole body, a comparable error may occur at some energies.

27435 **Measurement of Wsub(N)/e for methane-based tissue-equivalent gas in a d(4)-Be neutron field.** Maughan, R.L.; Michael, B.D. (Mount Vernon Hospital, Northwood (UK). Gray Lab.); McDonald, J.C. (Battelle Pacific Northwest Labs., Richland, WA (USA)); Ma, I.C. (Memorial Sloan-Kettering Cancer Center, New York (USA)). *Physics in Medicine and Biology;* **28**: No. 1, 1105-1112(Oct 1983).

Measurements of absorbed dose were carried out in a d(4)-Be neutron field using tissue-equivalent (TE) plastic ionisation chambers and a TE plastic calorimeter in a TE plastic phantom. The γ-ray dose fraction at the same position was measured using two types of Geiger-Mueller (GM) dosemeters. Good agreement was found in the absorbed dose as determined by the use of the two types of ionisation chambers: spherical and thimble-shaped. Bragg-Gray theory was employed, along with measurements using the ionisation chambers and the calorimeter to compute a value for

the ratio of absorbed dose to specific charge, which is proportional to the product of the stopping power ratio for secondary charged particles in the chamber wall and gas (Ssub(w,g)sub(N), and the average energy expended in the gas per ion pair formed (Wsub(N)/e). The value of Wsub(N)/e) for the d(4)-Be field studied was found to be 31.0 +- 1.8 J C^{-1} for methane-based TE gas, assuming the stopping power ratio to be 1.000 +- 0.044 for neutrons.

27436 **Neutron fluence-to-dose equivalent conversion factors: a comparison of data sets and interpolation methods.** Sims, C.S.; Killough, G.G. (Oak Ridge National Lab., TN (USA)). *Radiation Protection Dosimetry;* **5**: No. 1, 45-48(1983).

Various segments of the health physics community advocate the use of different sets of neutron fluence-to-dose equivalent conversion factors as a function of energy and different methods of interpolation between discrete points in those data sets. The major data sets and interpolation methods are used to calculate the spectrum average fluence-to-dose equivalent conversion factors for five spectra associated with the various shielded conditions of the Health Physics Research Reactor. The results obtained by use of the different data sets and interpolation methods are compared and discussed.

6560 Solid State Physics

27437 **(BNL—34604) Photoemission studies of mixed valent systems.** Parks, R.D.; Raaen, S.; denBoer, M.L.; Williams, G.P. (Polytechnic Inst. of New York, Brooklyn (USA). Dept. of Physics; Brookhaven National Lab., Upton, NY (USA)). 1984. Contract AC02-76CH00016. 23p. (CONF-840264—5). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010797.

From Workshop on high energy excitations in condensed matter; Los Alamos, NM, USA (13 Feb 1984).

Portions are illegible in microfiche products.

Photoemission spectroscopy has been used to study a number of aspects of the mixed valent state (corresponding to non-integral 4f occupation) in rare earth systems. Deep core photoemission (e.g., from 3d or 4d levels) allows the measurement of the 4f occupancy and surface valence shifts, and, as well, the indirect measurement of the effect of solid state environment on the energy of hybridization between 4f electrons and conduction electrons. 4f-Derived photemission has been used to study surface valence and chemical shifts and to infer the nature of the mixed valent ground state. A combination of 4f-derived photoemission and add-electron spectroscopy provides a measurement of the 4f Coulomb correlation energy, an important parameter in the mixed valent problem. A review of these approaches is presented, with emphasis on Ce-based systems, whose behavior falls outside the usual description of 4f-unstable systems. 35 references.

27438 (DL/SCI/R—19, pp 44-46) **Energy dispersive X-ray diffractometry in texture studies.** Szpunar, J.A. (Durham Univ. (UK). Dept. of Physics). 1983. NTIS (US Sales Only), PC A06/MF A01. (CONF-8211147—).

From Daresbury study on application of synchrotron radiation to problems in materials science; Daresbury, UK (13 Nov 1982).

Information about texture is traditionally obtained from the two-dimensional distributions of crystallographic directions in the reference frame of the specimen. The distributions can be measured using the angular dispersive diffractometry. In such measurements the rotation of the specimen brings the crystallographic planes of differently oriented crystals into the diffraction position. The distribution (pole figure) can be measured continuously or alternatively the angular space can be scanned in different directions and with required accuracy. The subject is discussed, with examples.

27439 **(EFI—588(75)-82) Investigation of bent monocrystals structural perfection using synchrotron radiation diffraction peculiarities.** Karabekov, I.P.; Egikyan, D.L.; Mikaelyan, L.A.; Bagdasaryan, V.G.; Martirosyan, M.A.; Kotsinyan, A.M.; Khachikoghlyan, S.L. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701396.

The results of the investigation of synchrotron radiation (SR) diffraction peculiarities from distorted monocrystalline plates are presetned. The possibilities of SR diffraction peculiarities for the definition of monocrystals structural perfection are discussed.

27440 **(JINR—E-17-83-293) Electron-phonon interaction and the generalized kinetic equation for systems interacting with high-intensity electromagnetic wave fields.** Vo Hong Anh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701367.

The generalized kinetic equation for an electron-phonon system subjected to the action of an intense electromagnetic wave field is derived on the basis of the Bogolubov method of elimination of boson operators, taking into account the electron-phonon collision effects. The conditions are considered under which the collision integral allows the introduction of the relaxation time, and the latter is calculated as a function of the frequency and intensity of the pumping field.

27441 **(MLM—3139(OP)) NMR studies of electronic structure and hydrogen diffusion in transition metal hydrides.** Bowman, R.C. Jr. (Monsanto Research Corp., Miamisburg, OH (USA). Mound). 1984. Contract AC04-76DP00053. 36p. (CONF-840152—1). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84009863.

From International workshop on hyperfine interactions; Kanpur, India (16 Jan 1984).

Portions are illegible in microfiche products.

Nuclear magnetic resonance spectroscopy has had extensive applications for the characterizations of numerous metal-hydrogen systems. Although the greatest emphasis of proton NMR has been to evaluate diffusion behavior, increasing attention has been addressed upon the correlation of proton Knight shifts and the conduction electron contributions to proton spin-lattice relaxation times to the electronic structure properties of the hydride. The general principles of NMR that pertain to the usual situations for most transition metal hydrides will be briefly reviewed. Several specific examples from some recent research will be discussed in greater detail. In particular, the roles of host crystal structure and hydrogen site occupancy to hydrogen diffusion behavior are examined for the Ti/sub 1-y/Cu/sub y/H/sub x/ and Zr/sub 1-y/Pd/sub y/H/sub x/ systems. The proton hyperfine parametes in TiH/sub x/ and ZrH/sub x/, as well as several related ternary hydrides, are used to qualitatively assess the character of the Fermi level electronic states. The relationship between the tetragonal distortions of the Ti and Zr dihydrides and a solid-state Jahn-Teller mechanism will also be examined.

27442 **(UCRL—15587) Formulation and numerical integration of elastoplastic and elasto-viscoplastic rate constitutive equations.** Pinsky, P.M.; Pister, K.S.; Taylor, R.L. (Brown Univ., Providence, RI (USA). Div. of Engineering; California Univ., Berkeley (USA). Dept. of Civil Engineering). Aug 1982. Contract W-7405-ENG-48. 35p. (UCB/SESM—82/05). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84010991.

Spatial rate constitutive equations for elastoplastic and elasto-viscoplastic materials are considered within a thermodynamic framework in which irreversible processes are characterized through the use of internal state variables and in which no restrictions on the magnitude of the deformation are imposed. The development employs an invariance principle which leads to a unique definition of the objective rate appearing in the rate constitutive equations. The elastic-plastic split of the deformation is introduced through a thermodynamic argument which leads to the additive decomposition of the spatial rate of deformation tensor. Following the development of the rate constitutive equations, a numerical algorithm is presented for their numerical integration. By employing product formula techniques, the proposed algorithm exploits the operator split of the spatial rate constitutive equations resulting from the additive decomposition of the rate of deformation tensor. The resulting algorithm is demonstrated to be unconditionally stable and incrementally objective. Finally, an efficient and very accurate implicit global algorithm for the numerical solution of the initial boundary value problem of linear momentum balance in con-

junction with the product algorithm for the constitutive equations is proposed. Numerical examples illustrate the effectiveness of the procedure.

27443 **Photostimulated field emission - image rounded barrier model.** Schwartz, C.; Cole, M.W. (Pennsylvania State Univ., University Park). *Surface Science;* **115**: 290-300(1982). Contract AC02-79ER10454.

A theory of photostimulated field emission (PFE) is presented which is analogous to that of the surface effect in photoemission. The authors generalize and extend previous calculations of Bagchi and Taranko. Results are compared with data of Lee and Reifenberger. The theory does not yield the observed oscillatory dependence of the current as a function of applied field.

27444 **Monte Carlo simulation of the two-dimensional classical Heisenberg model with easy-plane anisotropy.** Kawabata, C. (Okayama Univ. Computer Center, Japan); Bishop, A.R. *Solid State Communications;* **42**: No. 8, 595-600(1982).

Monte Carlo simulation results are presented for the classical, two-dimensional ferromagnetic Heisenberg model with 1% easy-plane anisotropy. Evidence for a Kosterlitz-Thouless-like topological phase transition at T = T/sub KT/ is presented with T/sub KT/ ~= 2/3 T/sub KT/ (planar). A specific heat anomaly is observed at T = T/sub S/ with T/sub S/ slightly above T/sub KT/. The in-plane spin-component correlations decay exponentially for T > T/sub KT/. The out-of-plane spin component correlations decay exponentially for all T but possibly with anomalies around both T/sub KT/ and T/sub S/.

27446 **(CERN—83-09) Elementary course on general relativity.** Regge, T. (European Organization for Nuclear Research, Geneva (Switzerland)). 22 Sep 1983. 30p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701394.

This report gives an informal account of the theory of general relativity, for non-specialists. It does not contain any detailed technical expose of tensor calculus but relies instead on a number of intuitive arguments. After a brief historical introduction the notion of curvature is developed, first in two dimensions (as done originally by Gauss) and then in higher dimensions, following the ideas of Riemann. This curvature is then related to quantities of physical interest through the following steps: i) The equality of gravitational and inertial masses is discussed and presented as the "weak equivalence principle". ii) This is then extended to the "strong equivalence principle" according to the original programme of Einstein. iii) The "strong equivalence principle" implies the existence of a local inertial observer in any point of space-time. In a sufficiently small region of space-time this observer will not sense any gravitational field. iv) In a larger region the observer will, however, sense residual tidal forces. These forces are identified with the curvature of spacetime, to achieve a direct geometrical interpretation of gravity. v) Finally certain curvature components are related to the distribution of matter through Einstein's field equations. Section 4 contains a discussion of the classical tests of the theory and of the possibility of detecting gravitational waves. Sections 5 and 6 deal with cosmology and with the possible extension of the theory along the lines of the original ideas of Einstein, with emphasis on the dimensional reduction techniques of current interest.

27447 **(ITEP—93(1982)) Instantons in supersymmetric theories.** Novikov, V.A.; Shifman, M.A.; Vajnshtejn, A.I.; Zakharov, V.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1982. 41p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701392.

Instanton effects are considered for a sample of supersymmetric theories: quantum mechanics, gluodynamics. Higgs model. The problem is how to reconcile the apparent lack of the boson-fermion symmetry in the effective instanton induced interaction with supersymmetry of the corresponding lagrangians. It is shown that in case of quantum mechanics and Higgs model there is no conflict between supersymmetry and the instanton calculus since the Ward identities, associated with the supersymmetry transformations, are satisfied. In case of supersymmetric gluodynamics the standard instanton calculus explicity violates the Ward identities. This is due to the lack of symmetry in the standard class of classical solutions used in the instanton calculus.

27448 **(JINR—E-2-83-384) Many-body problem in quantum mechanics and Hopf maps.** Polubarinov, I.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701378.

In the many-body problem in quantum mechanics, the transition from cartesian coordinates to inor variables is considered. Schroedinger and Heisenberg pictures are considered independently on each other. The Coulomb problem is reduced to the problem of four-dimensional oscillator. The transition to spinor variables is performed in two stages. At the first stage independent variables are introduced into the conventional Hamiltonian. At the second stage spinor variables are introduced as in the two-body problem: each three— dimensional Laplasian is replaced by four-dimensional Laplasian.

27449 **(JINR—E-4-83-50) New three-body equation.** Matveenko, A.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701381.

The Schroedinger equation is taken for the three-body problem in the molecular state approach. A new representation is built, which "kills" cross derivatives in the Schroedinger equation. This new equation has a simple form and "good" asymptotic properties. It may be interpreted as an equation for quasiparticles with masses depending on coordinates. Moreover, a potential energy term is modified and acquires the form of the three-particle interaction. This modification is of the kinematic nature.

27450 **(JINR—R-2-82-910) Connection between generators of three- and four dimensional turns with Hamilton's operators for particles with spins 1 and 1/2.** Yamaleev, R.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1982. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701384.

It is shown in the framework of the nonrelativistic theory that the structure of Hamilton operator for particles with spin 1 is strictly defined by the structure of group generator of three-dimensional turns; operator of spin, by infinitesimal operator of this groups. For particles with spin 1/2 similar connection is established with way transition from the 3-dimensional space to the Euclidean 4-dimensional space. Four-dimensional formalism allows one to construct such combinations of generator turns, which have commutational relations identical to those of orbital momentum, eiegevalues multiple to 1/2 infinitesimal operator-identical to the basis of Pauli matrix. The structure of such generator combinations corresponds to that one of Hamilton operator for Pauli equation. In 4-

dimensional space the symmetry is established between equations for particles with spins 1 and 1/2. The connection of transformational properties of the wave function of spin 1/2 particle with the group of 4-dimensional space turns is also considered.

27451 **(JINR—R-2-83-340) General relativity theory and spin.** Pestov, A.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 3p. (In Russian). (CONF-8306179—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701387.

From Working meeting on problems of radiation and detection of gravitational waves; Dubna, USSR (7 Jun 1983).

Problem of spin introduction into the general relativity theory (G. R. T.) is put and solved. Equations, describing the interaction of the gravitational field and matter with spin are derived. G. R. T. equations for matter with spin are expressed by consistent G_4-invariant system of differential equations.

27452 **(JINR—R-2-83-352) "Collapse onto scattering centre" in quasipotential theory.** Gogokhiya, V.Sh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701388.

Quasipotential equation for the wave function in the impulse representation is investigated for the case of singular attractive potential U(r)=-lambda r^{-2}. It is shown that discrete energy spectrum in the nonrelativistic limit do not depend on an arbitrary constant and there appears no collapse onto scattering centre. These results are a consequence of self-adjointness of quasipotential operator in the impulse representation ("deficiency-index" n=0) in the comparison with Lippmann-Schwinger operator ("deficiency-index" n=1).

27453 **(JINR—R-4-83-222) New integrable classical system with two degrees of freedom.** Inozemtsev, V.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701389.

It is shown that a classical system with the Hamiltonian $H=(p_1^2+p_2^2)/2$ + lambda(qsub(1)qsub(2))sup(-2/3) possesses a constant of the motion $K=p_1p_2(p_1q_2-p_2q_1)$ + 2lambda(psub(2)qsub(2)-psub(1)qsub(1))(qsub(1)qsub(2))sup(-2/3); the quantum system with the same Hamiltonian has no other than H constants of the motion, polynomials in momenta being of order not higher than three.

27454 **(JINR—R-4-83-356) Integrable models of two interacting particles motion in an external field.** Inozemtsev, V.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701390.

Classical systems with a Hamiltonian $H=(p_1^2+p_2^2)/2+V_1(x_1)+V_2(x_2)+V_{12}(x_1-x_2)$ are considered. They correspond to the two-particle system on a streight line with an external field. The new sets of V_1, V_2, V_{12} potentials are found for which these systems are integrable.

27455 **(KFTI—83-18) Low-frequency asymptotics of Green functions for superfluid Bose-systems.** Kovalevskij, M.Yu.; Peletminskij, S.V.; Tarasov, A.N. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 21p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701391.

A method permitting to find low-frequency asymptotics of Green functions for superfluid Bose-liquid without using fictitious external sources is developed. The structure of general Green functions Gsub(ab)sup(+-)(k vector, ω) in the range of small ω and k vector and at vsub(n) vector - vsub(s) vector not equal to 0 is found. The structure of Green functions peculiarities due to the existence of the first and second sound depends considerably on commutativity of operators a vector and b vector, determining the Green function, with operator of the mass M. The method developed of the study of low-frequency asymptotics of Green functions of superfluid systems can be also applied when considering similar problems for other systems with spontaneously distorted symmetry.

27456 **(SAND—83-1522C) Propagation of acoustic waves in partially saturated porous media.** Wilson, R.K.; Walsh, E.K. (Sandia National Labs., Albuquerque, NM (USA); Florida Univ., Gainesville (USA)). 10 May 1984. Contract AC04-76DP00789. 14p. (CONF-840504—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010536.

From Southeastern conference on theoretical and applied mechanics; Pine Mountain, GA, USA (10 May 1984).

Portions are illegible in microfiche products.

The propagation of acoustic waves in a partially saturated porous medium is modeled analytically using the continuum theory of mixtures. Three dynamic equations are obtained for the velocities of the liquid, gas and solid phases. The coefficients contain an explicit dependence on the capillary pressure or surface tension. The resulting equations are discussed in the context of previously developed models.

27457 **Application of the WKB method to x-ray diffraction by one dimensional periodic structures.** Lee, P. (Los Alamos National Lab., NM). *Optics Communications;* **42**: No. 3, 195-198(1 Jul 1982).

The problem of X-ray diffraction by one dimensional periodic structures is solved by the WKB method. It is shown that this approach is equivalent to the usual thin film theory if the effect of multiple reflections may be ignored. The WKB method permits analytical solution for a large class of periodic structures, in particular, all Fourier representable profiles may now be solved.

27458 **Influence of closure on the behaviour of the Yvon-Born-Green equation for a system of hard rods.** Green, K.A. (Univ. of Tulsa, OK); Luks, K.D.; MacCarthy, J.E.; Kozak, J.J. *Molecular Physics;* **45**: No. 4, 897-913(1982).

The Yvon-Born-Green equation for a system of hard rods is solved using the Kirkwood superposition approximation and the results obtained are compared with those generated from the exact solution to the problem. Whereas the pair correlation function generated using the exact closure is unique over the entire range of densities, multiple solutions of the underlying integral equation appear above a certain density when the full Kirkwood superposition closure is used. The method of complementary variational principles is used to corroborate the findings in the pre-transition regime. The implications of these results are discussed in light of previously reported studies of the Yvon-Born-Green equation on systems of hard discs and hard spheres, where evidence of a fluid-solid transition was found.

27459 **Generalized Lagrangian and conservation law for the damped harmonic oscillator.** Bahar, L.Y.; Kwatny, H.G. (Drexel Univ., Philadelphia, PA). *American Journal of Physics;* **49**: No. 11, 74-77(Nov 1981). Contract AC01-76ET29112;ET-78-S-01-3088.

An explicit construction of the time-dependent Lagrangian for a damped harmonic oscillator is given. The connection between this Lagrangian with the time-independent one developed by Morse and Feshbach is established. Various methods of deriving a first integral for the equation of motion are given. It is shown that the results developed in this paper by direct means are in agreement with those obtained through the use of group-theoretic methods, such as invariance principles and Noether's theorem, which are mathematically more advanced approaches.

27460 **(UCRL—15584) Unconditionally stable element-by-element algorithms for dynamic problems.** Ortiz, M.; Pinsky, P.M.; Taylor, R.L. (California Univ., Berkeley (USA). Dept. of Civil Engineering). Jan 1982. Contract W-7405-ENG-48. 28p. (UCB/SESM—82/01). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84011062.

A collection of results is presented regarding the consistency, stability and accuracy of operator split methods and product formula algorithms for general nonlinear equations of evolution.

These results are then applied to the structural dynamics problem, exploiting the element-by-element additive decomposition of the discrete dynamic equations resulting from a finite element discretization. Unconditionally stable algorithms are obtained that involve only element coefficient matrices. The storage requirements and operation counts are comparable to those of explicit methods. The method places no restriction on the topology of the finite element mesh.

27461 **Cubic spline method for solving second-order differential equations: theory and application to the Thomas-Fermi model for ions.** Raynor, S. (Harvard Univ., Cambridge, MA). *Chemical Physics (Amsterdam);* **66**: 409-415(1982). Contract AC02-79ER10470.

A cubic spline method is described which can be used to generate solutions to arbitrary second-order differential equations. The principle advantage is that this method provides accurate solutions which are cast in an analytic form, thus allowing the solutions to be applied to other problems. The method is applied to the solution of the Thomas-Fermi equation for singly and doubly ionized ions, and to the solution of the Schroedinger equation for the ground and first excited states of alkali metal atoms.

27462 **(DOE/ER/53126—T1) Theoretical studies of Elmo Bumpy Torus. Annual report.** (JAYCOR, San Diego, CA (USA)). Oct 1983. Contract AC01-82ER53126. 53p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84010814.

The work was divided into six basic areas. Modeling studies compared neoclassical and Fokker-Planck analyses of the core plasma electrons with EBT-S data. Ion physics studies treated propagation and absorption of ion cyclotron waves along with investigation of the effect of wave absorption and instabilities on the ion distribution function. Parametric instability calculations identified processes and thresholds for nonlinear electron cyclotron resonance (ECR) wave absorption. Ring physics studies considered not only energetics and spatial effects, but also scaling and startup scenarios, along with the attendant microwave power requirements. Radio frequency (RF) control studies considered the possibility of influencing transport by wave absorption; related studies produced the important predictions of RF stabilization of interchange modes, without ponderomotive effects. Finally, microwave deposition studies considered the geometric aspects of propagation and absorption of microwaves in a real EBT cavity system.

27463 **(DOE/ET/51013—120) Linear theory of lower hybrid heating.** Bonoli, P. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). 27 Mar 1984. Contract AC02-78ET51013. 63p. (PFC/RR—84-5). NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84010577.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The linear theory of wave propagation in the lower hybrid range of frequencies is presented. The topics of accessibility, linear and quasi-linear theories of electron Landau damping, and the linear theory of ion Landau damping are covered. The theory of wave propagation is extended to include the effect of toroidal geometry. A simulation model incorporating these theories is described and numerical results obtained with the model are given.

27464 **(DOE/ET/53016—94) Solution adaptive triangular meshes with application to the simulation of plasma equilibrium.** Erlebacher, G. (Columbia Univ., New York (USA). School of Engineering and Applied Science). 1984. Contract AC02-76ET53016. 209p. (COO—2456/84). NTIS, PC A10/MF A01; 1; GPO Dep. Order Number DE84010389.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Thesis.

A new discrete Laplace operator is constructed on a local mesh molecule, second order accurate on symmetric cell regions, based on local Taylor series expansions. This discrete Laplacian is then compared to the one commonly used in the literature. A truncation error analysis of gradient and Laplace operators calculated at triangle centroids reveals that the maximum bounds of their truncation errors are minimized on equilateral triangles, for a fixed triangle perimeter. A new adaptive strategy on arbitrary triangular grids is developed in which a uniform grid is defined with respect to the solution surface, as opposed to the x,y plane. Departures from mesh uniformity arises from a spacially dependent mean-curvature of the solution surface. The power of this new adaptive technique is applied to the problem of finding free-boundary plasma equilibria within the context of MHD. The geometry is toroidal, and axisymmetry in the toroidal direction is assumed. We are led to conclude that the grid should move, not towards regions of high curvature of magnetic flux, but rather towards regions of greater toroidal current density. This has a direct bearing on the accuracy with which the Grad-Shafranov equation is being approximated.

27465 **(GA-A—17386) Density variation due to wave heating in tokamak plasmas.** Hsu, J.Y.; Chan, V.S.; Harvey, R.W.; Hinton, F.L.; Prater, R.; Wong, S.K. (GA Technologies, Inc., San Diego, CA (USA)). Mar 1984. Contract AT03-84ER53158. 6p. (CONF-840616—2). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009402.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

The tokamak plasma density has been observed to drop during ECRH, and to increase during ICRF and LHH. A mechanism is proposed here to explain these density variations. Depending on the nature of the specific wave heating, electrons or ions tend to pile up toward the weak field side. A poloidally varying electrostatic potential is expected to arise and to saturate at a level such as to balance the trapping effect due to the magnetic well and the rf heating. As a result, an E x B drift comparable to the ion vertical drift in a toroidal magnetic field may occur. Assuming that electrons move across the magnetic surfaces more freely due to the magnetic stochasticity or other turbulent diffusion mechanisms, and the particle confinement is primarily determined by the ion neoclassical transport rate, the ECRH can enhance the ion vertical drift and cause the density to drop, while the ICRF and LHH can reduce the ion vertical drift and improve the density confinement.

27466 **(GA-A—17483) 3-D MHD stability of high-beta free-boundary tokamak plasmas with finite edge-pressure-gradient and limiter stabilization.** Lee, J.K.; Bernard, L.C.; Chu, M.S.; Moore, R.W.; Ohyabu, N. (GA Technologies, Inc., San Diego, CA (USA)). Feb 1984. Contract AT03-84ER53158. 6p. (CONF-840616—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009188.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

Ideal and resistive external kink-tearing-ballooning modes are studied for high-beta toroidal tokamak plasmas with a varying pedestal and/or with stabilization due to a limiter. When the pedestal value is small, the mode spectrum peaks near $n=1$ with a monotonically decreasing growth rate in n, in which case the most unstable mode has a structure similar to an ideal external kink mode. As the pedestal value increases, the linear growth rate decreases for a fixed beta and the mode spectrum tends to broaden. The perturbation becomes localized near the plasma edge resembling the edge relaxation phenomenon in an H-mode tokamak discharge. The stabilizing effect of a limiter on high-beta MHD modes is considered for a finite-size toroidal limiter, a poloidal limiter, and a general limiter. For the latter two types of limiters, a 3-D linear stability analysis is necessary, coupling both poloidal and toroidal modes. The high-beta toroidal case has different characteristics from the zero-beta cyclindrical case; among them is a substantial reduction in growth rate even with modest contact area. Optimum position and size of a limiter are found through extensive parameter studies. A scheme to stabilize the high-beta external kink-tearing mode by means of a set of passive feedback coils is also discussed.

27467 (Juel—1862) Absolute measurement of radiation losses of a tokamak in the region of ultrasoft X-radiation. Petzold, H.C. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Plasmaphysik; Duesseldorf Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). Aug 1983. 104p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84751264.

In this work experiments were performed to investigate the question to which extent spectroscopic measurements in the ultrasoft X-ray region (lambda=1-10nm) are a useful technique for diagnosing the relatively cool edge region (Tsub(e)approx.=100-200 eV) of fusion-oriented plasmas. Object of these measurements was the plasma centre of a small tokamak where the plasma parameters are comparable to those in the edge region mentioned above. The measurements were done with a Bragg-spectrometer using either TAP (2d=2.59 nm) or lead stearate (2d=10.04 nm) as analyzer crystal. This allowed to cover the whole spectrum between 0.5 and 9 nm with one instrument. Using a photon-counting detector the spectrometer/detector system was absolutely calibrated by measuring the transmission of its different components by means of monochromatic X-ray radiation. For the investigated tokamak plasma intense line spectra in the region 1.4 nm <=lambda<=2.2 nm as well as at lambda>=4.4 nm have been observed, where the former was caused by the high ionization stages of oxygen (OVII and OVIII), whereas the latter could be explained by Ar- to Na-like ions of the metallic impurities Fe, Cr, and Ni.

27468 (Juel—1869) Hydrodynamic theory of convective transport across a dynamically stabilized diffuse boundary layer. Gerhauser, H. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Plasmaphysik; Association Euratom-Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.)). Sep 1983. 82p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84751261.

The diffuse boundary layer between miscible liquids is subject to Rayleigh-Taylor instabilities if the heavy fluid is supported by the light one. The resulting rapid interchange of the liquids can be suppressed by enforcing vertical oscillations on the whole system. This dynamic stabilization is incomplete and produces some peculiar novel transport phenomena such as decay off the density profile into several steps, periodic peeling of density sheets of the boundary layer and the appearance of steady vortex flow. The theory presented in this paper identifies the basic mechanism as formation of convective cells leading to enhanced diffusion, and explains previous experimental results with water and ZnJ_2-solutions. A nonlinear treatment of the stationary convective flow problem gives the saturation amplitude of the ground mode and provides an upper bound for the maximum convective transport. The hydrodynamic model can be used for visualizing similar transport processes in the plasma of toroidal confinement devices such as sawtooth oscillations in soft disruptions of tokamak discharges and anomalous diffusion by excitation of convective cells. The latter process is investigated here in some detail, leading to the result that the maximum possible transport is of the order of Bohm diffusion.

27469 (KFTI—83-22) Excitation of gyrotropic plasma cylinder by a split antenna. Kurilko, P.I. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701404.

Analytical theory of spectrum of H-type, natural oscillations of open cylindric resonator filled with gyrotropic plasma with conducting shell and longitudinal slit of finite width is developed. In the general case of arbitrary parameters of the slit and plasma the task of spectrum and resonator field picture determination is reduced to the system solution on the basis of finite number of homogeneous algebraic equations for Fourier amplitudes of the field azimuthal harmonics.

27470 (LA-UR—84-620) Confinement time and energy balance in the CTX spheromak. Barnes, C.W.; Henins, I.; Hoida, H.W.; Jarboe, T.R. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 6p. (CONF-840255—8). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84007492.

From 6. US-Japan symposium on compact toroid research; Princeton, NJ, USA (20 Feb 1984).

The multipoint Thomson scattering diagnostic on CTX allows measurement of electron plasma pressure. The pressure correlates well with the poloidal flux function. Analysis using equilibrium models allows the [β]/sub vol/ to be calculated from over 100 Thomson scattering profiles taken under standard conditions of spheromak operation where the plasma parameters vary widely within the discharge. The calculated tau/sub E/ increases with central core temperature and with density. The global magnetic energy decay time tau/sub B/2 is consistent with Spitzer-Harm resistivity, but with an anomaly factor of 2 to 4 which may decrease at small ratios of B/n. The n tau/sub E/ product reaches 4 x 10^9 s cm^{-3} during the hottest part of the discharge. A zero-dimensional energy balance code, which accurately includes all the major atomic physics processes and whose parameters have been constrained by comparision to experimental data, is used to identify the causes of energy loss that contribute to the observed confinement time. The most important power loss is that needed to replace the particles being lost and to maintain the constant density of the plateau.

27471 (LA-UR—84-621) Ohmic heating to 100-eV and helicity injection in CTX. Henins, I.; Barnes, C.W.; Hoida, H.W.; Jarboe, T.R.; Klingner, P.L.; Knox, S.O.; Platts, D.A.; Sherwood, A.R.; Wright, B.L. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 5p. (CONF-840255—5). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84007494.

From 6. US-Japan symposium on compact toroid research; Princeton, NJ, USA (20 Feb 1984).

In the year since the last CT symposium, two major CTX results have been achieved. Electron temperatures over 100 eV have been obtained and the magnetic fields of the spheromaks have been sustained by helicity injection from the coaxial magnetized plasma source. The behavior and magnitude of the fields in the spheromak can be predicted from just the source voltage and flux by assuming a constant rate of helicity loss by resistive decay.

27472 (LA-UR—84-622) Space resolved absolutely calibrated VUV spectroscopic measurements on CTX. Hoida, H.W.; Barnes, C.W.; Henins, I.; Jarboe, T.R.; Sherwood, A.R. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 6p. (CONF-840255—4). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84007490.

From 6. US-Japan symposium on compact toroid research; Princeton, NJ, USA (20 Feb 1984).

Portions are illegible in microfiche products.

Space resolved particle confinement times have been measured in two independent methods in CTX. The confinement time near the magnetic axis was found to be tau/sub p/ $\sim$ 100 μs and a factor of two lower for the outer flux surfaces. Attempts at sustainment so far have resulted in cold plasmas and additional impurities being injected with the flux. This problem is being specifically addressed in the electrode facility.

27473 (LA-UR—84-626) Mixed mode operation in CTX. Hoida, H.W.; Barnes, C.W.; Henins, I.; Jarboe, T.R. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 4p. (CONF-840255—12). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84007493.

From 6. US-Japan symposium on compact toroid research; Princeton, NJ, USA (20 Feb 1984).

Mixed method of operation with input powers of 10 MW to 20-MW results in hotter (ΔT/sub e/ $\sim$ 30 eV) longer lived spheromaks ($\sim$ 200 μs longer) than slow mode operation. However, a further increase in driving current is detrimental to the temperature of the spheromak (possibly due to the injection of impurities). In the mixed method, n = 2 oscillations no longer appear during the decay, apparently due to the sustainment of currents in the outer flux surfaces. This sustainment leads to more uniform j/B profiles, which may stabilize the n = 2.

27474 (LA-UR—84-748) Equilibrium and stability of the Los Alamos spheromak. Marklin, G. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 6p. (CONF-840255—18). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010064.

From 6. US-Japan symposium on compact toroid research; Princeton, NJ, USA (20 Feb 1984).

The open mesh flux conserver (MFC) on the Los Alamos spheromak (CTX) has been equipped with a large number of Rogowski loops measuring the current in the individual segments of the MFC, providing a complete picture of the surface current pattern induced by the equilibrium and oscillations of the confined plasma. An analysis was made of the data from these Rogowski loops.

27475 (LA-UR—84-923) Two novel plasma diagnostics. Jahoda, F.C. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 5p. (CONF-840616—8). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009970.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

A rapidly developing technology (single-mode optical fiber sensors) and recent fundamental research in non-linear optics (phase conjugation) both offer opportunities for novel plasma diagnostics.

27476 (LA-UR—84-942) Generalized Poisson brackets and nonlinear Liapunov stability: application to reduced MHD. Hazeltine, R.D.; Holm, D.D.; Marsden, J.E.; Morrison, P.J. (Los Alamos National Lab., NM (USA); Texas Univ., Austin (USA); California Univ., Berkeley (USA)). 1984. Contract W-7405-ENG-36. 7p. (CONF-840616—12). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009973.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

A method is presented for obtaining Liapunov functionals (LF) and proving nonlinear stability. The method uses the generalized Poisson bracket (GPB) formulation of Hamiltonian dynamics. As an illustration, certain stationary solutions of ideal reduced MHD (RMHD) are shown to be nonlinearly stable. This includes Grad-Shafranov and Alfven solutions.

27477 (LA-UR—84-1063) Plasma simulation studies of electron acceleration for beat wave and single frequency-laser heating schemes. Kindel, J.M.; Forslund, D.W.; Mori, W.B.; Joshi, C.; Dawson, J.M. (Los Alamos National Lab., NM (USA); California Univ., Los Angeles (USA)). 1984. Contract W-7405-ENG-26. 5p. (CONF-840616—4). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009988.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

Two-dimensional particle simulations with a finite laser beam show that beat wave acceleration can produce energetic electrons as seen in one-dimensional simulations.

27478 (LA-UR—84-1127) Lyapunov stability conditions for a relativistic multifluid plasma. Holm, D.D.; Kupershmidt, B.A. (Los Alamos National Lab., NM (USA); Tennessee Univ., Tullahoma (USA). Space Inst.). 1984. Contract W-7405-ENG-36. 9p. (CONF-840616—6). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010004.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

In preparation for establishing nonlinear stability conditions, the Hamiltonian structure is given for ideal relativistic multifluid plasma dynamics in the laboratory frame with the Hamiltonian functional equaling the relativistic energy minus the mass energy. The noncanonical Poisson bracket for this system turns out to be the same as for the nonrelativistic multifluid plasma, but with dynamical variables replaced by their relativistic counterparts. New constants of the motion are then derived from the Hamiltonian structure and used as Lyapunov functionals for proving sufficient conditions for nonlinear stability of relativistic multifluid plasma equilibria. The nonrelativistic limit of the formulation is uniformly regular, and nonlinear Lyapunov stability conditions derived earlier for a nonrelativistic multifluid plasma re-emerge in that limit.

27479 (PPPL—2029) Princeton spectral equilibrium code: PSEC. Ling, K.M.; Jardin, S.C. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1984. Contract AC02-76CH03073. 78p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84010770.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A fast computer code has been developed to calculate free-boundary solutions to the plasma equilibrium equation that are consistent with the currents in external coils and conductors. The free-boundary formulation is based on the minimization of a mean-square error ϵ while the fixed-boundary solution is based on a variational principle and spectral representation of the coordinates x(psi,theta) and z(psi,theta). Specific calculations using the Columbia University Torus II, the Poloidal Divertor Experiment (PDX), and the Tokamak Fusion Test Reactor (TFTR) geometries are performed.

27480 (PPPL—2084) Formation of a 100-kA tokamak discharge in the Princeton large torus by lower hybrid waves. Jobes, F.; Stevens, J.; Bell, R.; Bernabei, S.; Cavallo, A.; Chu, T.K.; Cohen, S.; Denne, B.; Efthimion, P.; Hinnov, E. . (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1984. Contract AC02-76CH03073. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010748.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The development of non-inductive current drive is of great importance in establishing the tokamak as a long-pulse or steady-state fusion reactor. Lower hybrid waves, carrying 200 kW of power at 800 MHz, have been launched into the PLT tokamak to initiate and drive the discharge current to a level in excess of 100 kA.

27481 (PPPL—2090) MHD stability properties of bean-shaped tokamaks. Grimm, R.C.; Chance, M.S.; Todd, A.M.M.; Manickam, J.; Okabayashi, M.; Tang, W.M.; Dewar, R.L.; Fishman, H.; Mendelsohn, S.L.; Monticello, D.A. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1984. Contract AC02-76CH03073. 62p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84010753.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A study of the MHD stability properties of bean-shaped tokamak plasmas is presented. For ballooning modes, while increased indentation gives larger β stable configurations, the existence and accessibility of the second stable region is sensitive to the pressure and safety factor profiles. The second stable region appears at lower β values for large aspect ratio and moderately high q-values. Finite-Larmor-radius (FLR) kinetic effects can significantly improve the stability properties. For low q (< 1) operation, long wavelength (n $\sim$ 2,3) internal pressure driven modes occur at modest β/sub p/ values and accessibility to higher β operation is unlikely. Indentation modifies the nature of the usually vertical axisymmetric instability, but the mode can be passively stabilized by placing highly conducting plates near to the tips of the plasma bean. At constant q, indentation has a stabilizing effect on tearing modes.

27482 (PPPL—2096) Spectrometer sensitivity calibration in the extreme uv by means of branching ratios of magnetic dipole lines. Denne, B.; Hinnov, E. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1984. Contract AC02-76CH03073. 23p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010752.

Relative intensity measurements of various line pairs resulting from magnetic dipole transitions within the configurations s^2p^2 and s^2p^4, in conjunction with calculated transition probabilities, have been used to determine the wavelength dependence of the sensitivity of a grazing incidence spectrometer, in the range 400 to 1000 A. Emissions from Cr XIX, Fe XXI, Ni XXI and XXIII, Cu XXIV, and Zr XXVII ions in PLT tokamak discharges were used for this purpose. Absolute sensitivity of the spectrometer at selected wavelengths had been determined by the traditional hydrogen, helium, carbon, and oxygen electric-dipole line pairs from the same discharges. Similar attempts to use transitions in the s^2p^3 configura-

tions in Cr XVIII, Zr XXVI, and Mo XXVIII ions resulted in significant discrepancies that are ascribed to uncertainties in the corresponding calculated transition probabilities.

27483 **(PPPL—2098) Current driven instabilities of the kinetic shear Alfven wave: application to reversed field pinches and spheromaks.** Meyerhofer, D.D.; Perkins, F.W. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1984. Contract AC02-76CH03073. 46p. NTIS, PC A03; 3; GPO Dep. Order Number DE84010769.

Paper copy only, copy does not permit microfiche production. Original copy available until stock is exhausted.

The kinetic Alfven wave is studied in a cylindrical force-free plasma with self-consistent magnetic fields. This equilibrium represents a reversed field pinch or a spheromak. The stability of the wave is found to depend on the ratio of the electron drift velocity to the Alfven velocity. This ratio varies inversely with the square root of the plasma line density. The critical line density using the Spitzer-Harm electron distribution function is found for reversed field pinches with deuterium plasmas to be approximately 2×10^{18} m^{-1} and is 5×10^{17} m^{-1} in spheromaks with hydrogen plasmas. The critical line density is in reasonable agreement with experimental data for reversed field pinches.

27484 **(RL—83-038) Two-centre electronic wave functions in plasmas.** Rose, S.J. (Scientific and Technical Studies, London (UK)). Jun 1983. 9p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84700883.

The electronic structure occurring during collisions between ions in a plasma is considered in terms of two-centre wave-functions and exact solutions of the Schroedinger equation for the H_3^+ molecule are used to describe collisions between H atoms and H^+ ions in a hydrogen plasma. This 'transient chemistry' shows the existence of transitions not accounted for in the usual single-centre treatments and a coupling between radiation and ionic kinetic energy not previously described.

27485 **(SAI—84-3033/PRI-77) rf-induced stability and transport in axisymmetric tandem mirrors.** Myra, J.R.; D'Ippolito, D.A. (Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.). Apr 1984. Contract AC03-76ET53057. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010842.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A kinetic theory of the ponderomotive force on a plasma due to an electromagnetic ion cyclotron wave is developed and applied to axisymmetric mirrors. The force due to nonresonant particles is shown to modify the usual MHD interchange stability criterion. Resonant particle contributions to the force arise from the absorption of photon momentum and spin. This effect drives a radial particle flux, modifies the radial ambipolar potential profile, and couples transport and stability.

27486 **(UCID—20025) Plasma potential control: initial results from tandem mirror experiment-upgrade.** Hopper, E.B. Jr. (Lawrence Livermore National Lab., CA (USA)). 28 Feb 1984. Contract W-7405-ENG-48. 20p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010923.

Initial plasma potential control experiments used plates in the end fan, insulated from the end walls of TMX-U, which mapped along field lines to the plasma core (r/sub c/ $\leqq$ 12.9 cm). Measurements in which these plates are shorted to ground during plugging demonstrate that floating the plates increases the buildup rate of the central cell plasma, steepens the core density profile, and affects the plasma throughout the entire cross section. Floating the plates decreases the ion radial transport rate in the core by a factor of at least 1.5. Because of these encouraging results, in the next series of experiments more plates will be added, extending to a larger radius (r/sub c/ $\leqq$ 19.4 cm).

27487 **(UCRL—90425) Microstability theory for distributions separable in energy and pitch angle.** Smith, G.R. (Lawrence Livermore National Lab., CA (USA)). 20 Mar 1984. Contract W-7405-ENG-48. 5p. (CONF-840616—9). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009683.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

Distribution functions that are separable in energy and pitch angle allow analytical calculation of one or two velocity-space integrals that appear in the linear theory of certain microinstabilities.

27488 **(UCRL—90451) Microstability of TMX-U during initial thermal barrier operation.** Casper, T.A.; Berzins, L.V.; Ellis, R.F.; James, R.A.; Lasnier, C. (Lawrence Livermore National Lab., CA (USA); Maryland Univ., College Park (USA)). Mar 1984. Contract W-7405-ENG-48. 8p. (CONF-840616—10). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008944.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

During the initial thermal barrier experiments on the Tandem Mirror Experiment-Upgrade (TMX-U), we successfully demonstrated the principle of improved axial tandem mirror confinement achieved by establishment of both the thermal barrier and the ion confining potential peak. During this operation, we created both hot (100-keV) mirror-confined electron and hot (8-keV) mirror-confined ion populations in the end cells. In certain parameter ranges, we observed these species to be weakly unstable to various microinstabilities, but we did not observe clear evidence for an absolute limit to confinement.

27489 **Characteristics of ICRF heating near the second harmonic.** Chiu, S.C. (GA Technologies, Inc., San Diego, CA (USA)); Mau, T.K. (California Univ., Los Angeles (USA)). *Nuclear Fusion;* **23**: No. 12, 1613-1623(Dec 1983).

Analytical and numerical results of physical processes taking place around the second-harmonic resonance surface in ICRF heating are presented. It is shown that (1) symmetry of transmission coefficients follow from Onsager's reciprocity relation of the dielectric tensor, and (2) direct dissipation around the cyclotron harmonic layer is mostly due to the Bernstein branch and depends on ksub(parallel), becoming low for low ksub(parallel). The latter has the consequence that mode conversion and reflection are sensitively reduced by damping, but transmission is not.

27490 **Extension of Trubnikov's radiation loss formula to relativistic temperatures.** Tamor, S. (Science Applications, Inc., La Jolla, CA (USA)). *Nuclear Fusion;* **23**: No. 12, 1704-1708(Dec 1983).

Letter-to-the-editor.

A numerical study was carried out to find an extension of Trubnikov's formula for cyclotron radiation loss which is valid at relativistic temperatures. It is found that for temperatures up to 1000keV the loss can be fit by minor modification of the original result.

27491 **Scaling of edge-plasma turbulence in the Caltech tokamak.** Zweben, S.J.; Gould, R.W. (California Inst. of Tech., Pasadena (USA)). *Nuclear Fusion;* **23**: No. 12, 1625-1641(Dec 1983).

Portions are illegible in microfiche products. Original copy available until stock is exhausted2 refs.

Edge-plasma turbulence was investigated over a wide range of plasma and field parameters in the Caltech research tokamak. Fluctuation levels and spectra were measured using Langmuir probes in the region r/a=0.75-1.0. Under almost all conditions the edge plasma was turbulently unstable, with a broadband fluctuation spectrum in the drift-wave range of frequencies f=10-1000 kHz. A stable state was observed only in the very cold, low-current discharges formed at unusually high neutral filling pressure. Otherwise, the relative fluctuation level as monitored by the ion saturation current J^+ was very high, in the range J-tilde$^+$/J-bar$^+$ approx.=0.2-0.8, while the fluctuation power spectra were roughly invariant in shape. The relative fluctuation level was always highest near the wall and decreased monotonically toward the plasma centre. The same edge turbulence was observed with or without an outer limiter present. The relative fluctuation level was observed to be independent of the local collisionality over a range of nearly 100. The radial variation of J-tilde$^+$/J-bar$^+$ can be related to the radial density scale length Lsub(n) by J-tilde$^+$/J-bar$^+$ approx.=(3-5)rhosub(s)/Lsub(n).

27492 Plasma rotation in the PDX tokamak. Brau, K.; Bitter, M.; Goldston, R.J.; Manos, D.; McGuire, K.; Suckewer, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Nuclear Fusion;* **23**: No. 12, 1643-1655(Dec 1983).

Paper copy only, copy does not permit microfiche production4 refs.

Toroidal and poloidal rotation has been measured in the Poloidal Divertor Experiment (PDX) tokamak in Ohmic and neutral-beam heated plasmas in a variety of discharge conditions and in both circular and diverted configurations. Rotation velocities were deduced from Doppler shifts of magnetic dipole (M1) lines and lines of optically allowed transitions in the visible and UV regions, from Ksub(α) emission, and also from an array of magnetic pickup loops. Poloidal and toroidal rotation velocities in Ohmically heated discharges were usually less than $3x10^5 cm.s^{-1}$. Near the plasma edge, the toroidal rotation velocity varies with poloidal angle both before and during neutral-beam injection. No systematic poloidal rotation was observed during neutral-beam injection centred about or displaced 10 cm from the horizontal midplane, which implies that the poloidal damping time tausub(theta)<0.5tausub(ii) consistent with theoretical estimates. The central toroidal rotation velocity during neutral-beam injection scales linearly with the quantity Psub(abs)$\sqrt{}$nsub(e) and is independent of plasma current and toroidal magnet field. The toroidal rotation velocity is higher in deuterium than in hydrogen plasmas, and also in diverted discharges as compared with circular ones. Toroidal rotation decay times after injection range from 80-100 ms at the centre to 160-180 ms at half the minor radius. Modelling of the radial profile of toroidal rotation indicates a central momentum diffusivity of the order of $8x10^3 cm^2.s^{-1}$. This is approximately a factor of three higher than the momentum diffusivity obtained from the decay time. All present theories are inadequate in accounting for the observed damping rate of vsub(phi).

27493 Experimental evidence for outward radial transport of impurities from the central cell of TMX. Strand, O.T.; Moos, H.W. (Johns Hopkins Univ., Baltimore, MD (USA). Dept. of Physics); Allen, S.L. (Lawrence Livermore National Lab., CA (USA)). *Nuclear Fusion;* **23**: No. 12, 1675-1681(Dec 1983).

Letter-to-the-editor.

Impurity sources and confinement times in the central cell of TMX were examined by studying the extreme ultraviolet (EUV) emissions from intrinsic and injected impurities. Impurity ions from gases puffed radially toward the central-cell plasma showed very little radial penetration into the plasma. The confinement times of highly ionized intrinsic and injected impurities in the central cell were of the order of or less than the deuterium ion confinement times; the ambient density ratios of O V to O VI indicate overall O VI confinement times near the axis of 0.3 to 3 ms. Impurities introduced into the central-cell plasma were not detected in either end-cell plasma, indicating that axial losses of impurities from the central cell were small. This result agrees with theoretical calculations of the axial confinement times and suggests that most of the losses were radial. The radial flux of impurity ions determined from the measured radial profiles of the ambient impurity ion densities is primarily outward; the magnitude of these fluxes also implies a short confinement time for impurity ions.

27494 Measurement of radiation loss rate of an iron-seeded plasma. Zhu, Z.Y.; Wang, J.S.; Iglesias, E.J.; Maffei, K.C.; Griem, H.R. (Maryland Univ., College Park (USA). Lab. for Plasma and Fusion Energy Studies). *Nuclear Fusion;* **23**: No. 12, 1686-1689(Dec 1983).

Letter-to-the-editor.

The radiation loss rate for iron ions has been determined at Tsub(e)=45eV in a theta-pinch plasma. The intensities of almost all strong vacuum-ultraviolet lines of Fe VII-XI ions were measured, and the total radiative power was obtained from the observed line intensities. The iron impurity concentration was derived from the absolute intensity of the Fe X forbidden line. The experimental radiation loss rate is compared with calculations.

27495 Proposed scenario for burn control in tokamak reactor. Sestero, A. (Associazione EURATOM-ENEA sulla Fusione Centro Ricerche Energia Frascati, C.P. 65, 00044 Frascati, Rome). *Nuclear Technology;* **4**: No. 3, 437-451(Nov 1983).

A feedback control scenario of plasma burning in a tokamak reactor is investigated, whereby compression-expansion of the plasma provides routine control against small deviations from equilibrium, while occasional larger perturbations (expected to be of the cooling type only) are counteracted by the switching on of part of the additional heating system. The feasibility of the proposal is investigated on a profile-corrected zero-dimensional linearized model of the burning plasma, involving separate energy balances for electrons, ions, and alpha particles. Special attention is paid to control-theory features, with the aim to suitably interface them with plasma physics and fusion physics. A positive assessment concerning the feasibility of the proposed scheme is derived, with the proviso, however, that enough accuracy be obtained from the diagnostics that control the input to the feedback loop.

27496 A nuclear diagnostic for fast alpha particles. Grisham, L.R.; Dawson, J.M.; Post, D.E. (Princeton University Plasma Physics Laboratory Princeton, New Jersey 08544). *Nuclear Technology;* **4**: No. 3, 452-455(Nov 1983). Contract AC02-76CH03073.

The authors investigate the possibility of seeding a fusion plasma with nuclei that can undergo nuclear reactions with energetic alpha particles to produce product nuclei that are radioactive. If a fraction of these product nuclei can be collected and measured, one can obtain information about the presence of fast alpha particles. It appears that a feasible diagnostic could be based on the $^{10}B(\alpha,n)^{13}N$ reaction.

27497 Dose rates from induced activity in the ELMO Bumpy Torus proof-of-principle device. Alsmiller, R.G.; Barish, J.; Barnes, J.M.; Santoro, R.T. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Nuclear Technology;* **4**: No. 3, 491-497(Nov 1983). Contract W-7405-ENG-26.

Calculated results of the dose rates from induced activity in the enclosure of the ELMO Bumpy Torus proof-of-principle device (EBT-P) are presented. A cylindrical model of EBT-P is used. EBT-P will have a hydrogen plasma and thus the plasma will not produce neutrons, but substantial numbers of photoneutrons will be produced and it is the induced activity from these photoneutrons that is considered. The activation dose rates are presented for a variety of operating times and times after shutdown. Dose rates about 5 to 10 mrem/h at 1 h after shutdown are obtained and the major contributor to the dose rate at 1 h after shutdown is found to be ^{24}Na (half-life=15.0 h).

27498 Electron transport in one-dimensional plasmas. Wienke, B.R. (Los Alamos National Laboratory Computing Division, Los Alamos, New Mexico 87545). *Nuclear Technology;* **4**: No. 3, 426-436(Nov 1983).

A one-dimensional, multigroup, discrete ordinates technique for computing electron energy deposition in plasmas is detailed. The Fokker-Planck collision operator is employed in the continuous approximation and electric fields (considered external) are included in the equation. Bremsstrahlung processes are not treated. Comparisons with analytic and Monte Carlo results are given. Fits to deposition profiles and energy scaling are proposed and discussed for monoenergetic and Maxwellian sources in the range, 0 to 150 keV, with and without uniform fields. The techniques employed to track electrons are generally useful in situations where the background plasma temperature is an order of magnitude smaller than the electron energy and collective plasma effects are negligible. We have used the approach successfully in laser pellet implosion applications.

27499 Soliton experiments in plasmas. Lonngren, K.E. (Iowa Univ., Iowa City (USA). Dept. of Electrical and Computer Engineering). *Plasma Physics;* **25**: No. 9, 943-982(Sep 1983).

The experiments on solitons in plasmas performed during the period 1970 to 1982 are reviewed. Suggestions for future experiments are presented.

27500 **Plasma transport in stochastic magnetic fields. Pt. 3. Kinetics of test particle diffusion.** Krommes, J.A.; Oberman, C.; Kleva, R.G. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Plasma Physics;* **30**: 11-56(Aug 1983).

A discussion is given of test particle transport in the presence of specified stochastic magnetic fields, with particular emphasis on the collisional limit. Certain paradoxes and inconsistencies in the literature regarding the form of the scaling laws are resolved by carefully distinguishing a number of physically distinct correlation lengths, and thus identifying several collisional subregimes. The common procedure of averaging the conventional fluid equations over the statistics of a random field is shown to fail in some important cases because of breakdown of the Chapman-Enskog ordering in the presence of a stochastic field component with short autocorrelation length. A modified perturbation theory is introduced which leads to a Kubo-like formula valid in all collisional regimes. The direct-interaction approximation is shown to fail in the interesting limit in which the orbit exponentiation length Lsub(K) appears explicitly. A higher-order renormalized kinetic theory in which Lsub(K) appears naturally is discussed and used to rederive more systematically the results of the heuristic scaling arguments.

27501 **Linear model for the tearing mode of a tokamak plasma with flow and a resistive wall boundary condition.** Jensen, T.H.; Chu, M.S. (GA Technologies, Inc., San Diego, CA (USA)). *Journal of Plasma Physics;* **30**: 57-63(Aug 1983).

The tearing mode of a tokamak plasma without flow may be stabilized by the presence of a conducting wall surrounding the plasma. When the wall has a finite resistivity, its presence does not affect stability, only growth rates. If, however the plasma has a flow relative to the resistive wall, both stability and growth rates may be affected. For the cylindrical, circular cross-section tokamak the problem is formulated as a complex eigenvalue problem, with a complex eigen-value Δ', which in the limit of vanishing flow becomes identical to the usual 'delta prime'. The real part of Δ' describes as usual the power absorbed at the singular surface while the imaginary part describes absorption of momentum. It is found that for a plasma with shearless flow, a resistive wall has a stabilizing effect which even for relatively small flow velocities approaches that of a wall of infinite conductivity. Shear flow is found inherently destabilizing, but important only for very large flow velocities.

27502 **Linear density drift instabilities in very low beta plasmas: a different approach.** Gary, S.P. (Los Alamos National Lab., NM (USA)). *Journal of Plasma Physics;* **30**: 75-94(Aug 1983).

A study of the linear Vlasov electromagnetic dispersion equation for density drift instabilities in very low β plasmas is reported. A uniform magnetic field and a weak uniform density gradient are assumed.

27503 **Steady state compact toroidal plasma production.** Turner, W.C. (to Dept. of Energy). US Patent Application 6-495,386. 17 May 1983. 21p. Contract W-7405-ENG-48.

Portions are illegible in microfiche products.

This invention relates to the confinement of field reversed plasma rings and, more particularly, to the steady state maintainance of field reversed plasma rings produced by coaxial plasma guns.

27504 **Monte Carlo treatment for neutral particle transport problems in a toroidal plasma.** Inoue, S.; Nakahara, Y.; Suzuki, T.; Taji, Y. (Japan Atomic Energy Research Institute, Tokai-mura, Ibaraki-ken). *Nuclear Science and Engineering;* **73**: No. 2, 119-124(Feb 1980).

Transport of neutral particles in a toroidal plasma is treated in the same manner as that of neutrons by the Monte Carlo method. A new sampling technique of flight-path length is proposed for the torus geometry. Several routines relating to the toroidal geometry have been developed and incorporated into the neutron and gamma-ray transport Monte Carlo code "MORSE." Results obtained from sample calculations to check the cylindrical approximation show that hot neutrals escape more easily from the torus than from the cylinder, while cold neutrals are retained better in the cylinder. Furthermore, the spectrum of the leakage neutrals is compared with the neutral and ion spectra inside the torus.

27505 (ANL—83-55, pp 113-120) **Magnetic fusion energy research.** Jul 1983. NTIS, PC A10/MF A01.

In Chemical Technology Division. Annual technical report, 1982.

The main design effort focused on the evaluation of critical issues that affect tritium control, tritium recovery, and blanket design for fusion reactors. This effort was divided between two major design studies - FED/INTOR and STARFIRE/DEMO. The former was an international study to establish a world-wide consensus on tokamak fusion-reactor design; the latter focused on blanket design. The design studies, which were completed in 1982, included an assessment of both a representative solid-oxide (Li_2O) and liquid-metal (17Li83Pb) blanket. Other design efforts included investigation of some of the waste management problems associated with disposal of first-wall/blanket modules. In addition, CMT participated in a study sponsored by the Electric Power Research Institute, entitled Technical Risk Assessment of the Tritium Fuel Cycle. The main CMT effort was to define the tritium systems needed in a fusion reactor plant.

27506 **(BNL—34548) Overview of MRB fusion.** Maschke, A.W. (Brookhaven National Lab., Upton, NY (USA)). 1984. Contract AC02-76CH00016. 5p. (CONF-840142—7). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010288.

From International symposium on heavy ion accelerators and their applications to inertial fusion; Tokyo, Japan (23 Jan 1984).

Portions are illegible in microfiche products.

The Momentum-Rich Beam (MRB) fusion concept is a new method of achieving thermonuclear ignition in a single shell DT target. The advantage of the system is that only 1/4 to 1/2 MJ is needed for ignition, and the acceleration system for producing the beams may be 80% efficient or better. This combination of circumstances means that the driver costs for a full-scale ignition system are an order of magnitude less expensive than a comparable laser or heavy ion driver. This is especially important when one realizes that the cost of a conventional 5 MJ driver is in the 1-2 G$ range. This same problem has arisen for magnetic confinement fusion, where the cost of the next step, a full-scale reactor, is prohibitive. The program at BNL is divided into two parts. One part is a program to investigate the physics of interaction between the MRB's and the pellet. This is done with the LASNEX hydro code at LANL. The purpose of this report is to determine the minimum requirements the MRB's must have in order to achieve ignition.

27507 **(CONF-811113—59-Draft) Advanced limiters for ISX.** Mioduszewski, P.K.; Edmonds, P.H.; Sheffield, J. (Oak Ridge National Lab., TN (USA)). 1981. Contract W-7405-ENG-26. 9p. NTIS, PC A02; 3; GPO Dep. Order Number DE84004584.

From American Vacuum Society national symposium; Anaheim, CA, USA (3 Nov 1981).

Paper copy only, copy does not permit microfiche production.

Continuous removal of heat and particles becomes a vital necessity in future steady state fusion devices. The pump limiter seems to be an attractive concept to combine these two tasks. On ISX various schemes of pump limiters are being explored with the final goal to furnish the ISX-C device with a pump limiter to handle heat removal and particle control in steady state. The emphasis of the present paper is on pump limiters based on ballistic

particle collection. If this concept turns out to be successful in supplying sufficient pumping efficiency, it may be possible to design pump limiters without a leading edge. Analytical calculations of the particle collection efficiency are given for various limiter configurations. Pumping efficiencies of approximately +-10%, depending on the specific configuration, seem to be feasible which should be sufficient for steady state operation. First experimental results on pump limiter studies in ISX-B confirm the calculated collection efficiencies. By measuring the ion saturation current to the limiter blade and the pressure build-up simultaneously, a correlation between the incident particle flux and the pressure rise which agrees well with a simple model was found.

27508 **(CONF-840614—20) Tritium inventories and associated tritium breeding requirement for fusion power reactors.** Jung, J. (Argonne National Lab., IL (USA)). Jan 1984. Contract W-31-109-ENG-38. 7p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006404.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

This paper presents an assessment of tritium-breeding requirement for fusion power reactors. The analysis is based on an evaluation of time-dependent tritium inventories in the reactor system. The method presented can be applied to any fusion systems in operation on a steady-state mode as well as on a pulsed mode. The effect of reactor-parameter changes on the required tritium breeding ratio is analyzed for a variety of reactor operation scenarios.

27509 **(CONF-840614—23) Overview of the blanket comparison and selection study.** Smith, D.L.; Baker, C.C.; Sze, D.K.; Abdou, M.A.; Gordon, J.D.; Morgan, G.D.; Piet, S.; Wong, C.P. (Argonne National Lab., IL (USA); California Univ., Los Angeles (USA); TRW, Inc., Redondo Beach, CA (USA); McDonnell Douglas Astronautics Co., St. Louis, MO (USA); EG and G Idaho, Inc., Idaho Falls (USA); GA Technologies, Inc., San Diego, CA (USA)). Jan 1984. Contract W-31-109-ENG-38. 7p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84006408.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

A comprehensive Blanket Comparison and Selection Study was conducted to evaluate proposed D-T fusion reactor blanket concepts and to identify those concepts that offer the greatest potential for fusion reactor applications. The multilaboratory study was led by Argonne National Laboratory and included support from thirteen industrial, national and university laboratories; six primary subcontractors and seven specialized contributors. The primary objectives of the program were (1) to identify a small number ($\sim$ 3) of the blanket concepts that should be the focus of the blanket R and D program, (2) to define and prioritize the critical issues for the leading blanket concepts, and (3) to provide technical input for development of blanket R and D programs. A blanket concept is generally defined by the selection of the component materials, viz., breeder, coolant, structure, and neutron multiplier, and specification of the geometrical configuration. Blanket concepts were evaluated for both the tokamak and tandem mirror reactor configurations using the STARFIRE and MARS reactor designs as a basis, with appropriate modifications to reflect recent advances in technology.

27510 **(CONF-840614—24) Blankets for tritium catalyzed deuterium (TCD) fusion reactors.** Jung, J.; Greenspan, E.; Miley, G.H. (Argonne National Lab., IL (USA); Illinois Univ., Urbana (USA). Fusion Studies Lab.). Jan 1984. Contract W-31-109-ENG-38. 8p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006443.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

The TCD fusion fuel cycle - where the ^{3}He from the D(D,n)^{3}He reaction is transmuted, by neutron capture in the blanket, into tritium which is fed back to the plasma - was recently recognized as being potentially more promising than the Catalyzed Deuterium (Cat-D) fuel cycle for tokamak power reactors. It is the purpose of the present work to assess the feasibility of, and to identify promising directions for designing blankets for TCD fusion reactors.

27511 **(CONF-840614—26) Assessment of problems associated with tritium containment.** Sze, D.K.; Hassanein, A.; Piet, S.; Wong, C.; Bjorndahl, W. (Argonne National Lab., IL (USA); EG and G Idaho, Inc., Idaho Falls (USA); GA Technologies, Inc., San Diego, CA (USA); TRW, Inc., Redondo Beach, CA (USA)). Jan 1984. Contract W-31109-ENG-38. 4p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006441.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

Preventing tritium leakage across a large heat transfer area at high temperature is one of the most difficult problems associated with a D-T fusion reactor design. One of the most efficient methods to reduce the mobility of tritium is to convert it to tritiated water. Most solid breeder systems use a purge gas and assume tritium will be oxidized into the water form. For 17 Li-83Pb system, a double-walled steam generator is used. Tritium is assumed to be oxidized across the gap in between the two walls. However, if tritium cannot be oxidized efficiently, the tritium containment problem can become critical.

27512 **(CONF-840614—32) Nuclear analysis of liquid metal blanket designs.** Gohar, Y. (Argonne National Lab., IL (USA)). Jan 1984. Contract W-31-109-ENG-38. 8p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006742.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

This study concludes the following results: (a) the lithium-lead blanket achieves a higher tritium breeding ratio with a smaller blanket thickness relative to the lithium blanket, (b) the lithium blanket generates more energy per fusion neutron relative to the lithium-lead, (c) the lithium-6 enrichment is required for the lithium-lead blanket to reduce the blanket thickness, and (d) the energy deposition per fusion neutron reaches a saturation as the blanket thickness, the steel fraction in the reflector, or the reflector zone thickness increases. This allows one to design the blanket for a specific TBR without reducing the energy production.

27513 **(CONF-840614—34) Implication of TRIO-01 heat transfer results on solid breeder blanket designs.** Misra, B.; Clemmer, R.G.; Finn, P.A. (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 6p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006743.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

The greatest uncertainty in recent solid breeder blanket designs is associated with the thermophysical properties of lithium ceramics. The thermal conductivity of a solid breeder (κ) and its dependence on nuclear irradiation can be a major design-limiting factor. The TRIO-01 experiment studied in-situ recovery of tritium from a miniature solid breeder blanket (γ-$LiAlO_2$, 65% dense). The data of the TRIO-01 experiment provide an indirect measurement of κ of γ-$LiAlO_2$. This paper briefly discusses calculation of κ from TRIO-01 data and its implications on STARFIRE-type blanket designs.

27514 **(CONF-840614—39) Liquid metal breeder-coolant blanket concept.** Sze, D.K.; Cha, Y.S.; Gohar, Y.; Majumdar, S.; Picologlou, P.; Smith, D.L. (Argonne National Lab., IL (USA)). Jan 1984. Contract W-31-109-ENG-38. 5p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006554.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

This paper discusses the results and conclusions of a self-cooled, liquid-metal design for a D-T fusion reactor, which is part of the Blanket Comparison and Selection Study (BCSS). The effort reported in this paper emphasizes the inboard blanket of a tokamak since the problem is most severe in this region. The work on a self-cooled TMR is also reported.

27515 **(CONF-840616—11) Experiments and theory on half-harmonic light and two-plasmon decay.** Berger, R.L.; Busch, G.; Johnson, R.R.; Powers, L.V.; Schroeder, R.J.; Shepard, C.L.; Tarvin, J.A. (KMS Fusion, Inc., Ann Arbor, MI (USA)). 1984. Contract AC08-82DP40152. 5p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008945.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

Experimental data and theoretical calculations of half-integer harmonic light emission from laser-heated plasmas is presented. The data is quantitatively interpreted by use of the theoretical models.

27516 **(DOE/DP/40124—14) Laboratory for laser energetics. Annual report, 1 October 1980-30 September 1981.** (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1981. Contract AC08-80DP40124. 183p. NTIS, PC A09/MF A01; 1; GPO Dep. Order Number DE84010415.

Portions are illegible in microfiche products.

During 1981 we have carried out research and development programs in the following areas: (1) X-Ray Biophysics. The high x-ray conversion efficiency of laser-produced plasmas allows subnanosecond probing of crystal-like structures using x-ray diffraction. (2) X-Ray Laser. Laser-produced plasmas are prime candidates for an x-ray laser medium. Population inversion which could result in gain in the 100-A region has been measured in collisionally pumped transitions of various materials. (3). Picosecond Research. This area developed from the high-speed diagnostics and switching requirements of the laser-fusion research. (4) Microfabrication. The need to develop precise microscopic objects (laser-fusion targets) for the fusion program at LLE has stimulated inventions having broader application than just in the field of laser fusion. (5) Optical Materials. A strong program in optical materials development and characterization has been developed at LLE. We now have the capability to design, fabricate, and fully test and characterize a wide variety of optical coatings. We are carrying out development work on laser applications of liquid crystals and on uv transmissive optical materials.

27517 **(DOE/DP/40124—16) Inertial fusion program and National Laser Users Facility projects. Annual report, October 1, 1981-September 30, 1982.** (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1982. Contract AC08-80DP40124. 206p. NTIS, PC A10/MF A01; 1; GPO Dep. Order Number DE84010417.

Portions are illegible in microfiche products.

The Laboratory for Laser Energetics (LLE) continues to pursue its three-fold mission of (a) demonstrating the feasibility of laser fusion with short-wavelength lasers and directly driven targets, (b) operating the National Laser Users Facility (NLUF), and (c) developing advanced technology areas related to high-energy-density phenomena.

27518 **(DOE/DP/40124—40) Characterization of micron-sized, optical coating defects by photothermal deflection microscopy.** Abate, J.A.; Schmid, A.W.; Guardalben, M.G.; Smith, D.J.; Jacobs, S.D. (Rochester Univ., NY (USA). Lab. for Laser Energetics). Apr 1984. Contract AC08-80DP40124. 22p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011150.

Lab Report 154.

Information about the localized absorbing defects in optical thin films is required for a better understanding of laser-induced damage. Photothermal deflection microscopy offers a nondestructive optical diagnostic which can yield spatially resolved absorption data on simple and multiple-layer AR and HR dielectric coatings. This paper describes the computer-controlled apparatus used to generate absorption maps of dielectric thin films and an experiment in which a partial correlation between localized absorption sites and damage caused by nanosecond laser irradiation at 351 nm is established. An absolute calibration of absorption for our measurement technique is presented here. Micron-sized absorbtive defects of Cu were introduced into our coatings to provide a means of calibration. Also presented here are some preliminary data on the modification of the absorption signatures measured by photo-thermal deflection as a function of the location of the defect within the coating layers.

27519 **(DOE/DP/40137—2) Study of stimulated Brillouin and Raman scattering. Final report, 1982-1983.** Pietrzyk, Z.A.; Brooks, R.D.; Berger, R. (Washington Univ., Seattle (USA). Dept. of Nuclear Engineering). 1983. Contract AS08-81DP40137. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011260.

Portions are illegible in microfiche products.

Investigations of SRS and hot electron production as observed in the laboratory are discussed along with some computer modeling of these processes. Since the plasma was preformed with n everywhere less than 1/4 n/sub c/, a situation generally much different from laser produced plasmas, it was possible to observe hot electrons generated exclusively by the SRS process, a situation rare among SRS experiments. Using 10.6 μm radiation from a pulsed CO_2 laser, suprathermal electron distributions have been directly detected which have Maxwellian shapes and corresponding temperatures from 29 to 105 keV. A temporal correlation between the fast electron pulses and the back-scattered SRS radiation was also seen.

27520 **(DOE/ER—0045/11) Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1983.** (Oak Ridge National Lab., TN (USA)). Mar 1984. Contract W-7405-ENG-26. 230p. NTIS, PC A11/MF A01; GPO Dep. Order Number DE84007335.

Separate abstracts were prepared for 29 of the included sections. (MOW)

27521 (DOE/ER—0045/11, pp 4-10) **Control of activation levels to simplify waste management of fusion reactor ferritic steel components.** Wiffen, F.W.; Santoro, R.T. Mar 1984. NTIS, PC A11/MF A01.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1983.

The objective of this work is to examine the restrictions placed on the composition of steels to allow simplified waste management after service in a fusion reactor first wall. Decay of steel activity within tens of years could simplify waste disposal or even permit recycle. For material recycle, N, Al, Ni, Cu, Nb, and Mo must be excluded. For shallow land burial, initial concentration limits include (in at. ppM) Ni, <20,000; Mo, <3650; N, <3650; Cu, <2400; and Nb, <1.0. Other constituents of steels will not be limited.

27522 (DOE/ER—0045/11, pp 11-20) **Alloy development for fast induced radioactivity decay for fusion reactor applications.** Klueh, R.L.; Bloom, E.E. Mar 1984. NTIS, PC A11/MF A01.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1983.

During the operation of a fusion reactor, the structural material of the first wall and blanket structure will become highly radioactive from activation by the high-energy fusion neutrons. A difficult radioactive waste management problem will be involved in the disposal of this material after the service lifetime is complete. One way to minimize the management problem is the use of structural materials where the radioactive isotopes in the irradiated material decay to levels that allow for simplified disposal techniques. We are exploring how ferritic and austenitic steels could be developed to meet this objective.

27523 (DOE/ER—0045/11, pp 21-28) **Magnetic forces on a ferromagnetic HT-9 first wall/blanket and coolant pipe.** Lechtenberg, T.A.; Dahms, C.; Attaya, H. (GA Technologies, Inc., San Diego, CA; Univ. of Wisconsin, Madison). Mar 1984. NTIS, PC A11/MF A01.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1983.

The GFUN 3D code was used to model the toroidal fields and determine the magnetic body forces on the STARFIRE design for coolant pipes exiting the first wall sector and first wall/blanket modules. The HT-9 coolant pipes were modeled on the basis of a square bar having the same length and material volume as the coolant pipes. The stress analysis was performed using these magnetic forces applied to a pipe of 4 meters length, 8.25 cm O.D., and 0.75

cm thickness by the MODSAP stress analysis code. For the first wall/blanket module, GFUN 3D does not allow full modeling of the complex thin-walled structure or numerous small tubes because of the element aspect ratio limitations. Therefore, to obtain three dimensional loads, a solid homogeneous equivalent structure was used.

27524 (DOE/ER—0045/11, pp 30-37) **Neutron source characterization for materials experiments.** Greenwood, L.R. (Argonne National Lab., IL). Mar 1984. NTIS, PC A11/MF A01.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1983.

Damage and gas production calculations are summarized for the CTR 31, 32, 34, and 35 irradiations in HFIR. Neutron dosimetry measurements and damage calculations are also presented for the T2 and RB1 irradiations in HFIR. The helium production from nickel has been revised according to new cross section evaluations for ^{59}Ni. The status of all other experiments is summarized.

27525 (DOE/ER—0045/11, pp 43-51) **Disk-bend ductility tests for irradiated materials.** Klueh, R.L.; Braski, D.N. Mar 1984. NTIS, PC A11/MF A01.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1983.

We modified the HEDL disk-bend test machine and are using it to qualitatively screen alloys that are susceptible to embrittlement caused by irradiation. Tests designed to understand the disk-bend test in relation to a uniaxial test are discussed. Selected results of tests of neutron-irradiated material are also presented.

27526 (DOE/ET/52021—T1) **High field compact tokamak reactor (HFCTR) conceptual design. Final report.** (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Jan 1979. Contract AC02-77ET52021. 480p. NTIS MF A01; 2; GPO Dep. Order Number DE84008865.

Microfiche only, copy does not permit paper copy reproduction.

A conceptual design has been developed for a compact (R_0 = 6.0 m) high field (B/sub T/ = 7.4 T) tokamak demonstration power reactor which can produce fusion power densities as high as 10 MW/m^3 with a spatially averaged value of toroidal beta of less than 5%. The HFCTR design is based upon minimal extrapolation from experimentally established plasma confinement and MHD stability in tokamak devices. A unique design for the Nb_3Sn toroidal-field magnet system reduces the stress in the high-field trunk region and allows the achievement of high fields with a small radial build. An integrated system of automated actuators, vacuum and current-carrying mechanical joints and flexible cryostats allow total modularization of the reactor, including the coil systems. A detailed estimate of maintenance operation time indicated the possibility of very high plant availability. The modest value of toroidal beta permits a simple plasma-shaping coil system, located inside the TF coil trunk. Heating of the central plasma is attained by the use of ripple-assisted injection of 120-keV D^0 beams, which is also used for dynamic control of the plasma temperature during the burn period. A FLIBE-lithium blanket is designed especially for high-power-density operation in a high-field environment, and gives an overall tritium breeding ratio of 1.05.

27527 (DOE/ET/52028—1) **Fusion reactor technology studies. Final report for period August 1, 1972 - October 31, 1978.** Kulcinski, G.L.; Maynard, C.W. (Wisconsin Univ., Madison (USA)). Apr 1984. Contract AC02-76ET52028. 43p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84011389.

Major accomplishments for the period August 1, 1972 - October 31, 1978 include the publishing of four comprehensive fusion reactor conceptual design studies; experimental studies in the areas of radiation damage, plasma-wall interactions, superconducting magnets and 14-MeV neutron cross sections; development of the concepts of carbon curtains and ISSEC's for use in fusion reactors; development of a neutron and gamma heating computer code, a radioactivity and afterheat computer code and a neutral transport computer code; and studies in the areas of RF heating for tokamaks and resource assessment for fusion reactors.

27528 (DOE/ET/53088—135) **Nonlinear dynamics of magnetic islands with curvature and pressure.** Kotschenreuther, M.; Hazeltine, R.D.; Morrison, P.J. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Mar 1984. Contract FG05-80ET53088. 43p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010968.

Portions are illegible in microfiche products.

Curvature and finite pressure are known to have a dramatic influence on linear magnetic tearing stability. An analytic theory of the nonlinear resistive growth of magnetic islands in tokamaks is presented here, including the interchange driving term. A Grad-Shafranov equation to describe the MHD equilibrium of thin islands is derived. The resistive evolution of these islands is then obtained. Interchange effects are found to become progressively less important with increasing island width.

27529 (EIR—455) **Cross section sensitivity and uncertainty analysis for European INTOR and U.S. FED designs.** Pelloni, S. (Eidgenoessisches Inst. fuer Reaktorforschung, Wuerenlingen (Switzerland)). Jun 1982. 85p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84700884.

Also published as General Atomic Report GA-A--16685.

The European Community International Tokamak Reactor (INTOR-EC) and U.S. Fusion Engineering Device (FED) were used as a basis to investigate the uncertainties of several neutronics performance parameters such as tritium breeding ratio in the blanket, atomic displacement rate in the copper stabilizer, and nuclear heating in the epoxy-based insulator that arise due to nuclear data uncertainties and data processing discrepancies. Neutronics calculations were performed and reaction rates estimated for the recent INTOR-EC using the DLC-37 and DLC-41 cross section libraries. In general, the basic cross section data are known accurately enough to determine the tritium breeding ratio of the INTOR-EC within +-2%. The atomic displacement rate and nuclear heating rate in the superconducting magnet of FED (and presumably also INTOR-EC), however, can be predicted to only about +-12% to 24%. If additional accuracy is required, improved measurements of the iron, chromium, and nickel cross sections in the energy range between 12 and 14 MeV will be needed.

27530 (GA-A—17275) **Doublet III ECH Project administration plan.** Prater, R. (GA Technologies, Inc., San Diego, CA (USA)). Aug 1983. Contract AT03-76ET51011. 25p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84008592.

Portions are illegible in microfiche products.

This administrative plan establishes the framework, organization, and methods for integrating a number of diverse system requirements. Essential to the integration process is the establishment of concise communication between program participants. Single point contacts have been designated at GA, DOE/OFE, and DOE/SAN so that all official correspondence is routed through one individual at each management control point. The names of the individuals are given.

27531 (GA-A—17471) **Components and transmission systems for ECH.** Moeller, C.P.; Prater, R.; Lin, S.H. (GA Technologies, Inc., San Diego, CA (USA)). Mar 1984. Contract AT03-84ER51044. 13p. (CONF-840311—9). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011314.

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

Portions are illegible in microfiche products.

We describe the elements of a transmission and launching system used to transmit 200 kW of 60 GHz power per gyrotron in the 2 MW ECH experiment on the Doublet III tokamak. Various system components such as mode converters, waveguide bends, and directional couplers, as well as system efficiency and operation, are discussed.

27532 **(IAE—3526/7) Matching parameters of a plasma shell and power supply electric circuit in a linear Z pinch device.** Zemskov, A.I.; Matveev, V.V.; Prut, V.V.; Udalov, A.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. 17p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701403.

Conditions of self-consistency of a discharge chamber and power supply electric circuit are analyzed for obtaining the neutron yield $>= 10^{13}$ n/pulse in a noncylindrical z-pinch device at the expense of increasing the capacitor energy and discharge current. Optimum dimensionless parameters are presented; the neutron yield dependence on the current is derived. An experimental installation is described - a short z-pinch device, where plasma shell in the discharge chamber is formed as a result of plasma injection from an electrothermal injector. Current oscillograms with a sharply expressed particularity are obtained, during which a hard X-radiation burst has been observed. Measurements of X-radiation spatial-, time- and energy characteristics have been carried out. A high reproducibility of the results is noted.

27533 (JAERI-M—9999, pp 239-246) **Past and present of fusion reactor neutronics integral experiments.** Seki, Yasushi (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Mar 1982. (In Japanese). NTIS (US Sales Only), PC A06/MF A01. (NEANDC(J)—81/U; INDC(JAP)—68/L; CONF-8111184—).

From Seminar on nuclear data; Tokai, Ibaraki, Japan (26 Nov 1981).

Past history and present status of integral experiments on D-T fusion reactor neutronics are reviewed. In addition, the requests from the fusion reactor design to the integral experiments are summarized.

27534 (JAERI-M—9999, pp 247-256) **First blanket experiment by FNS.** Maekawa, Hiroshi (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Mar 1982. (In Japanese). NTIS (US Sales Only), PC A06/MF A01. (NEANDC(J)—81/U; INDC(JAP)—68/L; CONF-8111184—).

From Seminar on nuclear data; Tokai, Ibaraki, Japan (26 Nov 1981).

As the first blanket experiment using the Fusion Neutronics Source (FNS), the integral experiment on a Li_2O-C assembly was carried out. Measured items were as follows: 1) absolute fission-rate distributions, 2) tritium production-rate distributions, 3) response distributions of LiF TLD's, 4) induced activity of SUS316 stainless steel. The measured values were compared with calculated ones.

27535 **(KFTI—83-8) Possibility of the control by the relation of plasma radii and the first wall in thermonuclear devices.** Kotenko, V.G.; Romanov, S.S. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1983. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701405.

The possibility for controlling the distance between plasma filament and the wall in some magnetic systems of the stellator type is considered. The analysis is carried out according to the known literary data for linear configurations with point conductors in the range of alteration of parameter rsub(c)asup(-1) < 0.5 where rsub(c) the position of the separatris nib, a is the radius of the cylinder on which conductors are placed. The analysis has shown that in the range of alteration of the rsub(c)asup(-1) parameters the control of the position of separatrix rib most effectively realizes in three-turn classic stellarator.

27536 **(KMSF-U—1445) Holographic interferometry using twenty-picosecond uv pulses to obtain time resolved hydro measurements of selenium and gold plasmas.** Busch, G.E.; Johnson, R.R.; Shepard, C.L. (KMS Fusion, Inc., Ann Arbor, MI (USA)). 1984. Contract AC08-82DP40152. 5p. (CONF-8406104—2). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009485.

From Topical meeting on ultrafast phenomena; Monterey, CA, USA (12 Jun 1984).

A plasma probing (263 nm) pulse, from a temporally compressed YLF oscillator, delineates electron densities of very early (10 to 150 psec) selenium and gold plasmas using holographic interferometry.

27537 **(LA—9990-PR) Tokamak poloidal field systems. Progress report, January 1-December 31, 1983.** Rogers, J.D. (comp.). (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011006.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The work performed in support of the TFCX or DCT-8 studies is reported in detail and covers most aspects of the poloidal field (PF) design that were considered. The work, of a conceptual engineering design nature, included determination of magnetics, forces and fields; superconductor design and losses; structural channel support of internally cooled cable superconductor (ICCS); fault conditions for shorted PF coils; heat transfer, fluid dynamics, stability, and transient pressure rise for 3.0 and 4.5 K ICCS PF coils; and overall design of both pool bath cooled conductor (PBCC) and ICCS PF coil sets. Eddy current calculations in tokamak structures were made for transient conditions with a number of general and particular conclusions reached. Impovements to the 2 MJ switch test facility were made to increase its current carrying capacity substantially.

27538 **(LA—10035-MS) Some considerations on silicone oil in high-current and energy-disconnecting mechanisms.** Vogel, H.F. (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011021.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Silicone oil is considered inflammable. The dissociation products generated by an electric arc under silicone oil are known to form a highly explosive mixture with air. We calculate the arc energy required for dissociation to be 32 kJ per liter of gas mixture at standard pressure and temperature. We calculate the arc voltage gradient at a pressure of 50 atm and current density of 1 kA/mm^2 to be 0.5 kV/cm, resulting in an arc voltage of several kV, depending on the arc length. In a multikiloampere arc, the resulting arc power is likely to cause a pressure of many atmospheres in a shock wave.

27539 **(LA—10048-MS) Hamiltonian structure of field-line equations.** Channell, P.J. (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 7p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011019.

The canonical structure of the field-line equations in toroidal geometry is derived, and the global Hamiltonian for one choice of canonical coordinates is given explicitly.

27540 **(LA-UR—84-168) FIRST STEP towards ICF commercialization.** Saylor, W.W.; Pendergrass, J.H.; Dudziak, D.J. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 6p. (CONF-840614—15). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006017.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

Production of tritium for weapons and fusion R and D programs and successful development of Inertial Confinement Fusion (ICF) technologies are important national goals. A conceptual design for an ICF facility to meet these goals is presented. FIRST STEP (Fusion, Inertial, Reduced-Requirements Systems Test for Special Nuclear Material, Tritium, and Energy Production) is a concept for a plant to produce SNM, tritium, and energy while serving as a test bed for ICF technology development. A credible conceptual design for an ICF SNM and tritium production facility that competes favorably with fission technology on the bases of cost, production quality, and safety was sought. FIRST STEP is also designed to be an engineering test facility that integrates systems required for an ICF power plant and that is intermediate in scale between proof-of-principle experiment and commercial power plant. FIRST STEP driver and pellet performance requirements are moderate and represent reasonable intermediate goals in an R and D plan for ICF commercialization. Repetition rate require-

ments for FIRST STEP are similar to those of commercial size plants and FIRST STEP can be used to integrate systems under realistic ICF conditions.

27541 **(LA-UR—84-169) FIRST STEP blanket structure and fuel assembly design.** Saylor, W.W.; Pendergrass, J.H.; Thayer, G.R. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 6p. (CONF-840614—14). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006018.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

FIRST STEP (Fusion, Inertial, Reduced Requirement Systems Test for Special Nuclear Material, Tritium, and Energy Production) is an Inertial Confinement Fusion (ICF) plant designed to produce tritium, SNM, and energy using near-term technology. It is an integrated facility that will serve as a test bed for fusion power plant technology. The design of the blanket structure and blanket fuel assembly for wetted-wall FIRST STEP reactors is presented here.

27542 **(LA-UR—84-170) Use of the Streaming Matrix Hybrid Method for discrete-ordinates fusion reactor calculations.** Battat, M.E.; Davidson, J.W.; Dudziak, D.J.; Thayer, G.R. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 7p. (CONF-840614—18). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006019.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

The use of the discrete-ordinates method for solving two-dimensional, neutral-particle transport in fusion reactor blankets and shields is often limited by inherent inaccuracies due to the ray-effect. This effect presents a particular problem in the case of neutron streaming in the large internal void regions of a fusion reactor. A deterministic streaming technique called the Streaming Matrix Hybrid Method (SMHM) has been incorporated in the two-dimensional discrete-ordinates code TRIDENT-CTR. Calculations have been performed for an actual inertial-confinement fusion (ICF) reactor design using TRIDENT-CTR both with and without the SMHM. Comparisons of the calculated fluxes indicate that substantial mitigation of the ray effect can be achieved with the SMHM. Calculations were performed for the Los Alamos FIRST STEP hybrid ICF reactor designed for tritium production. Conventional ^{238}U fuel rod assemblies surround the spherical steel target chamber to form an annular cylindrical blanket. An axial fuel region is included to complete the blanket.

27543 **(LA-UR—84-623) Analysis of surface currents on the CTX mesh flux conserver.** Wright, B.L. (Los Alamos National Lab., NM (USA)). Feb 1984. Contract W-7405-ENG-36. 5p. (CONF-840255—14). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84007491.

From 6. US-Japan symposium on compact toroid research; Princeton, NJ, USA (20 Feb 1984).

The use of discharge cleaning and a mesh structure for the flux conserver have led to hotter, less resistive, spheromak configurations in the CTX experiment. Achievement of these conditions has been accompanied by the appearance of oscillations - most notably seen on magnetic probe signals - that were previously not present. These oscillations are observed both during the sustainment (V/sub gun/ not equal to 0) and the decaying (V/sub gun/ = 0) phases of the discharge and are attributed to the presence of internal kink modes driven by the departure of the plasma current distribution from the Taylor state: j/B = const. Computations suggest that an n-1 mode becomes unstable when j/B increases away from the magnetic axis (sustained spheromak) whereas an n=2 mode becomes unstable for radially decreasing j/B (decaying spheromak). The results reported are from an 80-cm-diameter mesh flux conserver constructed form 0.5"-diameter copper stock. It is of the same oblate rooftop design as used for previous work with a dimension of 40 cm from front to back.

27544 **(LA-UR—84-624) Sustained spheromak technology.** Platts, D.A.; Sherwood, A.R.; Jarboe, T.R.; Linford, R.K.; Hoida, H.W.; Henins, I. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 4p. (CONF-840255—13). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84007497.

From 6. US-Japan symposium on compact toroid research; Princeton, NJ, USA (20 Feb 1984).

The goal of these experiments is to devise a technique for driving a spheromak using dc-powered electrodes. The reduction or elimination of pulsed power components in the spheromak source would result in more attractive reactors, and simpler, cheaper experiments. This is important as experiments get larger and approach reactor size. According to some concepts, the dc spheromak would operate with plasma injection so that it would clean up any impurities produced during its formation. These features make the investigation of dc-powered spheromaks interesting. The questions that need to be answered in this investigation are: (1) can a spheromak be sustained by a dc source; and (2) can a practical source be designed to produce a hot clean plasma. After summarizing the evidence which suggests an answer to question one, the approach being taken to answer question two is discussed.

27545 **(LA-UR—84-870) Internal magnetic field measurements in a translating field-reversed configuration.** Armstrong, W.T.; Chrien, R.E.; McKenna, K.F.; Rej, D.J.; Sherwood, E.G.; Siemon, R.E.; Tuszewski, M. (Los Alamos National Lab., NM (USA)). 23 Feb 1984. Contract W-7405-ENG-36. 5p. (CONF-840255—19). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010054.

From 6. US-Japan symposium on compact toroid research; Princeton, NJ, USA (20 Feb 1984).

Portions are illegible in microfiche products.

Magnetic field probes have been employed to study the internal field structure of Field-Reversed Configurations (FRCs) translating past the probes in the FRX-C/T device. Internal closed flux surfaces can be studied in this manner with minimal perturbation because of the rapid transit of the plasma (translational velocity v/sub z/ $\sim$ 10 cm/μs). Data have been taken using a low-field (5 kG), 5-mtorr-D_2 gas-puff mode of operation in the FRC source coil which yields an initial plasma density of $\sim 1 \times 10^{15}$ cm^{-3} and x/sub s/ $\sim$ 0.04. FRCs translate from the $\sim$ 25 cm radius source coil into a 20 cm radius metal translation vessel. Two translation conditions are studied: (1) translation into a 4 kG guide field (matched guide-field case), resulting in similar plasma parameters but with x/sub s/ $\sim$ .45, and (2) translation into a 1 kG guide field (reduced guide-field case), resulting in expansion of the FRC to conditions of density $\sim 3 \times 10^{14}$, external field $B_0 \sim 2$ kG and x/sub s/ $\sim$ 0.7. The expected reversed B/sub z/ structure is observed in both cases. However, the field measurements indicate a possible sideways offset of the FRC from the machine axis in the matched case. There is also evidence of island structure in the reduced guide-field case. Fluctuating levels of B/sub theta/ are ovserved with amplitudes $\leq B_0/3$ in both cases. Field measurements on the FRC symmetry axis in the reduced guide-field case indicate β on the separatrix of β/ sub s/ $\simeq$ 0.3 (indexed to the external field) has been achieved. This decrease of β/sub s/ with increased x/sub s/ is expected, and desirable for improved plasma confinement.

27546 **(LA-UR—84-1062) Scaling of electron range reduction by magnetic insulation.** Lee, K. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 5p. (CONF-840616—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84009989.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

Portions are illegible in microfiche products.

The range of energetic electrons in subnormal density material can be dramatically reduced to prevent target preheat without significant mass penalty. Electron range scaling law and calculational design of an experiment to verify range reduction are presented.

27547 **(LBL—16528) Influence of processing on the cryogenic mechanical properties of high strength high manganese stainless steel.** Ogawa, R.; Morris, J.W. Jr. (Lawrence Berkeley Lab., CA (USA)). Aug 1983. Contract AC03-76SF00098. 10p. (CONF-830841—31). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008242.

From Cryogenic engineering conference and international cryogenic materials conference; Colorado Springs, CO, USA (15 Aug 1983).

New high strength structural steels have been required for the large superconducting magnets that will be used for the next step test facility for fusion reactor research. The new materials must have high yield strength accompanied with better toughness and better fatigue resistance compared with the conventional nitrogen-strengthened stainless steels such as AISI 304LN and 316LN that were used for the cases of the toroidal field coils for the Large Coil Project. A number of new high manganese austenitic steels have been proposed for new cryogenic structural alloys since they can offer low cost, stable austenite and high strength.

27548 **(LBL—17256) High current heavy ion beam transport experiment at LBL.** Chupp, W.; Faltens, A.; Hartwig, E.C.; Keefe, D.; Kim, C.H.; Pike, C.; Rosenblum, S.S.; Tiefenback, M.; Vanecek, D.; Warwick, A.I. (Lawrence Berkeley Lab., CA (USA)). Jan 1984. Contract AC03-76SF00098. 13p. (CONF-840142—5). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009225.

From International symposium on heavy ion accelerators and their applications to inertial fusion; Tokyo, Japan (23 Jan 1984).

Information on the current limit in a long quadrupole transport channel is required in designing an accelerator driver for an inertial confinement fusion system. Although a current transport limit was proposed by Maschke, quantitative estimates require a detailed knowledge of the stability of the beam. Analytic calculations based on the Kapchinskij-Vladimirskij (K-V) distribution function have identified transversely unstable modes, but particle simulations have shown that some of the K-V instabilities are benign, i.e., particles redistribute themselves in the 4-D transverse phase space, but the rms emittances do not grow. Some preliminary results of beam transport experiments were reported in the 1983 Particle Accelerator Conference in Santa Fe.

27549 **(MTR—7921-Summ.) Summary report of findings and recommendations. Workshop panel on commercializing inertial confinement fusion.** Greeley, R.S.; Ghovanlou, A.; Ettlinger, L.; Lord, N. (Mitre Corp., McLean, VA (USA)). 1978. Contract AC01-78DP40040. 14p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008892.

The panel felt that commercialization of inertial confinement fusion will eventually require the involvement of a broad range of industrial and user participants. The panel felt that it is not at all too soon to encourage involvement of these participants directly in the program and, with their assistance, to develop a program plan to provide for increasing participation of industry as the ICF program milestones are achieved.

27550 **(NIIEFA-P-B—0554) Plane-toroidal solenoid near ferromagnets.** Mingalov, B.S. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)). 1981. 18p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701406.

An analytical method is suggested to calculate the characteristics of a magnetic system consisting of several identical planar coils of an arbitrary form located axisymmetrically around a ferromagnetic body limited by cylindrical surfaces. A particular case of such system is realized as a constituent of the toroidal magnetic system of a tokamak type installation. As an example of calculating the system characteristics analytical formulas are obtained for the corrugation of a magnetic field in case of axisymmetrical system.

27551 **(NRL-MR—5204) Observation of Rayleigh-Taylor-like structures in a laser-accelerated foil.** Whitlock, R.R.; Emery, M.H.; Stamper, J.A.; McLean, E.A.; Obenschain, S.P.; Peckerar, M.C. (Naval Research Lab., Washington, DC (USA)). 19 Mar 1984. Contract AI08-79DP40092. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010847.

Portions are illegible in microfiche products.

Laser-accelerated targets have been predicted to be subject to the Rayleigh-Taylor hydrodynamic instability. The development of the instability was studied by introducing mass thickness variations in foil targets and observing the development of the target nonuniformities by side-on flash x radiography. Observations were made of target structures and mass redistribution effects which resemble Rayleigh-Taylor bubbles and spikes, including not only advanced broadening of the spike tips on the laser-irradiated side of the foil but also projections of mass on the unirradiated side. The observations compare well with numerical simulations.

27552 **(ORNL/TM—9002) Plasma engineering studies for Tennessee Tokamak (TENTOK) fusion power reactor.** Yokoyama, K.E.; Lacatski, J.T.; Miller, J.B.; Bryan, W.E.; King, P.W.; Santoro, R.T.; Uckan, N.A.; Shannon, T.E. (Oak Ridge National Lab., TN (USA)). Feb 1984. Contract W-7405-ENG-26. 17p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84007555.

This paper summarizes the results of the plasma engineering and systems analysis studies for the Tennessee Tokamak (TENTOK) fusion power reactor. TENTOK is a 3000-MW(t) central station power plant that uses deuterium-tritium fuel in a D-shaped tokamak plasma configuration with a double-null poloidal divertor. The major parameters are R_0 = 6.4 m, a = 1.6 m, σ (elongation) = 1.65, [n] = 1.5 x 10^{20} m^{-3}, [T] = 15 keV, [β] = 6%, B/sub T/ (on-axis) = 5.6 T, I/sub p/ = 8.5 MA, and wall loading = 3 MW/m^2. Detailed analyses are performed in the areas of (1) transport simulation using the one-and-one-half-dimensional (1-1/2-D) WHIST transport code, (2) equilibrium/poloidal field coil systems, (3) neutral beam and radiofrequency (rf) heating, and (4) pellet fueling. In addition, impurity control systems, diagnostics and controls, and possible microwave plasma preheating and steady-state current drive options are also considered. Some of the major features of TENTOK include rf heating in the ion cyclotron range of frequencies, superconducting equilibrium field coils outside the superconducting toroidal field coils, a double-null poloidal divertor for impurity control and alpha ash removal, and rf-assisted plasma preheating and current startup.

27553 **(PPPL—2048) Initial conditioning of the TFTR vacuum vessel.** Dylla, H.F.; Blanchard, W.R.; Krawchuk, R.B.; Hawryluk, R.J.; Owens, D.K. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jan 1984. Contract AC02-76CH03073. 21p. (CONF-831011—6). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006281.

From American Vacuum Society symposium; Boston, MA, USA (31 Oct 1983).

We report on the initial conditioning of the Tokamak Fusion Test Reactor (TFTR) vacuum vessel prior to the initiation of first plasma discharges, and during subsequent operation with high power ohmically-heated plasmas. Following evacuation of the 86 m^3 vessel with the 10^4 l/s high vacuum pumping system, the vessel was conditioned by a 15 A dc glow discharge in H_2 at a pressure of 5 mTorr. Rapid-pulse discharge cleaning was used subsequently to preferentially condition the graphite plasma limiters. The effectiveness of the discharge cleaning was monitored by measuring the exhaust rates of the primary discharge products (CO/C_2H_4, CH_4, and H_2O). After 175 hours of glow discharge treatment, the equivalent of 50 monolayers of C and O was removed from the vessel, and the partial pressures of impurity gases were reduced to the range of 10^{-9}-10^{-10} Torr.

27554 **(PPPL—2094) Magnetic field line Hamiltonian.** Boozer, A.H. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1984. Contract AC02-76CH03073. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010403.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The magnetic field line Hamiltonian and the associated canonical form for the magnetic field are important concepts both for understanding toroidal plasma physics and for practical calculations. A number of important properties of the canonical or Hamiltonian representation are derived and their importance is explained.

27555 **(PPPL—2104) Effect of finite β on stellarator transport.** Mynick, H.E. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1984. Contract AC02-76CH03073. 43p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011199.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A theory of the modification of stellarator transport due to the presence of finite plasma pressure is developed, and applied to a range of stellarator configurations. For many configurations of interest, plasma transport can change by more than an order of magnitude in the progression from zero pressure to the equilibrium β limit of the device. Thus, a stellarator with transport-optimized vacuum fields can have poor confinement at the desired operating β. Without an external compensating field, increasing β tends to degrade confinement, unless the initial field structure is very carefully chosen. The theory permits one to correctly determine this vacuum structure, in terms of the desired structure of the field at a prescribed operating β. With a compensating external field, the deleterious effect of finite β on transport can be partially eliminated.

27556 **(PPPL—2105) Environmental monitoring report for calendar year 1983.** Stencel, J.R. (Princeton Univ., NJ (USA). Plasma Physics Lab.). May 1984. Contract AC02-76CH03073. 59p. NTIS, PC A04; 3; GPO Dep. Order Number DE84010771.

Paper copy only, copy does not permit microfiche production. Original copy available until stock is exhausted.

The results of the environmental monitoring program for CY83 for the Princeton Plasma Physics Laboratory (PPPL) are presented and discussed. Besides the Princeton Large Torus (PLT) and Poloidal Divertor Experiment (PDX), PPPL's largest tokamak, the Tokamak Fusion Test Reactor (TFTR) had a full year of operation. A phased approach has been planned to assure the proper level of monitoring to coincide with the TFTR program. During CY83 there were no adverse effects to the environment resulting from any operational program at PPPL and the Laboratory was in compliance with all applicable Federal, State, and local environmental regulations.

27557 (RL—83-069, pp vp) **Chemical compatibility between lithium compounds and transition metals.** Pulham, R.J.; Watson, W.R. (Nottingham Univ. (UK). Dept. of Chemistry). 1983. NTIS (US Sales Only), PC A05/MF A01. (CONF-8209215—).

From Meeting of SERC research grant holders in fusion technology; Abingdon, UK (28 Sep 1982).

The aim is to investigate the chemical reactions or otherwise of lithium compounds; Li_7Pb_2 (a tritium breeder), Li_2O (breeder and impurity), Li_3N and LiH (impurities) with containment and fusion reactor component metals - 316 and austenitic steels, titanium. Experimental details are given and results are summarized.

27558 (RL—83-069, pp vp) **Theoretical studies of fusion materials.** De Leeuw, S.W.; Dixon, M.; Elliott, R.J. (Oxford Univ. (UK). Dept. of Theoretical Physics). 1983. NTIS (US Sales Only), PC A05/MF A01. (CONF-8209215—).

From Meeting of SERC research grant holders in fusion technology; Abingdon, UK (28 Sep 1982).

The main aim of the work is the study of metals containing a high concentration of defects generated in a displacement cascade. Molecular dynamics simulation techniques are used. Two basic difficulties arise when one tries to implement simulation techniques for these materials. These are: (1) the choice of a suitable potential model; and (2) the choice of boundary conditions for the simulations. Work using copper as the chosen material is reported briefly.

27559 **(SAND—83-1248C) Prospective light ion ICF driver.** Buttram, M.; Quintenz, J.P.; Johnson, D.J. (Sandia National Labs., Albuquerque, NM (USA)). 1983. Contract AC04-76DP00789. 9p. (CONF-831203—137). NTIS, PC A02; 3; GPO Dep. Order Number DE84003763.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Paper copy only, copy does not permit microfiche production.

An 11 TW pulsed power module designed to be an ion beam driver is described. Approximately 18 of these modules would be required for a reactor. It employs four gas spark gap switched submodules with 3 stages of saturable inductor (magnetic switch) pulse compression to drive a common voltage amplifier, accelerator section. The spark gaps and magnetic switches operate at 3 MV.

27560 **(SAND—84-0127) Improved performance of TiC-coated graphite limiters by surface texturing.** Whitley, J.B.; Mattox, D.M. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1984. Contract AC04-76DP00789. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011168.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

TiC-coated graphite limiters are currently in wide use as tokamak limiters. These limiters usually suffer a groove type of damage caused by plasma disruptions. A surface texturing treatment is described that reduces the occurrence of this type of damage.

27561 **(UCID—20050) Octupole anchor for tandem mirrors.** Hopper, E.B. Jr. (Lawrence Livermore National Lab., CA (USA)). 21 Mar 1984. Contract W-7405-ENG-48. 12p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010650.

The octupole anchor is a very promising alternative to the usual quadrupole designs. The most critical unsolved problem is stabilization of the trapped particle mode. The anchor magnetic field is low because MHD stabilization is by hot electrons, thus permitting relatively small magnet currents and conductor cross sections. Increasing the field to a sufficient level to permit operation of the thermal barrier and electrostatic plug required for trapped particle mode stabilization would require much more massive magnets, higher ECRH power, and the much more complex operating scenario associated with standard quadrupole operation. Despite these complications, the absence of a long transition (with an axial minimum in B) between the central cell and the octupole makes the option attractive.

27562 **(UCRL—15593) Design of GA thermochemical water-splitting process for the Mirror Advanced Reactor System.** Brown, L.C. (GA Technologies, Inc., San Diego, CA (USA)). Apr 1983. Contract W-7405-ENG-48. 62p. (GA-A—17106). NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84011058.

Portions are illegible in microfiche products.

GA interfaced the sulfur-iodine thermochemical water-splitting cycle to the Mirror Advanced Reactor System (MARS). The results of this effort follow as one section and part of a second section to be included in the MARS final report. This section describes the process and its interface to the reactor. The capital and operating costs for the hydrogen plant are described.

27563 **(UCRL—89292) Tritium breeding and activation in the cascade reactor.** Blink, J.A. (Lawrence Livermore National Lab., CA (USA)). 5 Dec 1983. Contract W-7405-ENG-48. 20p. (CONF-831203—117). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008347.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Cascade is an inertial fusion reactor that uses circulating Li_2O pellets as a coolant and tritium breeding medium. The pellets flow through a horizontal rotating vessel, and they are held against the vessel wall by centrifugal force. Three wall designs were considered: a steel shell and a SiC shell prestressed by Al or steel cables. The nuclear heating, tritium breeding ration, afterheat, inhalation biological hazard potential, and shallow land burial index were calculated for each configuration. Tritium breeding is more than adequate (1.35). Spray cooling of the wall exterior will be required during operation, but thermal radiation heat removal will be sufficient after shutdown. Allowable release fractions during an accident are higher than in comparable designs. Disposal of activated components by shallow land burial is feasible. Hands-on maintenance of the SiC/Al wall will be possible if it is moved away from the reflector.

27564 **(UCRL—89966-Rev.1) Normal zone detectors for a large number of inductively coupled coils. Revision 1.** Owen, E.W.; Shimer, D.W. (Lawrence Livermore National Lab., CA (USA)). 3 Nov 1983. Contract W-7405-ENG-48. 32p. (CONF-831203—138-Rev.1). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011053.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

In order to protect a set of inductively coupled superconducting magnets, it is necessary to locate and measure normal zone voltages that are small compared with the mutual and self-induced voltages. The method described in this paper uses two sets of voltage measurements to locate and measure one or more normal zones in any number of coupled coils. One set of voltages is the outputs of bridges that balance out the self-induced voltages. The other set of voltages can be the voltages across the coils, although alternatives are possible. The two sets of equations form a single combined set of equations. Each normal zone location or combination of normal zones has a set of these combined equations associated with it. It is demonstrated that the normal zone can be located and the correct set chosen, allowing determination of the size of the normal zone. Only a few operations take place in a working detector: multiplication of a constant, addition, and simple decision-making. In many cases the detector for each coil, although weakly linked to the other detectors, can be considered to be independent. The effect on accuracy of changes in the system parameters is discussed.

27565 **(UCRL—90089) Photoemissive materials for 0.35μm laser fiducials in x-ray streak cameras.** Hale, C.P.; Medecki, H.; Lee, P.H.Y. (Lawrence Livermore National Lab., CA (USA)). 1984. Contract W-7405-ENG-48. 18p. (CONF-840387—2). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008348.

From 2. topical meeting on laser techniques in the extreme ultraviolet; Boulder, CO, USA (5 Mar 1984).

Using a soft x-ray streak camera, materials are tested for suitability as transmission photocathodes when irradiated by 0.35μm laser pulses. Preliminary measurements of sensitivity, dynamic range and temporal resolution are reported. A practical fiber optic fiducial under development for laser fusion x-ray diagnostics on the LLNL Nova laser system is described.

27566 **(UCRL—90240) Developing models for simulation of pinched-beam dynamics in heavy ion fusion.** Boyd, J.K.; Mark, J.W.K.; Sharp, W.M.; Yu, S.S. (Lawrence Livermore National Lab., CA (USA); Stanford Linear Accelerator Center, CA (USA)). 18 Jan 1984. Contract W-7405-ENG-48. 11p. (CONF-840142—9). NTIS, PC A02; 3; GPO Dep. Order Number DE84011054.

From International symposium on heavy ion accelerators and their applications to inertial fusion; Tokyo, Japan (23 Jan 1984).

Paper copy only, copy does not permit microfiche production.

Hydrodynamic models have been derived by Mark and Yu and by others to describe energetic pinched-beams, such as those used in ion-beam fusion. The closure of the Mark-Yu model is obtained with adiabatic assumptions mathematically analogous to those of Chew, Goldberger, and Low for MHD. The other models treated here use an ideal gas closure and a closure by Newcomb based on an expansion in V/sub th//V/sub z/. Features of these hydrodynamic beam models are compared with a kinetic treatment.

27567 **(UCRL—90240-Rev.1) Developing models for simulation of pinched-beam dynamics in heavy ion fusion. Revision 1.** Boyd, J.K.; Mark, J.W.K.; Sharp, W.M.; Yu, S.S. (Lawrence Livermore National Lab., CA (USA); Stanford Linear Accelerator Center, CA (USA)). 22 Feb 1984. Contract W-7405-ENG-48. 12p. (CONF-840142—9-Rev.1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011057.

From International symposium on heavy ion accelerators and their applications to inertial fusion; Tokyo, Japan (23 Jan 1984).

Portions are illegible in microfiche products.

For heavy-ion fusion energy applications, Mark and Yu have derived hydrodynamic models for numerical simulation of energetic pinched-beams including self-pinches and external-current pinches. These pinched-beams are applicable to beam propagation in fusion chambers and to the US High Temperature Experiment. The closure of the Mark-Yu model is obtained with adiabatic assumptions mathematically analogous to those of Chew, Goldberger, and Low for MHD. Features of this hydrodynamic beam model are compared with a kinetic treatment.

27568 **(UCRL—90241) Recent Livermore estimates on the energy gain of cryogenic single-shell ion beam targets.** Lindl, J.D.; Mark, J.W.K. (Lawrence Livermore National Lab., CA (USA)). Jan 1984. Contract W-7405-ENG-48. 9p. (CONF-840142—10). NTIS, PC A02; 3; GPO Dep. Order Number DE84011052.

From International symposium on heavy ion accelerators and their applications to inertial fusion; Tokyo, Japan (23 Jan 1984).

Paper copy only, copy does not permit microfiche production.

Our recent estimates are that the energy-gain for cryogenic single-shell targets are close to those of similar double-shelled targets. However, the peak-power requirements for single-shell targets are still about a factor of two higher.

27569 **(UCRL—90330) Linear pinch driven by a moving compact torus.** Hartman, C.W.; Hammer, J.H.; Eddleman, J.L. (Lawrence Livermore National Lab., CA (USA)). 25 Apr 1984. Contract W-7405-ENG-48. 9p. (CONF-8403100—4). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011317.

From Conference of Z-pinches for fusion; Alexandria, VA, USA (29 Mar 1984).

Portions are illegible in microfiche products.

In principle, a Z-pinch of sufficiently large aspect ratio can provide arbitrarily high magnetic field intensity for the confinement of plasma. In practice, however, achievable field intensities and timescales are limited by parasitic inductances, pulse driver power, current, voltage, and voltage standoff of nearby insulating surfaces or surrounding gas. Further, instabilities may dominate to prevent high fields (kink mode) or enhance them (sausage mode) but in a nonuniform and uncontrollable way. In this paper we discuss an approach to producing a high-field-intensity pinch using a moving compact torus. The moving torus can serve as a very high power driver and may be used to compress a pre-established pinch field, switch on an accelerating pinch field, or may itself be reconfigured to form an intense pinch. In any case, the high energy, high energy density, and high velocity possible with an accelerated compact torus can provide extremely high power to overcome, by a number of orders of magnitude, the limitations to pinch formation described earlier. In this paper we will consider in detail pinches formed by reconfiguration of the compact torus.

27570 **Review of recent experimental and theoretical laser-plasma research carried out at Soreq.** Eliezer, S.; Arad, B.; Borowitz, A.; Gazit, Y.; Gilath, I.; Jackel, S.; Krumbein, A.D.; Lalluz, R.; Loebenstein, H.M.; Ludmirsky, A. . (Soreq Nuclear Research Centre Yavne 70600). pp 417-436 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter reports on the study of laser produced plasmas and laser produced shock waves using a set of different oscillators and an Nd: glass laser system. Topics covered include the laser system, laser light reflection and absorption, momentum measurements, electron-ion decay instability, the measurement of return currents and self-similar expansion, shock wave measurements, the spectra of highly ionized Cd, In, Sn and Te atoms, two dimensional x-ray spectroscopy of laser produced plasma, calculation of laser produced compression and pressure, the use of effective Feynman diagrams for atomic cross-section calculations, non-local-thermodynamic-equilibrium (LTE) models, and stochastic analysis in laser generated plasma. Presents a table and 2 diagrams.

27571 **Suprathermal electron generation transport and deposition in CO_2 laser irradiated targets.** Hauer, A.; van Hulsteyn, D.; Begay, F.; Goldman, R.; Kephart, J.; Kristal, R.; Mitchell, K.; Mueller, M.; Oona, H.; Stover, E. . (Los Alamos National Laboratory, Univ. of California, Los Alamos, NM). pp 479-492 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter investigates the absorption and subsequent partitioning of CO_2 laser energy incident on solid targets. Topics covered include laser absorption and hot electron generation; fast ion measurement and theory; and hot electron transport in relation to deposition and energy balance. Calorimetric measurements demonstrate high CO_2 laser absorption at high intensities. The high efficiency of conversion of laser energy to energetic ions is measured. New modeling techniques involving self consistent B fields are used to calculate many aspects of hot electron coupling to fast ions. Strong experimental evidence for non-diffusive lateral transport of hot electron energy is presented. It is demonstrated that x-ray and calorimetric measurements provide a good overall picture of fast electron energy partitioning. Includes 2 tables and 4 photos.

27572 **Absorption, double layers, and dynamics at laser-plasma interaction and pellet fusion gains with reheat.** Cicchitelli, L.; Dragila, R.; Golden, K.I.; Goldsworthy, M.P.; Hora, H.; Jones, D.A.; Kemeny, L.G.; Kentwell, G.W.; Lalousis, P.; Tubbenhauer, G. (Dept. of Theoretical Physics Univ. of New South Wales, Kensington-Sydney). pp 437-459 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter investigates absorption phenomena, electrostatic double layers, and laser fusion. Topics covered include quantum correction for optical absorption and anomalous resistivity; absorption by a new collision term in Ohm's law; collisionless absorption by time dependent nonlinear forces; plasma dynamics; nuclear fusion gains; reheat by alphas; and volume ignition with collective reheat and spin polarization. Direct derivation of the plasma-two-fluid equation covering the most general equation of plasma motion at monochromatic laser interaction introduced a new collision term which is related to solitons at special conditions and may explain the reduced thermal conduction in nonlinear-force steepened density profiles. Formulation of the nonlinear force for very short optical wave packets with respect to the Poynting vector is discussed. Inertial confinement with light ions has achieved ten times higher fusion gains than the best tokamak at a hundred times lower cost. Pellet fusion gains are calculated and compared with 50% higher cross sections for spin polarized nuclei whose relaxation times are found to be sufficiently long for pellet densities. Includes 1 table.

27573 **Scaling of laser-plasma interactions with laser wavelength and plasma size.** Max, C.E.; Campbell, E.M.; Estabrook, K.G.; Kruer, W.L.; Lasinski, B.F.; Mead, W.C.; Phillion, D.W.; Turner, R.E. (Lawrence Livermore National Lab. Livermore, CA 94550). pp 507-526 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984). Contract W-7405-ENG-48.

This chapter reports on work done at the Lawrence Livermore National Laboratory which demonstrated that plasma size is an important parameter in wavelength-scaling experiments because it determines both the threshold and potential gain for a variety of laser-plasma instabilities. Topics covered include thresholds for instabilities, Raman scatter, stimulated Brillouin scatter, two-plasmon decay instability, filamentation due to ponderomotive force, Raman scatter in an Argus laser experiment, evidence for strong instabilities in a Shiva laser experiment, filamentation in Argus laser experiments, thermal filamentation, and the role of inhomogeneities on the incident laser beam. It is graphically illustrated that a concerted effort is needed to field experiments with larger plasmas, so as to begin approaching the parameters typical of reactor-scale targets. The evidence presented for Raman scatter, filamentation, and the two-plasmon decay instability needs to be confirmed in experiments which measure several instability signatures simultaneously, and which produce more quantitative information about the local density and temperature profiles. Includes 4 photos and a diagram.

27574 **Recent advances in microwave simulation of laser-plasma interactions.** DeGroot, J.S.; Hargreaves, T.A.; James, R.A.; Kodis, M.A.; Mizuno, K.; Ng, E.W.Y.; Rambo, P.W.; Rasmussen, D.A.; Rogers, J.H.; Woo, W. (Dept. of Applied Science, Univ. of California, Davis, CA 95616). pp 561-576 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter reports results from measurements on several effects that can occur in laser driven pellets. Topics covered include electron heating and heat flux inhibition; hot electron generation due to resonance absorption; ion acoustic decay and oscillating two stream instability; hot electron generation; thermal electron heating and heat flux inhibition due to ion turbulence; hot electron generation due to the two-plasmon instability; and Stimulated Brillouin Scattering (SBS). Processes that strongly affect pellet performance are isolated by using theory and simulation calculations. Microwave driven experiments are designed to model these processes. Careful attention is given to scaling laws and the effect of boundary conditions so that the results apply to an important range of variables that occur in a laser driven pellet. The measurements are compared to theory, computer simulation calculations, and laser experiments for verification. Includes 2 schematic drawings.

27575 **Critical elements of high gain: An update.** Bodner, S. (Naval Research Lab. Washington, DC 20375). pp 665-672 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter discusses three problem areas concerning the direct drive concept in relation to pellet gains. Rocket efficiencies are substantially lower in spherical geometry as opposed to a flat target model. Efficiencies reach 15-20% only with short 1/4 μm lasers and without smoothing requirements. Reduced efficiency (from 20% down to 7%) implies a lower best-case pellet gain. Energy transport issues are affected by the failure of the flux limiter concept in two-dimensional analysis. Progress in producing a relatively uniform and controllable laser profile on target has been slow. Topics covered include hydrodynamic efficiency, flux limiters, and laser uniformity. Includes 1 photo.

27576 **Analysis of stability and symmetry implications for ICF.** Gardner, J.H.; Bodner, S.E.; Boris, J.P.; Emery, M.H.; Fritts, M.J.; Herbst, M.J. (Naval Research Lab. Washington, DC 20375). pp 673-691 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter reports on the theoretical and computational work that has been carried out in connection with the experimental work at the Naval Research Laboratory (NRL) in evaluating the design constraints that are imposed primarily by the symmetry and stability requirements on directly-driven laser fusion targets. The results are primarily based on numerical simulations with many of the results verified by experiments performed at NRL. Symmetry and Rayleigh-Taylor stability analysis were performed using the FAST2D laser-shell simulation code. Results reported include the requirements for thermal smoothing of laser nonuniformities, reduced Rayleigh-Taylor growth rates and saturation via the nonlinear Kelvin-Helmhotz shear flow, a new theory based on vortex shedding that explains the reduced linear Rayleigh-Taylor growth rates, and a possible wavelength-intensity window for high gain direct illumination where the requirements of target velocity, symmetry, and now also efficiency can be simultaneously met. It is demonstrated that unless an alternative is found to smoothing of laser nonuniformities, short wavelength lasers will have difficulties providing sufficient smoothing for reactor size inertial confinement fusion (ICF) targets.

27577 **Direct illumination spherical target experiments.** Johnson, R.R. (Fusion Experiments Dept. KMS Fusion, Inc. Ann Arbor, MI). pp 693-708 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984). Contract AC08-82DP40152.

This chapter reports on a set of spherical target experiments designed to evaluate the effectiveness of achieving higher convergence ratio implosions using cryogenically frozen fuel layers, submicron wavelength laser light, and temporally tailored pulse shapes. Topics covered include the experimental facilities (a tow beam Chroma laser; a triple bounce ellipsoidal mirror system); direct illumination cryogenic implosion experiments; and numerical simulations and interpretation. Numerical simulations were performed using the one-dimensional hydrodynamics code TRHYD, which includes radiation, a realistic equation of state, and a multi-group diffusion treatment for non-thermal electrons. The calculations indicate that the 1.05 μm temporally flat-topped cryogenic implosion experiments are dominated by hot electrons. The numerical studies show that by combining shorter wavelength illumination, cryogenic fuel layers and properly shaped laser pulses, the ideal Fermi degenerate adiabat can be approached.

27578 **Investigation of hydrodynamic stability of high aspect ratio targets in laser implosion experiments.** Dufour, J.M.; Galmiche, D.; Sitt, B. (Commissariat a l'Energie Atomique Centre d'Etudes de Limeil B.P. No 27 - 94190 Villeneuve-St. Georges). pp 709-730 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter examines the experimental results of the implosion of very high aspect ratio microballoons partly consistent with 1-D numerical simulations using a rigorous analytical treatment of the phase of linear instability associated with some phenomenological models describing "extreme" types of behavior of thermal effects. The CAMELIA experiments were performed using the 8-beam, 1.06 μm OCTAL laser system. Topics covered include analysis of a particular targets, investigations of hydrodynamic instabilities, numerical modeling of linear perturbations, the irradiation pattern of the OCTAL laser, instabilities induced by non-uniform laser irradiation, and instabilities induced by target defects. It is concluded that a small amount of suprathermal preheating efficiency protects the imploding shell against break-up; the classical Rayleigh-Taylor instability is not critical for type of target/long pulse combination; and implosion uniform is notably improved by acoustic smoothing, but remains highly sensitive to large scale illumination defects, because of the instability of a converging shock to low-order harmonic modes, which can strongly affect the final uniformity of the target core. Includes 2 spherical maps.

27579 **Thermal transport measurements in 1.05 um laser irradiation of spherical targets.** Yaakobi, B.; Boehly, T.; Delettrez, J.; Hutchinson, R.; Letzring, S.; Marjoribanks, R.; McCrory, R.L.; Richardson, M.C.; Shvarts, D.; Soures, J.M. . (Lab. for Laser Energetics College of Eng. and Applied Science Univ. of Rochester 250 East River Rd., Rochester, NY 14623). pp 731-750 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984). Contract AC08-80DP40124.

This chapter reports on transport and implosion experiments conducted on the OMEGA, 24-beam, uniform-irradiation facility which may influence the understanding of thermal transport in laser-irradiated targets. Topics covered include transport determination by burnthrough measurements, preheat determination using Kα lines, the mass ablation rate, and implosion experiments. It is demonstrated that transport in 1.05 μm laser irradiation cannot be adequately described by a flux-limited model but is in general agreement with multi-group treatments of transport. The enhanced inward penetration appears to supercede preheat by resonance-absorption electrons, but to have a weaker dependence on the irradiance than is the case for the latter mechanism. The target implosion experiments show higher core temperatures than predicted by an inhibited flux model and lower densities than predicted by an uninhibited flux model. It is indicated that in short wavelength irradiation the higher collisionality suppresses the deeper penetration measured.

27580 **Uniformity of energy deposition for laser driven fusion.** Skupsky, S.; Craxton, R.S.; Delettrez, J.; Epstein, R.; Lee, K.; McCrory, R.L.; Verdon, C. (Lab. for Laser Energetics Univ. of Rochester 250 East River Rd. Rochester, NY 14623). pp 751-774 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984). Contract AC08-80DP40124.

This chapter examines the characteristic nonuniformities produced by laser irradiation, with multiple overlapping beams, for a variety of laser-target configurations. The results from the geometrical effects related to the number and orientation of the laser beams are distinguished from the details of ray trajectories for the overlapping beams. Emphasis is placed on the wavelength of the nonuniformities in addition to their magnitudes, as the shorter wavelength nonuniformities are more easily smoothed by thermal conduction within the target. The nonuniformity that reaches the ablation surface and drives the target is estimated using a thermal smoothing model. The effects of specific laser-target conditions are illustrated using the 24-beam OMEGA laser system at the University of Rochester, and a 32-beam system ("truncated" icosahedron) comprised of beams whose axes penetrate the centers of the 20 faces and the 12 vertices of an icosahedron. The degradation in target performance caused by laser nonuniformities is shown. It is demonstrated how the geometrical symmetry of the laser system effectively eliminates the longer wavelengths, and how shorter wavelength nonuniformities can be "tuned out" by varying parameters such as the focal position and the radial intensity profile of the beam. Includes 3 tables, 1 photo, and 3 drawings.

27581 **Rayleigh-Taylor instability and resulting failure modes of ablatively imploded inertial fusion targets.** Montierth, L.; Morse, R. (Nuclear & Energy Engineering Univ. of Arizona Tucson, AZ 85721). pp 775-795 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter discusses small amplitude growth of the outside surface instability and modes of failure resulting from nonlinear development of the inside surface instability. It is demonstrated that pellets with initial pellet aspect ratio, A /SUB p/ >5 may have difficulty with Rayleigh-Taylor instability and that shells with A / SUB p/ $\geqq 10$ will probably demand stringent smoothness specification in order not to experience failure in the final implosion. The linear amplification of the outside surface instability can easily exceed 10^3 for A /SUB p/ and resulting A values in the range of programmatic interest. Amplifications of this order, starting from attainable surface finishes, can then penetrate to the inside shell surface, producing perturbations there which approach the nonlinear development amplitude and at the start of the final deceleration. It is shown that such inside surface perturbations can be amplified to large amplitude by the inside instability and cause failure through reduction of the maximum fuel temperature achieved. Insight into the scaling of failure mechanisms is offered.

27582 **High density transition laser driven implosions.** Bayer, C.; Bernard, M.; Decroisette, M.; Juraszek, D.; Meynial, D. (Centre d'etudes de Limeil B.P. 27, 94190 Villeneuve-Saint-Georges). pp 797-815 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter discusses implosion studies which explore the transition between exploding and ablative regimes. Several laboratories have been involved in transition implosions, where both lengthening of the laser pulse and thickening of the pusher wall lead to a more ablative regime than the exploding pusher. The experiments examined utilize the eight beams laser facility Octal and plastic coated glass microballoons irradiated in cubic geometry. X-ray shadowgraphy is developed as a suitable diagnostic for ablative target probing. Numerical simulations as performed with a 1-D Lagrangian code, with emphasis on the description of suprathermal transport. The preheat factors are reduced and the laser→fuel energy transfer is optimized by imploding thickened targets with intermediate laser pulse (500 ps). It is demonstrated that the thickness of the target shell increases the pusher, lowers the preheat and in-

duces a more ablative behavior. A maximum in final DT density is observed. Includes 2 tables, 1 drawing, and 5 photos.

27583 **X-ray emission experiments at 1.06 μm and 0.35 μm.** Babonneau, D.; Billon, D.; Bocher, J.L.; Di Bona, G.; Fortin, X.; Thiell, G. (Commissariat a l'Energie Atomique Centre d'Etudes de Limeil B.P. 27, 94190 Villeneuve-Saint-Georges). pp 817-837 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter reports on experiments concerning high-Z target X-ray emission conducted at the Limeil laboratory. X-ray spectra and conversion efficiencies are studied as a function of laser flux at 0.35 μm and 1.06 μm on gold targets, and target Z at 0.35 μm on aluminium, copper, silver, and gold. Spherical targets with Octal laser and planar targets with P102 laser are used. The influence of the different parameters (laser flux, laser wavelength, atomic number) on emission rates and spectra is discussed. Space-time resolved measurements are made with a streak camera from spherical targets. Spherical microballoons are irradiated with incident laser fluxes from 3×10^{13} to 3×10^{15} W/cm^2. The conversion rate decreases from 20% to 5% in this range. It is demonstrated that the conversion efficiency increases as Z increases. An analytical expression is proposed giving the X-ray conversion rates. Includes 3 tables, 3 drawings and 3 photos.

27584 **Laser implosion fusion experiments at Ile Osaka.** Nakai, S.; Izawa, Y.; Kato, Y.; Kitagawa, Y.; Mochizuki, T.; Nakatsuka, M.; Yamanaka, C.; Yamanaka, M.; Yamanaka, T.; Yoshida, K. (Inst. of Laser Engineering Osaka Univ. Osaka 565). pp 839-855 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter investigates the scaling laws for ablative compression driven by either thermal electrons, hot electrons or X-ray radiations as well as non-ablative compression (Cannon ball target), by applying the "GEKKO" glass lasers and its higher harmonics, and the "LEKKO" CO_2 laser. Topics covered include energy drivers, scaling of implosion pressure, hot electron driven ablation, X-ray driven ablation, and the implosion process in various targets. Ablation properties of different wavelength irradiation (10 μm, 1 μm and its 2nd and 3rd harmonics and X-ray) are studied. Shorter wavelength irradiation, especially soft X-ray, is observed to have high efficiency in generating the ablation pressure. Hot electron driven ablation is verified to be effective in driving the pellet implosion. It is demonstrated that the quantitative evaluations of the pre-heat, and R-T or nonuniformity instability on pellet implosion are the key issues for obtaining high compression. Cannon ball targets, double shell and foam ablator structures are compared to evaluate the performance of inertial confinement fusion (ICF) examining the absorption, hydrodynamic efficiency, uniformity improvement effect, and preheat reduction. Includes 2 tables, 3 drawings, and 18 photos.

27585 **Theoretical and computational investigation on implosion process.** Yabe, T.; Mima, K.; Nishiguchi, A.; Nishihara, K.; Yamanaka, C. (Inst. of Laser Engineering Osaka Univ. Suita, Osaka 565). pp 857-868 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter examines hydrodynamic implosion uniformities in inertial confinement fusion. A hydrodynamic simulation code is used which employs Lagrangian fluid particles and moving grids. The convering amplification instability due to the angular momentum conservation is investigated by comparing the simulation results with analytical estimations. The analysis shows that the instability could be dangerous when it is coupled with hot electron and/or radiation transport. Criteria for an initial nonuniformity are given in terms of the mach number of the imploding shell target. The degradation of fusion reaction in a strongly deformed target is estimated.

27586 **Recent studies in electron transport and laser interaction at INRS-energie.** Pepin, H.; Johnston, T.W.; Kieffer, J.C.; Lavigne, P.; Martin, F.; Matte, J.P.; McCarthy, N.; Pascale, D.; Picard, G.; Piche, M. (INRS-Energie, Univ. du Quebec Varennes, JOL 2PO). pp 869-891 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter reports on experiments concerning hot electron transport, spectroscopy and calorimetry of scattered radiation, and Fokker-Planck study of electron heat flow. The experiments were conducted at a CO_2 laser facility giving a 50 J, 1.2 nsec (FWHM) pulse, with a rise time of 0.4 nsec. Energy levels up to 15 J were focused onto the target by a f/1.5, 15 cm focal length, off axis parabolic mirror. Topics covered include x-ray angular distribution, deformation of the incident electron distribution in plastic, energy deposited by hot electrons, axial transport, lateral transport, backscatter measurement, and specular scattering. The results indicate that the inward transport to a conducting substrate can be described by the classical penetration of an incident hot electron distribution. The lateral energy transport by hot electrons produces a nonuniform radial energy deposition over a large area of the target surface. It is demonstrated that plasma can scatter energy at other angles than the privileged backscatter and specular direction. Includes 2 photos.

27587 **Progress toward direct drive laser fusion.** Richardson, M.C.; Boehly, T.R.; Brinker, B.A.; Bristow, T.C.; Craxton, R.S.; Delettrez, J.A.; Enright, G.; Entenberg, A.; Friedman, W.; Goldman, L.M. . (Lab. for Laser Energetics Univ. of Rochester 250 East River Road Rochester, NY 14623). pp 903-925 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984). Contract AC08-80DP40124.

This chapter reviews the recent progress in the three interrelated areas of irradiation uniformity, coronal physics and ablatively driven spherical shell implosions, all of immediate relevance to direct drive laser fusion. Diagnosis of the fuel during the implosion and at final compression, including direct measurement of fuel density-radius product is made through a variety of techniques involving space, time and spectral x-ray analysis and scattered reaction product spectrometry. The 24-beam OMEGA, Nd:glass laser system operating with 2-3 kJ, 1 ns, 1.054 μm pulses has been used to examine a number of physics issues central to the success of direct drive laser fusion. This system provides the capability to irradiate spherical targets with a high degree of irradiation uniformity with precisely temporally and spatially aligned beams on target. The technical progress made in perfecting the output characteristics of OMEGA, and the formulation of an approach to define multi-beam uniformity in spherical geometry, provide some optimism that the factor of 4-5 improvement in irradiation uniformity necessary for high performance targets can be attained. The coronal physics experiments performed under spherical geometric irradiation reveal shortcomings in the current understanding of electron energy transport. Includes 13 photos and 4 drawings.

27588 **Historical remarks on beam fusion.** Hora, H. (Dept. of Theoretical Physics Univ. of New South Wales, Kensington-Sydney). pp 927-935 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter discusses the complicated physics of beam fusion, including recent developments of electrostatic double layer effects in plasmas. An interpenetration model for self-sustained fusion combustion in solid DT is presented with a threshold of 2×10^7 J/cm^2. Topics covered include the condemnation of beam fusion, the revival of beam fusion, and errors in the past development of fusion research. CO_2 lasers may be used to initiate the discussed boots trap process by utilizing nonlinear force effects to generate space charge neutral ion beam densities exceeding 10^9 Amp/cm^2. Based on the experience of the development of fusion research, the scientific development is considered and a motivation is given for devising fusion programs that will lead to the early achievement of fusion energy.

27589 **Advances in ICF using light ion beams.** Yonas, G.; VanDevender, J.P. (Sandia National Lab. Albuquerque, NM 87185). pp 937-956 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter reports on how PBFA II, with parameters of 3.5 MJ and 100 TW, is being designed to allow inertial fusion ignition experiments using imploding foils or light ions beams. Experiments on Proto II and PBFA I are providing the information necessary to proceed with the final design of PBFA II. Imploding foil data on Proto II has demonstrated that electromagnetic energy can be efficiently converted into foil kinetic energy with the output increasing as the square of the foil current. This implosion demonstrates adequate stability, and modeling has shown that this behavior should extrapolate to higher currents if the implosion time is less than 100 ns. Proto II is modified for a lower inductance power feed in order to extend the scaling data to 8 MA. PBFA II will be capable of operating over a wide voltage range to accomodate the different options, with scaling experiments on PBFA I providing the basis for the selection. It is concluded that after the power concentration issues are resolved on PBFA II, the challenging problems of implosion hydrodynamics can be confronted with sufficient diagnostics to determine the feasibility of ignition. Includes a table, 5 photos, and 7 drawings.

27590 **Status of light ion inertial fusion research at NRL.** Cooperstein, G.; Barker, R.J.; Colombant, D.G.; Goldstein, S.A.; Meger, R.A.; Mosher, D.; Neri, J.M.; Ottinger, P.F. (Naval Research Lab. Washington, DC 20375). pp 957-979 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter reports on the use of high-brightness proton beams, extracted from axial pinch-reflex diodes mounted on the Naval Research Laboratory (NRL) Gamble II generator, to study light ion inertial fusion. Topics covered include the modular approach, ion beam brightness studies, light-ion beam transport, final focusing, the single diode approach, the inductive storage approach, an energy loss experiment, and future plans. Analysis of a modular inertial confinement fusion (ICF) system using axial pinch-reflex diodes shows that an operational window for transport of light-ion species exists. A proof-of-principle experiment for the required final focusing cell was conducted on Gamble II. Preliminary experiments using vacuum inductive storage and plasma opening switches have demonstrated factorof-three pulse compressions, with corresponding power and voltage multiplications for pulse durations of interest to PBFA II. The stopping power of deuterons in hot plasmas was measured in other experiments. It is demonstrated that about 40% enhancement in stopping power over that in cold targets when the deuteron beam is focused on the target to about .25 MA/cm^2. Includes 6 diagrams.

27591 **Inertial confinement fusion by light ion beam.** Miyamoto, S.; Higaki, S.; Imasaki, K.; Nakai, S.; Ozaki, T.; Yamanaka, C.; Yoshinouch, A. (Inst. of Laser Engineering Osaka Univ. Suita, Osaka, 565). pp 981-995 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter examines the key issues for the light ion beam (LIB) inertial confinement fusion (ICF) system based on the conceptual design of the ROKKO I reactor. Topics covered include ion beam generation, beam divergence and focusing, beam transport, and target experiments (stopping power and ablation pressure). A simulation calculation using the hydrodynamic code ABLATE was performed. The conceptual design of the ROKKO I includes the development of the pulse power technology, the development of diagnostics for high power beam and target experiments, beam generation and concentration of the energy in time and space, beam transport through a laser guided plasma channel, the investigation of the beam-target coupling physics and the scaling of the ablation pressure on power density, and implosion simulation and pellet design. Includes 6 drawings and 7 photos.

27592 **Propagation and space focusing in vacuum.** Phelps, D.A.; Chang, D.B.; Fisher, A.; Jorna, S.; Rostoker, N.; Salisbury, W.W.; Thompson, W.B.; Wharton, C.B. pp 997-1011 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter reports on experiments on the propagation and space focusing in vacuum of 200ns pulse of 100-500 kV and 0.1-1A/cm^2 alkali plasma beams. Topics include the ion accelerator, the electron neutralizer, plasma beam propagation experiments, beam bunching experiments, and plasma beam propagation theory. A plasma beam equilibrium and stability theory is presented which accounts for initial, thermal, and space-charge contributions to beam focusing. The theory deduces an effective lleV transverse temperature, relates this temperature to various sources of electron and ion emittance, and predicts that plasma beams accelerated to practical super power generator potentials of 5-15 MeV would realize the sub milli-radian angular divergence profiles observed in computer simulation experiments. Experiments on plasma beam time focusing in vacuum are also reported. A theory is presented which demonstrates that the observed time focusing could only be accomplished for less than 1% deviations from the appropriate voltage ramp, thereby establishing experimentally the accuracy of the ORCA-I precision tapered pulseline. Includes 4 drawings.

27593 **Ion beam interactions with ICF targets.** Bangerter, R.O. (Univ. of California Los Alamos National Lab. Los Alamos, NM 87545). pp 1013-1027 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter shows how low-intensity beams can be used to determine whether the ion beam target interaction is suitable for inertial confinement fusion (ICF) targets. Topics covered include the effect of uncertainties in energy loss on predictions of target performance; target conditions; single particle theory; plasma instabilities; preheat; knock-on electrons and ions; electrons from plasma instabilities; x-rays; charged nuclear debris; and neutrons. It is concluded that ion-target interaction appears suitable for ICF for at least some typical choices of beam and target parameters. More experimental work in hot plasmas and on targets with high-Z tampers is recommended. Includes a drawing of a typical spherical ion beam target.

27594 **Ions stopping in ICF plasmas.** Deutsch, C.; Maynard, G.; Minoo, H. (Lab. de Physique des Plasmas Bat. 212, Univ. Paris XI 91405 Orsay Cedex). pp 1029-1048 of Laser Interaction and Related Plasma Phenomena. Hora, H. New York, NY; Plenum Publishing Corp. (1984).

This chapter demonstrates how the exact random-phase approximation dielectric function can be used to compute the energy loss and straggling of nonrelativistic charged particles in very dense electron fluids (r /SUB s/ $\leqq$ 1) at any degeneracy and for any velocity ratio V/V /SUB F/ . Stopping powers, range data and deposition times are computed. Topics covered include partially degenerate electron fluid; energy loss at finite temperatures; and stopping by bound electrons. The distant collision part of the $Z^3{}_1$-contribution to the stopping of nonrelativistic ions by bound electrons is written in a compact analytical form. Its magnitude is considered for a few species through a structure-dependent electron-ion effective interaction (GSZ potential). Ion-driven inertial fusion is emphasized. Includes 4 tables.

27595 **ICF Reactor using A ^{3}He-AFLINT tritium self-sufficient target.** Miley, G.H.; Adams, B.; Choi, C.K.; Ragheb, M.; Stubbins, J.F. (Fusion Studies Lab. Univ. of Illinois Urbana, IL 61801). pp 1049-1059 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter considers a D-fueled target (the "AFLINT" concept) which is used to investigate alternate fuel configurations that enable tritium to be bred within the target itself and provide a significant advantage for inertial confinement fusion (ICF) reactors since a complicated tritium breeding blanket can be avoided. Topics covered include target and driver characteristics; reactor chamber design; AFLINT chamber conceptual design; and alter-

nate chamber possibilities. A target design is proposed that achieves an internal Tritium Breeding Ratio (TBR) of 1.1. This study suggests that tritium self-sufficient AFLINT targets can provide adequate recycling of tritium and ^{3}He to manufacture subsequent targets. It is concluded that the ^{3}He-AFLINT and dual liquid-fall reactor chamber represent a potentially attractive approach to ICF power plants. Includes 3 tables and 3 diagrams.

27596 **Conceptual design of ICF reactor SENRI, Part II. Advances in design and pellet gain scaling.** Ido, S.; Mima, K.; Nakai, S.; Tsuji, R.; Yamanaka, C. (Inst. of Laser Engineering Osaka Univ. Suita, Osaka 565). pp 1061-1081 of Laser Interaction and Related Plasma Phenomena. Hora, H.; Miley, G.H. New York, NY; Plenum Publishing Corp. (1984).

This chapter reviews the recent design studies on reactor concepts with magnetically guided lithium flow, SENRI-I, SENRI-IA and SENRI-II. The routes from the present status to power reactors and an advanced fuel pellet concept is also discussed. Topics covered include pellet design, magnetohydrodynamic design of liquid lithium flow; reactor cavity concepts with magnetically guided lithium flow, a thermo-hydraulic analysis, a tritium recovery system; and an advanced fuel pellet concept for an inertial confinement fusion (ICF) reactor without a tritium breeding blanket. An advanced fuel pellet for an ICF reactor without a T breeder was studied in the model calculations, which showed sufficiently high values of pellet gain. Includes a table and 8 diagrams.

27597 **Vertical poloidal asymmetries of low-Z element radiation in the PDX tokamak.** Brau, K.; Suckewer, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.); Wong, S.K. (GA Technologies, Inc., San Diego, CA (USA)). *Nuclear Fusion;* **23**: No. 12, 1657-1668(Dec 1983).

Vertical poloidal asymmetries of hydrogen isotopes and low-Z impurity radiation in the PDX tokamak may be caused by poloidally asymmetric sources of these elements at gas inlet valves, limiters or vacuum vessel walls, asymmetric magnetic-field geometry in the region beyond the plasma boundary, or by ion curvature drifts. Low ionization states of carbon (C II to C IV) are more easily affected by edge conditions than is C V. Vertical poloidal asymmetries of C V are correlated with the direction of the toroidal field. The magnitude of the asymmetry agrees with the predictions of a quasi-fluid neoclassical model. Experimental data and numerical simulations are presented to investigate different models of impurity poloidal asymmetries.

27598 **Locally omnigenous tandem mirror design.** D'Ippolito, D.A.; Francis, G.L.; Myra, J.R. (Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.). *Nuclear Fusion;* **23**: No. 12, 1698-1701(Dec 1983).

Letter-to-the-editor.

A simple tandem-mirror coil system is found which has the property that the geodesic curvature of the paraxial magnetic field is locally small everywhere. This design approaches the ideal of a 'locally omnigenous' configuration in which the particle drift surfaces coincide with the magnetic flux surfaces. Thus, radial losses due to resonant ion and stochastic radial diffusion are minimized. Plasma distortion due to central-cell parallel currents and instability due to trapped particles are also greatly reduced. The advantages and disadvantages of the design for reactor applications are discussed.

27599 **A heat pipe concept for cooling a liquid-pool blanket of a tandem mirror fusion reactor.** Schwertz, N.L.; Hoffman, M.A. (University of California, Department of Mechanical Engineering Davis, California 95616). *Nuclear Technology;* **4**: No. 3, 479-490(Nov 1983). Contract W-7405-ENG-48.

The performance potential of a heat pipe designed specifically to operate in the high magnetic fields of a fusion reactor is investigated analytically. The heat pipe has a thin, flat cross section aligned parallel to the magnetic field so as to reduce the eddy currents and the resultant magnetohydrodynamic pressure drops in the liquid wick flow. The flat heat pipes are used to cool a pool of liquid lithium (or lithium-lead eutectic) in the blanket that surrounds the central-cell plasma of a tandem mirror fusion reactor. Calculations indicate that this new heat pipe design may be able to transport up to about 6800 W/cm^2 of condenser cross-sectional area in a 2-T magnetic field. This is considerably higher than the 420 W/cm^2 capability of a conventional cylindrical heat pipe of similar dimensions employing a channel wick and operating in the same 2-T field.

27600 **Helium-cooled solid breeder blanket design for a tokamak fusion reactor.** Huggenberger, M.; Schultz, K.R. (Swiss Federal Institute for Reactor Research (EIR) 5303 Wurenlingen). *Nuclear Technology;* **4**: No. 3, 456-467(Nov 1983).

A preliminary design for a helium-cooled solid breeder blanket for a tokamak fusion reactor has been developed, and its performance looks quite good. The design is capable of bearing a 4 MW/m^2 neutron wall load, and the ideal pumping power required for the whole primary helium loop including the steam generators is only 2.5% of the total thermal power. The maximum blanket thickness including the helium duct work is only 860 mm, the minimum thickness is only 730 mm. The design work was focused on the thermalhydraulic aspects, which represent the key problems associated with using helium as a coolant. The present work demonstrates that the potential disadvantages helium has, due to its limited heat transfer capabilities, can be avoided or minimized by an appropriate thermal-hydraulic design. As a result, helium with its many advantages remains a promising fusion blanket coolant.

27601 **Prospects for low-activity aluminum structures.** Powell, J.R.; Fillo, J.A. (Brookhaven National Laboratory Department of Nuclear Energy, Upton, New York 11973). *Nuclear Technology;* **4**: No. 3, 561-565(Nov 1983).

High-purity, low-activity powder metallurgy aluminum alloys can be developed for use in a fusion reactor at 300 to 400°C using helium as a heat transfer medium. Hot water as a coolant may limit aluminum to 200°C. From a heat transfer point of view, based on the dual- or two-temperature design approach, commercial fusion reactor blanket designs appear to be feasible. To meet all of the blanket design requirements feasibility requires quantification of thermal hydraulics, materials, neutronics, and material responses. Also, radiation damage and lifetime analyses are key issues for design qualification. Based on tests performed to date, aluminum appears well suited for experimental fusion reactors operating at wall temperatures below 200°C.

27602 **Preface: Radioactivation of Fusion Structures.** Stauber, M.C. (Grumman Aerospace Corporation, Research and Development Center Bethpage, New York 11714). *Nuclear Technology;* **4**: No. 3, 522-527(Nov 1983).

The following six papers represent a cross section of the invited presentations made in two special sessions at the 1982 Winter Meeting of the American Nuclear Society (ANS) in Washington, D.C., on the subject of "Radioactivation of Fusion Structures." Additional papers from these special sessions are expected to be published in a forthcoming issue of this journal. Plans for this "mini-symposium" originated within the ANS Isotopes and Radiation Division and were carried forward in collaboration with members of the ANS Fusion Energy, Radiation Protection and Shielding, and Materials Science and Technology Divisions. As the program for these sessions crystallized, it became apparent that the theme, "Radioactivation of Fusion Structures," might be too narrowly conceived and perhaps should include the coolant-breeder system. This broader viewpoint in fact was adopted in some of the papers.

27603 **Analysis of pumping requirement for exhausting duct in close vicinity of divertor in tokamak reactor.** Saito, S.; Abe, T.; Fujisawa, N.; Sugihara, M.; Ueda, K. (Japan Atomic Energy Research Institute Naka-muchi, Naka-gun, Ibaraki-ken). *Nuclear Technology;* **4**: No. 3, 498-507(Nov 1983).

An improved method for Monte Carlo simulation is described to calculate the neutral-particle transport in a divertor throat and to evaluate the helium removal efficiency from a burning plasma. The required pumping speed for the helium removal is discussed with special emphasis placed on the effects of long exhausting duct and of scrape-off plasma variables. The analysis for

International Tokamak Reactor (INTOR) single null divertor suggests a possibility that the pumping requirement for INTOR could be drastically eased--e.g., $<10^4$ l/s, for the high scrape-off plasma density of the order of 10^{13} cm^{-3}.

27604 **Radioactivation characteristics for the tokamak fusion test reactor.** Ku, L.; Kolibal, J.G. (Princeton University Plasma Physics Laboratory, Princeton, New Jersey 08544). *Nuclear Technology;* **4**: No. 3, 586-598(Nov 1983). Contract AC02-76CH03073.

Activation analysis has been conducted for several primary fusion blanket materials based on a model of a commercial tokamak fusion reactor design, STARFIRE. The blanket materials studied include two solid tritium breeders, viz., Li_2O and α-$LiAlO_2$, and four candidate structural materials, viz., PCA stainless steel, V15Cr5Ti, Ti6Al4V, and Al-6063 alloys. The importance of breeder material activation is identified in terms of its impurity contents such as potassium, iron, nickel, molybdenum, and zirconium trace elements. The breeder activation is also discussed with regard to its potential for recycling and its impact on the lithium resource requirements. The structural material activation is analyzed based on two measures, volumetric radioactivity concentration and contact biological dose due to decay gamma emission. Using the radioactivity concentration measure, it is revealed that a substantial advantage exists from a viewpoint of radwaste management, which is inherent in fusion reactor designs based on potential low-activation alloys such as V15Cr5Ti, Ti6Al4V, and Al-6063. On the other hand, from the dose standpoint, the V15Cr5Ti alloy is found to be the only alloy for which one could realize a significant dose reduction (below 2.5 mrem/h) within about 100 yr after shutdown, possibly by some extrapolation on alloy purification techniques.

27605 **Contribution of activation products to fusion accident risk: part II. Effects of alternative materials and designs.** Holdren, J.P.; Fetter, S. (University of California, Berkeley Energy and Resources Group, Berkeley, California 94720). *Nuclear Technology;* **4**: No. 3, 599-619(Nov 1983).

Comparison of accident-hazard potentials associated with neutron-activation products in fusion reactors of various designs and structural materials suffers from a number of shortcomings in the readily available hazard-index data. Neither inventories of curies nor biological hazard potentials (BHPs) are satisfactory indices of hazard even if consistently computed, and between-study inconsistencies in neutronics packages and BHP calculations further obscure the meaning of comparisons based on these measures. We present here the results of internally consistent calculations of radioactive inventories, BHPs, and off-site dose potentials associated with the first walls of nine reactor-design/first-wall-material combinations. A recent mirror-reactor design reduces off-site dose potentials by a factor of 2 compared to a muchstudied early tokamak, for a given first-wall material. Holding design fixed, HT-9 ferritic steel offers a factor of 2 reduction in dose potential compared to Type 316 stainless steel. By the dose-potential measure, molybdenum is the worst of the materials investigated and silicon carbide is by far the best. Hazards in realizable accidents depend not only on the hypothetical dose potentials, as calculated here, but also on the actual release fractions of first-wall (or other activated) material. Review of the theoretical and experimental evidence bearing on release fractions suggests that, for most candidate materials, high release fractions from designs containing liquid lithium cannot yet be convincingly ruled out.

27606 **An analysis of activation and the impact of tritium breeding media and structural materials for a commercial tokamak fusion reactor design.** Jung, J. (Fusion Power Program, Argonne National Laboratory 9700 South Cass Avenue, Argonne, Illinois 60439). *Nuclear Technology;* **4**: No. 3, 566-585(Nov 1983).

The characteristics of the neutron-induced radioactivities have been studied for the Tokamak Fusion Test Reactor (TFTR) on both the global and local scales. The global radioactivation properties are illustrated by the dose rate contours near the tokamak for a number of typical cases, based on two-dimensional poloidal model transport calculations. Although calculations on this scale require the omission of many details of the machine design, it nevertheless yields valuable information on the spatial variations of the doses. On the local scale, the activation properties of individual materials have been studied by a systematic analysis which covers a typical set of materials and neutron flux spectra. The data necessary to correlate the operational history, the object size, and the observational distances are presented so that interpolation or extrapolation of the activation properties can be made for the situations that have not been covered. The results yield the necessary correction to the global picture, and also provide the necessary information for the assessment of the problems associated with waste disposal, radioactive material transport, and decommissioning for the TFTR. Although the study is specifically for the TFTR, the methods of approach and the results should also be useful for the analysis of activation on other fusion devices.

27607 **Radioactivation characteristics for deuterium-tritium fusion reactors.** Cheng, E.T. (GA Technologies Inc., P.O. Box 85608 San Diego, California 92138). *Nuclear Technology;* **4**: No. 3, 545-560(Nov 1983). Contract AT03-76ET51011.

Deuterium-tritium fusion neutrons, peaked at 14.1 MeV, can activate the materials employed in a fusion reactor. The radioactivation characteristics and level of activation that occurs in a fusion reactor after shutdown depend on the elements that are activated, the neutron wall loading, the duration of the exposure, and the neutron flux spectrum present. The radioactivity resulting from potential elements considered in fusion reactor designs is discussed. The dominating radionuclides and the levels of activation resulting from exposure of these elements to the neutron flux spectrum in the first-wall region of a typical Li_2O solid-breeder fusion reactor blanket are also given.

27608 **Low activation fusion rationale.** Hopkins, G.R.; Cheng, E.T. (GA Technologies Inc., P.O. Box 85608 San Diego, California 92138). *Nuclear Technology;* **4**: No. 3, 528-544(Nov 1983).

The potential problems of radioactivation in the materials surrounding a neutron-producing fusion plasma were identified over 8 yrs ago. At the same time, the use of low activation materials such as graphite, silicon carbide (SiC), and aluminum alloys was proposed for the structural material in fusion power reactors as a way to greatly reduce the major problems of radioactivity resulting from the more conventional stainless steel materials. A brief review of the current status of the reasons for low activation fusion is presented. Design studies with the low activation materials are not covered here. The consequences of low activation fusion are compared with stainless steel fusion structures and it is found that the radioactivity after reactor shutdown, as measured in curies, may be reduced by a factor of 1,000,000. Even then, this limit is determined by impurities in the materials rather than the low activation materials themselves. Problems from decay heat with potential meltdown are reduced for aluminum and completely eliminated for SiC and graphite. Contact or hands-on maintenance may be performed in regions immediately behind the blanket that otherwise require fully remote operations. Small amounts of radioactive waste materials may be stored in surface facilities for the low activation concept. This is compared to the conventional steel systems where high-level radwaste geologic storage facilities may be required. Preliminary projected incremental costs for low activation fusion do not appear excessive but cost/benefit analyses are needed to evaluate the optimum degree of activation reduction. Low activation fusion can help assure the full potential of fusion in providing an environmentally benign energy source with a high degree of safety and public acceptance.

27609 **Materials for fusion.** Scott, J.L. (Oak Ridge National Lab., TN). *Oak Ridge National Laboratory Review (United States);* **16**: No. 4, 66-67(Fal 1983).

The plasma to be magnetically confined in commercial fusion power devices can be exceedingly hostile to its immediate surroundings, i.e., the materials making up the first wall and the structure holding the blanket used for breeding new fuel. The Oak Ridge National Laboratory's research program on the development of materials suitable for fusion reactors is briefly discussed.

27610 **Laser or charged-particle-beam fusion reactor with direct electric generation by magnetic flux compression.** Lasche, G.P. (to Dept. of Energy). US Patent Application 6-537,218. 29 Sep 1983. 87p. Contract W-7405-ENG-48.

Portions are illegible in microfiche products.

The invention is a laser or particle-beam-driven fusion reactor system which takes maximum advantage of both the very short pulsed nature of the energy release of inertial confinement fusion (ICF) and the very small volumes within which the thermonuclear burn takes place. The pulsed nature of ICF permits dynamic direct energy conversion schemes such as magnetohydrodynamic (MHD) generation and magnetic flux compression; the small volumes permit very compact blanket geometries. By fully exploiting these characteristics of ICF, it is possible to design a fusion reactor with exceptionally high power density, high net electric efficiency, and low neutron-induced radioactivity. The invention includes a compact blanket design and method and apparatus for obtaining energy utilizing the compact blanket.

27611 **Method to produce large, uniform hollow spherical shells.** Hendricks, C.D. (to Dept. of Energy). US Patent Application 6-535,464. 26 Sep 1983. 17p. Contract W-7405-ENG-48.

Portions are illegible in microfiche products.

The invention is a method to produce large uniform hollow spherical shells by (1) forming uniform size drops of heat decomposable or vaporizable material, (2) evaporating the drops to form dried particles, (3) coating the dried particles with a layer of shell forming material and (4) heating the composite particles to melt the outer layer and to decompose or vaporize the inner particle to form an expanding inner gas bubble. The expanding gas bubble forms the molten outer layer into a shell of relatively large diameter. By cycling the temperature and pressure on the molten shell, nonuniformities in wall thickness can be reduced. The method of the invention is utilized to produce large uniform spherical shells, in the millimeter to centimeter diameter size range, from a variety of materials and of high quality, including sphericity, concentricity and surface smoothness, for use as laser fusion or other inertial confinement fusion targets as well as other applications.

27612 **In-situ determination of energy species yields of intense particle beams.** Kugel, H.W.; Kaita, R. (to Dept. of Energy). US Patent Application 6-535,974. 26 Sep 1983. 38p. Contract AC02-76CH03073.

Portions are illegible in microfiche products.

Objects of the present invention are provided for a particle beam having a full energy component at least as great as 25 keV, which is directed onto a beamstop target, such that Rutherford backscattering, preferably near-surface backscattering occurs. The geometry, material composition and impurity concentration of the beam stop are predetermined, using any suitable conventional technique. The energy-yield characteristic response of backscattered particles is measured over a range of angles using a fast ion electrostatic analyzer having a microchannel plate array at its focal plane. The knee of the resulting yield curve, on a plot of yield versus energy, is analyzed to determine the energy species components of various beam particles having the same mass.

27613 **Small gap experiments in magnetically insulated transmission lines.** Stinnett, R.W.; Bengtson, R.; Palmer, M.A.; Spielman, R.B. (Sandia National Laboratories, Albuquerque, NM 87185). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science;* **11**: No. 3, 216-218(Sep 1983).

We have performed experiments using magnetically insulated transmission lines (MITL's) with anode-cathode gaps ranging from 0.15 to 0.40 cm. We have studied cathode plasma a formation using laser schlieren photography, time resolved visible photography, and visible spectroscopy. Cathode plasma formation occurs within 10 ns of the application of the voltage pulse. Densities of 10^{15} cm^{-3} 10^{17} cm^{-3} are inferred from the schlieren measurements. Negative ion formation in MITL's has also been observed which may result in losses in high-current-density small-gap power feeds.

27614 **Reflex ring laser amplifier system.** Summers, M.A. (to Dept. of Energy). US Patent Application 6-528,285. 31 Aug 1983. 16p. Contract W-7405-ENG-48.

Portions are illegible in microfiche products.

The invention is a method and apparatus for providing a reflex ring laser system for amplifying an input laser pulse. The invention is particularly useful in laser fusion experiments where efficient production of high-energy and high power laser pulses is required. The invention comprises a large aperture laser amplifier in an unstable ring resonator which includes a combination spatial filter and beam expander having a magnification greater than unity. An input pulse is injected into the resonator, e.g., through an aperture in an input mirror. The injected pulse passes through the amplifier and spatial filter/expander components on each pass around the ring. The unstable resonator is designed to permit only a predetermined number of passes before the amplified pulse exits the resonator. On the first pass through the amplifier, the beam fills only a small central region of the gain medium. On each successive pass, the beam has been expanded to fill the next concentric non-overlapping region of the gain medium.

27615 **Method and source for producing a high concentration of positively charged molecular hydrogen or deuterium ions.** Ehlers, K.W.; Leung, K.N. (to Dept. of Energy). US Patent Application 6-517,476. 26 Jul 1983. 22p. Contract AC03-76SF00098.

Portions are illegible in microfiche products.

One principal object of the present invention is to provide a novel method and apparatus for generating a high concentration of H_3^+ or D_3^+ ions by using a new and improved multicusp ion source. The basic principle in achieving a high percentage of H_3^+ or D_3^+ ions is to extract them from the source as soon as they are produced. Otherwise they will react with background gas molecules to form tri-atomic ions H_3^+ or D_3^+ or be dissociated by electrons. The former reaction $H_3^+ + H_2 \rightarrow H_3^+ + H$ can have a very short mean free path length λ. Assuming a background neutral gas density of approximately 3.3×10^{13} cm^{-3} and a cross-section σ of approximately 6×10^{-15} cm^2, $\lambda = (n_0\,\sigma)^{-1}$ is estimated to be about 5 cm. Thus the distance traversed by the H_3^+ ion before it arrives at the extractor electrode cannot exceed this value. This in turn sets a limit on the length of the source chamber.

27616 **Positioning apparatus.** Vogel, M.A.; Alter, P. (to Dept. of Energy). US Patent Application 6-511,702. 7 Jul 1983. 27p. Contract AC06-76FF02170.

Portions are illegible in microfiche products.

An apparatus is provided for precisely adjusting the position of an article relative to a beam emerging from a neutron source disposed in a housing. The apparatus includes a support pivotably mounted on a movable base plate and freely suspended therefrom. The support is gravity biased toward the housing and carries an article holder movable in a first direction longitudinally of the axis of said beam and normally urged into engagement against said housing. Means are provided for moving the base plate in two directions to effect movement of the suspended holder in two mutually perpendicular directions, respectively, normal to the axis of the beam.

27617 **Transverse field focused system.** Anderson, O.A. (to Dept. of Energy). US Patent Application 6-500,105. 1 Jun 1983. 18p. Contract AC03-76SF00098.

Portions are illegible in microfiche products.

It is an object of the invention to provide a transport apparatus for a high current negative-ion beam which will bend the beam around corners through a baffled path in a differential pump or a neutron trap. It is another object of the invention to provide a transport apparatus for a high current negative-ion beam which will allow gas molecules in the beam to exit outwardly from the transport apparatus. A further object of the invention is to provide a multi-stage accelerator for a high current negative-ion beam which will enable acceleration of the beam to very high energy levels with a minimum loss of current carrying capacity. A still further object of the invention is to provide an apparatus for transport or accelertion of a sheet beam of negative ions which is shaped to confine the beam against divergence or expansion.

27618 **Variable control of neutron albedo in toroidal fusion devices.** Jassby, D.L.; Micklich, B.J. (to Dept. of Energy). US Patent Application 6-500,199. 1 Jun 1983. 44p. Contract AC02-76CH03073.

Portions are illegible in microfiche products.

This invention pertains to methods of controlling in the steady state, neutron albedo in toroidal fusion devices, and in particular, to methods of controlling the flux and energy distribution of collided neutrons which are incident on an outboard wall of a toroidal fusion device.

27619 **Method of controlling fusion reaction rates.** Kulsrud, R.M.; Furth, H.P.; Valeo, E.J.; Goldhaber, M. (to Dept. of Energy). US Patent Application 6-492,924. 9 May 1983. 9p. Contract AC02-76CH03073.

Portions are illegible in microfiche products.

This invention relates to a method of controlling the reaction rates in a nuclear fusion reactor; and more particularly, to the use of polarized nuclear fuel.

27620 **Graphite-ceramic rf Faraday-thermal shield and plasma limiter.** Hwang, D.L.Q.; Hosea, J.C. (to Dept. of Energy). US Patent Application 6-491,639. 5 May 1983. 18p. Contract AC02-76CH03073.

Portions are illegible in microfiche products.

The present invention is directed to a brazing procedure for joining a ceramic or glass material (e.g., Al_2O_3 or Macor) to graphite. In particular, the present invention is directed to a novel brazing procedure for the production of a brazed ceramic graphite product useful as a Faraday shield. The brazed ceramic graphite Faraday shield of the present invention may be used in Magnetic Fusion Devices (e.g., Princeton Large Torus Tokamak) or other high temperature resistant apparatus.

27621 **On the energy and momentum deposition in the ion beam-pellet interaction.** Cuperman, S.; Levush, B. (Tel Aviv University, Department of Physics and Astronomy Ramat Aviv). *Nuclear Science and Engineering;* **81**: No. 1, 45-54(May 1982).

The ion beam-pellet interaction is investigated by using a time-dependent particle tracking algorithm for the slowing down of the bombarding ions. Model equations for energy and momentum deposition are developed and solved with the aid of a numerical code that describes the beam-pellet interaction as well as the subsequent heating and compression of the target. Results of calculations carried out for solid deuterium-tritium pellets using beams of deuterons, alpha particles, and lithium ions are presented and discussed. Two main conclusions are found to hold, namely: Consideration of the finite thermalization time of the ion in the transport process results in slower heating and compression of the pellet as well as in smaller thermonuclear yield ratios. Taking into account the momentum deposition of the bombarding ions in the pellet also provides different thermonuclear yields for low initial ion energies; for high initial ion energies, the effect of the momentum deposition is negligible.

27622 **Thermonuclear reactor materials. Chapter 6.** Gruen, D.M. (Argonne National Lab., IL (USA)). pp 313-366 of Materials science in energy technology. Sinfel't, D.; Simnad, M.; Khouv, D. . Moscow, USSR; Mir (1982). (In Russian)

Portions are illegible in microfiche products58 refs.; 1 fig.; 2 tabs.; translation from English.

Concept designs of thermonuclear reactors are briefly described and requirements placed upon structural materials of the first wall, insulators, diverter plates, blanket, superconducting magnets are formulated. Data on compatibility of materials perspective for application in thermonuclear reactors are presented and interaction of the materials with radiation is considered.

27623 **Comparison of one- and two-dimensional cross-section sensitivity calculations for a fusion reactor shielding experiment.** Seki, Y.; Lucius, J.L.; Oblow, E.M.; Santoro, R.T. (Oak Ridge National Laboratory, P.O. Box X Oak Ridge, Tennessee 37830). *Nuclear Science and Engineering;* **73**: No. 1, 87-93(Jan 1980). Contract W-7405-ENG-26.

Cross-section sensitivities calculated with one- and two-dimensional models of a fusion reactor shielding experiment are compared. The effectiveness of the two-dimensional calculation in accurately modeling the experiment and detector configurations is demonstrated. At the same time, the validity of a one-dimensional sensitivity study is also demonstrated.

99 GENERAL AND MISCELLANEOUS

27624 **(ANL—83-55) Chemical Technology Division. Annual technical report, 1982.** (Argonne National Lab., IL (USA)). Jul 1983. Contract W-31-109-ENG-38. 217p. NTIS, PC A10/MF A01. Order Number DE83017541.

Highlights of the Chemical Technology (CMT) Division's activities during 1982 are presented. In this period, CMT conducted research and development in the following areas: (1) advanced batteries, mainly lithium/iron sulfide, for electric-vehicle application; (2) aqueous batteries - improved lead-acid, nickel/zinc, and nickel/iron - for electric vehicles, as well as advanced lead-acid batteries for electric-utility load leveling; (3) advanced fuel cells (electrolytes of molten carbonate or solid oxide) for use by electric utilities; (4) coal technology, including fluidized-bed combustion of coal in the presence of an SO_2 sorbent of limestone and indirect liquefaction of coal with improved catalysts; (5) heat- and seed-recovery technology for open-cycle magnetohydrodynamic systems; (6) methodologies for utilization of energy from municipal waste; (7) solar energy collectors and thermal energy storage; (8) fuel cycle technology - nuclear waste management, proof-of-breeding for the light water breeder reactor, and sodium technology (e.g., cold traps) for liquid metal fast breeder reactors; and (9) magnetic fusion technology, mainly the breeder blanket. The Division also has a program in basic and applied materials research. Examples of this effort include experimental and theoretical studies on (1) the behavior of fission products likely to be released from light water reactor fuel under accident conditions; (2) the thermodynamic properties of a wide variety of inorganic materials; and (3) the transformation kinetics and formation mechanisms of atmospheric sulfate and nitrate aerosols. In addition, the Division continued to operate the central Analytical Chemistry Laboratory at Argonne. Separate abstracts were prepared for 12 sections of the report.

27625 **(DOE/ER—0191) Programs of the Office of Energy Research.** (USDOE Office of Energy Research, Washington, DC). Apr 1984. 24p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011362.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

An overview is given for the DOE research programs in high energy and nuclear physics; fusion energy; basic energy sciences; health and environmental research; and advisory, assessment and support activities. (GHT)

27626 **(DOE/ER—0193) Health physics/radiation protection enrollments and degrees, 1983.** (Oak Ridge Associated Universities, Inc., TN (USA)). Feb 1984. Contract AC05-76OR00033. 63p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84010980.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report presents data on the number of students enrolled and the degrees awarded in academic year 1982-83 from 66 U.S. universities offering degree programs in radiation protection or related areas that would enable graduates to work as health physicists. The report includes historical survey data for the last decade and provides information about enrollment and degree trends, foreign national student participation, female and minority student participation, and placement of graduates. Also included is a listing of the universities by type of program and number of students.

27627 **(DOE/MA—0148) Collective bargaining agreement between Department of Energy Headquarters and the National Treasury Employees Union.** (National Treasury Employees Union, Washington, DC (USA)). Mar 1984. 32p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84010528.

This collective bargaining agreement is entered into to prescribe certain rights and obligations of the employees of the Department of Energy (DOE) Headquarters represented by the National Treasury Employees Union (NTEU) and to delineate procedures which are designed to meet the special requirements and needs of DOE Headquarters. The provisions of this agreement have been negotiated and should be interpreted in a manner consistent with the requirement of an effective and efficient Department.

27628 **(NSF—83-5) Annual science and technology report to the Congress: 1982.** (Office of Science and Technology Policy, Washington, DC (USA)). 3 Oct 1983. 120p. NTIS, PC A06/MF A01 - GPO* $5.00. Order Number DE84901150.

The science and technology policies in this report outline the framework in which the US Administration is addressing the challenges of maintaining the competitiveness of our industries in the international marketplace and ensuring the continued technological superiority of our defense capabilities. Chapters are included on decisions and actions in science and technology, outlook for selected fields of science, and federal research and development programs. (GHT)

27629 **(PNL-SA—12058) Development of a document preparation staff within an office automation environment.** Bebee, J.L. (Pacific Northwest Lab., Richland, WA (USA)). Feb 1984. Contract AC06-76RL01830. 14p. (CONF-840276—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008649.

From 3. annual Office Systems Research conference; Los Angeles, CA, USA (18 Feb 1984).

Developing a document preparation staff in an office automation environment will not occur by accident. Office Automation will undoubtedly create job match challenges that management cannot ignore. For the implementation of Office Automation to be successful, one must look beyond the technology and understand the true basis for the success of any organization. As you adopt the belief that the people are the basis for the success of the organization, plan to do the following: develop job descriptions, build around the experienced staff, select staff by thorough evaluation, integrate new staff into the organization, provide planned staff growth and development, and have an ongoing staff development review process.

27630 **(BNL—34603) Limiting behavior of sample autocovariance function of a seasonal time series.** Tian, C.J. (Brookhaven National Lab., Upton, NY (USA)). 1983. Contract AC02-76CH00016. 11p. (CONF-8308167—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010792.

From 11. international time series meeting; Toronto, Canada (18 Aug 1983).

Portions are illegible in microfiche products.

In this paper we study a seasonal time series X/sub t/. Under some ergodic assumptions it is proved that the limit of sample autocovariance function of X/sub t/ exists and reveal same periodicity in some sense. Based on the limiting behavior, the problem of estimating period is also briefly discussed.

27631 **(LA—10049-M) User's guide for TWODANT: a code package for two-dimensional, diffusion-accelerated, neutral-particle transport.** Alcouffe, R.E.; Brinkley, F.W.; Marr, D.R.; O'Dell, R.D. (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 40p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84011011.

The TWODANT code package is a modular computer program designed to solve the two-dimensional, time-independent, multigroup discrete-ordinates form of the Boltzmann transport equation. TWODANT uses the same modular construction as the ONEDANT code. This modular construction separates the input processing, the transport equation solving, and the postprocessing, or edit functions, into distinct, independently executable code modules, the INPUT, SOLVER, and EDIT modules, respectively. These modules are connected to one another solely by means of binary interface files. The INPUT module and, to a lesser degree, the EDIT module are general in nature and are designed to be standardized modules. With these modules, different new production codes can be created simply by developing different SOLVER modules that can be plugged in to the standardized INPUT and EDIT modules.

27632 **(LBL—16254) Token ring local area networks. A comparison of experimental and theoretical performance.** Sventek, J.; Greiman, W.; O'Dell, M.; Jansen, A. (Lawrence Berkeley Lab., CA (USA)). Jun 1983. Contract AC03-76SF00098. 17p. (CONF-831276—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010706.

From Computer networks symposium; Silver Spring, MD, USA (13 Dec 1983).

Portions are illegible in microfiche products.

Many existing performance models of local area networks are based on the assumptions of random traffic patterns and infinite buffer capacity. All real network implementations violate the infinite capacity assumption, while an inceasingly popular class of local area network applications violates the randomness assumption. This paper describes the experimental measurements of the characteristics of a commercially available token ring network. It is shown that the violation of both assumptions invalidates model predictions, and that the utility of all access control mechanisms for such applications must be reevaluated. Finally, it is shown that congestion is a very real problem even in small simple local area networks. Schemes for controlling interface congestion may require rather novel approaches to the problem.

27633 (LBL—16321, pp 404-413) **Performance prediction methods for evaluating PDE algorithms on MIMD machines.** Fok, S.K.; Wilson, J.R.; Heard, H.G.; Parker, J.A. (Tech. Development of California, Inc., Santa Clara). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

In this paper, a variety of current performance measures for SIMD machines are extended to MIMD machines. The concept of cost-effectiveness is elaborated and used to obtain an a posteriori estimate of the optimal number of processors to be used for a particular problem. Using both probability modeling and simulation, performance prediction methods are developed to evaluate the performance of the Large Eddy Code [7] of NASA-Ames on a tightly-coupled system such as the CRAY X-MP.

27634 **(N—83-24193) Overview of computer-based natural language processing.** Gevarter, W.B. (National Aeronautics and Space Administration, Washington, DC (USA). Office for Aeronautic and Space Technology). Apr 1983. 50p. (NASA-TM—85635; NBSIR—83-2687). NTIS, PC A03.

Paper copy only, copy does not permit microfiche production.

Computer-based Natural Language-Processing (NLP) is the key to enabling humans and their computer-based creations to interact with machines in natural language (like English, Japanese, German, etc. in contrast to formal computer languages). The doors that such an achievement can open have made this a major research area in Artificial Intelligence and Computational Linguistics. Commercial natural language interfaces to computers have recently en-

tered the market and the future looks bright for other applications as well. This report reviews the basic approaches to such systems, the techniques utilized, applications, the state-of-the-art of the technology, issues and research requirements, the major participants, and finally, future trends and expectations. It is anticipated that this report will prove useful to engineering and research managers, potential users, and other who will be affected by this field as it unfolds.

27635 **(PB—83-217562) Overview of expert systems.** Gevarter, W.B. (National Bureau of Standards, Washington, DC (USA)). Oct 1982. 74p. (NBSIR—82-2505). NTIS, PC A04.

Paper copy only, copy does not permit microfiche production.

This report provides an overview of Expert Systems - currently the hottest topic in the field of Artificial Intelligence. Topics covered include what it is, techniques used, existing systems, applications, who is doing it, who is funding it, the state-of-the-art, research requirements and future trends and opportunities.

27636 **(SAND—83-1670) Graphics Workstation Switching Unit.** Baldwin, D.B. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1984. Contract AC04-76DP00789. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011626.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The capability to operate a computer/aided design workstation from a number of different computer processor systems is required. In the past this was accomplished by separately recabling the terminal to another central processing unit (CPU). This report describes a Graphics Workstation Switching Unit that has been designed and built which eliminates the necessity to recable a terminal in order to connect it to another CPU. This unit is capable of switching 10 workstations between 2 CPUs.

27637 **(SAND—84-0281) SLATEC mathematical subprogram library, Version 2.0.** Vandevender, W.H. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1984. Contract AC04-76DP00789. 19p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010750.

The SLATEC Common Mathematical Subprogram Library is an experiment in resource sharing by the computing departments of several Department of Energy Laboratories. The objective is to cooperatively assemble and install at each site a mathematical subprogram library characterized by portability, good numerical technology, good documentation, robustness, and quality assurance. The result is a portable Fortran mathematical subprogram library of over 160,000 lines of code. Much of the following report is based on Reference 1, a chapter to be included in a forthcoming book about mathematical software.

27638 **(SAND—84-0447) Set covering, partition and packing.** Hulme, B.L.; Baca, L.S. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1984. Contract AC04-76DP00789. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011171.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Set covering problems are known to be solvable by Boolean algebraic methods. This report shows that set partition and set packing problems can be solved by the same algebraic methods because these problems can be converted into covering problems. Many applications are possible including security patrol assignment which is used as an example.

27639 **(SAND—84-0581C) DBMS conversion case study.** Dale, B.C. (Sandia National Labs., Albuquerque, NM (USA)). 1984. Contract AC04-76DP00789. 14p. (CONF-8405148—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011205.

From 2. annual DPMA software maintenance symposium; Washington, DC, USA (7 May 1984).

The Integrated Procurement System (IPS) is a very large data base application that supports purchasing, accounts payable and cost accounting for materials and services at Sandia National Laboratories. The system was the first data base application installed as a production system and has been around since the early 1970s. The size of the network data base is approximately 130 million characters and there are approximately 20 separate production jobs that run against it to perform various functions. In all, there are about 80 programs with a total of around 120,000 lines of COBOL source code. Several years ago, a redevelopment effort was launched to design and program a new Integrated Procurement System which would incorporate several features that were not available in the old version, including the capability to account for line item details on purchase orders and to perform our receiving function in an automated fashion rather than manually. It was also a goal to have all data input via screen programs, i.e., terminal input rather than keypunch and batched. The development of this conversion is described.

27640 **(SAND—84-0856C) ANVIL-4000 update.** Plomp, P.W. (Sandia National Labs., Albuquerque, NM (USA)). May 1984. Contract AC04-76DP00789. 12p. (CONF-8405145—1). NTIS, PC A02; 3; GPO Dep. Order Number DE84010602.

From IMOG/NSG meeting; Tampa, FL, USA (15 May 1984).

Paper copy only, copy does not permit microfiche production.

The ANVIL-4000 interactive computer graphics software is used to program numerically controlled machine tools, construct accurate engineering drawings, and to solve geometric problems. Examples are cited demonstrating the use of the NC COMBO machining module.

27641 **(SAND—84-0919C) Common Data Input/Retrieval System.** Pate, J.E.; Muntz, J.E. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1984. Contract AC04-76DP00789. 17p. (CONF-8404136—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010972.

From USE conference; Dallas, TX, USA (2 Apr 1984).

Portions are illegible in microfiche products.

The Common Data Input/Retrieval System (CDIRS) is a generalized software system developed at Sandia National Laboratories which is incorporated into an application system to perform application data input and/or retrieval processing. The system operates in the on-line mode in the Transaction-Processing (TIP) environment, and in batch mode. The system may be used for retrieval and/or updating of both the transaction database and the application database. Features provided include data input/retrieval screens which are tailored to designer's specifications, access to transactions via six retrieval paths, backup and recoverability of transactions, and periodic archival of processed transactions. The system consists of 40 programs, of which 36 are written in Cobol and 4 are written in Assembler. Forty-three action codes are provided to accomplish various combinations of DMS activities. Security is available at three levels: datasystem-level, user-level, and transaction-level. The purpose of this paper is to provide an overview of the CDIRS environment from a user perspective. For this reason, some generalizations will be made, and some detail will be omitted. The system is complex, however; it will be necessary to provide enough detail to define the various entities, and attempt to explain how they interface.

27642 **(UCID—18852-Rev.2) Syntax and semantics of a LINCS control monologue.** Minton, J.A.; Donnelley, J.E.; Mecozzi, D.T.; Du Bois, P.J. (Lawrence Livermore National Lab., CA (USA)). 11 Apr 1984. Contract W-7405-ENG-48. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011399.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The basic unit of information in a LINCS Control Monologue is a token. A sequence of tokens makes up a statement, a sequence of statements makes up a message, and one or more messages and associated state information make up a control monologue. A monologue is bound to an association. An association is made up of a speaker and a listener, where each is represented as a LINCS port address. The data structure in which the state informa-

tion retained is called a Control Monologue Record (CMR). This reference document defines the syntax and semantics of tokens, statements, messages, control monologues, and CMRs.

27643 **(UCID—30183-Rev.1) Linear systems analysis program. Programmer's manual, Version 2.2 (VAX/VMS).** Tilly, D.M. (Lawrence Livermore National Lab., CA (USA)). 20 Apr 1984. Contract W-7405-ENG-48. 24p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010953.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The computer program Linear Systems Analysis Program (LSAP) is an interactive program with graphics capability that can be used for the analysis and design of linear control systems. Nearly all classical design tools are available, including manipulation of transfer functions and generation of root locus, time response, and frequency response plots. This manual discusses the structure of the program. Included are explanations of implementation details of the underlying data structure.

27644 **(UCRL—83604-Rev.1) Serial link protocol design: a critique of the X.25 standard, Level 2.** Fletcher, J.G. (Lawrence Livermore National Lab., CA (USA)). 25 Oct 1983. Contract W-7405-ENG-48. 31p. (CONF-840636—Rev.1). NTIS, PC A03/MF A01. Order Number DE84002724.

From ACM SIGCOMM '84 symposium on communications architectures and protocols; Montreal, Canada (6 Jun 1984).

There are certain technical design principles for link communication protocols which, if followed, result in a protocol that is less complex in both concept and implementation, but at the same time provides better service, than if the principles are not followed. These principles include modularization into subprotocols, symmetry between the nodes on the link, and use of the state-exchange model of a conversation rather than the command-response model. The principles are described, the extent to which they are followed by the standard protocol X.25, level 2, is examined, and a protocol adhering to them is presented.

27645 **(UCRL—90351) Supercomputers: the next ten years - a user's view.** Ranelletti, J.E.; Michael, G.A. (Lawrence Livermore National Lab., CA (USA)). 6 Feb 1984. Contract W-7405-ENG-48. 6p. (CONF-8405147—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011072.

From 4. Jerusalem conference on information technology; Jersualem, Israel (26 May 1984).

Portions are illegible in microfiche products.

In a continuing effort to build faster computers, today's hardware architectural designers have turned to Multi-Instruction/Multi-Data machines (MIMDs) in order to achieve significant increases in capability. This paper represents the view of some potential users of such architectures. The authors call for consideration of a total Supercomputing Environment in order to meet the application needs of the future. Much research is needed soon in order to properly provide such a balanced environment.

27646 **(YALEU/DCS/RR—261) PLTMGC: a multi-grid continuation program for parameterized nonlinear elliptic systems.** Bank, R.E.; Chan, T.F. (Yale Univ., New Haven, CT (USA). Dept. of Computer Science). Dec 1983. Contract AC02-81ER10996. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010406.

Portions are illegible in microfiche products.

PLTMGC is a program package for solving nonlinear elliptic systems that have explicit dependence on a scalar parameter. In addition to being able to compute solutions for fixed parameter values, it can be used to solve the linear eigenvalue problem, trace solution branches, accurately locate singular points (simple turning points and bifurcation points) and switch branch at simple bifurcation points. A multi-grid continuation approach is employed in which a continuation procedure is used to follow the solution curve on the coarsest grid and a multi-grid algorithm is used to refine the solution at selected points using an adaptive mesh refinement strategy. Some numerical examples illustrating the performance of the package are given.

27647 **(YALEU/DCS/RR—300) Approximate Newton method for coupled nonlinear systems.** Chan, T.F. (Yale Univ., New Haven, CT (USA). Dept. of Computer Science). Feb 1984. Contract AC02-81ER10996. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010411.

Portions are illegible in microfiche products.

A general algorithm is proposed for solving a general class of coupled nonlinear systems. It is especially suitable for problems for which efficient solvers exist for part of the system but not for the whole. The algorithm can be applied in a modular fashion with calls to these solvers and fully exploits the efficiency built into them. The local convergence analysis shows that if the solvers are sufficiently contractive, then the algorithm converges locally.

27648 **(YALEU/DCS/TR—297) Techniques for large sparse systems arising from continuation methods.** Chan, T.F. (Yale Univ., New Haven, CT (USA). Dept. of Computer Science). Dec 1983. Contract AC02-81ER10996. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010410.

Portions are illegible in microfiche products.

We survey numerical techniques for solving the nonlinear and linear systems arising from applying continuation methods to tracing solution manifolds of parameterized nonlinear systems of the form $G(u,\lambda) = 0$. We concentrate on large and sparse problems, e.g. discretizations of partial differential equations, for which this part of the computation dominates the overall cost. The basic issue is a tradeoff of the exploitation of the sparsity structure of the Jacobian G/sub u/ and the numerical treatment of its singularity. Among the techniques to be discussed are: Newton and quasi-Newton methods, low rank correction methods, implicit deflation techniques, Krylov subspace iterative methods and multi-grid methods.

27649 **Convergence of sequences of Pade approximants.** Baker, G.A. Jr.; Graves-Morris, P.R. (Los Alamos National Lab., NM). *Journal of Mathematical Analysis and Applications;* **87**: No. 2, 382-394(Jun 1982).

Criteria are specified for the selection of a convergent subsequence of Pade approximants out of a given sequence. Conditions which may be implemented computationally are given for establishing spherical equicontinuity of a sequence of Pade approximants, and these conditions suffice to prove spherical convergence.

27650 **(AAEC/M—102) AAEC INIS online user manual.** Rugg, T.J.; Wong, S.C. (Australian Atomic Energy Commission Research Establishment, Lucas Heights). May 1983. 41p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84700987.

The Australian Atomic Energy Commission's INIS database has been opened for online searching by non-AAEC personnel. System features and search commands are described.

27651 **(DOE/TIC—4585-R4) Energy Data Base corporate author entries.** Hendricks, P.L. (ed.). (USDOE Technical Information Center, Oak Ridge, TN). Apr 1984. 860p. NTIS, PC A99/MF A01. Order Number DE84003877.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The US Department of Energy is one of three agencies funding the major portion of government-supported research. One of the ways to locate the results of this research is to find reports in the Energy Data Base (EDB), the comprehensive data base of the Office of Scientific and Technical Information, Technical Information Center, and in publications derived therefrom by referring to the corporate organization performing the research. This information field has been established as an index point retrievable in online searching and is included as an index in printed publications. To provide consistent citing of names in bibliographic entries, this

authority has been created and maintained as a means of entry of corporate names into the EDB. To locate such information, one can (1) use the seven-digit code number assigned to the corporate entity of interest (enter, for example, IC=9506086) or (2) use one word at a time from the corporate name given (enter, for example, CS=Dominion).

27652 **(IAEA-INIS—11-Rev.12) INIS: authority list for journal titles.** (International Atomic Energy Agency, Vienna (Austria)). Mar 1984. 288p. UNIPUB, PO Box 433, Murray Hill Station, New York, NY 10157.

This is the twelfth revision of the INIS: Authority List for Journal Titles (IAEA-INIS-11). It lists the titles of 8471 journals which have contained articles within the scope of INIS. The purpose of this report is to provide descriptive cataloguers with a standard abbreviation for journal titles and users of INIS products with a tool for verifying the full title of a journal. This bibliographic element (Tag 230, bibliographic level S) is discussed in INIS: Descriptive Cataloguing Rules (IAEA-INIS-1). The cataloguer should also be familiar with the correct method of giving the date (Tag 403) and the collation (Tag 500) for journal articles. In this report as well as in other INIS publications and forms, the term journal is used for publications of a periodical nature, including annuals such as Annual Review of Nuclear Science. It does not include publishers' series such as McGraw-Hill Series in Nuclear Engineering. If available, ISSN and CODEN are given. To facilitate input preparation one may enter either the abbreviated journal title at Tag 230, bibliographic level S, or the respective ISSN at Tag 230, bibliographic level S, or both. The elements not entered, the journal title abbreviation or the ISSN - whichever is applicable - will automatically be added during central processing.

27653 **(IAEA-INIS—17-Rev.2) INIS: manual for online retrieval.** Schiele, J.; Kurtev, I.; Ruckenbauer, E.; Stanik, Z.; Varecka, F.; Schmid, H. (International Atomic Energy Agency, Vienna (Austria)). Mar 1984. 144p. UNIPUB, PO Box 433, Murray Hill Station, New York, NY 10157.

This manual is addressed to users participating in the INIS Online Service available at the IAEA in Vienna. The retrieval system used at the IAEA is IBM/STAIRS (Storage and Information Retrieval System), installed on an IBM mainframe computer operating under OS/MVS and the TP monitor CICS. STAIRS is a multipurpose software package which enables the user to carry out retrieval on suitably structured textual and/or numerical data files in both interactive (i.e. online) and batch modes. In addition to the actual retrieval modules, the system also includes a number of auxiliary facilities which assist in the preparation and management of search files, help the users in printing the document references retrieved and in saving formulated queries for later execution or SDI processing, etc. Because of certain modifications and extensions made by the IAEA, the retrieval dialogue will be slightly different from the standard STAIRS. The present manual describes the INIS/STAIRS database and the IAEA/STAIRS retrieval language.

27654 **(LBL—14083) Enhancements to the codata data definition language.** McCarthy, J.L. (Lawrence Berkeley Lab., CA (USA)). Feb 1982. Contract AC03-76SF00098. 30p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010579.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This memo outlines a number of proposed enhancements to the current codata data definition language (DDL) for SEEDIS. At present, the codata DDL is used in data definition files (DDF's) to describe both fixed format, character-image codata files and binary format SEEDIS Compressed data files. The basic enhancement proposed here is that we make the process of adding and changing metadata definitions easier (and less hardwired) than it has been in the past. We also propose specific enhancements to facilitate handling 1980 Census Project data files, including multidimensional data elements, dimension descriptions, and differentiated labeling components.

27655 (LBL—16321, pp 2-8) **Data-bases for clinical histories.** Elliman, A.D. (Brunel Univ., Uxbridge, England). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

Medical researchers frequently investigate the progress of a disease or treatment by collecting a number of case histories. Data only becomes available when suitable patients present themselves and each patient may need to be followed for some years. A study of this type is a long term exercise. Such studies are only made possible by the availability of computers for data collection and analysis. Several data-base systems are available for clinical research, but many of these do not give enough attention to the dynamic aspects of this type of work. To identify the problem areas models for both the investigator's and patient's interaction with the data-base are presented.

27656 (LBL—16321, pp 9-18) **Features of a system for statistical databases.** Ozsoyoglu, G.; Ozsoyoglu, Z.M. (Case Western Reserve Univ., Cleveland, OH). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

Desirable features of statistical databases (SDB) are listed and the architecture and major features of a statistical database management system, called the System for Statistical Databases (SSDB), is summarized. SSDB uses a semantic data model designed to facilitate the data manipulation tasks of statistical database users. It incorporates tools to model operational populations such as experimental, cleaned, interpreted and representative populations, and has the capacity to model summary tables, histograms, matrices, crosstabulations, scatter diagrams and two-dimensional plots. The data model uses the compartmentalization concept to minimize the effects of SDB security enforcement. The SSDB software is partitioned into certified and uncertified modules, and the flow of control within SSDB is designed to allow SDB security checking at execution time. Finally SSDB has a screen-oriented query language to manipulate summary and raw data. The paper concludes with a brief overview of the existing and proposed systems.

27657 (LBL—16321, pp 19-21) **Issues related to medical statistical databases.** Long, J.M.; Brashear, J.R. (Univ. of Minnesota, Minneapolis). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

The underlying system for most if not all medical statistical databases is the patient medical record whose automation is still in a development stage. The automation of this underlying system is not standardized and its standardization is the subject of debate. Ethical and legal considerations add to the difficulty in generating statistical databases containing medical data ragardless of its use in demographic, epidemiologic, or other research and planning applications. None of these problems appear to have short range solutions. To minimize the impact of these problems on statistical databases in support of planning and research needs, the structure and content of statistical databases using medical data can and should be kept as simple as possible.

27658 (LBL—16321, pp 32-38) **Model for a clinical research database.** Goldman, A.I. (Univ. of Minnesota, Minneapolis). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

A model for the organization of a clinical research database is described. The model is based mainly on the Minnesota Bone Marrow Transplant and the Leukemia-Lymphoma Databases which are characterized by patient data with non-rectangular format, prospectively collected as patients are followed. The SIR data management system is used because of its flexibility and the ease with which statistical analysis files can be created. A main focus of the file organization is an emphasis on events rather than lab values as endpoints. Records for patients, event labels, and protocol are separate case types and linked together during retrieval.

27659 (LBL—16321, pp 39-45) **Research needs and database development: push and pull.** Meierhoefer, B.S. (Federal Judicial Center, Washington, DC). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper traces the inception of a database reorganization project that got its stimulus from a research question. When asked to look into what constitutes an overburdened court in terms of per judge caseload, researchers at the Federal Judicial Center developed a research design calling for relatively sophisticated time series and survival analyses involving large amounts of data over a ten year period. Though the necessary data were available from the administrative agency which prepares annual statistical reports for the federal court system, they were not organized in a way to permit the case tracking analyses called for by the research design. As a result, the Center is now in the process of developing a research oriented database which will integrate pertinent federal court case data from 1970 through 1982 and be updated as new information becomes available.

27660 (LBL—16321, pp 54-63) **Multi-tree automation for efficient data transmission.** Hazboun, K.A.; Raymond, J.L. (Pennsylvania State Univ., University Park). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

A two-stage finite state implementation of an efficient compression algorithm is outlined. This designs proposed for the economic transmission of large volume of data within a distributed network of statistical databases. The encoder/decoder stage of the design is based on a reversible semantic-independent variable-length character technique that makes use of the group locality of character reference behavior and the variable frequency of character occurrence within a well-defined subgroupings of the character set. The two-stage automata, while specifically designed for a modified version of the Hazboun-Bassiouni Multi-Group algorithm, is extended to support any single character look-ahead procedure.

27661 (LBL—16321, pp 64-72) **Relational database machine for efficient processing of statistical queries.** Farsi, H.; Tartar, J. (Univ. of Alberta, Edmonton). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper presents the design of a data base machine for supporting statistical data bases. The primary objective of this research is to introduce an architecture which performs efficiently in executing relational operations on fully transposed files. This objective is met by utilization of two functionally specialized subsystems: category and summary subsystems. The category subsystem exploits the parallel, content addressed search capabilities of associative memories (AM) while the summary subsystem employs a set of functionally equivalent processors suitable for evaluating statistical functions. In order to support processing of category attributes, the design of an extended associative memory has been considered and its features are presented. The most important feature of this AM stems from its ability to sort selected tuples of a relation, with respect to several attributes simultaneously and at the same time to produce an inverted list for each attribute. Sorting is performed by enumeration. The sorted inverted lists are used for efficient execution of relational projection and join operations.

27662 (LBL—16321, pp 73-79) **SIBYL: an economist's workbench.** Heiler, S.I.; Bergman, R.F. (World Bank, Washington, DC). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper presents a report on work in progress on the development of the SIBYL system, an economist's workbench at the World Bank. The principle objectives are to provide capabilities for sharing data among a large and diverse user community, handling a growing number of databases, and providing access to a collection of analytical and modeling packages. The implementations oriented towards using off-the-shelf software, a large mainframe with Model 204 DBMS to handle the databases, and a group of microcomputers running UNIX. The key components integrating this architecture are a database template, a set of generalized procedures for browsing, updating and extracting data, and translators between the databases and the analytical and reportwriting packages. The project has been in progress since May 1982 and a prototype system is installed for three user groups. It will continue to evolve over the next year with additional development focused on providing a batch update facility, writing validation procedures, refining the user interface, and establishing a local network.

27663 (LBL—16321, pp 89-94) **Data management without a database manager.** Fox, M.A. (Univ. of California, Los Angeles). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

A file-handling full screen data entry, verification, updating, and displays system, with overtones of a data base management system without the overhead is described. Using a high level specification language, created automatically by describing a form on the screen, a PL/1 program is generated which will display empty forms allowing data entry, verification and retrieval (by example). Files or transactions to data base systems may be constructed, and existing files formatted for display, post hoc field validation and restructuring. The system is complete but may be interfaced with other systems and, because it is a program generator, used to provide building blocks (reuseable code) for other full screen applications.

27664 (LBL—16321, pp 99-103) **Distributed data management in a minicomputer network: the SEEDIS experience.** Merrill, D.; McCarthy, J.; Gey, F.; Holmes, H. (Lawrence Berkeley Lab., CA). 1983. NTIS, PC A19/MF A01. (CONF-830950—). Contract AC03-76SF00098.

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper described distributed data management aspects of SEEDIS (Socio-Economic Environmental Demographic Information System). SEEDIS is an experimental system for the retrieval, analysis, and display of geographically linked data. SEEDIS operates on nine computers in a nationwide network. Users at any location select and retrieve all data in the same way, regardless of whether they are stored locally or at a remote location. The network implementation has been substantially modified during 1983. New enhancements include: local caching of data files to improve efficiency; linking to an automatic tape library (ATL) to make larger volumes of data accessible; node independence to facilitate automatic sharing of data among autonomous SEEDIS installations without the need for central control; improvements providing robust operation despite unreliable network connections; and automatic recording of all cache transactions for subsequent statistical analysis.

27665 (LBL—16321, pp 104-110) **Integrated research support system for inter-package communication and handling large volume output from statistical database analysis operations.** Anderson, G.D.; Snider, T.; Toporek, J. (McMaster Univ., Hamilton, Ontario). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper describes work underway to develop an integrated research support system designed to link together into a unified system a generalized DBMS, a relational database query system, statistical packages, a graphics system, text editors and a generalized screen oriented output handler. The work is being carried out on the Hewlett Packard HP9000 32 bit micro computer system under HP-UX; HP's implementation of the UNIX/sup TM/ operating system. The intent of the project is to provide a unified environment designed specifically for the researcher.

27666 (LBL—16321, pp 111-118) **Integrating data and documentation in a multi-national research project: the IEA second international mathematics study.** Wolfe, R.G. (Ontario Inst. for Studies in Education, Toronto). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

With recent advances in the design of statistical software systems, data files with a hierarchy of observations can be stored

with appropriate linkage of data and documentation and analytically aggregated and disaggregated. However, additional layers of organizational complexity need to be incorporated into the design of statistical databases when it is desired to integrate research studies that are parallel in sampling and instrumentation, but not identical. This occurs when a research survey is repeated over several years or in several countries. Integration may be facilitated with a central documentation file of tables and text that capture inter-study variation and can drive analysis programs. This is illustrated in an application to a 20-country set of school mathematics surveys.

27667 (LBL—16321, pp 119-123) **PASTE: a tool to put application systems together easily.** Weiss, S.E.; Weeks, P.L. (Bureau of Labor Statistics, Washington, DC). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

The collections of statistical packages, tabulation systems, and database systems that have grown up in the past 10 years constitute a significant advance in the tools available to the statistician. Unfortunately, each of these tools is limited. The developer of an application system using these tools is often faced with the difficult problem of stringing these systems together to get a complete application system. Two approaches have been applied to alleviating this problem. Arguments are advanced against each of these approaches. A new solution to the problem is proposed. The solution is a system called PASTE whose purpose is to Put Application Systems Together Easily. A preliminary design of this highly flexible and extensible data description and file transformation system is described.

27668 (LBL—16321, pp 124-132) **Interactive statistical database management system.** Wartelle, M.; Kramar, A.; Jan, P.; Kruger, D. (Inst. GUSTAVE ROUSSY, Villejuif, France). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

PIGAS is an interactive statistical database management system whose main assets include logical data checking, data entry for meaningful variables only, three different types of missing value codes, non-rectangular data structure and user interfaces with BMDP, GLIM or specifically written FORTRAN programs. The structure of the PIGAS language is the same as one passes from one phase of a research study to another, whether it be data updating, checking or analysis, thus requiring only a minimum amount of initiation in its use. It is particularly appealing since data verification is completely specified through variable names as they appear on the questionnaire. Instructions given in how to fill in a questionnaire can thus be directly incorporated in the data checking process, thus ensuring a good quality data base.

27669 (LBL—16321, pp 133-142) **Simulators, statistical analysis, and databases.** Scuse, D.H.; Arnason, A.N. (Univ. of Manitoba, Winnepeg). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper described advantages of integrating simulators, statistical analysis programs, and databases in a common statistical information system. It has been found that the integration of the components in a statistical information system greatly enhances the value of the individual components, makes the resulting system easier to use by end-users, and reduces the amount of work required to implement new applications and modify existing applications.

27670 (LBL—16321, pp 144-147) **CANSIM, the Canadian socio-economic management information system.** Podehl, M. 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

CANSIM, the Canadian Socio-Economic Information Management system is Statistics Canada's computerized data bank and information retrievel service. This paper gives an overview of the current status and development activities of electronic information services provided by Statistics Canada.

27671 (LBL—16321, pp 148-151) **Diversification in statistical data bases.** Poot, H.C. 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

In this brief report the author discusses the consequences of growth and diversification in statistical data bases as evidenced at Data Resources, Inc. (DRI). In general, one sees time-series being used in closer conjunction with cross-sectional and textural information. This has a great impact on the types of software used. The variety of data available requires more diverse methods of quality control. The amount and scope of information now online requires that descriptive and reference materials be made available online, particularly in the area of current awareness.

27672 (LBL—16321, pp 152-153) **Econometric time series on DIALOG.** Lundy, R.T. (DIALOG Information Services, Palo Alto, CA). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

DIALOG Information Services, Inc., the leading commerical provider of online non-numeric database services, has also been involved in the development of numeric databases, particularly time series. This report described the efforts being made to adapt an essentially test-oriented retrieval system to the needs of users of econometric time series.

27673 (LBL—16321, pp 154-156) **Evolution in storage and retrieval: the LABSTAT data base and software system.** Harllee, G.L. (Bureau of Labor Statistics, Washington, DC). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

The use of an integrated data bank for time series data was initially introduced at the Bureau of Labor Statistics two decades ago. The data bank has been available on line since LABSTAT was introduced in 1977. This paper summarizes some of the major developments in the data bank and access software and discusses some enhancements currently being considered.

27674 (LBL—16321, pp 157-166) **Interactive information management with EPS.** Childs, S.R. 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper provides an illustration of interactive statistical data base management. Its focus is on the use of the EPS (Econometric Programming System) software language as a manager of information. EPS is usually employed to analyze time series information using econometric techniques. The paper will illustrate some EPS capabilities using several data bases developed by Gnostic Concepts, Inc., a subsidiary of DRI (Data Resources, Inc.) specializing in market analysis of the electronics industry.

27675 (LBL—16321, pp 167-169) **Meta data: an experience of its uses and management.** Cubitt, R.E. (Statistical Office of the European Communities, Luxembourg). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This short paper presents some of the problems surrounding the management and use of the meta data which is associated with most types of statistical data. Current approaches to the problems which are being taken within the Statistical Office of the EC are described.

27676 (LBL—16321, pp 170-171) **Problems, plans and activities concerning the economic databases at Statistics Sweden.** Nordbaeck, L. 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

In this paper some of the issues concerning the move towards the terminalized dissemination of statistics from a central sta-

tistical office will be highlighted: the implications of the new techniques on the in-house activities; the way to assimilate this new technique into the different statistics consumers' hardware and software environment; and the problems to suite different levels of knowledge of data processing in the man-machine interface.

27677 (LBL—16321, pp 172) **Proposal for workshop on large economic data bases.** Levioff, P. 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

Outline for discussion purposes concerning problems confronting data base managers in their role as conduits between data sources and end users.

27678 (LBL—16321, pp 173-177) **SAS applied to statistical databanks via a command language.** Nilsson, I. (I/S Datacentralen af 1959, Copenhagen, Denmark). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper describes how a command language, DC-TIME Series Management System, is used as an interface between the user, a databank and SAS, Statistical Analysis System. The aim is to give easy access to time series in a large databank to a great variety of users ranging from those just in need for the data to the ones requiring an analysis tool like SAS. The paper gives an account of the structure of DC-TIME, which is actually a combination of a command language and a dialogue. To illustrate the application and the usefulness of the system some examples are given using the databank CRONOS-Eurostat, which contains macro-economic time series concerning national accounts, production, trade, etc., for a large number of countries. Various ways of presenting the data, using the facilities in SAS, are also given.

27679 (LBL—16321, pp 178-187) **Statistical data manipulation language.** Barsottini, G.; Farget, J.C. (Systems and Management, Torino, Italy). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

A new Data Model based on a set theoretic approach is proposed here; it is intended to fit the statistician requirements by giving them the ability to describe data in terms of classes of objects which are ordered according to users needs. Classes are identified by the handle which is a set of attributes; they are gathered in collections. Based on that Model a Statistical Data Manipulation Language (SDML) is presented to provide tools for Statistical Manipulations on Collections. Basic classes of operations are Retrieve, partition, internal or inter-object operations and join of collections. The SDML has been designed to be concise, user-friendly and extensible.

27680 (LBL—16321, pp 188-195) **Complex data types and a data manipulation language for scientific and statistical databases.** Brown, V.A.; Navathe, S.B.; Su, S.Y.W. (Univ. of Florida, Gainesville). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

A Scientific and Statistical DBMS needs to recognize a greater variety of data types than those currently supported by conventional DBMSs. Using the concept of abstract data types, a set of extended data types (Complex Data Types) is proposed to be supported directly by the DBMS. The Complex Data Types presently recongized include: set, vector, ordered set, matrix, time, time series, text, and generalized relation. A data manipulation language designed specifically for scientific and statistical data processing is presented using these types as a basis.

27681 (LBL—16321, pp 196-201) **Data structures for scientific simulation programs.** Bell, J. (Univ. of Colorado, Boulder). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This research investigates data management, data structures, and constraints on data structure design in a cross section of programs known as "scientific models". Scientific models are large programs that use numerical approximation techniques to simulate physical phenomena for which exact solution is impossible, e.g. weather forecasting models. Scientific models, as a class, use remarkably similar data structures. The generic structures and access patterns in scientific models are the basis for functional specification of a data management system tailored to this application class.

27682 (LBL—16321, pp 202-211) **Extension of relational algebra for summary tables.** Ozsoyoglu, Z.M.; Ozsoyoglu, G. (Case Western Reserve Univ., Cleveland, OH). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

A summary table is one of the useful data structures used in statistical databases. For an algebraic summary table manipulation language, the authors first extend relational algebra for nested relations and aggregate functions, then propose a summary table manipulation language based on the extended algebra. A new operator, called aggregation-by-template is introduced, and other operators of the relational algebra are modified to apply nested relations. A special case of summary tables, called primitive summary table, is distinguished since it can be directly represented by a nested relation. Primitive summary tables are viewed as building blocks of summary tables. Operators for constructing and manipulating summary tables, and their properties are also discussed.

27683 (LBL—16321, pp 212-219) **How baroque should a statistical database management system be?.** Olken, F. (Univ. of California, Berkeley). 1983. NTIS, PC A19/MF A01. (CONF-830950—). Contract AC03-76SF00098.

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

How elaborate should the functionality, data types, and data models of a statistical database management system be? In this paper several criteria to be used in deciding the matter are considered: efficiency, data semantics, standardization, integrity, security, and useability. On the basis of these criteria the authors construct a taxonomy of proposals for enhanced functionality of statistical database management systems.

27684 (LBL—16321, pp 220-222) **How far should a database system go? (to support a statistical one).** Swartwout, D. (Bell Laboratories, Murray Hill, NJ). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This note discusses some issues that were addressed in adapting a prototype database management system to enable it to supply data to a statistical system. The issues include the choice of statistically-oriented features for the database system, the "right" way to do aggregate computations, and some side effects of decisions that were made in this case.

27685 (LBL—16321, pp 223-229) **Integrated macro-economic data management system based on multi-dimensional arrays.** Gibbons, M.; David, M. 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

The paper describes the system currently being developed at the OECD for the management of macro-economic data. The system provides a general framework for economists and statisticians to structure and manipulate large volumes of data in the form of multi-dimensional arrays. The dimensions of the arrays are hierarchical lists of elements corresponding to criteria of classification, TIME typically being one of them. Derivation of data can occur either automatically during extraction or explicitly through a flexible Data Manipulation Language. The system fully incorporates the management of qualitative information associated with the data at several levels. A number of interfaces are provided including an extension to the Research and Analysis Language (RAL).

27686 (LBL—16321, pp 230-234) **Classification of metadata.** Bishop, Y.M.; Freedman, S.R. (Dept. of Energy, Washington, DC). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

The Energy Information Administration (EIA) has developed a search tool, the Data Resources Directory, that tracks the energy information obtained on source data collection forms to its final publication. The metadata is indexed according to a specially developed hierarchical classification scheme. Experience so far has indicated good features of this approach but problems still remain to be solved, particularly in determining optimum classification strategies for metadata.

27687 (LBL—16321, pp 235-244) **Some experiments in evaluation of an expert system for statistical estimation on databases.** Rowe, N.C. (Stanford Univ., CA). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

In this paper for the first of these Workshops advantages of a new approach to estimation of statistics on databases are claimed. These claims are now backed up with quantitative experimental evidence of the comparative performance of this approach versus several simpler alternatives.

27688 (LBL—16321, pp 245-250) **GENISYS data definition facilities.** Maness, A.T.; Dintelman, S.M. (Univ. of Utah, Salt Lake City). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper briefly describes the data definition facilities of the Genealogical Information System, GENISYS, which include the ability to define and to modify the definitions of the various database elements such as files, fields, logical links between files and forms to input, display and modify data. The use of a source definition and a target definition for data translation is presented. Also included is a list of proposed improvements and extensions to the current facilities.

27689 (LBL—16321, pp 251-263) **Logical and physical modeling of statistical/scientific databases.** Su, S.Y.W.; Navathe, S.B.; Batory, D.S. (Univ. of Florida, Gainesville). 1983. NTIS, PC A19/MF A01. (CONF-830950—). Contract AS05-81ER10977.

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper describes the major research tasks currently being undertaken at the Database System Research and Development Center at the University of Florida in the area of management of statistical databases. It presents the progress made to data and accomplishments related to the following: 1) the development of a semantic association model and its data language for use in statistical/scientific applications, 2) the study of a data mapping between (a) semantic model and the model used by a particular DBMS and between a logical model and its physical implementation, and (b) view integration problems in database design, 3) the investigation of data compression techniques and the development of a general model of database implementation, and 4) the study of parallel algorithms and database machine techniques for the efficient processing of statistical/scientific databases. The research project has been supported by the Applied Mathematical Science Program of the Department of Energy under contract # DE-AS05-81ER10977.

27690 (LBL—16321, pp 264-272) **Proposal of a logical model for statistical data base.** Rafanelli, M.; Ricci, F.L. (Ist. Analisi dei Sistemi ed Informatica, Roma, Italy). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

In this paper the authors propose a logical model (called GRASS) for representing both the properties of a Statistical Data Base (S.D.B.) and the tables view, which represent the peculiar reality of statistical user. The proposed model consists of a marked, labeled, direct, connected, acyclic, partially ordered graph. For this graph nodes semantics and connection and branching rules are provided. A cognitive and selective approach on how to navigate through category attributes and summary data are given, too. Finally, some facilities of the model are discussed and a comment is made.

27691 (LBL—16321, pp 273-279) **Statistical data management research at Lawrence Berkeley Laboratory.** Chan, P.; Eggers, S.; Gey, F.; Holmes, H.; Kreps, P.; McCarthy, J.; Merrill, D.; Olken, F.; Shoshani, A.; Wong, H. (Lawrence Berkeley Lab., CA). 1983. NTIS, PC A19/MF A01. (CONF-830950—). Contract AC03-76SF00098.

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper summarizes current research on statistical database management issues at the Lawrence Berkeley Laboratory. This research included development of prototype systems as well as analytic work on user interfaces, physical organization, hardware architecture, and database modeling.

27692 (LBL—16321, pp 280-286) **Statistical database component of a data analysis and modelling system: lessons from eight years of user experience.** Klensin, J.C. (Massachusetts Inst. of Tech., Cambridge). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

When development of the Consistent System, a large-scale data analysis and modelling system for the social, policy, and behavioral sciences, began, it was determined that database management facilities would be necessary to handle the variety of complex data that were anticipated. The primary data base management component of that system, called Janus, has been in use, in two prototypes and then in production form, at several sites and by a variety of users, since about 1975. This paper reviews some of the original design considerations about Janus (including its relationship to the rest of the Consistent System) and reflects on them in light of user experiences and comments in the subsequent years.

27693 (LBL—16321, pp 287-295) **System/K: a knowledge base management system.** Maier, M.; Cirilli, C. (IBM Scientific Center, Pisa, Italy). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

System/K is a Knowledge Base Management System designed to offer a set of facilities for knowledge representation and usage at the conceptual level by means of three descriptive mechanisms ("Aggregate", "Derive" and "Collect"). Two specific object-types (Assertions and Sets) are defined to represent the "part-off", "is-a" and "member-of" relationships. An "object-oriented" cross-reference logic is defined, that saves users from having to be constantly aware of "keys". System/K refers to SQL/DS (a relational DBMS) to maintain information concerning both the conceptual relationships (meta-database) and the description of the entities in the real world (database). A logic is defined to generate the appropriate relation schemes starting from the conceptual definitions.

27694 (LBL—16321, pp 296-305) **Computer-independent data compression for large statistical databases.** Gey, F.; McCarthy, J.L.; Merrill, D.; Holmes, H. (Lawrence Berkeley Lab., CA). 1983. NTIS, PC A19/MF A01. (CONF-830950—). Contract AC03-76SF00098.

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper describes a dictionary-driven, hardware-independent data compression scheme for archival storage of large statistical databases. It discusses motivations for this development, storage format requirements, implementation details, access considerations, and possible extensions of the technique. It also analyzes the degree of compression achieved for different types of statistical data files.

27695 (LBL—16321, pp 306-314) **Index coding: a compression technique for large statistical databases.** Batory, D.S. (Univ. of Florida, Gainesville). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

Index encoding is a compression technique that involves the substitution of numeric codes for data values. Current methods of index encoding are suited only for attributes whose underlying domains are small or static. In this paper, general methods to encode dynamic domains are proposed and analyzed. A practical methodology for their application is presented. The authors also compare and contrast our methods with another that is now being used in a commercial file management system.

27696 (LBL—16321, pp 315-324) **Overview of cantor: a new system for data analysis.** Karasalo, I.; Svensson, P. (Swedish National Defense Research Inst., Stockholm). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

A transportable system for the analysis of large sets of data, forming complex information structures, is being developed at the Swedish National Defense Research Institute, with financial support also from some civilian Swedish government agencies. The system is based on a relational data base handler of new design, permitting efficient data storage and fast evaluation of complex, spontaneous queries. A query language, based on set algebra and oriented towards scientist users, was developed for the system. To this kernel will be added subsystems for interactive sublanguage definition and user communication, data loading, tabular and graphic data presentation, statistical analyses, and data base backup and recovery. The paper presents an overview of the system version now completed.

27697 (LBL—16321, pp 325-330) **Statistical database research project in Japan and the CAS SDB project.** Shibano, K.; Sato, H. (Tokyo Scientific Center, Japan). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

In this paper, a description is given of working statistical database systems in Japan. Most are special purpose systems. In 1983, a comprehensive statistical database research project MUSE began in academic societies. In conjunction with it, EPA is going on an SDB development project (CAS SDB project). CAS SDB plans to handle a large amount of statistical summary data and to support a variety of social scientific uses. Statistical meta-data problems and a current design for a statistical meta database are discussed. A current implementation of CAS SDB is also described. It was implemented on a relational DBMS and has an interface with SAS. The capabilities of CAS SDB in real statistical applications are now being tested.

27698 (LBL—16321, pp 331-337) **Strategy for implementing a computer efficient database management system preliminary research report.** Dixie, J.; Wake, P. (Office of Population Censuses and Surveys, Titchfield, England). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

The United Kingdom census office has a need to improve access to large data sets such as the population census, registrations of births, marriages, deaths and diseases, and major social surveys. In general terms the need is to access a small number of data fields from a large number of records (with or without filtering) for applications in which the data volume is enormous but stable (say 100Mb or greater). A DBMS with transposed file structure (like RAPID) would appear to be ideal for this. A strategy is proposed for implementing such a system on ICL 2900 range computers. Questions are raised concerning enhanceability, programming languages, data packing and file structure, storage of meta-data, and the use of the operating system. A recently implemented secondary (macro) data TDF (Transposed Datastore File) is described and the possibility of using the same structure for primary (micro) data is discussed.

27699 (LBL—16321, pp 338-345) **Utilization of character reference locality for efficient storage of data base.** Bassiouni, M.A.; Hazboun, K.A. (Univ. of Central Florida, Tampa). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper describes an efficient character encoding method based on practically observed properties of character occurences within files. The method is specially designed for the encoding of files containing both numeric and alphabetic fields. It is therefore particularly attractive for the storage of many large database files, encountered in practice, which are amenable to statistical analysis. The technique of using m-grams is also incorporated to enhance the compression efficiency. Numerical tests have given favorable results for the proposed method.

27700 (LBL—16321, pp 346-354) **Automated cell suppression to preserve confidentiality of business statistics.** Sande, G. (Statistics Canada, Ottawa, Ontario). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

A Statistical Agency must balance the competing requirements of preserving the confidentiality of the data obtained from respondents and of publishing statistical summaries of the data obtained from respondents. This note will describe the components of an experimental suite of software which seeks to resolve this conflict in the case of economic censuses. The components described will be those which identify sensitive statistics, determine complementary suppressions and audit the suppressed publications. These components are supported by an infrastructure of utility programmes. Experience with the software on various economic censuses and opportunities for further work will be discussed.

27701 (LBL—16321, pp 355-359) **Information theoretic approach to statistical databases and their security: a preliminary report.** McLeish, M. (Univ. of Guelph, Ontario). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper considers a statistical database model used by J. Kam and J. Ullman in [5] to study database security. Results for the transmitter-receiver problem studied in information theory are applied to the database model to provide a measure of the information in the query-record system. A slightly different information theoretic approach is then used to provide a more effective model for the security problem. Results are obtained which give the conditions on queries necessary to minimize the information gained by making a security breach. Statistical methods can then be used to determine if a series of queries are being used which have properties significantly close to those required to endanger the security.

27702 (LBL—16321, pp 360-367) **Introduction to sampling to estimate database integrity.** Greer, R. (Bell Labs., Murray Hill, NJ). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

In order to create a sound and meaningful sampling plan for estimating measures of database integrity, a statistician must first have appropriate theoretical tools for understanding the nature of databases and their integrity constraints, for developing reasonable numerical measures of database integrity, and for determining the sampling unit and its relationship to the integrity measures. This paper uses database theory, mathematical logic, and sampling theory to provide such tools.

27703 (LBL—16321, pp 368-390) **Security model for the statistical database problem.** Denning, D.E. (Purdue Univ., West Lafayette, IN). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

A security model for addressing the statistical inference problem in online query processing systems is described. The set of all statistics computed over groups of records having common

characteristics are structured as a lattice of logical tables. The lattice model provides a mathematical basis for studying the inference problem, and a framework for evaluating and comparing different controls. Although the lattice model has been used by census agencies to protect statistical tables published offline, it has only recently been used to develop inference controls for general purpose query processing systems.

27704 (LBL—16321, pp 391-403) **Statistical databases: their model, query language and security.** Michalewicz, Z. (Victoria Univeristy of Wellington, New Zealand). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

In this paper the problem of security of statistical databases, i.e., file systems, is dealt with. A model is proposed of a statistical database in which to investigate the properties of statistical databases and a query language connected with such a database is described. The problem of dependencies between attributes is discussed and the case when database contains incomplete information is considered. In the case of incomplete information the problems arrive with the interpretation of the query language, mainly for statistical terms. The need for a precise semantic is here evident.

27705 (LBL—16321, pp 414-423) **Using statistical software with a database management data theory.** Muller, R.J. 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This paper analyzes several statistical computing environments in an effort to show the relationship between formal database management theory and the computational environment as an integral part of data analysis. The paper uses Entity-Relationship theory as a data theory to compare the flexibility, representation, and problem-solving difficulties of the analyst in the Minitab, BMDP, SPSS, SAS, OSIRIS, SIR, and the Consistent/System computing environments. It shows that none make full use of database management capabilities; it also shows that even those capabilities are not capable of dealing with all problems confronting the statistically oriented data analyst.

27706 (LBL—16321, pp 95-98) **Development implications of an interactive, portable, user-friendly, statistical database management system.** Schiff, G.L. (Hoffmann-La Roche Inc., Nutley, NJ). 1983. NTIS, PC A19/MF A01. (CONF-830950—).

From 2. international statistical database management workshop; Los Altos, CA, USA (27 Sep 1983).

This is a definition of terms and discussion of the design and development of an interactive, portable, user-friendly statistical database management system from the perspective of a computer scientist. The definitions are fairly clear and can be found in most textbooks but their interactions, particularly when a system is being designed and developed which attempts to include all of them, have been given relatively little attention. This paper will focus on how the major structural elements of an "ideal" statistical database management system impinge on each other during the design and development phases of that system. There will also be a discussion of how these elements and their interactions affect the people designing, writing and using the system.

27707 **(SAND—84-0183C) Few results in message authentication.** Brickell, E.F. (Sandia National Labs., Albuquerque, NM (USA)). Feb 1984. Contract AC04-76DP00789. 16p. (CONF-840282—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010975.

From 15. southeastern conference on combinatorics, graph theory and computing; Baton Rouge, LA, USA (5 Feb 1984).

Portions are illegible in microfiche products.

We prove a few inequalities about authentication systems and then define doubly perfect systems to be systems where equality holds. We show that orthogonal arrays or orthogonal multi-arrays can be used to construct doubly perfect systems.

27708 **Unique ORNL facilities used by academic and industrial scientists.** *Oak Ridge National Laboratory Review (United States);* **16**: No. 4, 58-59(Fal 1983).

Besides technology transfer to industry, ORNL also encourages the exchange of information between its researchers and those who work in the laboratories of industry and academia. Examples of ORNL-university and ORNL-industry interactions are briefly discussed.

27709 **Technical oral presentations: what happens to them?.** Lyon, W.S.; Roberts, P.P. (Oak Ridge National Lab., TN). *Analytical Proceedings (London);* **20**: 374-376(Jul 1983). Contract W-7405-ENG-26.

Technical oral presentations were reviewed in order to determine what fraction of them represented research as opposed to reviews. Efforts were made to determine what portion of these talks actually reached archival literature. A total of 380 oral presentations during the period 1977-1981 were studied. Results revealed that about one-third of these presentations never reached archival literature. These results were compared with those obtained from an actual conference. It was found that the ratio of research to review papers was somewhat higher at the conference, with the fraction attaining final publication being somewhat lower.

CORPORATE AUTHOR INDEX

In the Corporate Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Information Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Complete analysis of polarization in two-particle QCD processes, 9:27319 (R;UA)
Gribov-Lipatov relation in perturbative QCD, 9:27320 (R;UA)
Q^2-dependence of multiparticle distribution and fragmentation functions in QCD, 9:27321 (R;UA)

Argonne National Lab., Idaho Falls, ID (USA)
Automated reasoning applications to design analysis, 9:25959 (R;US)

Argonne National Lab., IL (USA)
Active ultrasonic cross-correlation flowmeters for mixed-phase pipe flows, 9:25273 (R;US)
Advanced battery development in the US, 9:26079 (R;US)
Analysis of an oxidant tube from the Westinghouse Coal Gasification PDU, 9:25181 (R;US)
Analysis of complex vessel experiments using the Hybrid Lagrangian-Eulerian containment code ALICE-II, 9:26016 (R;US)
Analytical methods under emergency conditions, 9:27164 (R;US)
Assessment of problems associated with tritium containment, 9:27511 (R;US)
Behavior of coal ash and alkali matter in a coal-fired gas turbine system, 9:26756 (R;US)
Blankets for tritium catalyzed deuterium (TCD) fusion reactors, 9:27510 (R;US)
Cation self-diffusion in Fe_2O_3, 9:26404 (R;US)
Chemical Technology Division. Annual technical report, 1982, 9:27624 (R;US)

Clean air targets and the politics of urban travel: a case study, 9:26973 (R;US)
Coal cleaning as an acid rain mitigation strategy: an in-depth examination, 9:25274 (R;US)
Comments on US LMFBR steam generator base technology, 9:25933 (R;US)
Comparison of BIASI and Columbia CHF correlations using BODYFIT-2PE, 9:25883 (R;US)
Comparison of some SSC beam parameters for pp and p anti p, 9:26769 (R;US)
Cost-competitive, inherently safe LMFBR pool plant, 9:25930 (R;US)
Development of the three-dimensional SHAPS code capabilities for application to LMFBR piping systems, 9:26014 (R;US)
Energy from biomass: short-run economic effects of increased biomass production, 9:25629 (R;US)
Environmental monitoring at Argonne National Laboratory. Annual report for 1983, 9:27010 (R;US)
Experiments on tubes conveying fluid, 9:26682 (R;US)
Fuel cycle programs. Quarterly progress report, April-June 1983, 9:25482 (R;US)
High repetition rate production of picosecond pulses at wavelengths <250nm, 9:26666 (R;US)
Implication of TRIO-01 heat transfer results on solid breeder blanket designs, 9:27513 (R;US)
In-pile loss-of-flow TREAT test L05 with prototype fast reactor fuel, 9:26013 (R;US)
Key asset - inherent safety of LMFBR Pool Plant, 9:26012 (R;US)
Liquid metal breeder-coolant blanket concept, 9:27514 (R;US)
Long term creep calculation of reactor containment, 9:25970 (R;US)
Midplane and off-midplane axial leakage simulation of heterogeneous subassemblies in EBR-II, 9:25961 (R;US)
Nuclear analysis of liquid metal blanket designs, 9:27512 (R;US)
Numerical treatment of pipe boundary conditions in two-phase flow, 9:25960 (R;US)
Optical properties and complex dielectric function of metallic aluminum from 0.04 to 10^4 eV, 9:26273 (R;US)
Overview of the blanket comparison and selection study, 9:27509 (R;US)
Oxidation-sulfidation behavior of Fe-Cr-Ni alloys containing additions of Zr, Nb, OR Ti, 9:26279 (R;US)
Perturbation theory within the framework of a higher-order nodal method, 9:25932 (R;US)
Photoelectron studies of excited molecular states: H_2C 1/PI//sub u/ and N_2O_3 1/PI//sub u/, 9:27255 (R;US)
Plugging of intersubassembly gaps by downward flowing molten steel, 9:26015 (R;US)
Pyrolysis of MSW: the current ANL/DOE program, 9:26243 (R;US)
Regional socioeconomic analysis of tar sands development in Utah, 9:25343 (R;US)
RETRAN02/MOD02: an outside perspective, 9:26018 (R;US)
System seismic analysis of an innovative primary system for a large pool type LMFBR plant, 9:26017 (R;US)
Thermal laminarization of a stratified pipe flow, 9:25931 (R;US)
Tritium inventories and associated tritium breeding requirement for fusion power reactors, 9:27508 (R;US)

Arizona Univ., Tucson (USA). Dept. of Chemical Engineering
Aerosol formation from pulverized coal combustion. Quarterly reports 1, 2 and 3, 9:25285 (R;US)

Arizona Univ., Tucson (USA). Dept. of Hydrology and Water Resources
Relationship between the gas conductivity and geometry of a natural fracture, 9:25335 (R;US)

Arkansas Power and Light Co., Little Rock (USA)
Evaluation and demonstration of methods for improved nuclear fuel utilization: analysis of the transition to extended burnup cycles for ANO-2, 9:25898 (R;US)

Army Engineer Waterways Experiment Station, Vicksburg, MS (USA)
Cementing reactions in the hazardous waste environment, 9:27058 (R;US)

Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Geotechnical Lab.
Alternative methods for dispoal of low-level radioactive wastes. Task 1. Description of methods and assessment of criteria, 9:25514 (R;US)

Army Materials and Mechanics Research Center, Watertown, MA (USA)
Quality control and nondestructive evaluation techniques for composites. Part 4. Radiography - a state-of-the-art review. Final report 1 Dec 80-15 May 81, 9:26681 (R;US)

Associated Nuclear Services, London (UK)
Underground disposal of vitrified high level radioactive waste: a review of research and development, 9:25483 (R;GB)

Association Euratom-Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.)
Hydrodynamic theory of convective transport across a dynamically stabilized diffuse boundary layer, 9:27468 (R;DE)

Auburn Univ., AL (USA). Coal Conversion Lab.
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, February-April 1983, 9:25184 (R;US)
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, May-July 1983, 9:25185 (R;US)

Auburn Univ., AL (USA). Dept. of Mechanical Engineering
Influence of a temperature change on in-reactor creep, 9:26311 (R;US)

Auckland Univ. (New Zealand)
Modeling of solid-side mass transfer in desiccant particle beds, 9:25783 (R;US)

Australian Atomic Energy Commission Research Establishment, Lucas Heights
AAEC INIS online user manual, 9:27650 (R;AU)
NAIADQ, a computer program for calculating reactivity transients in low power experimental water reactors, 9:25999 (R;AU)
Technetium-99 levels in pertechnetate solutions from (n,γ) and (n,f) molybdenum-99 generators, 9:27126 (R;AU)
ZAPP - a computer program for simulation of reactor power transients, 9:26000 (R;AU)

Australian Coal Industry Research Labs. Ltd., North Ryde
Coal mine ventilation, 9:25260 (R;AU)
Stability of chain pillars and gate roads at South Bulli 'B' mine longwalls, 9:25261 (R;AU)

Australian National Univ., Canberra. Dept. of Nuclear Physics
Improved determination of the quadrupole moment of the first excited state of ^{208}Pb, 9:27402 (R;AU)

Australian Radiation Lab., Melbourne
Derivation and use of nomograms in diagnostic radiography, 9:27127 (R;AU)
Evaluation of Amerscan Technetium (tin colloid) Agent for liver scintigraphy, 9:27163 (R;AU)

B

Babcock and Wilcox Co., Lynchburg, VA (USA)
Development of an advanced extended-burnup fuel assembly design incorporating Urania-Gadolinia. Fourth semi-annual progress report, October 1982-March 1983, 9:25901 (R;US)
Development of an extended-burnup Mark B design. Eighth progress report, July 1982-June 1983, 9:25902 (R;US)
On-line monitoring of main coolant pump seals, 9:25900 (R;US)

Basler und Hofmann, Ingenieure und Planer A.G., Zurich (Switzerland)
Contribution of new combined heat and power generation plants to electricity supply, 9:26250 (R;CH;In German)

Battelle Columbus Labs., OH (USA)
Characterization of carbon fiber emissions from current and projected activities for the manufacture and disposal of carbon fiber products. Final report, 9:26992 (R;US)
Installation, cost, and performance testing of a 30 kW photovoltaic array field based on a low cost modular design, 9:25687 (R;US)
Integration of advanced preparation with coal liquefaction. Second quarterly technical progress report, January 1-March 31, 1984, 9:25208 (R;US)
Long-term performance of mateials used for high-level waste packaging. Third quarterly report, year two, October 1983-December 1983, 9:25510 (R;US)

Low cost catenary design-analysis. Final report, Task 1 and 2, 9:26220 (R;US)
Potentiometric-level monitoring program - Mississippi and Louisiana: annual status report for fiscal year 1983, 9:25487 (R;US)

Battelle Memorial Inst., Columbus, OH (USA). Office of Nuclear Waste Isolation
Management activities for the DOE's National Waste Terminal Storage Program. Technical progress report for the quarter 1 April-30 June, 1983, 9:25484 (R;US)
Meteorological and air quality characterization of the Deaf Smith and Swisher County locations in the Palo Duro Basin, Texas, 9:25488 (R;US)

Bechtel Group, Inc., San Francisco, CA (USA)
Cost-competitive, inherently safe LMFBR pool plant, 9:25930 (R;US)

Beck (Mark) Associates, Inc., Columbia, MD (USA)
Solar energy system, Baltimore County Jail, Towson, Maryland. Final report, 9:25767 (R;US)

Bell Labs., Murray Hill, NJ (USA)
Staging transitions in graphite intercalation compounds, 9:26432 (R;US)

Bendix Corp., Kansas City, MO (USA)
Environmental summary for calendar year 1983: US Department of Energy Bendix Kansas City Plant, Kansas City, Missouri, 9:27053 (R;US)
Robotic deburring. Part 1. Preliminary observations, 9:26575 (R;US)

Bend Research, Inc., OR (USA)
Research on an energy-efficient drying process. Interim report, September 24, 1982-November 30, 1983, 9:26232 (R;US)

Bergbau-Forschung G.m.b.H. Forschungsinstitut des Steinkohlenbergbauvereins, Essen (Germany, F.R.)
Climate-management at high rock-temperatures and large extraction quantities, 9:26767 (R;XE;In German)

Bettis Atomic Power Lab., West Mifflin, PA (USA)
Nuclear analysis and performance of the Light Water Breeder Reactor (LWBR) core power operation at Shippingport, 9:25940 (R;US)

Bickelhaupt Associates, Inc., Carbondale, IL (USA)
Field study of a combined NH_3-SO_3 conditioning system on a cold-side fly ash precipitator at a coal-fired power plant, 9:25251 (R;US)

Bi-State Development Agency, St. Louis, MO (USA)
Bi-State Development Agency resource recovery project. Phase II report, 9:26246 (R;US)

Boeing Engineering Co., Seattle, WA (USA)
Monitored Retrievable Storage conceptual system study: open cycle vault, 9:25404 (R;US)

Bonn Univ. (Germany, F.R.). Physikalisches Inst.
Recent results from the UA5 experiment at the CERN panti p collider, 9:27277 (R;DE)

Brigham Young Univ., Provo, UT (USA)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, December 1, 1983-February 29, 1984, 9:25620 (R;US)

British Columbia Univ., Vancouver (Canada). Dept. of Physics
Pion absorpton and production in few nucleon systems, 9:27348 (R;US)

British Columbia Univ., Vancouver (Canada). TRIUMF Facility
Photon emission in self-quenching streamer chambers, 9:26830 (R;CA)
Supersymmetry and supergravity: a short review, 9:27375 (R;CA)

British Gas Corp., London
A simple mathematical model for heat transfer and its application for continuous type reheating furnaces, 9:26236 (R;GB)

Brookhaven National Lab., Upton, NY (USA)
1983 breeding bird censuses and summary of 1977-1983 results, 9:27069 (R;US)
Accelerator-based atomic physics experiments with photon and ion beams, 9:27253 (R;US)
Adirondack tourism: perceived consequences of acid rain, 9:27045 (R;US)
AGS experiments - 1982, 1983, 1984, 9:26798 (R;US)
Assessment of TRAC and RELAP5 codes with ORNL POST-CHF tests, 9:26005 (R;US)
Benchmarking of pressure vessel fluence calculations, 9:25896 (R;US)
Brookhaven FASTBUS ADC's, 9:26814 (R;US)
D phi detector, 9:26799 (R;US)
Diffusion of molybdenum through H-451 graphite, 9:26009 (R;US)
Effect of charging methods on battery electrodes, 9:26078 (R;US)
Estimation of pre-existing LWR containment leakage areas for severe accident conditions, 9:26003 (R;US)
Evaluation of selected approximations used in pressure vessel fluence calculations, 9:25968 (R;US)
Evaluation of the radiation resistance of high-density polyethylene, 9:26425 (R;US)
Geochemistry of trench leachates at low-level radioactive waste burial sites, 9:25489 (R;US)
Hazardous materials information hotline using System 2000, 9:27226 (R;US)
High energy high intensity coherent photon beam for the SSC, 9:26771 (R;US)
Hypernuclear research at the AGS, 9:27274 (R;US)
Identification of dose-reduction techniques for BWR and PWR repetitive high-dose jobs, 9:26008 (R;US)
Intergranular failures of Alloy 600 in high temperature caustic environments, 9:26275 (R;US)
Limiting behavior of sample autocovariance function of a seasonal time series, 9:27630 (R;US)
Long term post-test simulation of the FFTF natural circulation tests using SSC, 9:26004 (R;US)
Mechanisms of intergranular failures in Alloy 600 in high temperature environments, 9:26276 (R;US)
Minet validation study using EBR-II transient data, 9:26002 (R;US)
Overview of MRB fusion, 9:27506 (R;US)
Parametric studies on the load-deflection characteristics of hydraulic snubbers, 9:25969 (R;US)
Photoemission studies of mixed valent systems, 9:27437 (R;US)
Potential-determining reactions during pitting corrosion of aluminum, 9:26274 (R;US)
Radiotracers in PETT: strategies for in vivo receptor activity, Schizophernia, and Alzheimer's Dementia studies, 9:27128 (R;US)
Staging transitions in graphite intercalation compounds, 9:26432 (R;US)
Status of the glueballs, 9:27275 (R;US)
Strippable coating used for the TMI-2 reactor building decontamination, 9:26006 (R;US)
Structural reliability analysis and seismic risk assessment, 9:26007 (R;US)
Study of K^+ K/sub s/π^- final state produced by π^- and anti p beams, 9:27276 (R;US)
Tracking and computing, 9:26770 (R;US)
TWIST: a Transient Two-dimensional Intra-Subassembly Thermal-Hydraulics model for LMFBRs, 9:25929 (R;US)
US statutes of general interest to safeguards and security officers. Volume 2. Text of Atomic Energy Act, Executive Orders and other laws, 9:25578 (R;US)
Working group summary: new technologies, 9:26780 (R;US)

Brown and Root Development, Inc., Houston, TX (USA)
Study to develop an inspection, maintenance, and repair plan for OTEC (Ocean Thermal Energy Conversion) modular experiment plants. Final report, 9:25752 (R;US)

Brown Univ., Providence, RI (USA). Div. of Engineering
Formulation and numerical integration of elastoplastic and elasto-viscoplastic rate constitutive equations, 9:27442 (R;US)
Near-threshold fatigue crack propagation: a perspective on the role of crack closure, 9:26329 (R;US)

Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene
Assessment of variability of radiation doses emanating from emission of airborne radioactive substances during normal operation of nuclear facilities, 9:27033 (R;DE;In German)

Solution adaptive triangular meshes with application to the simulation of plasma equilibrium, 9:27464 (R;US)
Combustion Engineering, Inc., Chattanooga, TN (USA)
Effect of creep-fatigue damage relationships upon HTGR heat exchanger design, 9:25922 (R;US)
Commission of the European Communities, Geel (Belgium). Central Bureau for Nuclear Measurements
1982 annual status report. Nuclear measurements, 9:27379 (R;BE)
Certification of a plutonium metal reference material for chemical analysis, 9:26467 (R;XE)
Use of a visible light spectrophotometer for nuclear target production control, 9:26801 (R;XE)
Commission of the European Communities, Ispra (Italy). Joint Research Centre
Benchmark reference data on post irradiation analysis of light water reactor fuel samples, 9:25887 (R;XE)
Characterization and determination of the stability constant of lanthanide complexes with carbonates. Final report, 9:26516 (R;IT;In Italian)
Comments upon the International Conference on point defects and defect interactions in metals, 9:26314 (R;XE)
EURDYN: computer programs for the nonlinear transient analysis of structures submitted to dynamic loading. EURDYN (Release 3): users' manual, 9:25938 (R;IT)
LOBI: Influence of PWR primary loops on blowdown, first results. Final report, 9:26020 (R;XE)
MORSE-E1, source and analysis routines to be used with the MORSE code, 9:27427 (R;IT)
TPLOT: an interactive time plot system for transient structural problems, 9:26643 (R;IT)
Use of a heat transfer coefficient for describing the radiative exchange between water vapour and the bounding walls. Final report, 9:25889 (R;XE)
Commission of the European Communities, Karlsruhe (Germany, F.R.). European Inst. for Transuranium Elements
Integral experiment relating to calibration and interpretation of plutonium solid waste measurements at Dounreay nuclear power development establishment, 9:25937 (R;GB)
Commission of the European Communities, Luxembourg
Ability of type A packages to withstand regulatory tests. Final report, 9:26640 (R;LU)
Analysis and synthesis of the theoretical studies performed on the control and safety of LWR's burning plutonium fuel. Final report, 9:26021 (R;XE)
Assessment of coke strength after reaction with carbon dioxide (Report on ECSC contract 7220/EB/311), 9:25244 (R;XE)
Behaviour of the gaseous radionuclides released during the first reprocessing operations, 9:25501 (R;XE;In French)
Benchmark for the qualification of gamma shielding calculation methods for light-water type reactor spent fuels, 9:26639 (R;XE;In French)
Carbonization of thermally pretreated coal with added pitch (Report on ECSC contract 7220-EB/110), 9:25218 (R;XE)
Catalogue of facilities in Member States of the European Community for testing the packaging of radioactive materials, 9:25476 (R;XE)
Characterization of activities associated with irradiated fuel element claddings, 9:25396 (R;XE)
Chemical refining of coal (Report on ECSC contract 7220-EC/816), 9:25220 (R;XE)
Critical confrontation of standard and more sophisticated methods for modelling the dispersion in air of heavy gas clouds; evaluation and illustration of the intrinsic limitations of both categories, 9:26926 (R;XE)
Criticality safety hazards arising from the transport of fissile materials. Final report, 9:26642 (R;XE)
Encapsulation pilot plant of radioactive wastes in thermosetting resins. Final report, 9:25500 (R;LU;In French)
Forecasting of firedamp release and means of combating firedamp. Summary report of INIEX research (Report on ECSC contract 7220-AC/205), 9:25268 (R;XE)
Intercomparison of the calibration of helium leaks for use in leak detection, 9:26641 (R;LU)
Joint exercise to compare fatigue crack growth data obtained on type 304/316 stainless steel. Final report, 9:26315 (R;XE)
Lateral shrinkage of the charge and effects of expansion on coke oven walls (Report on ECSC contract 7220-EB/311), 9:25219 (R;XE;In French)
Measurements of pulverized coal combustion under conditions simulating a blast furnace environment (Report on ECSC contract 7210-AA/601), 9:25286 (R;XE)
Mine roadway floor stabilisation (Report on ECSC contract 7220-AE/810), 9:25269 (R;XE)
New methods for obtaining industrial chemical compounds from the by-products of coal gasification and carbonisation processes (Report on ECSC contract 7220-EC/201), 9:25217 (R;XE;In French)
Possible research program on a large scale nuclear pressure vessel. Final report, 9:25888 (R;XE)
Prediction of strata stability from instrumentation and modelling data (Report on ECSC contract 7220-AC/811), 9:25267 (R;XE)
Steel and fabrication requirements in coal utilization technologies - a review study (Report on ECSC contract 7210-KF/801), 9:25222 (R;XE)
Studies of the factors controlling the formation and development of the porous structure of coke (Report on ECSC contract 7220-EB/814), 9:25221 (R;XE)
Testing and evaluation of solidified high-level waste forms. Joint annual progress report. Final report, 9:25503 (R;LU)

Underground disposal for radioactive wastes: study of the thermal impact in a fractured medium, 9:25502 (R;LU;In French)
Commission of the European Communities, Luxembourg. Directorate-General for Information, Market and Innovation
Energy models for Denmark, 9:26096 (R;XE)
Industrial technology for economic and reliable encapsulation of large surface arrays of solar cells, 9:25678 (R;XE;In French)
Optimisation of a multi-vane expander as the prime-mover in an organic Rankine cycle, 9:25873 (R;XE)
Optimisation of concentrating array of silicon solar cells, 9:25677 (R;XE;In French)
Reference case 2 UK, 9:26095 (R;XE)
Committee on Science and Technology (U.S. Congress. House), Washington, DC. Subcommittee on Energy Research and Production
The space nuclear reactor program, 9:25949 (R;US)
Consumers Power Co., Jackson, MI (USA)
Extended Burnup Demonstration Reactor Fuel Program. Poolside fuel examination, Big Rock Point extended burnup fuel, February 1982 (EOC 17), 9:25884 (R;US)
Cornell Univ., Ithaca, NY (USA). School of Applied and Engineering Physics
Producing hydrogen with a bacteriorhodopsin solar energy cell. Final technical report, 9:25589 (R;US)
Corning Glass Works, NY (USA)
Role of water in densification of gels, 9:26451 (R;US)
Cottrell Environmental Science, Somerville, NJ (USA)
Results of the HTHP ESP testing at Curtiss-Wright, 9:26638 (R;US)
Coury and Associates, Lakewood, CO (USA)
Replacement of chemical intensive water treatment processes with energy saving membrane. Final report, 9:26248 (R;US)

D

Daresbury Lab. (UK)
Intershield to tank sparks at the Daresbury tandem, 9:26772 (R;GB)
David W. Taylor Naval Ship Research and Development Center, Annapolis, MD (USA)
J-integral tearing instability analyses for 8-inch diameter ASTM A106 steel pipe, 9:26333 (R;US)
Dayton Univ., OH (USA). Dept. of Electric Engineering
Study and review of permanent magnets for electric vehicle propulsion motors, 9:26256 (R;US)
Decision Focus, Inc., Los Altos, CA (USA)
Analytical framework for assessing federal R and D strategies on liquid and gaseous fuels, 9:26150 (R;US)
Calculating the cost of producing energy for regulated and nonregulated industry, 9:26108 (R;US)
Development of an analytical framework to assess the role of new technologies for liquid and gaseous fuels. Volume IV. Decision analysis of national research and development funding for unconventional oil technologies. Final report, 9:25298 (R;US)
Load management strategy testing model case study. Final report, 9:26156 (R;US)
Delaware Univ., Newark (USA). Inst. of Energy Conversion
Chemical vapor deposition of amorphous semiconductor films. Semiannual report, 1 May 1983-31 October 1984, 9:25688 (R;US)
Recent results on weak decays from the Mark II experiment, 9:27298 (R;US)
Department of Agriculture, Raleigh, NC (USA)
Field methods to assess the impact of air pollutants on crop yields, 9:26931 (R;US)
Department of Housing and Urban Development, Washington, DC (USA). Office of the Assistant Secretary for Housing-Federal Housing Commission
Housing standards: change to HUD 4930.2 Intermediate Minimum Property Standard (IMPS) supplement for solar heating and domestic hot water systems, 9:26214 (R;US)
Department of Resources and Energy, Canberra (Australia)
Julia Creek project: shale oil refining investigation, 9:25355 (R;AU)
Detroit Diesel Allison, Indianapolis, IN (USA)
Advanced Gas Turbine (AGT): Power-train system development, 9:26253 (R;US)
Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)
Contributions to the two-photon session at the 14. international symposium on multiparticle dynamics, 9:27278 (R;DE)
Electroweak interference, 9:27280 (R;DE)
Electroweak interference, neutrino electron scattering and related topics, 9:27282 (R;DE)
First results from the Crystal Ball at DORIS II, 9:27281 (R;DE)
Fragmentation of quarks and gluons, 9:27307 (R;DE)
Heavy quarks, 9:27308 (R;DE)
Review of e^+e^--physics with PETRA, 9:27279 (R;DE)
Dow Chemical Co., Freeport, TX (USA)
Evaluation of on-line chelant addition to PWR steam generators. Steam generator cleaning project, 9:25899 (R;US)
Duesseldorf Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet
Absolute measurement of radiation losses of a tokamak in the region of ultrasoft X-radiation, 9:27467 (R;DE;In German)
Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.
Costs for disposal of Savannah River high-level waste in a commercial repository, 9:25498 (R;US)
Deformation and strain analysis for high extrusion ratios and elevated temperatures, 9:26313 (R;US)
Development of a slurry-fed in-can melter for nuclear defense waste, 9:25497 (R;US)
Dissolution of uranium fuel tubes in nitric acid, 9:25395 (R;US)
Dynamic model building and identifying on the countercurrent extraction process with microcomputer, 9:25402 (TJ;US)
Processes influencing cooling of reactor effluents, 9:25989 (R;US)

E

East Carolina Univ., Greenville, NC (USA). Dept. of Biology
Natural and modified pocosins: literature synthesis and management options, 9:27084 (R;US)
EG and G Idaho, Inc., Idaho Falls (USA)
Assessment of problems associated with tritium containment, 9:27511 (R;US)
Biomass Alternative Fuels Program: results of the feasibility studies awarded under PL 96-126. Final report, 9:25619 (R;US)
Decontamination and decommissioning of the TAN/TSF-3 concrete pad. Final report, 9:25499 (R;US)
Improved time integration method for the TRAC-BD1 analytic nodal reactor kinetics equations, 9:25885 (R;US)
Joining silicon nitride based ceramics: a technical assessment, 9:26406 (R;US)
Overview of the blanket comparison and selection study, 9:27509 (R;US)
Severe Accident Sequence Analysis (SASA) Program sequence event tree: boiling water reactor anticipated transient without scram, 9:26047 (R;US)
TMI-2 core debris grab sample quick look report, 9:26019 (R;US)
TMI-2 Technical Information and Examination Program 1983 annual report, 9:25912 (R;US)
TRAC-BD1/MOD1: an advanced best estimate computer program for boiling water reactor transient analysis. Volume 1. Model description, 9:26048 (R;US)
TRAC-BD1/MOD1: an advanced best estimate computer program for boiling water reactor transient analysis. Volume 2. Users guide, 9:26049 (R;US)
Uranium recovery from a nuclear fuel, 9:25911 (R;US)
EG and G, Inc., Goleta, CA (USA). Energy Measurements Group
Resonance ionization spectroscopy measurement of the vapor pressure of several molecular species, 9:27254 (R;US)
Surveys for Astragalus beatleyae on Nellis Bombing Range, Nye County, Nevada, 9:27070 (R;US)
Eidgenoessisches Inst. fuer Reaktorforschung, Wuerenlingen (Switzerland)
Cross section sensitivity and uncertainty analysis for European INTOR and U.S. FED designs, 9:27529 (R;CH)
EIR solar heating plant OASE. Pt. 2, 9:25794 (R;CH;In German)
FINELM: a multigroup finite element diffusion code. III. R-theta geometry and internal boundary conditions, 9:27425 (R;CH)

Identification of the two-phase flow in the upper part of a boiling water reactor core using reactor noise analysis, 9:25886 (R;CH;In German)
Integral methods for handling the slit problem in the reactor shield, 9:27426 (R;CH;In German)
Optimized broad energy group structures for radiation transport in air and in LWR-shields, 9:27424 (R;CH)
Electric Power Research Inst., Chattanooga, TN (USA)
Field study of a combined NH_3-SO_3 conditioning system on a cold-side fly ash precipitator at a coal-fired power plant, 9:25251 (R;US)
Energy Engineering, Inc., Albuquerque, NM (USA)
Development and manufacturing of a more cost-effective heat pipe solar water heater. Final report, 9:25781 (R;US)
Engineering Applications, Inc., Rolla, MO (USA)
Energy conservation using the waste heat from Herreshoff furnace (1982), 9:26234 (R;US)
Englehard Industries, Edison, NJ (USA)
Develop and test fuel cell powered on-site integrated total energy system, 9:26172 (R;US)
Environmental Protection Agency, Ann Arbor, MI (USA)
EPA (Environmental Protection Agency) evaluation of the POWERFuel Extender System under Section 511 of the Motor Vehicle Information and Cost Savings Act. Technical report, 9:26255 (R;US)
EPA (Environmental Protection Agency) evaluation of the P.S.C.U. 01 device under section 511 of the Motor Vehicle Information and Cost Savings Act. Technical report, 9:26261 (R;US)
EPA (Environmental Protection Agency) evaluation of the Mesco Moisture Extraction System under Section 511 of the Motor Vehicle Information and Cost Savings Act. Technical report, 9:26262 (R;US)
EPA evaluation of the VCD supplemental gaseous fuel delivery system under section 511 of the Motor Vehicle Information and Cost Savings Act. Technical report, 9:26222 (R;US)
Environmental Protection Agency, Ann Arbor, MI (USA). Emission Control Technology Div.
EPA (Environmental Protection Agency) evaluation of the HYDRO-VAC device under Section 511 of the Motor Vehicle Information and Cost Savings Act. Technical report, 9:26221 (R;US)
EPA (Environmental Protection Agency) evaluation of the gyroscopic wheel cover device under Section 511 of the Motor Vehicle Information and Cost Savings Act. Technical report, 9:26260 (R;US)
Environmental Protection Agency, Research Triangle Park, NC (USA). Environmental Sciences Research Lab.
Ozone and hydrocarbon measurements in recent oxidant transport studies, 9:26993 (R;US)

Modifications of forms of relativistic dynamics related to the Poincare transformations, 9:27358 (R;SU)
Possibility of a measurement of the gluon structure function of pion from J/psi production data, 9:27316 (R;SU;In Russian)
Study on the Δ^{++} and Δ^{0} isobar inclusive production in $K^{-}p$ interactions at 32 GeV/c, 9:27286 (R;SU;In Russian)
Thermodynamic analysis of a refrigeration cycle with flow imbalance, 9:26645 (R;SU;In Russian)

Gould, Inc., Rolling Meadows, IL (USA). Gould Labs.-Electrical and Electronic Research
Integral inverter/battery charger for use in electric vehicles. Final report, 9:26257 (R;US)

GPU Nuclear Corp., Parsippany, NJ (USA)
Extended Burnup Demonstration Reactor Fuel Program. Poolside fuel examination, Big Rock Point extended burnup fuel, February 1982 (EOC 17), 9:25884 (R;US)

H

Hammer Consulting Engineers, Inc., Austin, TX (USA)
Health Care Facilities Energy Analysis Study. A report on the development of a manual system to evaluate energy efficiency in health care facilities. Task 5, final report, 9:26197 (R;US)

Hanford Engineering Development Lab., Richland, WA (USA)
Automated rule-base control for nuclear power plants, 9:25984 (R;US)
Decontamination of hot leg LMFBR components, 9:25939 (R;US)
FFTF operating experience, 1982-1984, 9:25993 (R;US)
Fission product and actinide data status in ENDF/B, 9:27382 (R;US)
Ring ductility of irradiated Inconel 706 and Nimonic PE16, 9:26317 (R;US)
Seismic response and damping tests of small bore LMFBR piping and supports, 9:26022 (R;US)
Transmutation of manganese - substituted steels in STARFIRE, 9:26316 (R;US)

Hanford Works, Richland, WA (USA)
Some aspects of the corrosion of buried stainless steel pipe at the Hanford Works, 9:26318 (R;US)

Harvard Univ., Cambridge, MA (USA)
International symposium on indoor air pollution, health and energy conservation. Extended summaries, 9:27186 (R;US)

Hawaiian Dredging and Construction Co., Honolulu (USA)
Ocean Thermal Energy Conversion cold water pipe at-sea test program status report. Design, fabrication, materials testing, 9:25750 (R;US)

Hawaii Univ., Honolulu (USA). Dept. of Mechanical Engineering
Materials compatibility with the volcanic environment. Final report, 9:26285 (R;US)

Hawaii Univ., Honolulu (USA). Hawaii Inst. of Geophysics
Phase transformation and the equation of state of beryllium (Be) under high pressure. Final report, 9:26347 (R;US)

Hennington, Durham and Richardson, Minneapolis, MN (USA)
City of Red Wing, district heating study, 9:26244 (R;US)
Red Wing district heating project. Phase II. Preliminary design and economic analysis report, 9:26245 (R;US)

Hitachi Ltd., Tsuchiura (Japan). Mechanical Engineering Research Lab.
Potential-determining reactions during pitting corrosion of aluminum, 9:26274 (R;US)

Hydronautics, Inc., Laurel, MD (USA)
Methods for and examples of dynamic load and stress analysis of OTEC (Ocean Thermal Energy Conversion) cold water pipe designs. Volume 1, 9:25746 (R;US)

I

ICF, Inc., Washington, DC (USA)
Case studies on impacts of rate design on dispersed solar energy systems. Task 1. Literature review and survey of utility rates, 9:25664 (R;US)
New Mexico residential solar rate initiatives. Executive summary and rulemaking document, 9:25665 (R;US)

Idaho National Engineering Lab., Idaho Falls (USA)
1983 Environmental monitoring program report for Idaho National Engineering Laboratory Site, 9:27028 (R;US)
Application of Stein and related parametric empirical Bayes estimators to the nuclear plant reliability data system, 9:25881 (R;US)
Fission product and actinide data status in ENDF/B, 9:27382 (R;US)

Illinois Univ., Urbana (USA)
Formation of dispersions of rare earth oxides in titanium alloys using rapid solidification processing, 9:26310 (R;US)
Transport and relaxation processes in supercritical fluids. Technical progress report, December 31, 1983-March 31, 1984, 9:25206 (R;US)

Illinois Univ., Urbana (USA). Dept. of Ceramic Engineering
Role of Al2O3 in sintering of submicron yttria-stabilized ZrO2 powders. Technical report No. 8 (final) Oct 80-30 Sep 83, 9:26402 (R;US)

Illinois Univ., Urbana (USA). Fusion Studies Lab.
Blankets for tritium catalyzed deuterium (TCD) fusion reactors, 9:27510 (R;US)

Institute of Gas Technology, Chicago, IL (USA)
Porosity and permeability of tight sands, 9:25334 (R;US)

Simulation-based energy storage evaluation methods. Executive summary, 9:26080 (R;US)

T

Technecon Analytic Research, Inc., Philadelphia, PA (USA)
Federal geothermal royalty income derived from the benefits of government-sponsored R and D, 9:25848 (R;US)
Technical Development Corp., Boston, MA (USA)
Performance contracting for energy efficiency: an introduction with case studies, 9:26211 (R;US)
Technische Hochschule Aachen (Germany, F.R.)
Investigation of two-component two-phase channel flow with heat supply for application in inside cooled turbine blades. Final Report, 9:26679 (R;DE;In German)
Technische Univ. Berlin (Germany, F.R.). Inst. fuer Bergbauwissenschaften
Importance of services in mining as exemplified by special mining companies, 9:25270 (R;DE;In German)
Tennessee Univ., Knoxville (USA). Energy, Environment and Resources Center
TECH House I horizontal coil ground coupled heat pump: 1983 cooling season performance, 9:26212 (R;US)
Tennessee Univ., Tullahoma (USA). Space Inst.
Lyapunov stability conditions for a relativistic multifluid plasma, 9:27478 (R;US)
Quarterly technical progress report, October-December 1982 on Energy Conversion Research and Development Programs, 9:26168 (R;US)
Tennessee Valley Authority, Knoxville (USA)
Guntersville Reservoir land management plan. Appendix 1. Public involvement, 9:26131 (R;US)

Tennessee Valley Authority, Knoxville (USA). Div. of Air and Water Resources
Sulfur input, output and distribution in two oak forests, 9:27055 (R;US)
Summary of channel catfish and rainbow trout production at the Gallatin Waste Heat Aquaculture Facility, 1979-1980, 9:27161 (R;US)
Tennessee Valley Authority, Muscle Shoals, AL (USA). Office of Agricultural and Chemical Development
Nature and impact of TVA's agricultural resource development program, 9:26130 (R;US)
Tennessee Valley Authority, Norris (USA). Div. of Land and Forest Resources
Evaluation of logging systems designed to recover harvesting residues for energy, 9:25694 (R;US)
Guntersville Reservoir land management plan. Appendix 2, 9:27071 (R;US)
Terra Tek Research, Salt Lake City, UT (USA)
Inversion approach for thermal data from a convecting hydrothermal system, 9:25830 (R;US)
Texas A and M Univ., College Station (USA)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Annual report for the Bryan Mound site, September 1982-August 1983. Volume III. Executive summary, 9:25324 (R;US)
Texas Governor's Energy Advisory Council, Austin (USA)
Natural gas pricing: an economic analysis of new gas price deregulation with emphasis on the interstate and Texas intrastate markets, 9:25336 (R;US)
Texas Univ., Austin (USA)
Application of Stein and related parametric empirical Bayes estimators to the nuclear plant reliability data system, 9:25881 (R;US)
Generalized Poisson brackets and nonlinear Liapunov stability: application to reduced MHD, 9:27476 (R;US)
Texas Univ., Austin (USA). Bureau of Economic Geology
Catahoula Formation of the Texas Coastal Plain: depositional systems, composition, structural development, ground-water flow history, and uranium distribution, 9:25388 (R;US)
Geothermal potential along the Balcones/Ouachita trend, central Texas: ongoing assessment and selected case studies, 9:25829 (R;US)
Texas Univ., Austin (USA). Inst. for Fusion Studies
Nonlinear dynamics of magnetic islands with curvature and pressure, 9:27528 (R;US)
Toledo Edison Co., OH (USA)
On-line monitoring of main coolant pump seals, 9:25900 (R;US)
Touche Ross and Co., Minneapolis, MN (USA)
City of Red Wing, district heating study, 9:26244 (R;US)
Red Wing district heating project. Phase II. Preliminary design and economic analysis report, 9:26245 (R;US)
TRW Energy Development Group, Redondo Beach, CA (USA)
Bench-scale development of the TRW process for cleaning coal (Gravimelt Process). Quarterly technical progress report, 17 August 1983-4 November 1983, 9:25216 (R;US)
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Development of BEACON technology. Quarterly report, October-December 1982, 9:25191 (R;US)
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
TRW Energy Systems Group, Redondo Beach, CA (USA)
Development of BEACON technology. Quarterly report, October-December 1981, 9:25187 (R;US)
TRW, Inc., Redondo Beach, CA (USA)
Assessment of problems associated with tritium containment, 9:27511 (R;US)
Overview of the blanket comparison and selection study, 9:27509 (R;US)
TRW, Inc., Research Triangle Park, NC (USA)
Vinyl chloride: a review of national emission standards, 9:27050 (R;US)
TRW Systems and Energy, Redondo Beach, CA (USA)
OTEC (Ocean Thermal Energy Conversion) cold water pipe preliminary design study. Appendices to final report, 9:25754 (R;US)

U

UKAEA Atomic Energy Research Establishment, Harwell
In-pile loss-of-flow TREAT test L05 with prototype fast reactor fuel, 9:26013 (R;US)
UKAEA Atomic Energy Research Establishment, Harwell. Chemical Technology Div.

Techniques for large sparse systems arising from continuation methods, 9:27648 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept. (e.g. Pipeline Quality Gas see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, VA 22161.

A

A1-1070 RESONANCES
Electromagnetic Particle Decay
Polarization effects in vector meson electromagnetic decay (rho $\rightarrow \pi + 1^+ + 1^-$, $A_1 \rightarrow \pi + 1^+ + 1^-$), 9:27342 (R;UA;In Russian)

ABANDONED SITES
Ground Subsidence
Socio-economic, subsidence, transportation, and legal ramifications of potential liquefaction plant sitings. Task B. Prediction of subsidence potential over abandoned mine land. Quarterly report, October 1-December 31, 1983, 9:25266 (R;US)

ABNORMALITIES (CHROMOSOMAL)
See CHROMOSOMAL ABERRATIONS

ABSORBED DOSES
See RADIATION DOSES

ABSORBED FRACTION (INTERNAL IRRADIATION)
See INTERNAL IRRADIATION
SPATIAL DOSE DISTRIBUTIONS

ABSORBERS (SOLAR)
See SOLAR ABSORBERS

ABSORPTION SPECTRA
Zeeman Effect
Selection of atomic emission lines for tunable atomic line molecular spectrometry of benzene, 9:26485 (J;US)

ABSORPTION SPECTROSCOPY
Atomization
Improved graphite furnace atomizer, 9:26489 (P;US)

AC SYSTEMS
Control Systems
Reactive power control to alleviate bus voltage violations in an ac-dc power system, 9:25871 (R;US)

ACCIDENTAL IRRADIATION
See RADIATION ACCIDENTS

ACES
See QUARKS

ACETONE
Diffusion
Concentration-dependent transport of gases and vapors in glassy polymers. II. Organic vapors in ethyl cellulose, 9:26544 (J;NL)
Sorption
Concentration-dependent transport of gases and vapors in glassy polymers. II. Organic vapors in ethyl cellulose, 9:26544 (J;NL)

ACETYLENE
Combustion Kinetics
Some ion-molecule reactions pertinent to combustion, 9:26568 (RA;US)
Ion-Molecule Collisions
Some ion-molecule reactions pertinent to combustion, 9:26568 (RA;US)

ACETYLENES
See ALKYNES

ACID RAIN
Aerial Monitoring
New instrumentation for airborne acid rain research, 9:27007 (J;GB)
Atmospheric Chemistry
Chemistry of western Atlantic precipitation at the mid-Atlantic coast and on Bermuda, 9:27079 (J;US)
Biological Effects
Effects of simulated acidic rain on yields of Raphanus sativus, Lactuca sativa, Triticum aestivum and Medicago sativa, 9:27221 (J;GB)
Growth analysis of soybean exposed to simulated acid rain and gaseous air pollutants, 9:27217 (J;GB)
Economic Impact
Adirondack tourism: perceived consequences of acid rain, 9:27045 (R;US)
Economic valuation of acid deposition induced changes in the productivity of commercial forests, 9:26117 (R;US)
Environmental Effects
Acid precipitation: microcosm applications and field studies, 9:27057 (RA;US)
Environmental research in forest damage, 9:27201 (R;DE;In German)
Environmental Policy
Research program for effects of acidic deposition on materials and cultural resources, 9:26991 (R;US)
Global Aspects
Acid precipitation: microcosm applications and field studies, 9:27057 (RA;US)
Mitigation
Ancillary benefits of acid deposition reduction policies, 9:26125 (R;US)
Pollution Sources
Estimation of wet and dry deposition of pollutant sulfur in eastern Canada as a function of major source regions, 9:27008 (J;NL)

Program Management
Research program for effects of acidic deposition on materials and cultural resources, 9:26991 (R;US)
Simulation
Growth analysis of soybean exposed to simulated acid rain and gaseous air pollutants, 9:27217 (J;GB)
Social Impact
Adirondack tourism: perceived consequences of acid rain, 9:27045 (R;US)

ACOUSTIC EMISSION TESTING
Sound Waves
Classification of NDE waveforms with autoregressive models, 9:26716 (BA;US)

ACOUSTIC MEASUREMENTS
Thermocouples
Thermoacoustic couple, 9:26891 (P;US)

ACOUSTIC TESTING
See also ACOUSTIC EMISSION TESTING
ULTRASONIC TESTING
Noncontacting measurement of surface acoustic waves, 9:26737 (BA;US)
Residual stress characterization by use of elastic wave scattering measurements, 9:26723 (BA;US)
Laser Radiation
Characterization of surface cracks using a laser probe, 9:26701 (RA;US)

ACRYLAMIDE
Biological Effects
Somatosensory thresholds in monkeys exposed to acrylamide, 9:27219 (J;US)
Toxicity
Somatosensory thresholds in monkeys exposed to acrylamide, 9:27219 (J;US)

ACTINIDE NUCLEI

CURIUM
PLUTONIUM
THORIUM
URANIUM
Quantity Ratio
Determination of natural actinides and plutonium in marine particulate material, 9:27072 (J;US)
Solvent Extraction
Improved method for extracting lanthanides and actinides from acid solutions, 9:25527 (P;US)

ACTIVATED CARBON
Ignition
Ignition properties of nuclear grade activated carbons, 9:26027 (RA;US)

ADDUCTS
Chemical Preparation
Preparation and reactions of porphyrin n-oxides, 9:26541 (J;GB)
Chemical Reactions
Preparation and reactions of porphyrin n-oxides, 9:26541 (J;GB)

ADENOCARCINOMAS
See CARCINOMAS

ADGEZATOR
See ELECTRON-RING ACCELERATORS

ADIRONDACK MOUNTAINS
Tourism
Adirondack tourism: perceived consequences of acid rain, 9:27045 (R;US)

ADSORBENTS
See also ACTIVATED CARBON
CHARCOAL
MOLECULAR SIEVES
SILICA GEL
Reviews
Evaluation of inorganic sorbent treatment for LWR coolant process streams, 9:25915 (R;US)
Uses
Evaluation of inorganic sorbent treatment for LWR coolant process streams, 9:25915 (R;US)

ADSORPTION
Mathematical Models
Dependence of liquefaction behavior on coal characteristics. Part V. Penetration of solvent vapor into coal particles. Final technical report, March 1981-February 1984, 9:25199 (R;US)

ADSORPTION ISOTHERMS
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, May-July 1983, 9:25185 (R;US)

AEROSOL MONITORING
Comparative Evaluations
Application of thermal analysis and photoelectron spectroscopy for the characterizatoin of particulate matter, 9:26984 (RA;US)
Optimization
Determination of low-Z elements simultaneously by charged particle activation analysis, 9:26988 (RA;US)

AEROSOLS
See also SMOKES
Aerial Monitoring
Cooling tower plume rise analyses by airborne lidar, 9:26996 (J;GB)
Atmospheric Chemistry
Basic energy science, 9:26528 (RA;US)
Chemical Composition
Elemental carbon concentrations: estimation of an historical data base, 9:26995 (J;GB)
Data Analysis
Comparison of R- and Q-modes in target transformation factor analysis for resolving environmental data, 9:26999 (J;GB)
Filtration
Growth and characterization of metal oxide whiskers for aerosol filtration, 9:26269 (R;US)
Mathematical Models
Comparison of R- and Q-modes in target transformation factor analysis for resolving environmental data, 9:26999 (J;GB)
Particle Size
Deposition of sulfuric acid mist in the respiratory tracts of guinea pigs and rats, 9:27004 (J;US)
Pollution Sources
Characterization of particles from several sources and three urban areas by solvent extraction, 9:27000 (J;GB)
Quantitative Chemical Analysis
Detection of chlorine and fluorine in air by laser-induced breakdown spectrometry, 9:26495 (J;US)
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:26488 (J;US)

AGRICULTURAL RESIDUES
See AGRICULTURAL WASTES

AGRICULTURAL WASTES

Technology Utilization
Adoption and diffusion of agriculture technology, 9:27160 (RA;US)

AIR
Chemical Analysis
Detection of chlorine and fluorine in air by laser-induced breakdown spectrometry, 9:26495 (J;US)
Detection of chlorine and fluorine in air by laser-induced breakdown spectrometry, 9:27005 (J;US)
Determination of aromatic hydrocarbons in particulate samples by high-temperature extraction and Shpol'skii spectrometry, 9:26480 (J;US)
Sampling and determination of boron in the atmosphere, 9:26481 (J;US)
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:26488 (J;US)
Fluorescence Spectroscopy
Determination of aromatic hydrocarbons in particulate samples by high-temperature extraction and Shpol'skii spectrometry, 9:26480 (J;US)
Neutron Transport
Optimized broad energy group structures for radiation transport in air and in LWR-shields, 9:27424 (R;CH)
Photon Transport
Optimized broad energy group structures for radiation transport in air and in LWR-shields, 9:27424 (R;CH)
Radionuclide Migration
Multimedia radionuclide exposure assessment modeling. Annual report, October 1980-September 1981, 9:27035 (R;US)
Sorption
Sampling and determination of boron in the atmosphere, 9:26481 (J;US)
AIR CLEANING SYSTEMS
Activated Carbon
Ignition properties of nuclear grade activated carbons, 9:26027 (RA;US)
Fire Prevention
Fire and explosion protection of air cleaning systems, 9:26029 (RA;US)
AIR FILTERS
Combustion Products
HEPA filter loading by combustion products, 9:26742 (RA;US)
Plugging
HEPA filter loading by combustion products, 9:26742 (RA;US)
AIR INFILTRATION
Evaluation
Inexpensive perfluorocarbon tracer technique for wide-scale infiltration measurements in homes, 9:26181 (RA;US)
AIR POLLUTION

Alternative work schedules energy conservation potential. Task 1 report, 9:26112 (R;US)

ALUMINIA
See ALUMINIUM OXIDES

ALUMINIUM
Castings
Effect of surface and bulk parameters (typical of cast material) on flaw detection and sizing, 9:26698 (RA;US)
Corrosion
Corrosion of 5083 aluminum by aqueous sodium sulfate, 9:26349 (R;US)
Electrochemical Corrosion
Galvanic corrosion of an aluminum O-ring, 9:26346 (R;US)
Extrusion
Deformation and strain analysis for high extrusion ratios and elevated temperatures, 9:26313 (R;US)
Fracture Properties
Fracture strains in biaxially loaded 2024 aluminum tubes, 9:26385 (J;NL)
Indoor Air Pollution
Aluminum, iron, and lead concentrations of personal, indoor, and outdoor respirable particles, 9:26951 (RA;US)
Leaching
Leaching aluminum from calcined kaolinitic clay with nitric acid. Report of investigations/1983, 9:27059 (R;US)
Optical Properties
Optical properties and complex dielectric function of metallic aluminum from 0.04 to 10^4 eV, 9:26273 (R;US)
Study of stabilized CuO/Al solar absorbers. Final report, 9:25791 (R;US)

Physical Radiation Effects
Annealing of radiation defects in aluminium irradiated with 32 MeV electron at 4.2 K, 9:26327 (RA;UA;In Russian)
Pitting Corrosion
Potential-determining reactions during pitting corrosion of aluminum, 9:26274 (R;US)
Roughness
Rough surface effects of aluminum castings on ultrasonic sizing algorithms, 9:26717 (BA;US)
Strains
Fracture strains in biaxially loaded 2024 aluminum tubes, 9:26385 (J;NL)
Superconductivity
Magnetic coupling in granular aluminum superconducting films, 9:26371 (J;US)
Surface Properties
Multilayer lattice relaxation at metal surfaces, 9:26375 (J;US)
Ultrasonic Testing
Effect of surface and bulk parameters (typical of cast material) on flaw detection and sizing, 9:26698 (RA;US)
Rough surface effects of aluminum castings on ultrasonic sizing algorithms, 9:26717 (BA;US)
X-Ray Emission Analysis
X-ray emission experiments at 1.06 μm and 0.35 μm, 9:27583 (BA;US)

ALUMINIUM 27 TARGET
Electron Reactions
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)
Proton Reactions
Scattering of polarized protons on ^{24}Mg, ^{27}Al, and ^{32}S and anomalies in the giant resonance region of ^{25}Al, of ^{28}Si, and of ^{33}Cl, 9:27392 (J;NL;In French)

ALUMINIUM ALLOYS
See also ALUMINIUM BASE ALLOYS
Chemical Composition
Ductile aluminide alloys for high temperature applications, 9:26370 (P;US)
Corrosion Resistance
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Deposition
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Internal Friction
Internal Friction study of solute segregation to dislocations, 9:26380 (J;US)
Marketing
Marketing ORNL-made materials, 9:26362 (J;US)
Materials Testing
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Microstructure
Detection of strain induced microstructural changes in aluminum (6061-T6) using ultrasonic signal analysis, 9:26726 (BA;US)
Physical Radiation Effects
Compositional redistribution in alloy films under high-voltage electron microscope irradiation, 9:26365 (J;NL)
Radiation Effects
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Radioactivation
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Ultrasonic Testing
Detection of strain induced microstructural changes in aluminum (6061-T6) using ultrasonic signal analysis, 9:26726 (BA;US)

ALUMINIUM BASE ALLOYS
Crystal Defects
Asymptotic elastic energy in simple metals, 9:26323 (R;IT)
Internal Friction
Internal Friction study of solute segregation to dislocations, 9:26380 (J;US)

ALUMINIUM COMPOUNDS
See also ALUMINIUM OXIDES
Photoemission
Surface versus shake-down effects in the deep-core photoemission of Sm- and Eu-based intermetallics, 9:26376 (J;US)

ALUMINIUM OXIDES
Catalytic Effects
Hydrotreatment catalyst activity enhancement. Quarterly report No. 3, February 1-April 30, 1984, 9:25215 (R;US)
Corrosion Resistance
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983, 9:26334 (R;US)
Deposition
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983, 9:26334 (R;US)
Grain Size
Grain boundary microstructures in a liquid-phase sintered alumina (α-Al_2O_3), 9:26421 (J;GB)
Microstructure
Degradation of sodium β''-alumina: effect of microstructure, 9:26087 (J;US)
Grain boundary microstructures in a liquid-phase sintered alumina (α-Al_2O_3), 9:26421 (J;GB)

ALUMINIUM-AIR BATTERIES
Cyclone Separators
Development of hydrocyclones for aluminum/air battery applications, 9:26084 (R;US)
Design
Aluminum-air battery development. Final report, June 17, 1982-March 17, 1983, 9:26085 (R;US)

ALUMINUM
See ALUMINIUM

ALVEOLI (PULMONARY)
See LUNGS

AMERICIUM
Extraction Chromatography
Separation of tervalent lanthanides from actinides by extraction chromatography, 9:26505 (J;US)

AMERICIUM 241
Ecological Concentration
Evaluation of an automated assay system to measure soil radionuclides by L x-ray and γ-ray spectrometry, 9:27067 (J;US)
Radioecological Concentration
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)

AMERICIUM COMPLEXES
Stability
Characterization and determination of the stability constant of lanthanide complexes with carbonates. Final report, 9:26516 (R;IT;In Italian)

AMINES
See also RHODAMINES
Gas Chromatography
Determination of alkyl anilines and alkyl pyridines in solvent refined coal distillates and aqueous extracts by gas chromatography/mass spectrometry, 9:25249 (J;US)
Isolation and identification of amino polycyclic aromatic hydrocarbons from coal-derived products, 9:26482 (J;US)
Indoor Air Pollution
Simultaneous measurement of airborne amines, nitrosating potential and nitrosamines, 9:26941 (RA;US)
Mass Spectra
Isolation and identification of amino polycyclic aromatic hydrocarbons from coal-derived products, 9:26482 (J;US)
Mass spectrometry with direct supercritical fluid injection, 9:26479 (J;US)
Mass Spectroscopy
Determination of alkyl anilines and alkyl pyridines in solvent refined coal distillates and aqueous extracts by gas chromatography/mass spectrometry, 9:25249 (J;US)

Sorptive Properties
Study on the reaction between CO_2 and alkanolamines in aqueous solution, 9:26998 (J;GB)

AMINO ALCOHOLS
See ALCOHOLS
AMINES

AMINO SUGARS
See AMINES

AMINOGLYCIDES
See AMINES

AMMONIA
Adsorption
Correlation of zeolites Nul and ZSM-5 acid site strength with catalytic activity and selectivity. Final report, 9:26514 (R;US)
Thermodynamic Properties
Preliminary considerations for the selection of a working medium for the solar sea power plant, 9:25739 (R;US)

AMMONIUM PHOSPHATES
Physical Radiation Effects
Damage and other changes that occur in some inorganic materials subjected to synchrotron radiation, 9:26437 (RA;GB)

AMORPHOUS STATE
X-Ray Spectroscopy
Applications of EXAFS to studies of the structure of amorphous and microcrystalline solids, 9:26433 (RA;GB)

ANALOG-TO-DIGITAL CONVERTERS
Fastbus System
Brookhaven FASTBUS ADC's, 9:26814 (R;US)

ANALYSIS (GAS)
See GAS ANALYSIS

ANALYSIS (THERMAL)
See THERMAL ANALYSIS

ANGIOGRAPHY
See BIOMEDICAL RADIOGRAPHY

ANGLE OF INCLINATION
See INCLINATION

ANISOTROPY
Decomposition
Streak camera measurement of tryptophan and rhodamine motions with picosecond time resolution, 9:26676 (J;GB)

ANL
Chemical Effluents
Environmental monitoring at Argonne National Laboratory. Annual report for 1983, 9:27010 (R;US)
Radiation Monitoring
Environmental monitoring at Argonne National Laboratory. Annual report for 1983, 9:27010 (R;US)
Radioactive Effluents
Environmental monitoring at Argonne National Laboratory. Annual report for 1983, 9:27010 (R;US)
Research Programs
Chemical Technology Division. Annual technical report, 1982, 9:27624 (R;US)

ANTENNAS
Design
Development of a borehole directional antenna at VHF, 9:25838 (R;US)
Performance
Performance of Beverage antennas at low angles, 9:26753 (R;US)

ANTHRACENE
Combustion Products
Polycyclic hydrocarbons (aromatic) and soot from practical combustion systems, 9:26574 (BA;US)
Diffusion
Effect of solvent swelling on diffusion rates in bituminous coal, 9:25247 (J;GB)
Exhaust Gases
Polycyclic hydrocarbons (aromatic) and soot from practical combustion systems, 9:26574 (BA;US)
Gas Analysis
Polycyclic hydrocarbons (aromatic) and soot from practical combustion systems, 9:26574 (BA;US)

ANTIBODIES
See also MONOCLONAL ANTIBODIES
Inhibition
Poliovirus RNA synthesis in vitro: structural elements and antibody inhibition, 9:27106 (J;US)

ANTIMONY
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)

ANTIMONY 125
Radioecological Concentration
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)

ANTIMONY ALLOYS
Use of layer strains in strained-layer superlattices to make devices for operation in new wavelength ranges, E.G., InAsSb at 8 to 12 μm (InAs/sub 1-x/Sb/sub x/), 9:26875 (P;US)

ANTINEUTRINO-ELECTRON INTERACTIONS
Elastic Scattering
Results of experiments on νsub(μ)e scattering and perspectives of its investigation at the neutrino detector of IHEP-JINR, 9:27333 (RA;SU;In Russian)

ANTIREFLECTION COATINGS
Fabrication
Antireflection Pyrex envelopes for parabolic solar collectors, 9:25804 (J;US)

ANTRIM SHALES
See BLACK SHALES

APA
See ALASKA POWER ADMINISTRATION

APARTMENT BUILDINGS
Air Infiltration
Testing and comparison of different ventilation systems in the 'Solarhaus Freiburg', 9:26176 (R;DE;In German)
Indoor Air Pollution
Activity of radon daughters in high rise buildings and the influence of soil emanation, 9:27022 (RA;US)
Measurements of radon daughters in 5 600 Swedish homes, 9:27109 (RA;US)
Retrofitting
Changes in indoor climate after tightening of apartments, 9:26183 (RA;US)
Ventilation Systems
Testing and comparison of different ventilation systems in the 'Solarhaus Freiburg', 9:26176 (R;DE;In German)

APPARATUS

Energy Efficiency
Analysis of appliance efficiency standards, 9:26135 (RA;US)

APPROPRIATE TECHNOLOGY
Evaluation
Appropriate energy technology, 9:26165 (RA;US)
Information Dissemination
Project status report on field research tasks and technical services, June 1, 1983-September 30, 1983, 9:26164 (R;US)

AQUATIC ECOSYSTEMS
See also WETLANDS
Baseline Ecology
Evaluation of the Steel Creek ecosystem in relation to the proposed restart of the L-Reactor: interim report, 9:27081 (R;US)
Biological Models
Optimum microcosm design for ecotoxicology, 9:27076 (RA;US)

AQUEOUS HUMOR
See BODY FLUIDS

AQUEOUS SOLUTIONS
Sorptive Properties
Study on the reaction between CO_2 and alkanolamines in aqueous solution, 9:26998 (J;GB)

ARC FURNACES
Casting
Behavior of sustained high-current arcs on molten alloy electrodes during vacuum consumable arc remelting, 9:26658 (J;US)
Electrodes
Behavior of sustained high-current arcs on molten alloy electrodes during vacuum consumable arc remelting, 9:26658 (J;US)
Melting
Behavior of sustained high-current arcs on molten alloy electrodes during vacuum consumable arc remelting, 9:26658 (J;US)
Vacuum Systems
Behavior of sustained high-current arcs on molten alloy electrodes during vacuum consumable arc remelting, 9:26658 (J;US)
ARCHAEOLOGICAL SPECIMENS
Isotope Dating
Precise characterization of new world obsidian sources and the cost-effective determination of provenience of selected artifacts, 9:27228 (RA;US)
Quantitative Chemical Analysis
Precise characterization of new world obsidian sources and the cost-effective determination of provenience of selected artifacts, 9:27228 (RA;US)
ARCTIC REGIONS
Air Quality
Carbon particles in the arctic, 9:26928 (RA;US)
ARDENNES REACTOR
Radioactive Wastes
Encapsulation pilot plant of radioactive wastes in thermosetting resins. Final report, 9:25500 (R;LU;In French)
AREA POLLUTION SOURCES
See POLLUTION SOURCES
ARGON
Triplets
Multiphoton ionization spectroscopy and photochemistry of transient species. Technical progress report, 9:26549 (R;US)
ARGON 40 REACTIONS
Particle Production
Two-pion correlations in heavy ion collisions: measurement of source dimensions using pion interferometry, 9:27304 (J;CH)
ARGON 41
Radioecological Concentration

TOLUENE
Decomposition
Coal liquefaction model studies: radical-initiated and phenol-inhibited decompostition of 1,3-diphenylpropane, dibenzyl ether, and phenethyl phenyl ether, 9:25229 (J;US)
Hydrogenation
Homogeneous catalytic hydrogenations of models synthetic fuel compounds, 9:26529 (RA;US)
Molecular Weight
Determination of molecular weight distribution of aromatic components in petroleum products by chemical ionization mass spectrometry with chlorobenzene as reagent gas, 9:25330 (J;US)
Phosphorescence
Solid surface luminescence analysis. [Progress report] November 1982-March 1984, 9:26466 (R;US)
Production
New methods for obtaining industrial chemical compounds from the by-products of coal gasification and carbonisation processes (Report on ECSC contract 7220-EC/201), 9:25217 (R;XE;In French)
Synthesis
Formation of aromatic compounds from condensation reactions of cellulose degradation products, 9:25702 (J;GB)
Ultraviolet Spectra
Ultraviolet light absorbers having two different chromophors in the same molecule, 9:26537 (P;US)
ARSENIC
Absorption Spectroscopy
Molecular substituent parameters applied to the specification of inorganic arsenic and organoarsenic compounds in shale oil and oil shale kerogen by HPLC-GFAA, 9:25379 (RA;US)
Aerosol Monitoring
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:26488 (J;US)
Biological Effects
Field evaluation of hazardous waste site bioassessment protocols. Volume 2, 9:27203 (R;US)
Catalytic Effects
Arsenic and platinum deposition during cathodic hydrogenation, 9:26547 (J;US)
Electrodeposition
Arsenic and platinum deposition during cathodic hydrogenation, 9:26547 (J;US)
Laser Spectroscopy
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:25234 (J;US)
Liquid Column Chromatography
Molecular substituent parameters applied to the specification of inorganic arsenic and organoarsenic compounds in shale oil and oil shale kerogen by HPLC-GFAA, 9:25379 (RA;US)
Removal
Reactions of inorganic and organoarsenic compounds with substituted catechols, 9:25312 (RA;US)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)

ARTIFICIAL INTELLIGENCE

Bench-Scale Experiments
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Development of BEACON technology. Quarterly report, October-December 1982, 9:25191 (R;US)
Catalysts
Development of BEACON technology. Quarterly report, October-December 1981, 9:25187 (R;US)
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Development of BEACON technology. Quarterly report, October-December 1982, 9:25191 (R;US)
Chemical Feedstocks
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Chemical Reactors
Development of BEACON technology. Quarterly report, October-December 1981, 9:25187 (R;US)
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Development of BEACON technology. Quarterly report, October-December 1982, 9:25191 (R;US)
Test Facilities
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
Thermodynamics
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)

BEAM BENDING MAGNETS
Design
Second-order path length terms for a general bending magnet, 9:26811 (J;GB)

BEAM DYNAMICS
Computer Codes
TRACE: an interactive beam-transport code, 9:26786 (R;US)

BEAM EMITTANCE
Measuring Methods
Measuring emittances and sigma matrices, 9:26792 (R;US)

BEAM MONITORS
Calibration
Cable fabrication procedures for the BPM System, 9:26777 (R;US)

BEAM PERVEANCE
See BEAM EMITTANCE

BEAM POSITION
Beam Monitors
Cable fabrication procedures for the BPM System, 9:26777 (R;US)

BEAM TRANSPORT
Stability
Stability of the Kapchinskij-Vladimirskij (K-V) distribution in long periodic transport systems, 9:26795 (J;GB)

BEAM-PLASMA SYSTEMS
Study on intense relativistic electron beam propagation in a low density collisionless plasma, 9:26781 (RA;SU;In Russian)

BEANS
Rare Earths
Rare earth element behavior in the development of energy resources, 9:25236 (R;US)

BENTONITE
Physical Properties
Fuel cycle programs. Quarterly progress report, April-June 1983, 9:25482 (R;US)
Physical Radiation Effects
Fuel cycle programs. Quarterly progress report, April-June 1983, 9:25482 (R;US)

BENZENE
Absorption Spectra
Selection of atomic emission lines for tunable atomic line molecular spectrometry of benzene, 9:26485 (J;US)
Adsorption
Dependence of liquefaction behavior on coal characteristics. Part V. Penetration of solvent vapor into coal particles. Final technical report, March 1981-February 1984, 9:25199 (R;US)
Combustion Kinetics
Some ion-molecule reactions pertinent to combustion, 9:26568 (RA;US)
Indoor Air Pollution
Individual human exposure to volatile organic compounds encountered during normal daily activities, 9:26964 (RA;US)
Production
Production of chemical feedstock by the methanolysis of wood, 9:25627 (P;US)
Quantitative Chemical Analysis
Selection of atomic emission lines for tunable atomic line molecular spectrometry of benzene, 9:26485 (J;US)
Refractivity
Quantitative analysis without analyte identification by refractive index detection, 9:26487 (J;US)
Sorption
Concentration-dependent transport of gases and vapors in glassy polymers. II. Organic vapors in ethyl cellulose, 9:26544 (J;NL)
Spectroscopy
Tunable atomic line molecular (TALM) spectrometer, 9:27266 (J;GB)
Structural Chemical Analysis
Angle-resolved photoelectron spectroscopy of benzene and hexafluorobenzene as a function of photon energy, 9:26497 (J;NL)

Volumetric Analysis
Quantitative analysis without analyte identification by refractive index detection, 9:26487 (J;US)

BENZOPYRENE
Biological Accumulation
Octanol-water partition coefficient of benzo(a)pyrene: measurement, calculation, and environmental implications, 9:26476 (J;US)
Fluorescence
Immobilized enzyme system for the conversion of benzo[a]pyrene to fluorescent metabolites, 9:26504 (J;US)
Fluorescence Spectroscopy
Determination of aromatic hydrocarbons in particulate samples by high-temperature extraction and Shpol'skii spectrometry, 9:26480 (J;US)
Partition
Octanol-water partition coefficient of benzo(a)pyrene: measurement, calculation, and environmental implications, 9:26476 (J;US)
Qualitative Chemical Analysis
Immobilized enzyme system for the conversion of benzo[a]pyrene to fluorescent metabolites, 9:26504 (J;US)
Solvent Extraction
Determination of aromatic hydrocarbons in particulate samples by high-temperature extraction and Shpol'skii spectrometry, 9:26480 (J;US)

BENZOQUINONES
Excitation
Resonance Raman and molecular orbital studies of the effects of deuteration on the vibrational structure of the p-benzosemiquinone radical anion, 9:26533 (J;US)
Labelling
Resonance Raman and molecular orbital studies of the effects of deuteration on the vibrational structure of the p-benzosemiquinone radical anion, 9:26533 (J;US)
Photochemical Reactions
Resonance Raman and molecular orbital studies of the effects of deuteration on the vibrational structure of the p-benzosemiquinone radical anion, 9:26533 (J;US)
Raman Spectra
Resonance Raman and molecular orbital studies of the effects of deuteration on the vibrational structure of the p-benzosemiquinone radical anion, 9:26533 (J;US)

BERING SEA
Natural Gas Deposits
Bering Sea summary report: Outer Continental Shelf oil and gas activities in the Bering Sea and their onshore impacts, 9:25320 (R;US)
Petroleum Deposits
Bering Sea summary report: Outer Continental Shelf oil and gas activities in the Bering Sea and their onshore impacts, 9:25320 (R;US)

BERYLLIUM
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)
Emission Spectra
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:26488 (J;US)
Laser Spectroscopy
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:25234 (J;US)
Phase Transformations
Phase transformation and the equation of state of beryllium (Be) under high pressure. Final report, 9:26347 (R;US)

BERYLLIUM 9 TARGET
Electron Reactions
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)

BERYLLIUM MODERATORS
See BERYLLIUM

BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS

BETA BEAMS (POSITRONS)
See POSITRON BEAMS

BETA DECAY
For neutron and nuclear decay.
See also BETA-MINUS DECAY
Configuration Mixing
Effects of magnetic monopoles on nuclear wave functions and possible catalysis of nuclear beta decay and spontaneous fission, 9:27414 (J;NL)

BETA DOSIMETRY
NaI Detectors
A portable beta spectrometer/dosimeter, 9:26849 (J;US)
Plastic Scintillation Detectors
A portable beta spectrometer/dosimeter, 9:26849 (J;US)

BETA SPECTROMETERS
Design
A portable beta spectrometer/dosimeter, 9:26849 (J;US)
NaI Detectors
A portable beta spectrometer/dosimeter, 9:26849 (J;US)
Plastic Scintillation Detectors
A portable beta spectrometer/dosimeter, 9:26849 (J;US)
Portable Equipment
A portable beta spectrometer/dosimeter, 9:26849 (J;US)
Readout Systems
A portable beta spectrometer/dosimeter, 9:26849 (J;US)

BETA-MINUS DECAY
See also DOUBLE BETA DECAY
Nuclear structure of ^{225}Ra, 9:27407 (J;NL)

BF3 COUNTERS
Coincidence Methods
A passive neutron counter for determination of transuranics in high gamma activity samples, 9:26874 (J;US)
Counting Rates
A passive neutron counter for determination of transuranics in high gamma activity samples, 9:26874 (J;US)
Design
A passive neutron counter for determination of transuranics in high gamma activity samples, 9:26874 (J;US)
Performance
A passive neutron counter for determination of transuranics in high gamma activity samples, 9:26874 (J;US)
Sensitivity
A passive neutron counter for determination of transuranics in high gamma activity samples, 9:26874 (J;US)

BIG ROCK POINT REACTOR
Spent Fuel Elements
Extended Burnup Demonstration Reactor Fuel Program. Poolside fuel examination, Big Rock Point extended burnup fuel, February 1982 (EOC 17), 9:25884 (R;US)

BINARY ALLOY SYSTEMS
Mixing Heat
Relation between the heats of mixing of the liquid and solid in metallic systems, 9:26388 (J;GB)

BIOASSAY
Accuracy
Coulter volume cell sorting to improve the precision of radiation survival assays, 9:27175 (J;US)

BIOGAS
See METHANE

BIOLOGICAL TESTING
See BIOASSAY

BIOLOGICAL WASTES
Radiochemical Analysis
Analytical methods under emergency conditions, 9:27164 (R;US)

BIOLOGY
See also GENETICS
Budgets
Congressional budget request, FY 1985. Volume 3. Energy supply research and development, 9:26132 (R;US)

BIOMASS
Energy Source Development
Regional impacts of herbaceous and woody biomass production on U.S. agriculture, 9:25698 (BA;US)
Forecasting
Future biomass energy industry, 9:26161 (RA;US)
Research Programs
Energy and Environment Division, annual report, FY 1981, 9:25603 (R;US)

Thermochemical Processes
Thermochemical conversion of biomass: perspectives of prospective users, 9:25667 (RA;US)
BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Design
Energy efficient alcohol fuel production, 9:25643 (BA;US)
Planning
Mechanisms for introducing innovations in biomass technologies, 9:26162 (RA;US)
Socio-Economic Factors
Energy from biomass: short-run economic effects of increased biomass production, 9:25629 (R;US)
BIOMASS PLANTATIONS
Bioconversion of solar energy, 9:25703 (BA;US)
Cultivation Techniques
Silviculture - energy's future, 9:25668 (RA;US)
Economic Impact
Regional impacts of herbaceous and woody biomass production on U.S. agriculture, 9:25698 (BA;US)
Environmental Impacts
Environmental impacts of Marine Biomass, 9:27086 (RA;US)
Feasibility Studies
Environmental impacts of Marine Biomass, 9:27086 (RA;US)
Harvesting
Harvesting biomass fuels, 9:25670 (RA;US)
Harvesting Equipment
Integrated agricultural fuel systems, 9:25669 (RA;US)
Short Rotation Cultivation
Fuels from woody biomass. Final technical report, June 1, 1978-May 31, 1981, 9:25673 (R;US)
Socio-Economic Factors
Energy from biomass: short-run economic effects of increased biomass production, 9:25629 (R;US)
BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Genetically Significant Dose
Measurement of population exposure by radiological screening in private companies in Berlin, 9:27129 (R;DE;In German)
Nomograms
Derivation and use of nomograms in diagnostic radiography, 9:27127 (R;AU)
BIOSYNTHESIS
Research Programs
GBF scientific report 1982, 9:27096 (R;DE;In German)
BIPYRIDINES
Photolysis
Solution medium control of the photoredox yield in the $Ru(bpy)_3^{2+}$/methyl viologen/EDTA system, 9:26550 (J;US)
BISMUTH
Form Factors
Magnetic form factors, 9:26401 (J;FR)
Neutron Transport
Slow neutron scattering on bismuth and lead and electric polarizability of the neutron, 9:27428 (R;SU)
BISMUTH GERMANATES
Crystal Growth
Light scattering from the substructure of bismuth germanate, 9:26835 (J;US)
Light Scattering
Light scattering from the substructure of bismuth germanate, 9:26835 (J;US)
Solid Scintillation Detectors
Efficiency of a bismuth-germanate scintillator: comparison of Monte Carlo calculations with measurements, 9:26831 (J;US)
BITTER SPAR
See DOLOMITE
BITUMINOUS COAL
Combustion
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Quarterly progress report 8, July 1-September 30, 1983, 9:25287 (R;US)
Combustion Kinetics
Aerosol formation from pulverized coal combustion. Quarterly reports 1, 2 and 3, 9:25285 (R;US)
Combustion Products
Characteristics of coal/light hydrocarbon slurries in spray combustion. Final report, September 1, 1980-June 30, 1983, 9:25284 (R;US)
Plasticity
Predictors of plasticity in bituminous coals. Final technical report, 9:25238 (R;US)
Swelling
Effect of solvent swelling on diffusion rates in bituminous coal, 9:25247 (J;GB)
BLACK SHALES
Explosive Fracturing
Rock mechanics effects observed subsequent to multiple fracturing of wellbores, 9:25338 (R;US)
BLADES (TURBINES)
See TURBINE BLADES
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLASTING
See EXPLOSIVE FRACTURING
BLASTS
See EXPLOSIONS
BLOOD DISEASES
See HEMIC DISEASES
BNL
Birds
1983 breeding bird censuses and summary of 1977-1983 results, 9:27069 (R;US)
BODY FLUIDS
See also MILK
Deuteration
Use of heavy water in boron neutron capture therapy of brain tumours, 9:27149 (J;GB)
BOILERS
See also REFUSE-FUELED BOILERS
Performance
Which coal at what cost, 9:25246 (J;US)
Slags
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Quarterly progress report 8, July 1-September 30, 1983, 9:25287 (R;US)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BOLIVIA
Energy Policy
Bolivia - energy situation 1981/82, 9:26144 (R;DE;In German)
BOLTZMANN-VLASOV EQUATION
Lorentz Groups
Nonlinear realization of the conformal group in two dimensions and the Liouville equation, 9:27370 (R;SU)
Nonlinear Problems
Nonlinear realization of the conformal group in two dimensions and the Liouville equation, 9:27370 (R;SU)
U-1 Groups
U(1)-supersymmetric extension of the Liouville equation, 9:27364 (R;SU)
BONE MARROW
Morphological Changes
Periodic neutropenia and monocytopenia, 9:27158 (J;US)
BOOM TOWNS
Growth and energy development in the rural west, 9:27089 (RA;US)
BORANES
Carbonylation
Synthesis of carbon-13 labeled aldehydes, carboxylic acids, and alcohols via organoborane chemistry, 9:25638 (J;GB)
BOREHOLES
Antennas
Development of a borehole directional antenna at VHF, 9:25838 (R;US)
Temperature Effects
Application of proving-ring technology to measure thermally induced displacements in large boreholes in rock, 9:25522 (R;US)

BORON
Atmospheric Chemistry
Sampling and determination of boron in the atmosphere, 9:26481 (J;US)
Leaching
Relationship between reaction layer thickness and leach rate for nuclear waste glasses, 9:25517 (R;US)
BORON 10
Alpha Reactions
A nuclear diagnostic for fast alpha particles, 9:27496 (J;US)
BORON CARBIDES
Chemical Composition
Hard metal composition, 9:26415 (P;US)
Uses
Alternate shield material feasibility, 9:25936 (R;US)
BOROSILICATE GLASS
Leaching
Fuel cycle programs. Quarterly progress report, April-June 1983, 9:25482 (R;US)
Relationship between reaction layer thickness and leach rate for nuclear waste glasses, 9:25517 (R;US)
Sintering
Role of water in densification of gels, 9:26451 (R;US)
BOROSILICATES
See BOROSILICATE GLASS
BOSE-EINSTEIN GAS
Green Function
Low-frequency asymptotics of Green functions for superfluid Bose-systems, 9:27455 (R;UA;In Russian)
BOUNDARIES (GRAIN)
See GRAIN BOUNDARIES
BOUNDARY LAYERS
See also PLASMA SCRAPE-OFF LAYER
Combustion
Combustion in a turbulent boundary layer, 9:26759 (RA;US)
Hydrodynamic Model
Hydrodynamic theory of convective transport across a dynamically stabilized diffuse boundary layer, 9:27468 (R;DE)
BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
BRAIN
Image Processing
Performance figures and images from the therascan 3128 positron emission tomograph, 9:27134 (J;US)
Neoplasms
Use of heavy water in boron neutron capture therapy of brain tumours, 9:27149 (J;GB)
Positron Computed Tomography
Imaging local brain function with emission computed tomography, 9:27130 (J;US)
Performance figures and images from the therascan 3128 positron emission tomograph, 9:27134 (J;US)
Performance characteristics of the McMaster positron emission tomograph, 9:27135 (J;US)
Solid Scintillation Detectors
Performance figures and images from the therascan 3128 positron emission tomograph, 9:27134 (J;US)
Performance characteristics of the McMaster positron emission tomograph, 9:27135 (J;US)
BREASTS
See MAMMARY GLANDS
BREEDER REACTORS
See also FBR TYPE REACTORS
LWBR TYPE REACTORS
Materials
Design of D9: a radiation damage-resistant alloy, 9:25943 (J;US)
BREEDING BLANKETS
Blankets for tritium catalyzed deuterium (TCD) fusion reactors, 9:27510 (R;US)
Breeding Ratio
Tritium inventories and associated tritium breeding requirement for fusion power reactors, 9:27508 (R;US)
Comparative Evaluations
Overview of the blanket comparison and selection study, 9:27509 (R;US)
Design
FIRST STEP blanket structure and fuel assembly design, 9:27541 (R;US)
FIRST STEP towards ICF commercialization, 9:27540 (R;US)
Helium-cooled solid breeder blanket design for a tokamak fusion reactor, 9:27600 (J;US)
Implication of TRIO-01 heat transfer results on solid breeder blanket designs, 9:27513 (R;US)
Liquid metal breeder-coolant blanket concept, 9:27514 (R;US)
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Heat Pipes
A heat pipe concept for cooling a liquid-pool blanket of a tandem mirror fusion reactor, 9:27599 (J;US)
Hydraulics
Helium-cooled solid breeder blanket design for a tokamak fusion reactor, 9:27600 (J;US)
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Neutron Fluence
Helium-cooled solid breeder blanket design for a tokamak fusion reactor, 9:27600 (J;US)
Neutron Flux
Radioactivation characteristics for deuterium-tritium fusion reactors, 9:27607 (J;US)
Neutron Reactions
First blanket experiment by FNS, 9:27534 (RA;JP;In Japanese)
Neutron Transport
Cross section sensitivity and uncertainty analysis for European INTOR and U.S. FED designs, 9:27529 (R;CH)
Nuclear analysis of liquid metal blanket designs, 9:27512 (R;US)
Use of the Streaming Matrix Hybrid Method for discrete-ordinates fusion reactor calculations, 9:27542 (R;US)
Performance
Helium-cooled solid breeder blanket design for a tokamak fusion reactor, 9:27600 (J;US)
Radioactivation
Alloy development for fast induced radioactivity decay for fusion reactor applications, 9:27522 (RA;US)
Preface: Radioactivation of Fusion Structures, 9:27602 (J;US)
Radioactive Waste Management
Alloy development for fast induced radioactivity decay for fusion reactor applications, 9:27522 (RA;US)
Research Programs
Magnetic fusion energy research, 9:27505 (RA;US)
Specifications
Laser or charged-particle-beam fusion reactor with direct electric generation by magnetic flux compression, 9:27610 (P;US)
Thermodynamics
Helium-cooled solid breeder blanket design for a tokamak fusion reactor, 9:27600 (J;US)
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Tritium Recovery
Fuel cycle programs. Quarterly progress report, April-June 1983, 9:25482 (R;US)
Wall Loading
Helium-cooled solid breeder blanket design for a tokamak fusion reactor, 9:27600 (J;US)
Magnetic forces on a ferromagnetic HT-9 first wall/blanket and coolant pipe, 9:27523 (RA;US)
BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION
BRINES
Environmental Effects
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Annual report for the Bryan Mound site, September 1982-August 1983. Volume III. Executive summary, 9:25324 (R;US)
Marine Disposal
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Annual report for the Bryan Mound site, September 1982-August 1983. Volume III. Executive summary, 9:25324 (R;US)
Recovery
Brine and gas recovery from geopressured systems. I. Parametric calculations, 9:25851 (R;US)

BROMINE
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)
BROMINE BROMIDES
See BROMINE
BRONCHI
Reactivity
Sulfur dioxide and ammonium sulfate effects on pulmonary function and bronchial reactivity in human subjects, 9:27205 (J;US)
BRONCHOGENIC CARCINOMA

ATWS
Severe Accident Sequence Analysis (SASA) Program sequence event tree: boiling water reactor anticipated transient without scram, 9:26047 (R;US)

Containment Buildings
Analytical modelling of hydrogen transport. Final report, 9:26055 (R;US)
Safety analysis of a stratified reactor foundation subject to core meltdown, 9:26001 (R;DE;In German)

Control Elements
Experience in BWR control rod shipping, 9:25981 (RA;US)

Coolant Cleanup Systems
Evaluation of inorganic sorbent treatment for LWR coolant process streams, 9:25915 (R;US)

Fuel Element Clusters
Comparison of BIASI and Columbia CHF correlations using BODYFIT-2PE, 9:25883 (R;US)

Fuel Management
Analysis and synthesis of the theoretical studies performed on the control and safety of LWR's burning plutonium fuel. Final report, 9:26021 (R;XE)
Extended Burnup Demonstration Reactor Fuel Program. Poolside fuel examination, Big Rock Point extended burnup fuel, February 1982 (EOC 17), 9:25884 (R;US)

Fuel Rods
Fuel-cladding mechanical interaction in PCI-resistant LWR fuel designs during normal operation and power ramping, 9:25894 (J;US)

Isotope Ratio
Benchmark reference data on post irradiation analysis of light water reactor fuel samples, 9:25887 (R;XE)

Leaks
Estimation of pre-existing LWR containment leakage areas for severe accident conditions, 9:26003 (R;US)

Loose Parts Monitoring
Loose-part monitoring programs and recent operational experience in selected US and western European commercial nuclear power stations, 9:25973 (R;US)

Loss of Coolant
Use of a heat transfer coefficient for describing the radiative exchange between water vapour and the bounding walls. Final report, 9:25889 (R;XE)

Pipes
Impact of changes in damping and spectrum peak broadening on the seismic response of piping systems, 9:26044 (R;US)
Reliability analysis of stiff versus flexible piping. Status report, 9:25893 (R;US)
Report to Congress on abnormal occurrences, July-September 1983, 9:26033 (R;US)

Pumps
Statistical analysis of nuclear power plant pump failure rate variability: some preliminary results, 9:26051 (R;US)

Radioactive Effluents
Evaluation of inorganic sorbent treatment for LWR coolant process streams, 9:25915 (R;US)

Reactor Accidents
Estimation of pre-existing LWR containment leakage areas for severe accident conditions, 9:26003 (R;US)

Reactor Instrumentation
Evaluation of instrumentation for detection of inadequate core cooling in boiling water reactors, 9:26052 (R;US)

Reactor Kinetics
Improved time integration method for the TRAC-BD1 analytic nodal reactor kinetics equations, 9:25885 (R;US)

Reactor Maintenance
Evaluation of robotic inspection systems at nuclear power plants, 9:25892 (R;US)

Reactor Materials
Fuels and materials chemistry, 9:25882 (RA;US)

Reactor Noise
Use of neutron noise for diagnosis of in-vessel anomalies in light-water reactors, 9:25985 (R;US)

Reactor Safety
Analysis and synthesis of the theoretical studies performed on the control and safety of LWR's burning plutonium fuel. Final report, 9:26021 (R;XE)
Evaluation of instrumentation for detection of inadequate core cooling in boiling water reactors, 9:26052 (R;US)
Fuels and materials chemistry, 9:25882 (RA;US)

Spent Fuels
Benchmark reference data on post irradiation analysis of light water reactor fuel samples, 9:25887 (R;XE)

Transients
Improved time integration method for the TRAC-BD1 analytic nodal reactor kinetics equations, 9:25885 (R;US)
RETRAN02/MOD02: an outside perspective, 9:26018 (R;US)
TRAC-BD1/MOD1: an advanced best estimate computer program for boiling water reactor transient analysis. Volume 2. Users guide, 9:26049 (R;US)
TRAC-BD1/MOD1: an advanced best estimate computer program for boiling water reactor transient analysis. Volume 1. Model description, 9:26048 (R;US)

C

C-2260 RESONANCES
See LAMBDA-2250 RESONANCES

CABLES (ELECTRIC)
See ELECTRIC CABLES

CADMIUM

Auger Electron Spectroscopy
Data acquisition and processing modes for quantitative Auger electron spectroscopy, 9:26506 (J;US)

Biological Effects
Molecular response of cadmium resistant Datura innoxia cells to heavy metal stress, 9:27198 (R;US)

Body Burden
Dose-response analysis of cadmium in man: body burden vs kidney dysfunction, 9:27207 (J;US)

Environmental Transport
Transport of trace metals in the Magela Creek system, Northern Territory. I. Concentrations and loads of iron, manganese, cadmium, copper, lead and zinc during flood periods in the 1978-1979 wet season, 9:25529 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. II. Trace metal concentrations in the Magela Creek billabongs at the end of the 1978 dry season, 9:25530 (R;AU)

Tissue Distribution
Cadmium load of the population in the over 50 age group in the South Bavarian region, 9:27202 (R;DE;In German)

CADMIUM ALLOYS

Mathematical Models
Superconducting proximity effects for in situ and model layered systems. Metallurgy, fabrication, and applications, 9:26664 (BA;US)

CADMIUM OXIDES
Carcinogenesis
Carcinogenicity of single and multiple intratracheal instillations of cadmium oxide in the rat, 9:27206 (J;US)
Intratracheal Administration
Carcinogenicity of single and multiple intratracheal instillations of cadmium oxide in the rat, 9:27206 (J;US)
Sintering
Investigation of the role of sintering in gas-solid interactions. Progress report, 9:26405 (R;US)
CADMIUM SULFATES
Chemical Reactions
Reactions of photoexcited triplet states of zinc porphyrin with transient radicals in aqueous solutions, 9:26556 (J;IL)
CADMIUM SULFIDE SOLAR CELLS
Spray Coating
Spray solar cell research: CdS/Cu_2S cells by ion exchange - CSD. Final report, 1 September 1980-28 February 1981 (Chemical spray deposition), 9:25691 (R;US)
CAES
See COMPRESSED AIR ENERGY STORAGE
CAES PLANT
See COMPRESSED AIR STORAGE POWER PLANTS
CALCIUM
Abundance
Iridium anomaly approximately synchronous with terminal eocence extinctions, 9:27240 (RA;US)
Activation Analysis
In vivo quantification of body nitrogen for nutritional assessment, 9:27159 (J;US)
Electron Reactions
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)
Metabolism
Clinical-pathological correlations in neoplasia, 9:27120 (R;US)
X-Ray Fluorescence Analysis
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)
CALCIUM 40 TARGET
Neutron Reactions
Nuclear structure approach to the Coulomb correction of the imaginary nucleon-nucleus optical potential, 9:27395 (J;US)
Proton Reactions
Nuclear structure approach to the Coulomb correction of the imaginary nucleon-nucleus optical potential, 9:27395 (J;US)
CALCIUM CARBONATES
See also DOLOMITE
Catalytic Effects
Catalyzed gasification of coal: isotope and XPS studies, 9:25205 (R;US)
Physical Radiation Effects
Damage and other changes that occur in some inorganic materials subjected to synchrotron radiation, 9:26437 (RA;GB)
CALCIUM SILICATES
Sorptive Properties
Desulfurization of fuel gases in fluidized bed gasification and hot fuel gas cleanup systems, 9:25232 (P;US)
CALDERAS
Earthquakes
Tilt measurements at Long Valley Caldera, California, May-August 1982, 9:27235 (R;US)
Ground Motion
Tilt measurements at Long Valley Caldera, California, May-August 1982, 9:27235 (R;US)
CALIFORNIA
Continental Shelf
Pacific summary report: Outer Continental Shelf oil and gas activities in the Pacific and their onshore impacts, 9:25321 (R;US)
Economic Development
California energy systems assessment models, 9:26097 (RA;US)
Energy Models
California energy systems assessment models, 9:26097 (RA;US)
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
Tax Credits
California's solar, wind, and conservation tax credits, 9:26166 (R;US)
Volcanoes
Tilt measurements at Long Valley Caldera, California, May-August 1982, 9:27235 (R;US)
Water Quality
Estuarine impacts of fossil-fuel-based technologies: a case study, 9:27085 (RA;US)
Groundwater impacts of enhanced oil recovery, 9:25325 (RA;US)
CALIFORNIUM
Extraction Chromatography
Separation of tervalent lanthanides from actinides by extraction chromatography, 9:26505 (J;US)
CALLAWAY-1 REACTOR
Reactor Safety
Safety evaluation report related to the operation of Callaway Plant, Unit No. 1 (Docket No. STN 50-483), 9:26036 (R;US)
CALORIMETERS
Design
Calorimetric test facility for field measuring thermal performance of passive/hybrid solar components, 9:26901 (BA;US)
CALORIMETERS (PARTICLE)
See SHOWER COUNTERS
CALUTRONS
See ELECTROMAGNETIC ISOTOPE SEPARATORS
CALVERT CLIFFS-1 REACTOR
Reactor Accidents
Interim reliability evaluation program. Analysis of the Calvert Cliffs Unit 1 Nuclear Power Plant. Volume 1, main report, 9:26043 (R;US)
CAM
See COMPUTER-AIDED MANUFACTURING
CAMERAS
See also GAMMA CAMERAS
NEUTRON CAMERAS
Design
Fast imaging applications in the nuclear test program, 9:26913 (J;US)
Performance
Fast imaging applications in the nuclear test program, 9:26913 (J;US)
Sensitivity
Fast imaging applications in the nuclear test program, 9:26913 (J;US)
Spatial Resolution
Fast imaging applications in the nuclear test program, 9:26913 (J;US)
CANADA
Mineral Wastes
Mineral waste resource of Canada. Report No. 5. Mining wastes in the Prairie Provinces, 9:25250 (R;CA)
Pollution Regulations
Indoor air-pollution: some Canadian experiences, 9:26971 (RA;US)
CANCER
See NEOPLASMS
CANDU TYPE REACTORS
Fire Prevention
Fire protection design in CANDU nuclear power plants, 9:26024 (RA;US)
Radioactive Effluents
Stack effluent monitoring for an operating four reactor unit Candu Nuclear Station, 9:27040 (J;US)
Spent Fuel Casks
Thermal analysis for the design of a CANDU irradiated fuel transportation cask, 9:26616 (RA;US)
CAPACITORS
Dielectric Materials
Evaluation of polysulfone film as a capacitor dielectric material for neutron generator applications, 9:26427 (R;US)
CARBINOL
See METHANOL

CARBON
See also ACTIVATED CARBON
CARBON BLACK
GRAPHITE
Activation Analysis
Determination of low-Z elements simultaneously by charged particle activation analysis, 9:26988 (RA;US)
Alpha Reactions
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
Atmospheric Chemistry
Application of thermal analysis and photoelectron spectroscopy for the characterizatoin of particulate matter, 9:26984 (RA;US)
Carbon 12 Reactions
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
Deposition
Development of BEACON technology. Quarterly report, October-December 1981, 9:25187 (R;US)
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Development of BEACON technology. Quarterly report, October-December 1982, 9:25191 (R;US)
Deuteron Reactions
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
Ecological Concentration
Carbon particles in the arctic, 9:26928 (RA;US)
Elemental carbon concentrations: estimation of an historical data base, 9:26995 (J;GB)
Electron Reactions
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)
Meetings
Contributions for the third international carbon conference CARBON '80, 9:26444 (R;DE;In German and English)
Oxidation
Theoretical studies of the thermal decomposition of carbonaceous aerosol particulates, 9:26985 (RA;US)
Proton Reactions
Experimental estimation of the contribution of secondary inelastic interactions in the multiplicity of πp mesons in pA-interactions, 9:27284 (R;SU;In Russian)
Sampling
Application of selective solvent extraction to carbonaceous aerosols, 9:26986 (RA;US)
Thermal Conductivity
Low temperature thermal conductivities of glassy carbons, 9:26424 (BA;US)
Uptake
Light-shade adaptation by the oceanic dinoflagellates pyrocystis noctiluca and P. fusiformis, 9:27116 (J;DE)
CARBON 12
Cluster Model
Additional evidence for the existence of the ^{12}C nucleus as three α-particles and not as ^{8}Besub(g.s.)+α, 9:27386 (R;IT)
CARBON 12 REACTIONS
Coulomb Scattering
Improved determination of the quadrupole moment of the first excited state of ^{208}Pb, 9:27402 (R;AU)
Interaction Range
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
Particle Production
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
CARBON 12 TARGET
Pion Minus Reactions
π^+ meson production under 118 deg angle in the inclusive $\pi^- A \rightarrow \pi^+ x$ reaction at 1.5 GeV/c incident momentum, 9:27287 (R;SU;In Russian)
Average number of neutrons in π^-p, π^-n and π^-^{12}C interactions at p=4 GeV/c, 9:27295 (R;SU;In Russian)
Cumulative proton production in pion-carbon interactions at 5 GeV/c, 9:27288 (R;SU;In Russian)
Triton Reactions
Polarized triton capture on ^{12}C, 9:27389 (J;NL)
CARBON 13 TARGET
Electron Reactions
Electron scattering from ^{13}C, 9:27387 (R;IT)
CARBON 14
Radioactive Waste Processing
Behaviour of the gaseous radionuclides released during the first reprocessing operations, 9:25501 (R;XE;In French)
CARBON BLACK
Ecological Concentration
Relation between concentrations of polynuclear aromatic hydrocarbons and black carbon, 9:26987 (RA;US)
CARBON DIOXIDE
Absorption
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
Adsorption
Study on the reaction between CO_2 and alkanolamines in aqueous solution, 9:26998 (J;GB)
Air Pollution Abatement
Pollutant emission rates from indoor combustion appliances and sidestream cigarette smoke, 9:27199 (RA;US)
Ecological Concentration
Effects of ventilation on residential air pollution due to emissions from a gas-fired range, 9:26976 (RA;US)
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26981 (RA;US)
Environmental Impacts
Identification and preliminary characterization of global water resource issues which may be affected by CO_2-induced climate change, 9:26124 (R;US)
Greenhouse Effect
Climatic effect of CO_2: a different view, 9:27002 (J;GB)
Indoor Air Pollution
Control of the ventilation by CO_2 content, 9:26969 (RA;US)
Indoor air quality in new energy-efficient houses and retrofitted houses, 9:26957 (RA;US)
Methanation
Methanation of carbon dioxide on Ni(100) and the effects of surface modifiers, 9:25626 (J;US)
Molecule-Molecule Collisions
Vibrational and rotational energy transfer upon molecular collisions, 9:27271 (J;NL)
Thermal Conductivity
Thermal conductivity of mixtures of methane with carbon dioxide, 9:26543 (J;DE)
Thermodynamic Properties
Preliminary considerations for the selection of a working medium for the solar sea power plant, 9:25739 (R;US)
CARBON DIOXIDE INJECTION
Additives
Development of mobility control methods to improve oil recovery by CO_2. Final report, 9:25300 (R;US)
Enhanced oil recovery by CO_2 foam flooding. Final report, 9:25301 (R;US)
Bench-Scale Experiments
Development of mobility control methods to improve oil recovery by CO_2. Final report, 9:25300 (R;US)

Enhanced oil recovery by CO_2 foam flooding. Final report, 9:25301 (R;US)

CARBON DIOXIDE LASERS
Tuning
Frequency stabilization of carbon dioxide lasers, 9:26670 (R;SE)

CARBON FIBERS
Chemical Properties
Characterization of carbon fiber emissions from current and projected activities for the manufacture and disposal of carbon fiber products. Final report, 9:26992 (R;US)

CARBON MONOXIDE
Air Pollution Abatement
Pollutant emission rates from indoor combustion appliances and sidestream cigarette smoke, 9:27199 (RA;US)
Air Pollution Monitors
Carbon monoxide and aerosol concentrations in public access buildings, 9:26934 (RA;US)
Estimation of personal exposure to carbon monoxide from fixed and portable monitoring, 9:27100 (RA;US)
Personal exposure to carbon monoxide: nine person study data analysis and conclusions, 9:26960 (RA;US)
Chemical Reaction Kinetics
Theoretical studies of chemical reactions of importance in flames, 9:26569 (RA;US)
Chemical Reactions
Method and system for producing lower alcohols, 9:25640 (P;US)
Ecological Concentration
Effects of ventilation on residential air pollution due to emissions from a gas-fired range, 9:26976 (RA;US)
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26981 (RA;US)
Hydrogenation
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, December 1, 1983-February 29, 1984, 9:25620 (R;US)
Molecular ingredients of heterogeneous catalysis, 9:26268 (R;US)
Indoor Air Pollution
Indoor carbon monoxide pollution in the Netherlands, 9:26950 (RA;US)
Measurement of carbon monoxide concentrations in indoor and outdoor locations using personal exposure monitors, 9:26961 (RA;US)
Methanation
Basic energy science, 9:26528 (RA;US)
Molecule-Molecule Collisions
Vibrational and rotational energy transfer upon molecular collisions, 9:27271 (J;NL)
Photochemical Oxidants
Electrocatalytic oxidation of carbon monoxide in a CO/O_2 fuel cell, 9:26545 (J;US)
Production
Production of chemical feedstock by the methanolysis of wood, 9:25627 (P;US)
Triplets
Multiphoton ionization spectroscopy and photochemistry of transient species. Technical progress report, 9:26549 (R;US)

CARBON TETRAFLUORIDE
Damaging Neutron Fluence
Radiation stability of counting gas mixtures containing CF_4, 9:26852 (J;US)
Stability
Radiation stability of counting gas mixtures containing CF_4, 9:26852 (J;US)

CARBOXYLIC ACIDS
See also MONOCARBOXYLIC ACIDS
Chemical Preparation
Synthesis of carbon-13 labeled aldehydes, carboxylic acids, and alcohols via organoborane chemistry, 9:25638 (J;GB)
Oxidation
Photo-Kolbe reaction in biomass wastestreams, 9:25598 (RA;US)

CARCINOMAS
Correlations
Correlations between lung cancer and phosphates, 9:27110 (RA;US)

CARDIOVASCULAR SYSTEM
See also HEART
CAT Scanning
Gated cardiac scanning using limited-angle image reconstruction technique and information in the neighboring phases, 9:27147 (J;US)
Radioisotope Scanning
Dual gated nuclear cardiac images, 9:27146 (J;US)

CARIBBEAN SEA
See also GULF OF MEXICO
Geochemistry
Iridium anomaly approximately synchronous with terminal eocence extinctions, 9:27240 (RA;US)

CARIBOU
See DEER

CASCADE MOUNTAINS
Geology
Geology of the Lookout Point area, Lane County, Oregon. Chapter 5, 9:25827 (RA;US)
Geothermal Exploration
Geothermal exploration in the central Oregon Cascade Range. Chapter 8, 9:25834 (RA;US)
Heat Flow
Heat flow in the Oregon Cascades. Chapter 7, 9:25833 (RA;US)
Stratigraphy
Overview of the geology of the central Oregon Cascade Range. Chapter 2, 9:25824 (RA;US)

CASCADE SHOWERS
Gamma Detection
A measurement of the energy resolution and related properties of an SCG1-C scintillation glass shower counter array for 1-25 GeV positions, 9:26864 (J;US)
Radiation Length
Measurement of electronic shower position and size with a saturated avalanche tube hodoscope and a fine grained scintillation hodoscope, 9:26865 (J;US)

CASINGS
See COVERINGS

CASINGS (WELL)
See WELL CASINGS

CASKS
See also SPENT FUEL CASKS
Criticality safety hazards arising from the transport of fissile materials. Final report, 9:26642 (R;XE)
Certification
Upgrading the DOT 6M-2R shipping package, 9:26615 (RA;US)
Design
Design concept for a defense high level waste shipping cask: truck, 9:26605 (RA;US)
Development of packaging for plutonium oxide powder, 9:26591 (RA;US)
Development of a transport cask for contaminated steam generators, 9:26604 (RA;US)
Impact Tests
Two- and three-dimensional analyses of DHLW casks, 9:26622 (RA;US)
Mechanical Tests
Low-cost/high-integrity waste casks, 9:25491 (RA;US)
Performance Testing
Low-cost/high-integrity waste casks, 9:25491 (RA;US)
Radiative Cooling
Thermal diode cooling fin concept, 9:26590 (RA;US)
Seals
Factors influencing the design and assessment of elastomer seals for nuclear fuel transport flasks, 9:26598 (RA;US)
Fundamental studies on the performance of O-ring for cask, 9:26599 (RA;US)

CAST IRON
Elongation
TN 1300 casting process and material qualification, 9:26582 (RA;US)
Fracture Properties
Assessment of cast irons for structural components in nuclear material transportation systems, 9:26584 (RA;US)
Properties of nodular ductile graphite cast iron used in GNS-manufactured spent fuel casks, 9:26581 (RA;US)
Mechanical Properties
Design criteria for nodular cast iron shipping containers, 9:26583 (RA;US)
Tensile Properties
TN 1300 casting process and material qualification, 9:26582 (RA;US)
Yield Strength
Properties of nodular ductile graphite cast iron used in GNS-manufactured spent fuel casks, 9:26581 (RA;US)
TN 1300 casting process and material qualification, 9:26582 (RA;US)
CASTE (INSECTS)
See INSECTS
CASTINGS
Roughness
Rough surface effects of aluminum castings on ultrasonic sizing algorithms, 9:26717 (BA;US)
Ultrasonic Testing
Rough surface effects of aluminum castings on ultrasonic sizing algorithms, 9:26717 (BA;US)
CAT SCANNING
Errors
Gated cardiac scanning using limited-angle image reconstruction technique and information in the neighboring phases, 9:27147 (J;US)
Gating Circuits
Gated cardiac scanning using limited-angle image reconstruction technique and information in the neighboring phases, 9:27147 (J;US)
Incidence Angle
Gated cardiac scanning using limited-angle image reconstruction technique and information in the neighboring phases, 9:27147 (J;US)
Synchronization
Gated cardiac scanning using limited-angle image reconstruction technique and information in the neighboring phases, 9:27147 (J;US)
Time Resolution
Gated cardiac scanning using limited-angle image reconstruction technique and information in the neighboring phases, 9:27147 (J;US)
CATALYSIS
Molecular ingredients of heterogeneous catalysis, 9:26268 (R;US)
Recycling
Status of the 100 bpd fluid bed methanol-to-gasoline project, 9:25631 (RA;US)
CATALYSTS
Chemical Preparation
Catalysis using hydrous metal oxide ion exchangers, 9:26524 (P;US)
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Iron-manganese Fischer-Tropsch catalysts, 9:25609 (RA;US)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, December 1, 1983-February 29, 1984, 9:25620 (R;US)
Promotion and characterization of zeolitic catalysts used in the synthesis of hydrocarbons from syngas, 9:25617 (RA;US)
Spectroscopic studies of metal/zeolite catalysis materials and products, 9:25618 (RA;US)
Syngas conversion and chemisorption studies on metal-zeolite catalysts, 9:25615 (RA;US)
Zeolite-supported cobalt catalysts for the conversion of synthesis gas to hydrocarbon products, 9:25616 (RA;US)
Comparative Evaluations
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Deactivation
Hydrotreatment catalyst activity enhancement. Quarterly report No. 3, February 1-April 30, 1984, 9:25215 (R;US)
Microflow reactor for studying catalyst deactivation, 9:25228 (R;US)
Electron Microprobe Analysis
Development of significantly improved catalysts for coal liquefaction and upgrading of coal extracts. Quarterly progress report No. 8, July 1-September 30, 1983, 9:25198 (R;US)
Meetings
Proceedings of the DOE contractors' conference on indirect liquefaction, 9:25605 (R;US)
Performance
Promotion and characterization of zeolitic catalysts used in the synthesis of hydrocarbons from syngas, 9:25617 (RA;US)
Syngas conversion and chemisorption studies on metal-zeolite catalysts, 9:25615 (RA;US)
Performance Testing
Development of BEACON technology. Quarterly report, October-December 1981, 9:25187 (R;US)
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Development of BEACON technology. Quarterly report, October-December 1982, 9:25191 (R;US)
Liquid phase methanol update, 9:25630 (RA;US)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, December 1, 1983-February 29, 1984, 9:25620 (R;US)
Zeolite-supported cobalt catalysts for the conversion of synthesis gas to hydrocarbon products, 9:25616 (RA;US)
Physical Properties
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Poisoning
Liquid phase methanol update, 9:25630 (RA;US)
Production
High surface area ThO_2 catalyst, 9:26416 (P;US)
Research Programs
Basic energy science, 9:26528 (RA;US)
Supported f-element complexes: surface chemistry and catalysis. Progress report, April 1, 1983-April 1, 1984, 9:26513 (R;US)
Sorptive Properties
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, December 1, 1983-February 29, 1984, 9:25620 (R;US)
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, May-July 1983, 9:25185 (R;US)
Specificity
Liquid hydrocarbon fuels from syngas, 9:25614 (RA;US)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, December 1, 1983-February 29, 1984, 9:25620 (R;US)
Promotion and characterization of zeolitic catalysts used in the synthesis of hydrocarbons from syngas, 9:25617 (RA;US)
Spectroscopic studies of metal/zeolite catalysis materials and products, 9:25618 (RA;US)
Syngas conversion and chemisorption studies on metal-zeolite catalysts, 9:25615 (RA;US)
Zeolite-supported cobalt catalysts for the conversion of synthesis gas to hydrocarbon products, 9:25616 (RA;US)
Stability
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)
Surface Properties
Physical and chemical investigations on real catalyst surfaces, 9:26512 (R;DE;In German)
Testing
FeTi methanation catalyst, 9:25645 (J;US)

CATALYTIC REFORMING
Catalysts
SRC-I naphtha reforming study. Part 1: SRC-I naphtha distillation and hydrotreating. Part 2: SRC-I naphtha reforming. Final technical report, 9:25195 (R;US)
CAVITY RECEIVERS
Design
Prototype design of an advanced ceramic receiver. Final report, 9:25721 (R;US)
CELL FLOW SYSTEMS
Design
Method and apparatus for fringe-scanning chromosome analysis, 9:27111 (P;US)
Interferometry
Method and apparatus for fringe-scanning chromosome analysis, 9:27111 (P;US)
CELL GROWTH (PLANT)
See PLANT CELLS
CELL KILLING
Radioinduction
Coulter volume cell sorting to improve the precision of radiation survival assays, 9:27175 (J;US)
Sensitivity
Hypersensitivity to cell killing and mutation induction by chemical carcinogens in an excision repair-deficient mutant of CHO cells, 9:27112 (J;NL)
CELL MEMBRANES
Biochemistry
Reconstitution of the membrane-bound, ubiquinone-dependent pyruvate oxidase respiratory chain of Escherichia coli with the cytochrome d terminal oxidase, 9:27103 (J;US)
Electric Potential
Reconstitution of the membrane-bound, ubiquinone-dependent pyruvate oxidase respiratory chain of Escherichia coli with the cytochrome d terminal oxidase, 9:27103 (J;US)
CELLS (BACTERIAL)
See BACTERIA
CELLS (PLANT)
See PLANT CELLS
CELLULOSE
Biosynthesis
Comparison of the mechanism of cellulose biosynthesis in plants and bacteria (Acetobacter xylinum), 9:27104 (J;US)
Enzymatic Hydrolysis
Chemical raw materials from cellulose, 9:25636 (RA;DE;In German)
Photobiological production of hydrogen by photosynthetic bacteria, 9:25593 (RA;US)
Production of sugars from cellulose, 9:25635 (RA;US)
Liquefaction
Formation of aromatic compounds from condensation reactions of cellulose degradation products, 9:25702 (J;GB)
Permeability
Concentration-dependent transport of gases and vapors in glassy polymers. II. Organic vapors in ethyl cellulose, 9:26544 (J;NL)
Sorptive Properties
Concentration-dependent transport of gases and vapors in glassy polymers. II. Organic vapors in ethyl cellulose, 9:26544 (J;NL)
CELTIC SEA
See IRISH SEA
CEMENTS
Performance Testing
Geothermal cement: high temperature downhole tests: continuation of an API project, 9:25853 (J;US)
Research Programs
Geothermal cement: high temperature downhole tests: continuation of an API project, 9:25853 (J;US)
CENTRAL RECEIVERS
Computerized Simulation
Preliminary simulation of the MDAC receiver panel test sequences to be implemented at the CR-STTF, 9:25712 (R;US)
Materials Testing
Alternate central receiver power system, Phase II. Volume I. Executive summary. Final report, 9:25722 (R;US)
Alternate central receiver power system, Phase II. Volume III. Molten salt materials tests. Final report, 9:25723 (R;US)
Molten Salts
Alternate central receiver power system, Phase II. Volume I. Executive summary. Final report, 9:25722 (R;US)
Alternate central receiver power system, Phase II. Volume III. Molten salt materials tests. Final report, 9:25723 (R;US)
Temperature Monitoring
Infrared sensor for remote temperature monitoring of solar thermal central receivers, 9:25711 (R;US)
CENTRIFUGAL CONTACTORS
See EXTRACTION APPARATUSES
CERAMIC MELTERS
Development of a slurry-fed in-can melter for nuclear defense waste, 9:25497 (R;US)
CERAMICS
Activation Analysis
Neutron-activation study of figurines, pottery, and workshop materials from the Athenian Agora, Greece (Neutron reactions; France, Israel, Cyprus), 9:26496 (J;US)
Age Estimation
Neutron-activation study of figurines, pottery, and workshop materials from the Athenian Agora, Greece (Neutron reactions; France, Israel, Cyprus), 9:26496 (J;US)
Bonding
Ceramic-glass-metal seal by microwave heating, 9:26270 (P;US)
Brazing
Graphite-ceramic rf Faraday-thermal shield and plasma limiter, 9:27620 (P;US)
Excavation
Neutron-activation study of figurines, pottery, and workshop materials from the Athenian Agora, Greece (Neutron reactions; France, Israel, Cyprus), 9:26496 (J;US)
Fracture Mechanics
Thermal stress fracture of ceramic coatings: Measurements, transformations, and high-temperature fracture, 9:26419 (BA;US)
Fracture Properties
Effect of indenter geometry on controlled-surface-flaw fracture thoughness, 9:26417 (J;US)
Joining
Ceramic to metal attachment system (Ceramic electrode to metal conductor in MHD generator), 9:26169 (P;US)
Joining silicon nitride based ceramics: a technical assessment, 9:26406 (R;US)
Knoop Hardness
Effect of indenter geometry on controlled-surface-flaw fracture thoughness, 9:26417 (J;US)
Microstructure
High resolution electron microscopy studies of the early stages of decomposition in alloys and ceramics, 9:26407 (R;US)
Microchemistry and microstructure of a multiphase aluminosilicate ceramic, 9:26420 (J;GB)
Physical Properties
Advanced structural ceramics, 9:26412 (J;US)
Research Programs
Advanced structural ceramics, 9:26412 (J;US)
Stress Analysis
Analytical and experimental evaluation of biaxial contact stress, 9:26418 (BA;US)
Thermal Stresses
Thermal stress fracture of ceramic coatings: Measurements, transformations, and high-temperature fracture, 9:26419 (BA;US)
Vickers Hardness
Effect of indenter geometry on controlled-surface-flaw fracture thoughness, 9:26417 (J;US)
CEREALS
See also MAIZE
WHEAT
Rare Earths
Rare earth element behavior in the development of energy resources, 9:25236 (R;US)
CERIUM
See also CERIUM-ALPHA
CERIUM-BETA

X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)

CERIUM 144
Radioecological Concentration
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)

CERIUM COMPLEXES
Electronic Structure
Quasirelativistic SCF-Xα scattered-wave study of uranocene, thorocene, and cerocene, 9:26562 (J;US)
Molecular Structure
Quasirelativistic SCF-Xα scattered-wave study of uranocene, thorocene, and cerocene, 9:26562 (J;US)

CERIUM OXIDES
Chemical Reactions
Thermochemical splitting of sulfur dioxide with cerium (IV) oxide, 9:26520 (J;US)

CERIUM SULFATES
Thermal Degradation
Thermochemical splitting of sulfur dioxide with cerium (IV) oxide, 9:26520 (J;US)

CERIUM-ALPHA
Positrons
Study of positron lifetimes in α, β, and γ cerium at high pressures, 9:26392 (J;NL)

CERIUM-BETA
Positrons
Study of positron lifetimes in α, β, and γ cerium at high pressures, 9:26392 (J;NL)

CERN II SYNCHROTRON
See CERN SPS SYNCHROTRON

CERN SPS SYNCHROTRON
Device and main results of the NA-4 experiment: deep inelastic muons scattering and investigating multimuons states, 9:27296 (RA;SU;In Russian)

CESIUM
Crystal Structure
Structural energetics of heavy alkali metals: Pseudopotential theory revisited, 9:26322 (R;IT)
Eigenvalues
Cubic spline method for solving second-order differential equations: theory and application to the Thomas-Fermi model for ions, 9:27461 (J;NL)
Removal
Method for removing cesium from a nuclear reactor coolant, 9:25945 (P;US)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)

CESIUM 137
Biogeochemistry
Aquatic chemistry of plutonium in seasonally anoxic lake waters, 9:27080 (J;GB)
Radioecological Concentration
1983 environmental monitoring report, Sandia National Laboratories, Albuquerque, New Mexico, 9:27037 (R;US)
Aquatic chemistry of plutonium in seasonally anoxic lake waters, 9:27080 (J;GB)
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)

CESIUM ISOTOPES
See also CESIUM 137
Radioactive Waste Disposal
Immobilization of radioactive cesium in pyrolytic-carbon-coated zeolite, 9:25528 (J;US)

CFFF
See MHD GENERATOR CFFF

CHALKS
See LIMESTONE

CHARCOAL
Production
Energy conservation using the waste heat from Herreshoff furnace (1982), 9:26234 (R;US)

CHARGED PARTICLE DETECTION
See also MUON DETECTION
Time-of-Flight Method
A time-of-flight hodoscope saving the number of photomultipliers, 9:26870 (J;US)

CHARGED-PARTICLE TRANSPORT
Discrete Ordinate Method
Electron transport in one-dimensional plasmas, 9:27498 (J;US)
Fokker-Planck Equation
Electron transport in one-dimensional plasmas, 9:27498 (J;US)
Monte Carlo Method
Electron transport in one-dimensional plasmas, 9:27498 (J;US)
Multigroup Theory
Electron transport in one-dimensional plasmas, 9:27498 (J;US)
Scaling Laws
Plasma transport in stochastic magnetic fields. Pt. 3. Kinetics of test particle diffusion, 9:27500 (J;GB)

CHARM PARTICLES
See also CHARMED BARYON RESONANCES
Jet Model
Charm particle jet production at the neutrino-valent gluon interaction, 9:27344 (R;UA;In Russian)
Pair Production
Charm particle jet production at the neutrino-valent gluon interaction, 9:27344 (R;UA;In Russian)
Particle Identification
Pointing out and identification system in a vertex detector for secondary particles, 9:26824 (RA;SU;In Russian)

CHARMED BARYON RESONANCES
See also LAMBDA-2250 RESONANCES
Particle Decay
Production and decay of charmed particles in e^+e^- collisions, 9:27306 (BA;US)
Particle Production
Production and decay of charmed particles in e^+e^- collisions, 9:27306 (BA;US)
Weak Hadronic Decay
Nonleptonic decays of charmed baryons in chiral theory, 9:27327 (R;SU;In Russian)

CHARMONIUM
Particle Widths
Limits of application of the nolocal quark model, 9:27330 (R;SU;In Russian)
Quark Model
Limits of application of the nolocal quark model, 9:27330 (R;SU;In Russian)

CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS

CHARS
Activation Energy
Reactivity of spent Chattanooga Oil Shale, 9:25380 (R;US)
Fluidization
Characteristics of fluidization at high pressure, 9:25230 (J;GB)

CHEMICAL ANALYSIS
Data Analysis
Comparison of conventional and robust regression in analysis of chemical data, 9:26464 (J;US)
Lasers
Laser induced phosphorescence uranium analysis, 9:25583 (P;US)
Research Programs
Analytical Chemistry Division annual progress report for period ending December 31, 1983, 9:26472 (R;US)

CHEMICAL BONDS
Cleavage
Facile reaction/extraction of coal with supercritical fluids. Quarterly technical progress report, January 1-March 31, 1984, 9:25204 (R;US)

CHEMICAL EFFLUENTS
Mutagen Screening
Environmental characterization studies of a high throughput wood gasifier, 9:25700 (BA;US)
Qualitative Chemical Analysis
Environmental characterization studies of a high throughput wood gasifier, 9:25700 (BA;US)

CHEMICAL EXPLOSIVES
See also NITROCELLULOSE

Stability
Utilization of accelerating rate calorimetry for the characterization of energetic materials at MRC-Mound, 9:26910 (J;NL)
Thermodynamic Properties
Utilization of accelerating rate calorimetry for the characterization of energetic materials at MRC-Mound, 9:26910 (J;NL)
Toxicity
Toxicological study of the high-explosive formulation imidazo(4,5-d)imidazole-2,5(1H,3H)-dione, tetrahydro-1,4-dinitro, 9:26903 (R;US)

CHEMICAL INDUSTRY
Indoor Air Pollution
Chemical dusts, vapours and fumes as causes of asthma, 9:26956 (RA;US)

CHEMICAL MUTAGENS
See MUTAGENS

CHEMICAL OXYGEN DEMAND
Distribution
Aquatic chemistry of plutonium in seasonally anoxic lake waters, 9:27080 (J;GB)

CHEMICAL REACTION KINETICS
See also COMBUSTION KINETICS
Forecasting
Variational transition state theory, 9:26570 (RA;US)
Variational Methods
Variational transition state theory, 9:26570 (RA;US)

CHEMICAL REACTIONS

FISCHER-TROPSCH SYNTHESIS
HYDROGENATION
PHOTOCHEMICAL REACTIONS
Data Analysis
Comparison of conventional and robust regression in analysis of chemical data, 9:26464 (J;US)
Thermodynamics
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Quarterly progress report 8, July 1-September 30, 1983, 9:25287 (R;US)

CHEMICAL REACTORS
See also RETORTS
Chemical Effluents
Environmental characterization studies of a high throughput wood gasifier, 9:25700 (BA;US)
Construction
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
Development of BEACON technology. Quarterly report, July-September 1982, 9:25190 (R;US)
Design
Apparatus for kinetic measurements on elementary fossil fuel combustion reactions over wide temperature ranges. Final report, 1 May 1983-30 April 1984, 9:26571 (R;US)
Assessment of the use of slurry reactors in Fischer-Tropsch synthesis, 9:25610 (RA;US)
Development of BEACON technology. Quarterly report, October-December 1981, 9:25187 (R;US)
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)
Microflow reactor for studying catalyst deactivation, 9:25228 (R;US)
Staged fluidized bed, 9:25378 (P;US)
Fluid Mechanics
Assessment of the use of slurry reactors in Fischer-Tropsch synthesis, 9:25610 (RA;US)
Slurry bubble column dynamics, 9:25613 (RA;US)
Slurry reactor hydrodynamic studies, 9:25612 (RA;US)
Mathematical Models
Slurry reactor hydrodynamic studies, 9:25612 (RA;US)
Multiphase Flow
Assessment of the use of slurry reactors in Fischer-Tropsch synthesis, 9:25610 (RA;US)
Study of multiphase flow useful to understanding scaleup of coal liquefaction reactors. Technical progress report, December 1 1983-February 29, 1984, 9:25201 (R;US)
Performance Testing
Development of BEACON technology. Quarterly report, October-December 1982, 9:25191 (R;US)
Scaling Laws
Study of multiphase flow useful to understanding scaleup of coal liquefaction reactors. Technical progress report, December 1 1983-February 29, 1984, 9:25201 (R;US)
Simulation
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, January 1-March 31, 1984, 9:25211 (R;US)

CHEMICAL SHIFT
Temperature Dependence
Temperature dependence of the magnetic susceptibility and proton and carbon-13 chemical shifts of tetramethylsilane, 9:26527 (J;GB)

CHEMICAL SHIMMING
See FLUID POISON CONTROL

CHEMICALS

CHIRAL SYMMETRY
Symmetry Breaking
Research in the theory of condensed matter and elementary particles. Progress report, 9:27309 (R;US)

CHLOR-ALKALI INDUSTRY
See CHEMICAL INDUSTRY
CHLORINE

CHLORATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Physical Radiation Effects
Damage and other changes that occur in some inorganic materials subjected to synchrotron radiation, 9:26437 (RA;GB)

CHLORINATED ALIPHATIC HYDROCARBONS
See also METHYL CHLORIDE
VINYL CHLORIDE
Toxicity
Documentation of trichloroethylene for the material safety data sheet, 9:27204 (R;US)

CHLORINATED AROMATIC HYDROCARBONS
Acetolysis
Photochemical transformation. 35. Stereochemistry of electron transfer from photoexcited aromatic rings to carbon-chlorine bonds. Syn stereochemistry of migration in photo-Wagner-Meerwein rearrangements, 9:26553 (J;US)
Field Tests
PCB Detection in the field, 9:25877 (J;US)

Indoor Air Pollution
Individual human exposure to volatile organic compounds encountered during normal daily activities, 9:26964 (RA;US)
Mass Spectra
Mass spectrometry with direct supercritical fluid injection, 9:26479 (J;US)
Photochemical Reactions
Photochemical transformation. 35. Stereochemistry of electron transfer from photoexcited aromatic rings to carbon-chlorine bonds. Syn stereochemistry of migration in photo-Wagner-Meerwein rearrangements, 9:26553 (J;US)
Research Programs
PCB Detection in the field, 9:25877 (J;US)

CHLORINATION
Efficiency
Organic compounds in coal slurry pipeline water, 9:27077 (RA;US)

CHLORINE
Emission Spectra
Detection of chlorine and fluorine in air by laser-induced breakdown spectrometry, 9:26495 (J;US)
Immune Reactions
Environmental control of indoor air pollution in hospital and home environment in relation to cardiovascular disease, 9:27156 (RA;US)
Laser Spectroscopy
Detection of chlorine and fluorine in air by laser-induced breakdown spectrometry, 9:27005 (J;US)

CHLORINE 36
Environmental Transport
Persistence and transfer of ^{36}Cl-DDT in the soil and biota of an old-field ecosystem: a six-year balance study, 9:27211 (J;US)

CHLORINE CHLORIDES
See CHLORINE

CHLOROPHYLL
Comparative Evaluations
Comparison of chlorophyll a measurements by fluorometric, spectrophotometric and high pressure liquid chromatographic methods in aquatic environments, 9:27073 (J;DE)
Distribution
Comparison of chlorophyll a measurements by fluorometric, spectrophotometric and high pressure liquid chromatographic methods in aquatic environments, 9:27073 (J;DE)

CHLOROPLASTS
Photosynthetic Reaction Centers
Photo/biological production of hydrogen and oxygen. Progress report, June 1982-May 1983, 9:25595 (RA;US)
Water-splitting photosystem II preparations from spinach: structural, biochemical, and biophysical properties, 9:25597 (RA;US)

CHOOZ REACTOR
See ARDENNES REACTOR

CHROMATID DELETIONS
See CHROMOSOMAL ABERRATIONS

CHROMIUM
Abundance
Iridium anomaly approximately synchronous with terminal eocence extinctions 9:27240 (RA;US)
Environmental Transport
Transport of trace metals in the Magela Creek system, Northern Territory. III. Pillabong sediments, 9:25531 (R;AU)
Form Factors
Magnetic form factors, 9:26401 (J;FR)
Mutagen Screening
Cr (VI) and other metallic mutagens in fly ash and welding fumes, 9:25292 (R;DE)
Optical Properties
Preparation and characterization of black molybdenum films: application to solar energy photothermic conversion, 9:25795 (R;FR;In French)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)

CHROMIUM ALLOYS
See also CHROMIUM STEELS
STAINLESS STEELS
Charpy Test
Effect of specimen size and nickel content on the impact properties of 12 Cr-1 MoVW ferritic steel, 9:26298 (RA;US)
Postirradiation notch ductility tests of ESR alloy HT-9 and modified 9Cr-1Mo alloy from UBR reactor experiments, 9:26297 (RA;US)
Corrosion
Corrosion and oxidation of vanadium-base alloys in helium environments, 9:26308 (RA;US)
Corrosion Resistance
Improved oxidation sulfidation resistance of Fe-Cr-Ni alloys, 9:26372 (P;US)
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Creep
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation: irradiation creep and swelling, 9:26291 (RA;US)
Sulfur and antimony segregation to creep cavity surfaces in Ni and an FCC Fe-Ni-Cr alloy, 9:26280 (R;US)
Deposition
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Ductility
Postirradiation notch ductility tests of ESR alloy HT-9 and modified 9Cr-1Mo alloy from UBR reactor experiments, 9:26297 (RA;US)
Fractures
Fracture toughness of ferritic alloys irradiated in HFIR, 9:26304 (RA;US)
Hardness
Effects of HFIR irradiation at 55°C on the microstructure and toughness of HT-9 and 9Cr-1Mo, 9:26295 (RA;US)
Impact Tests
Effect of specimen size and nickel content on the impact properties of 12 Cr-1 MoVW ferritic steel, 9:26298 (RA;US)
Marketing
Marketing ORNL-made materials, 9:26362 (J;US)
Microstructure
Effects of HFIR irradiation at 55°C on the microstructure and toughness of HT-9 and 9Cr-1Mo, 9:26295 (RA;US)
Microstructure of 9 Cr-1 MoVNb and 12 Cr-1 MoVW ferritic steels after irradiation at elevated temperatures in HFIR, 9:26294 (RA;US)
Oxidation
Corrosion and oxidation of vanadium-base alloys in helium environments, 9:26308 (RA;US)
Physical Radiation Effects
Comparison of neutron and heavy-ion damage in a single-phase austenite, 9:26400 (BA;US)
Design of D9: a radiation damage-resistant alloy, 9:25943 (J;US)
Scaling
Oxidation-sulfidation behavior of Fe-Cr-Ni alloys containing additions of Zr, Nb, OR Ti, 9:26279 (R;US)
Segregation
Sulfur and antimony segregation to creep cavity surfaces in Ni and an FCC Fe-Ni-Cr alloy, 9:26280 (R;US)
Sulfidation
Oxidation-sulfidation behavior of Fe-Cr-Ni alloys containing additions of Zr, Nb, OR Ti, 9:26279 (R;US)
Swelling
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation: irradiation creep and swelling, 9:26291 (RA;US)
Swelling in simple ferritic alloys irradiated to high fluence, 9:26293 (RA;US)

Tensile Properties
Elevated-temperature tensile properties of 2 1/4 Cr-1 Mo steel irradiated in the EBR-II, AD-2 experiment, 9:26292 (RA;US)

CHROMIUM IONS
Luminescence
EPR of luninescent glasses containing chromium(III), 9:26463 (J;NL)

CHROMIUM STEELS
See also CHROMIUM-MOLYBDENUM STEELS
Corrosion
Corrosion of path A PCA and 12 Cr-1 MoVW steel in thermally convective lithium, 9:26305 (RA;US)
Embrittlement
Grain boundary segregation and embrittlement in a 12Cr-1Mo steel resulting from cooling rate variations, 9:26299 (RA;US)
Grain Boundaries
Grain boundary segregation and embrittlement in a 12Cr-1Mo steel resulting from cooling rate variations, 9:26299 (RA;US)

CHROMIUM-MOLYBDENUM STEELS
See also ALLOY-HT-9
Corrosion
Determination of corrosion rates for steel alloys in process solvent. Final technical report, 9:26312 (R;US)
Creep
Creep-fatigue effects in structural materials used in advanced nuclear power generating systems, 9:25978 (BA;US)
Effect of creep-fatigue damage relationships upon HTGR heat exchanger design, 9:25922 (R;US)
Electric Conductivity
Physical properties of 9 Cr-1 Mo steel from 300 to 1000 K, 9:26396 (BA;US)
Fatigue
Creep-fatigue effects in structural materials used in advanced nuclear power generating systems, 9:25978 (BA;US)
Effect of creep-fatigue damage relationships upon HTGR heat exchanger design, 9:25922 (R;US)
Thermal Conductivity
Physical properties of 9 Cr-1 Mo steel from 300 to 1000 K, 9:26396 (BA;US)
Thermal Expansion
Physical properties of 9 Cr-1 Mo steel from 300 to 1000 K, 9:26396 (BA;US)
Welding
Simple test for dissimilar-metal welds, 9:25876 (J;US)

CHROMODYNAMICS

Climatic effect of CO_2: a different view, 9:27002 (J;GB)

CLINCH RIVER BREEDER REACTOR
Financing
Clinch River: an alternate financing plan. Hearing before the Subcommittee on Energy Conservation and Power, House of Representatives, Ninety-Eighth Congress, first session, 20 Sep 1983, 9:25941 (B;US)
Investment
Clinch River: an alternate financing plan. Hearing before the Subcommittee on Energy Conservation and Power, House of Representatives, Ninety-Eighth Congress, first session, 20 Sep 1983, 9:25941 (B;US)
Reactor Core Disruption
Analysis of complex vessel experiments using the Hybrid Lagrangian-Eulerian containment code ALICE-II, 9:26016 (R;US)
Reactor Vessels
Analysis of complex vessel experiments using the Hybrid Lagrangian-Eulerian containment code ALICE-II, 9:26016 (R;US)
Safety Standards
Comparison of CRBRP standards to DOE prescribed standards, 9:25934 (R;US)

CLINTON P. ANDERSON MESON PHYSICS FACILIT
See LAMPF LINAC

CLOSED CONFIGURATIONS
Analytical Solution
Possibility of the control by the relation of plasma radii and the first wall in thermonuclear devices, 9:27535 (R;UA;In Russian)

CLOUDS
Limited to clouds in the earth atmosphere; for interstellar clouds see COSMIC DUST or COSMIC GASES.
Mathematical Models
Critical confrontation of standard and more sophisticated methods for modelling the dispersion in air of heavy gas clouds; evaluation and illustration of the intrinsic limitations of both categories, 9:26926 (R;XE)
Stimulation
Modification of the surface temperature by an artificial cirrus cloud. Final report, September 1, 1980-November 30, 1983, 9:26247 (R;US)

CLUSTERS (FUEL ELEMENTS)
See FUEL ELEMENT CLUSTERS

CO2 FLOODING
See CARBON DIOXIDE INJECTION

COAL
See also SUBBITUMINOUS COAL
Agglomeration
Integration of advanced preparation with coal liquefaction. Second quarterly technical progress report, January 1-March 31, 1984, 9:25208 (R;US)
Calorific Value
Photothermal method of determining calorific properties of coal, 9:25248 (P;US)
Role of preasphaltenes in coal conversion reactions. Second quarterly report, year two, 9:25239 (R;US)
Carbonization
Carbonization of thermally pretreated coal with added pitch (Report on ECSC contract 7220-EB/110), 9:25218 (R;XE)
Studies of the factors controlling the formation and development of the porous structure of coke (Report on ECSC contract 7220-EB/814), 9:25221 (R;XE)
Chemical Analysis
Trace elements in Canadian coals, 9:25243 (R;CA)
Chemical Composition
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Quarterly progress report 8, July 1-September 30, 1983, 9:25287 (R;US)

Mobile phase in coals: its nature and modes of release. Technical progress reports, September-November 1983 and December 1983-February 1984, 9:25214 (R;US)
Role of preasphaltenes in coal conversion reactions. First quarterly report, year two, 9:25240 (R;US)
Role of preasphaltenes in coal conversion reactions. Second quarterly report, year two, 9:25239 (R;US)

Chemical Properties
Effects of stresses on optical and chemical properties of coal. Technical progress report, May 1-July 31, 1983, 9:25241 (R;US)

Cleaning
Bench-scale development of the TRW process for cleaning coal (Gravimelt Process). Quarterly technical progress report, 17 August 1983-4 November 1983, 9:25216 (R;US)
Coal cleaning as an acid rain mitigation strategy: an in-depth examination, 9:25274 (R;US)

Coking
Lateral shrinkage of the charge and effects of expansion on coke oven walls (Report on ECSC contract 7220-EB/311), 9:25219 (R;XE;In French)

Combustion Kinetics
Coal burning rate studies. Final report, September 1, 1978-August 31, 1980, 9:25283 (R;US)

Combustion Properties
Which coal at what cost, 9:25246 (J;US)

Comminution
Physico-chemical fracturing and cleaning of coal (Treatment with CO_2 in water at high pressure), 9:25277 (P;US)

Consumption Rates
Assessment of the quality of selected EIA data series. Coal and electric power data from 1977 to 1982, 9:25290 (R;US)

Deashing
Physico-chemical fracturing and cleaning of coal (Treatment with CO_2 in water at high pressure), 9:25277 (P;US)

Desulfurization
Coal cleaning as an acid rain mitigation strategy: an in-depth examination, 9:25274 (R;US)
Process for removing sulfur from coal, 9:25233 (P;US)

Drying
Integration of advanced preparation with coal liquefaction. Second quarterly technical progress report, January 1-March 31, 1984, 9:25208 (R;US)

Energy Consumption
Monthly energy review, January 1984, 9:26147 (R;US)

Flotation
Microbubble flotation of fine coal. Final report, 9:25275 (R;US)

Fluidization
Characteristics of fluidization at high pressure, 9:25230 (J;GB)

Fluidized-Bed Combustion
Fluidized-bed coal combustion: in-bed sorbent sulfation model, 9:25288 (J;GB)
Utilization of coal, 9:25282 (RA;US)

Infrared Spectra
Novel analytical approaches to coal beneficiation. Quarterly report, 9:25276 (R;US)

Marketing
Quarterly coal report, October-December 1983, 9:25289 (R;US)

Optical Properties
Effects of stresses on optical and chemical properties of coal. Technical progress report, May 1-July 31, 1983, 9:25241 (R;US)

Particle Size
Lateral shrinkage of the charge and effects of expansion on coke oven walls (Report on ECSC contract 7220-EB/311), 9:25219 (R;XE;In French)

Physical Properties
Which coal at what cost, 9:25246 (J;US)

Plasticity
Volatiles mass transport with particles of softened coal. Technical progress report, July 27, 1983-October 26, 1983, 9:25213 (R;US)

Production
Assessment of the quality of selected EIA data series. Coal and electric power data from 1977 to 1982, 9:25290 (R;US)
Monthly energy review, January 1984, 9:26147 (R;US)

Pyrolysis
New methods for obtaining industrial chemical compounds from the by-products of coal gasification and carbonisation processes (Report on ECSC contract 7220-EC/201), 9:25217 (R;XE;In French)
Role of preasphaltenes in coal conversion reactions. First quarterly report, year two, 9:25240 (R;US)
Role of preasphaltenes in coal conversion reactions. Second quarterly report, year two, 9:25239 (R;US)
Volatiles mass transport with particles of softened coal. Technical progress report, July 27, 1983-October 26, 1983, 9:25213 (R;US)

Quality Assurance
Improvement of ROM coal quality, 9:25264 (R;DE;In German)

Rare Earths
Rare earth element behavior in the development of energy resources, 9:25236 (R;US)

Solar Drying
Solar drying. Final report, 9:25769 (R;US)

Solvent Extraction
Mobile phase in coals: its nature and modes of release. Technical progress reports, September-November 1983 and December 1983-February 1984, 9:25214 (R;US)

Sorptive Properties
Dependence of liquefaction behavior on coal characteristics. Part V. Penetration of solvent vapor into coal particles. Final technical report, March 1981-February 1984, 9:25199 (R;US)

Statistical Data
Assessment of the quality of selected EIA data series. Coal and electric power data from 1977 to 1982, 9:25290 (R;US)

Structural Chemical Analysis
Role of preasphaltenes in coal conversion reactions. First quarterly report, year two, 9:25240 (R;US)

Swelling
Role of preasphaltenes in coal conversion reactions. First quarterly report, year two, 9:25240 (R;US)
Role of preasphaltenes in coal conversion reactions. Second quarterly report, year two, 9:25239 (R;US)

Uses
Steel and fabrication requirements in coal utilization technologies - a review study (Report on ECSC contract 7210-KF/801), 9:25222 (R;XE)

Water Removal
A simulator for dewatering of coal fines, 9:25281 (BA;US)

Weathering
Role of preasphaltenes in coal conversion reactions. First quarterly report, year two, 9:25240 (R;US)
Role of preasphaltenes in coal conversion reactions. Second quarterly report, year two, 9:25239 (R;US)

COAL CHEMICALS
See COAL EXTRACTS

COAL DEPOSITS
See also COAL SEAMS

Degassing
Measurement of dynamic reservoir conditions. Fourth project status report, July 1-September 30, 1983, 9:25265 (R;US)

Geologic Faults
Measurement of dynamic reservoir conditions. Fourth project status report, July 1-September 30, 1983, 9:25265 (R;US)

Geologic Fissures
Measurement of dynamic reservoir conditions. Fourth project status report, July 1-September 30, 1983, 9:25265 (R;US)

COAL EXTRACTS

Liquid Column Chromatography
Mobile phase in coals: its nature and modes of release. Technical progress reports, September-November 1983 and December 1983-February 1984, 9:25214 (R;US)

Structural Chemical Analysis
Role of preasphaltenes in coal conversion reactions. Second quarterly report, year two, 9:25239 (R;US)

Structure-Activity Relationships
Prediction of thermodynamic properties of coal derivatives. Progress report, September 1, 1983-August 31, 1984, 9:25237 (R;US)

Thermodynamic Properties
Prediction of thermodynamic properties of coal derivatives. Progress report, September 1, 1983-August 31, 1984, 9:25237 (R;US)

COAL FINES
Combustion
Measurements of pulverized coal combustion under conditions simulating a blast furnace environment (Report on ECSC contract 7210-AA/601), 9:25286 (R;XE)

COAL GASIFICATION
See also BEACON PROCESS
FISCHER-TROPSCH/MOBIL PROCESS
WESTINGHOUSE GASIFICATION PROCESS
Catalysis
Catalyzed gasification of coal: isotope and XPS studies, 9:25205 (R;US)
Catalysts
Investigations on the application of iron salt containing waste acids for the catalytic gasification of coals and cokes with H_2/H_2O, 9:25182 (R;DE;In German)
Chemical Reaction Kinetics
Catalyzed gasification of coal: isotope and XPS studies, 9:25205 (R;US)
Demonstration Plants
Ranking fossil energy demonstration candidates to meet selected national priorities, 9:25225 (R;US)
Environmental Impacts
Coal gasification, 9:27009 (J;US)
Research Programs
Surface coal gasification, 9:25192 (R;US)
Solid Wastes
Coal gasification waste disposal: the impact of regulation, 9:25255 (J;US)
Test Facilities
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
Waste Water
Processing of condensate waters from coal conversion, 9:25323 (RA;US)

COAL GASIFICATION PLANTS
Coatings
Chemical vapor deposition of erosion-resistant TiB_2 coatings, 9:26408 (R;US)
Gaseous Wastes
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
Heat Exchangers
Transient simulation and experimental verification of gas-steam and liquid-steam, shell and tube type heat exchangers, 9:25183 (R;US)
Hoppers
Review of valve designs for coal-gasification lockhopper service, 9:25223 (R;US)
Indoor Air Pollution
Personnel and plant area monitoring at the University of Minnesota-Duluth gasifier, 9:25226 (R;US)
Liquid Wastes
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
Materials
Fossil energy materials research, 9:25231 (J;US)
Modifications
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
Pollution Control
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)

COAL LIQUEFACTION
See also FISCHER-TROPSCH/MOBIL PROCESS
H-COAL PROCESS
LIQUID PHASE METHANOL PROCESS
TSL PROCESS
Catalysts
Catalysis using hydrous metal oxide ion exchangers, 9:26524 (P;US)
Development of significantly improved catalysts for coal liquefaction and upgrading of coal extracts. Quarterly progress report No. 8, July 1-September 30, 1983, 9:25198 (R;US)
Utilization of coal, 9:25282 (RA;US)
Chemical Reactions
Coal liquefaction model studies: radical-initiated and phenol-inhibited decompostition of 1,3-diphenylpropane, dibenzyl ether, and phenethyl phenyl ether, 9:25229 (J;US)
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, February-April 1983, 9:25184 (R;US)
Chemical Reactors
Study of multiphase flow useful to understanding scaleup of coal liquefaction reactors. Technical progress report, December 1 1983-February 29, 1984, 9:25201 (R;US)
Chemistry
Exploratory study of coal conversion chemistry. Quarterly report No. 11, November 19, 1983-February 18, 1984, 9:25200 (R;US)
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, February-April 1983, 9:25184 (R;US)
Coal Preparation
Integration of advanced preparation with coal liquefaction. Second quarterly technical progress report, January 1-March 31, 1984, 9:25208 (R;US)
Comparative Evaluations
Mobile phase in coals: its nature and modes of release. Technical progress reports, September-November 1983 and December 1983-February 1984, 9:25214 (R;US)
Demonstration Plants
Ranking fossil energy demonstration candidates to meet selected national priorities, 9:25225 (R;US)
Environmental Impacts
Coal liquefaction, 9:25259 (J;US)
Experimental Data
Integration of advanced preparation with coal liquefaction. Second quarterly technical progress report, January 1-March 31, 1984, 9:25208 (R;US)
Reaction Heat
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, January 1-March 31, 1984, 9:25211 (R;US)
Research Programs
Chemical refining of coal (Report on ECSC contract 7220-EC/816), 9:25220 (R;XE)
Waste Water
Processing of condensate waters from coal conversion, 9:25323 (RA;US)

COAL LIQUEFACTION PLANTS
Coatings
Chemical vapor deposition of erosion-resistant TiB_2 coatings, 9:26408 (R;US)
Environmental Impacts
H-Coal environmental and health process studies: process description and sampling strategy, 9:25258 (R;US)
Materials
Fossil energy materials research, 9:25231 (J;US)
Residues
Subcontracted R and D final report: gasifier feed preparation (Program Area 15.1.1), 9:25194 (R;US)
Site Selection
Socio-economic subsidence, transportation and legal ramifications of potential coal liquefaction plant sitings. Quarterly report, October 1-December 31, 1983, 9:25210 (R;US)

COAL LIQUIDS
Adsorption
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, May-July 1983, 9:25185 (R;US)
Chemical Analysis
Determination of alkyl anilines and alkyl pyridines in solvent refined coal distillates and aqueous extracts by gas chromatography/mass spectrometry, 9:25249 (J;US)
Chemical Composition
Stability studies on the chemical and biological activity of coal-derived liquids, 9:25245 (R;US)
Corrosive Effects
Determination of corrosion rates for steel alloys in process solvent. Final technical report, 9:26312 (R;US)
Extraction Chromatography
Isolation and identification of amino polycyclic aromatic hydrocarbons from coal-derived products, 9:26482 (J;US)
Fractionation
Heteroatom speciation in coal liquefaction via FTIR coupled with liquid chromatography. Quarterly progress report, October 1-December 31, 1983, 9:25202 (R;US)
Separation and characterization of coal derived components, 9:25207 (R;US)
SRC-I naphtha reforming study. Part 1: SRC-I naphtha distillation and hydrotreating. Part 2: SRC-I naphtha reforming. Final technical report, 9:25195 (R;US)
Gel Permeation Chromatography
Synthesis of oligomeric models of coal derived materials for use with GPC calibration. Quarterly report, January-March 1984, 9:25203 (R;US)
Hydrogenation
Development of significantly improved catalysts for coal liquefaction and upgrading of coal extracts. Quarterly progress report No. 8, July 1-September 30, 1983, 9:25198 (R;US)
Microflow reactor for studying catalyst deactivation, 9:25228 (R;US)
SRC-I naphtha reforming study. Part 1: SRC-I naphtha distillation and hydrotreating. Part 2: SRC-I naphtha reforming. Final technical report, 9:25195 (R;US)
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, May-July 1983, 9:25185 (R;US)
Infrared Spectra
Heteroatom speciation in coal liquefaction via FTIR coupled with liquid chromatography. Quarterly progress report, October 1-December 31, 1983, 9:25202 (R;US)
Liquid Column Chromatography
Mobile phase in coals: its nature and modes of release. Technical progress reports, September-November 1983 and December 1983-February 1984, 9:25214 (R;US)
Mass Spectra
Mass spectrometry with direct supercritical fluid injection, 9:26479 (J;US)
Mass Spectroscopy
Separation and characterization of coal derived components, 9:25207 (R;US)
Molecular Weight
Synthesis of oligomeric models of coal derived materials for use with GPC calibration. Quarterly report, January-March 1984, 9:25203 (R;US)
Mutagen Screening
Stability studies on the chemical and biological activity of coal-derived liquids, 9:25245 (R;US)
Mutagens
Photodegradation of mutagens in solvent-refined coal liquids, 9:25227 (R;US)
Prandtl Number
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, January 1-March 31, 1984, 9:25211 (R;US)
Rare Earths
Rare earth element behavior in the development of energy resources, 9:25236 (R;US)
Stability
Determination of corrosion rates for steel alloys in process solvent. Final technical report, 9:26312 (R;US)
Stability studies on the chemical and biological activity of coal-derived liquids, 9:25245 (R;US)
Storage
Stability studies on the chemical and biological activity of coal-derived liquids, 9:25245 (R;US)
Structural Chemical Analysis
Heteroatom speciation in coal liquefaction via FTIR coupled with liquid chromatography. Quarterly progress report, October 1-December 31, 1983, 9:25202 (R;US)
Thermodynamic Properties
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, January 1-March 31, 1984, 9:25211 (R;US)
COAL MINES
Air Conditioning
Climate-management at high rock-temperatures and large extraction quantities, 9:26767 (R;XE;In German)
Fire Fighting
Improvement of safety in fighting mine fires, by means of inertization of fire zones, 9:25291 (R;DE;In German)
Mineral Wastes
Mineral waste resource of Canada. Report No. 5. Mining wastes in the Prairie Provinces, 9:25250 (R;CA)
Ventilation Systems
Coal mine ventilation, 9:25260 (R;AU)
COAL MINING
Computer-Aided Design
Using computers to enhance the safety of mining operations, 9:25294 (BA;US)
Health Hazards
Use of the computer in processing accident, injury, illness and employment information in United States mines, 9:25295 (BA;US)
Industrial Accidents
Computer programs for statistical graphics in safety analysis, 9:25293 (BA;US)
Use of the computer in processing accident, injury, illness and employment information in United States mines, 9:25295 (BA;US)
Occupational Safety
Computer programs for statistical graphics in safety analysis, 9:25293 (BA;US)
Use of the computer in processing accident, injury, illness and employment information in United States mines, 9:25295 (BA;US)
Using computers to enhance the safety of mining operations, 9:25294 (BA;US)
Safety Engineering
Using computers to enhance the safety of mining operations, 9:25294 (BA;US)
Service Sector
Importance of services in mining as exemplified by special mining companies, 9:25270 (R;DE;In German)
Stowing
Minimizing underground and surface subsidence by rapidly setting stowage, 9:25263 (R;DE;In German)
COAL PREPARATION
Integration of advanced preparation with coal liquefaction. Second quarterly technical progress report, January 1-March 31, 1984, 9:25208 (R;US)
Computer Codes
The Department of Energy's coal washer performance computer program, 9:25280 (BA;US)
Computerized Simulation
A simulator for dewatering of coal fines, 9:25281 (BA;US)
Cost Benefit Analysis
Coal cleaning as an acid rain mitigation strategy: an in-depth examination, 9:25274 (R;US)
Equipment
The Department of Energy's coal washer performance computer program, 9:25280 (BA;US)
Simulators
A simulator for dewatering of coal fines, 9:25281 (BA;US)

COAL PREPARATION PLANTS
Computerized Simulation
Microcomputer simulation of coal preparation plants, 9:25278 (BA;US)
COAL SEAMS
Degassing
Forecasting of firedamp release and means of combating firedamp. Summary report of INIEX research (Report on ECSC contract 7220-AC/205), 9:25268 (R;XE)
Hazards
Forecasting of firedamp release and means of combating firedamp. Summary report of INIEX research (Report on ECSC contract 7220-AC/205), 9:25268 (R;XE)
COAL TAR
Chemical Composition
Personnel and plant area monitoring at the University of Minnesota-Duluth gasifier, 9:25226 (R;US)
Gel Permeation Chromatography
Volatiles mass transport within particles of softened coal. Technical progress report, October 27, 1983-January 26, 1984, 9:25242 (R;US)
Structural Chemical Analysis
Role of preasphaltenes in coal conversion reactions. Second quarterly report, year two, 9:25239 (R;US)
COAL TAR ACIDS
Removal
Phenol extraction studies: solvent screening, tar acid removal, and organic volatilization. Final technical report, 9:25196 (R;US)
COAL-DERIVED LIQUIDS
See COAL LIQUIDS
COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Ashes
Behavior of coal ash and alkali matter in a coal-fired gas turbine system, 9:26756 (R;US)
Corrosive Effects
Behavior of coal ash and alkali matter in a coal-fired gas turbine system, 9:26756 (R;US)
COAL-FIRED MHD GENERATORS
See also MHD GENERATOR CFFF
Heat Recovery
Magnetohydrodynamic heat and seed recovery technology, 9:26167 (RA;US)
Seed Recovery
Magnetohydrodynamic heat and seed recovery technology, 9:26167 (RA;US)
COAL-OIL MIXTURES

COATINGS
See also ANTIREFLECTION COATINGS
PROTECTIVE COATINGS
VAPOR DEPOSITED COATINGS
Defects
Characterization of micron-sized, optical coating defects by photothermal deflection microscopy, 9:27518 (R;US)
Fracture Mechanics
Thermal stress fracture of ceramic coatings: Measurements, transformations, and high-temperature fracture, 9:26419 (BA;US)
Materials Testing
Chemical vapor deposition of erosion-resistant TiB_2 coatings, 9:26408 (R;US)
Thermal Stresses
Thermal stress fracture of ceramic coatings: Measurements, transformations, and high-temperature fracture, 9:26419 (BA;US)
COBALT
Catalytic Effects
Liquid hydrocarbon fuels from syngas, 9:25614 (RA;US)
Syngas conversion and chemisorption studies on metal-zeolite catalysts, 9:25615 (RA;US)
Emission Spectra
Selection of atomic emission lines for tunable atomic line molecular spectrometry of benzene, 9:26485 (J;US)
Photochemical Reactions
Reactions of group 8 transition-metal ions (Fe^+, Co^+, and Ni^+) with cyclic hydrocarbons in the gas phase, 9:26531 (J;US)
Solvent Extraction
Basic energy science, 9:26528 (RA;US)
Neodecanoic acid as a Co3+ solvent extractant. Report of investigations/1983, 9:26474 (R;US)
Stacking Faults
Structural characteristics of cobalt particles in a 9.5% Co-ZSM-5 catalyst, 9:26390 (J;CH)
COBALT 54
Vibrational States
Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni, 9:27394 (J;NL)
COBALT 56
Vibrational States
Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni, 9:27394 (J;NL)
COBALT ALLOYS
Corrosion Resistance
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Deposition
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Physical Properties
Physical properties of V(Fe, Co, Ni)$_3$ alloys from 300 to 1000 K, 9:26397 (BA;US)
COBALT COMPLEXES
Chemical Reaction Kinetics
Kinetics of the superoxide radical oxidation of[cobalt sepulchrate](2+). A flash photolytic study, 9:26552 (J;US)
Photolysis
Kinetics of the superoxide radical oxidation of[cobalt sepulchrate](2+). A flash photolytic study, 9:26552 (J;US)
COCKROACHES
Metabolism
Bioelimination of ^{51}Cr and ^{85}Sr by cockroaches, Gromphadorhina portentosa (orthoptera: blaberidae), as affected by mites, Gromphadorholaelaps schaeferi (parasitiformes: laelapidae), 9:27121 (J;US)
Symbiosis
Bioelimination of ^{51}Cr and ^{85}Sr by cockroaches, Gromphadorhina portentosa (orthoptera: blaberidae), as affected by mites, Gromphadorholaelaps schaeferi (parasitiformes: laelapidae), 9:27121 (J;US)
COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Cost
Contribution of new combined heat and power generation plants to electricity supply, 9:26250 (R;CH;In German)

Tariffs
Oklahoma Corporation Commission PURPA program. Final progress report, October 1, 1980-September 30, 1982, 9:26155 (R;US)
COGENERATION PLANTS

COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS
COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Load Management
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
Mathematical Models
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
COMBUSTION
See also FLUIDIZED-BED COMBUSTION
IN-SITU COMBUSTION
Mathematical Models
Numerical modeling of turbulent combustion, 9:26763 (RA;US)
Pollution Control
Energy from Municipal Waste Program, 9:26239 (RA;US)
Turbulence
Combustion in a turbulent boundary layer, 9:26759 (RA;US)
Numerical modeling of turbulent combustion, 9:26763 (RA;US)
COMBUSTION INSTABILITY
Combustion instabilities leading to flashback, 9:26757 (RA;US)
COMBUSTION KINETICS
Test Facilities
Apparatus for kinetic measurements on elementary fossil fuel combustion reactions over wide temperature ranges. Final report, 1 May 1983-30 April 1984, 9:26571 (R;US)
COMBUSTORS
See also FLUIDIZED-BED COMBUSTORS
Design
Combustion heater for oil shale, 9:25375 (P;US)
COMMERCIAL BUILDINGS
See also HOTELS
Energy Analysis
Commercial building energy performance analysis using multiple regression procedures, 9:26210 (R;US)
Energy Efficiency
Commercial building energy performance analysis using multiple regression procedures, 9:26210 (R;US)
Performance contracting for energy efficiency: an introduction with case studies, 9:26211 (R;US)
Financing
Performance contracting for energy efficiency: an introduction with case studies, 9:26211 (R;US)
Regression Analysis
Commercial building energy performance analysis using multiple regression procedures, 9:26210 (R;US)
COMMERCIAL SECTOR
Energy Consumption
Analysis of energy conservation measures in commercial buildings, 9:26141 (RA;US)
COMMINUTION
Computerized Simulation
Interfacing comminution and classification models with a general flowsheet simulator, 9:25279 (BA;US)
COMMUNICATIONS
See also DATA TRANSMISSION
Technical oral presentations: what happens to them?, 9:27709 (J;GB)
Security
Few results in message authentication, 9:27707 (R;US)
COMPOSITE MATERIALS
See also CONCRETE-PLASTIC COMPOSITES
SUPERCONDUCTING COMPOSITES
Fabrication
Method for fabricating laminated uranium composites, 9:26369 (P;US)
Image Scanners
A computerized ultrasonic scanning bridge for defect imaging: composite materials, 9:26735 (BA;US)

Industrial Radiography
Quality control and nondestructive evaluation techniques for composites. Part 4. Radiography - a state-of-the-art review. Final report 1 Dec 80-15 May 81, 9:26681 (R;US)
Nondestructive Testing
Porosity estimation in composites, 9:26699 (RA;US)
Plastics
Preparation of internal crack samples and ultrasonic measurements in composites, 9:26700 (RA;US)
Porosity
Porosity estimation in composites, 9:26699 (RA;US)
Quality Control
Quality control and nondestructive evaluation techniques for composites. Part 4. Radiography - a state-of-the-art review. Final report 1 Dec 80-15 May 81, 9:26681 (R;US)
Ultrasonic Testing
A computerized ultrasonic scanning bridge for defect imaging: composite materials, 9:26735 (BA;US)
Interferometric techniques using embedded optical fibers for the quantitative NDE of composites, 9:26734 (BA;US)
Preparation of internal crack samples and ultrasonic measurements in composites, 9:26700 (RA;US)

COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS

COMPRESSED AIR ENERGY STORAGE
Engineering Geology
Factors affecting storage of compressed air in solution mined salt cavities, 9:26070 (J;US)
Site Selection
Factors affecting storage of compressed air in solution mined salt cavities, 9:26070 (J;US)

COMPRESSED AIR STORAGE POWER PLANTS
Heat Storage
Thermal energy storage media for advanced compressed air energy storage systems, 9:26074 (J;US)
Rock Beds
Thermal energy storage media for advanced compressed air energy storage systems, 9:26074 (J;US)

COMPRESSED WORK WEEK
See ALTERNATIVE WORK SCHEDULES

COMPUTER AXIAL TOMOGRAPHY SCANNING
See CAT SCANNING

COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
See also P CODES
A Codes
ANVIL-4000 update, 9:27640 (R;US)
AUTSKED: automated scheduling technique for leaching and filling activities at the Strategic Petroleum Reserve, 9:25332 (R;US)
Evaluation of three first-order closure models - Plains Site. Final report, 9:26974 (R;US)
B Codes
Evaluation of three first-order closure models - Plains Site. Final report, 9:26974 (R;US)
C Codes
Computer programs for statistical graphics in safety analysis, 9:25293 (BA;US)
COSTEAM: an industrial steam generation cost model. Phase III. Users' guide and model description, 9:26235 (R;US)
CRAC2 model description, 9:26037 (R;US)
Evaluation of three first-order closure models - Plains Site. Final report, 9:26974 (R;US)
E Codes
Interfacing comminution and classification models with a general flowsheet simulator, 9:25279 (BA;US)
H Codes
Hazardous materials information hotline using System 2000, 9:27226 (R;US)
Processes influencing cooling of reactor effluents, 9:25989 (R;US)
L Codes
Linear systems analysis program. Programmer's manual, Version 2.2 (VAX/VMS), 9:27643 (R;US)
Syntax and semantics of a LINCS control monologue, 9:27642 (R;US)
M Codes
Evaluation of three first-order closure models - Plains Site. Final report, 9:26974 (R;US)
N Codes
NAIADQ, a computer program for calculating reactivity transients in low power experimental water reactors, 9:25999 (R;AU)
O Codes
OLDAGE, a computer program for calculating nuclear fuel cycle flow balances. Monitored Retrievable Storage study. FY-83 studies. Task C (Computer program used to calculate amount of spent fuel and/or high-level waste transferred to and from various fuel cycle facilities), 9:25477 (R;US)
P Codes
Computer programs for statistical graphics in safety analysis, 9:25293 (BA;US)
Evaluation of three first-order closure models - Plains Site. Final report, 9:26974 (R;US)
PLTMGC: a multi-grid continuation program for parameterized nonlinear elliptic systems, 9:27646 (R;US)
S Codes
Interfacing comminution and classification models with a general flowsheet simulator, 9:25279 (BA;US)
SLATEC mathematical subprogram library, Version 2.0, 9:27637 (R;US)
T Codes
Computer programs for statistical graphics in safety analysis, 9:25293 (BA;US)
Evaluation of three first-order closure models - Plains Site. Final report, 9:26974 (R;US)
Processes influencing cooling of reactor effluents, 9:25989 (R;US)
TRAC-BD1/MOD1: an advanced best estimate computer program for boiling water reactor transient analysis. Volume 2. Users guide, 9:26049 (R;US)
TRACE: an interactive beam-transport code, 9:26786 (R;US)
User's guide for TWODANT: a code package for two-dimensional, diffusion-accelerated, neutral-particle transport, 9:27631 (R;US)
W Codes
Multimedia radionuclide exposure assessment modeling. Annual report, October 1980-September 1981, 9:27035 (R;US)
Users manual for the laser welding code WELD2D, 9:26576 (R;US)
Z Codes
ZAPP - a computer program for simulation of reactor power transients, 9:26000 (R;AU)

COMPUTER GRAPHICS
Data Analysis
Computer programs for statistical graphics in safety analysis, 9:25293 (BA;US)

COMPUTER NETWORKS
Data Transmission
Serial link protocol design: a critique of the X.25 standard, Level 2, 9:27644 (R;US)
Syntax and semantics of a LINCS control monologue, 9:27642 (R;US)
Token ring local area networks. A comparison of experimental and theoretical performance, 9:27632 (R;US)
Simulation
Token ring local area networks. A comparison of experimental and theoretical performance, 9:27632 (R;US)

COMPUTER PROGRAMS
See COMPUTER CODES

COMPUTER-AIDED DESIGN
Computer Graphics
Graphics Workstation Switching Unit, 9:27636 (R;US)

COMPUTER-AIDED MANUFACTURING
Computer Codes
ANVIL-4000 update, 9:27640 (R;US)

COMPUTERIZED CONTROL SYSTEMS
Design
A memory intensive functional architecture for distributed computer control systems, 9:26845 (J;US)
Distributed Data Processing
A memory intensive functional architecture for distributed computer control systems, 9:26845 (J;US)
Memory Devices
A memory intensive functional architecture for distributed computer control systems, 9:26845 (J;US)
Real Time Systems
Review of the 3rd biennial conference on real-time computer applications in nuclear and particle physics, 9:26853 (J;US)
Technology Assessment
Review of the 3rd biennial conference on real-time computer applications in nuclear and particle physics, 9:26853 (J;US)
Technology Utilization
Review of the 3rd biennial conference on real-time computer applications in nuclear and particle physics, 9:26853 (J;US)
COMPUTERIZED SIMULATION
Array Processors
Tracking and computing, 9:26770 (R;US)
CONCENTRATIONS (RADIONUCLIDES)
See RADIOACTIVITY
CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Fresnel Lens
Photovoltaic concentrators: performance and reliability data and future design directions, 9:25686 (R;US)
Optimization
Optimisation of concentrating array of silicon solar cells, 9:25677 (R;XE;In French)
Performance
Photovoltaic concentrators: performance and reliability data and future design directions, 9:25686 (R;US)
Performance Testing
PV concentrator structure and array test results, 9:25685 (R;US)
Reliability
Photovoltaic concentrators: performance and reliability data and future design directions, 9:25686 (R;US)
CONCRETE BLOCKS
Phase Change Materials
Thermal energy storage system combining mass and PCM, 9:25808 (R;US)
CONCRETE-PLASTIC COMPOSITES
Production
Electropositive bivalent metallic ion unsaturated polyester complexed polymer concrete, 9:26423 (P;US)
CONCRETES
See also PRESTRESSED CONCRETE
Chemical Reactions
SLAM: a sodium-limestone concrete ablation model, 9:26042 (R;US)
Decontamination
Decontamination and decommissioning of the TAN/TSF-3 concrete pad. Final report, 9:25499 (R;US)
CONDENSATION CHAMBERS
Fission Product Release
Fission product removal in Engineered Safety Feature (ESF) systems. Data base assessment and suggested experimental program, 9:26054 (R;US)
CONDENSED AROMATICS
See also ANTHRACENE
BENZOPYRENE
NAPHTHALENE
PHENANTHRENE
Fluorescence Spectroscopy
Rotationally cooled laser-induced fluorescence/gas chromatography, 9:25329 (J;US)
Gas Chromatography
Rotationally cooled laser-induced fluorescence/gas chromatography, 9:25329 (J;US)
CONDENSERS (ELECTRIC)
See CAPACITORS
CONDUCTORS (ELECTRIC)

CONSTRUCTION
Legal Aspects
Licensee contractor and vendor inspection status report. Quarterly report, January 1984-March 1984, 9:25950 (R;US)
CONSTRUCTION INDUSTRY
Energy Demand
Documentation of the PURHAPS industrial demand model. Volume I. Model description, overview, and assumptions for the Annual Energy Outlook 1983, 9:26138 (R;US)
CONSUMER PRODUCTS
Articles of commerce available to the general public. When possible, use descriptors for the specific products.
Health Hazards
Pollutant emission rates from indoor combustion appliances and sidestream cigarette smoke, 9:27199 (RA;US)
CONTACT RADIOTHERAPY
See RADIOTHERAPY
CONTAINED EXPLOSIONS
Containment Systems Experiment
Design and testing of an explosion product fabric containment enclosure, 9:26905 (R;US)
Manufacturing
High performance, extrusion cast explosive, 9:26909 (R;US)
Materials Working
Dynamic powder compaction, 9:26908 (R;US)
Rock Bursts
Methods for predicting rubble motion during blasting, 9:26904 (R;US)
CONTAINERS
See also CASKS
HOPPERS
PRESSURE VESSELS
TANKS
Design
Development of waste package designs for disposal in a salt repository, 9:25493 (RA;US)
Development of a new DOT-7A, Type A corrugated metal waste container at the Rocky Flats Plant, 9:26592 (RA;US)
Integrated metal container as a part of an integrated system for back end of irradiated fuel management, 9:25457 (RA;US)
Large transport containers for nuclear reactor decommissioning waste, 9:26610 (RA;US)
Module container system for LLW disposal, 9:25490 (RA;US)
Failures
Protecting against failure by brittle fracture in ferritic steel shipping containers, 9:26579 (RA;US)
Fractures
Design criteria for nodular cast iron shipping containers, 9:26583 (RA;US)
Impact Tests
Experimental impact and puncture evaluation of the prototype quarter scale TRU transporter package, 9:26607 (RA;US)
Test and analysis on impact characteristics evaluation of nuclear fuel packaging loaded on vehicle, 9:25420 (RA;US)
Materials Testing
Assessment of cast irons for structural components in nuclear material transportation systems, 9:26584 (RA;US)
Design criteria for nodular cast iron shipping containers, 9:26583 (RA;US)
Evaluation of the radiation resistance of high-density polyethylene, 9:26425 (R;US)
Mechanical requirements for materials of accident proof packagings of radioactive materials, 9:26580 (RA;US)
Mechanical Properties
Behaviour of UF_6 package in fire: comparison of calculations with fire experiment, 9:26600 (RA;US)
Mechanical requirements for materials of accident proof packagings of radioactive materials, 9:26580 (RA;US)
Performance Testing
Facility for repeatable fire testing, 9:26619 (RA;US)

Specifications
Safety analysis report for packaging: the ORNL DOT specification 6M - tritium trap package, 9:26653 (R;US)
Testing
Safety analysis report for packaging: the ORNL DOT specification 6M - tritium trap package, 9:26653 (R;US)
Thermodynamic Properties
Behaviour of UF_6 package in fire: comparison of calculations with fire experiment, 9:26600 (RA;US)

CONTAINMENT
See also CONTAINMENT BUILDINGS
CONTAINMENT SHELLS
CONTAINMENT SYSTEMS
Reliability
Structural reliability analysis and seismic risk assessment, 9:26007 (R;US)
Seismic Effects
Structural reliability analysis and seismic risk assessment, 9:26007 (R;US)

CONTAINMENT BUILDINGS
Controlled Atmospheres
Analytical modelling of hydrogen transport. Final report, 9:26055 (R;US)
Creep
Long term creep calculation of reactor containment, 9:25970 (R;US)
Stress Analysis
Safety analysis of a stratified reactor foundation subject to core meltdown, 9:26001 (R;DE;In German)

CONTAINMENT SHELLS
Dynamic Loads
Response of containment vessels to explosive blast loading, 9:26661 (J;US)
Strains
Response of containment vessels to explosive blast loading, 9:26661 (J;US)

CONTAINMENT SPRAY SYSTEMS
Fission Product Release
Fission product removal in Engineered Safety Feature (ESF) systems. Data base assessment and suggested experimental program, 9:26054 (R;US)

CONTAINMENT SYSTEMS
See also CONTAINMENT SPRAY SYSTEMS
Design
Design rules for containment systems of nuclear spent fuel and high-level waste transport packagings, 9:25470 (RA;US)

CONTENT ANALYSIS

COPEPODS
Biochemistry
Digestive carbohydrase activities in individual marine copepods, 9:27122 (J;NL)
Digestion
Digestive carbohydrase activities in individual marine copepods, 9:27122 (J;NL)
Enzyme Activity
Digestive carbohydrase activities in individual marine copepods, 9:27122 (J;NL)
Grazing
Impact of copepod grazing on the phytoplankton of Georges Bank and the New York Bight, 9:27124 (J;CA)
Growth
Impact of copepod grazing on the phytoplankton of Georges Bank and the New York Bight, 9:27124 (J;CA)
Nitrogen regeneration by the subtropical marine copepod, 9:27123 (J;GB)
Metabolism
Digestive carbohydrase activities in individual marine copepods, 9:27122 (J;NL)
Nitrogen regeneration by the subtropical marine copepod, 9:27123 (J;GB)

COPPER
Biological Effects
Field evaluation of hazardous waste site bioassessment protocols. Volume 2, 9:27203 (R;US)
Defects
Defect production efficiencies in thermal neutron irradiated copper and molybdenum, 9:26350 (R;US)
Dipped Coatings
Membrane electrode for the determination of actinyl(VI) cations, 9:26491 (J;US)
Environmental Transport
Transport of trace metals in the Magela Creek system, Northern Territory. I. Concentrations and loads of iron, manganese, cadmium, copper, lead and zinc during flood periods in the 1978-1979 wet season, 9:25529 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. II. Trace metal concentrations in the Magela Creek billabongs at the end of the 1978 dry season, 9:25530 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. III. Billabong sediments, 9:25531 (R;AU)
Physical Radiation Effects
Vacancy formation and migration energies in strained crystals, 9:26337 (RA;GB)
Pion Minus Reactions
πi meson production under 118 deg angle in the inclusive π^- A $\rightarrow \pi^+$ x reaction at 1.5 GeV/c incident momentum, 9:27287 (R;SU;In Russian)

Recrystallization
Dynamic recrystallization and dynamic recovery in <111> single crystals of nickel and copper, 9:26382 (J;US)
X-Ray Emission Analysis
X-ray emission experiments at 1.06 μm and 0.35 μm, 9:27583 (BA;US)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)

COPPER 58
Vibrational States
Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni, 9:27394 (J;NL)

COPPER 60
Vibrational States
Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni, 9:27394 (J;NL)

COPPER ALLOYS
See also COPPER BASE ALLOYS
INCOLOY 825
Microstructure
Cooling rate dependent structure of amorphous (Au/sub x/Cu/sub 1-x/)$_{81}$La$_{9}$, 9:26277 (R;US)
Physical Radiation Effects
Compositional redistribution in alloy films under high-voltage electron microscope irradiation, 9:26365 (J;NL)
Production
Tantalum-copper alloy and method for making, 9:26373 (P;US)
Thermal Conductivity
Transport properties of concentrated Ag-Pd and Cu-Ni alloys from 300-1000 K, 9:26394 (BA;US)

COPPER BASE ALLOYS
Internal Friction
Internal Friction study of solute segregation to dislocations, 9:26380 (J;US)

COPPER CHLORIDES
X-Ray Spectroscopy
X-ray absorption spectroscopy of hemocyanin and hemerythrin, 9:27102 (R;US)

COPPER COMPLEXES
Absorption Spectra
Transmission of magnetic interactions in a molecular metal oxide cluster, 9:26523 (J;US)
Catalytic Effects
Mechanisms of the dismutation of superoxide catalyzed by the copper(II) phenanthroline complex and of the oxidation of the copper(I) phenanthroline complex by oxygen in aqueous solution (Gamma Radiation), 9:26561 (J;US)
Magnetic Susceptibility
Transmission of magnetic interactions in a molecular metal oxide cluster, 9:26523 (J;US)
X-Ray Spectroscopy
X-ray absorption spectroscopy of hemocyanin and hemerythrin, 9:27102 (R;US)

COPPER OXIDES
Crystal Growth
Growth and characterization of metal oxide whiskers for aerosol filtration, 9:26269 (R;US)
Optical Properties
Study of stabilized CuO/Al solar absorbers. Final report, 9:25791 (R;US)
X-Ray Spectroscopy
X-ray absorption spectroscopy of hemocyanin and hemerythrin, 9:27102 (R;US)

COPPER SELENIDE SOLAR CELLS
Crystal Growth
Development of stable high-efficiency polycrystalline thin film solar cells based on CuInSe$_2$, 9:25689 (R;US)
Performance
Development of stable high-efficiency polycrystalline thin film solar cells based on CuInSe$_2$, 9:25689 (R;US)

COPPER SELENIDES
Chemical Vapor Deposition
Chemical vapor deposited copper indium diselenide thin film materials research. Final report, 15 November 1982-14 January 1984, 9:25690 (R;US)

COPPER SULFIDE SOLAR CELLS
Spray Coating
Spray solar cell research: CdS/Cu$_2$S cells by ion exchange - CSD. Final report, 1 September 1980-28 February 1981 (Chemical spray deposition), 9:25691 (R;US)

COPPER SULFIDES
Electrical Properties
Contribution to the manufacture and the study of photovoltaic mechanisms of Cu$_2$S-Cdsub(1-y)Znsub(y)S (0<=y<=0,15) solar cells prepared by aerosol pyrolysis ("spray"), 9:25681 (R;FR;In French)
Optical Properties
Contribution to the manufacture and the study of photovoltaic mechanisms of Cu$_2$S-Cdsub(1-y)Znsub(y)S (0<=y<=0,15) solar cells prepared by aerosol pyrolysis ("spray"), 9:25681 (R;FR;In French)
Spray Coating
Contribution to the manufacture and the study of photovoltaic mechanisms of Cu$_2$S-Cdsub(1-y)Znsub(y)S (0<=y<=0,15) solar cells prepared by aerosol pyrolysis ("spray"), 9:25681 (R;FR;In French)
X-Ray Spectroscopy
X-ray absorption spectroscopy of hemocyanin and hemerythrin, 9:27102 (R;US)

COPPICES
Harvesting
Silviculture - energy's future, 9:25668 (RA;US)
Productivity
Regional impacts of herbaceous and woody biomass production on U.S. agriculture, 9:25698 (BA;US)

CORDOVA QUAD CITIES-1 REACTOR
See QUAD CITIES-1 REACTOR

CORE CATCHERS
Testing
Molten thermite teeming into an iron oxide particle bed, 9:26039 (R;US)

CORES (DRILL)
See DRILL CORES

CORN (MAIZE)
See MAIZE

CORN OIL
Combustion Properties
Study of the combustion of various alternate fuels, 9:25625 (B;US)
Fuel Substitution
Study of the combustion of various alternate fuels, 9:25625 (B;US)

CORN STOVER
See AGRICULTURAL WASTES
MAIZE

CORROSION
Research Programs
Corrosion studies at ORNL, 9:26364 (J;US)
Simulation
Simulations of erosion/corrosion surface chemical reactions with a laser beam, 9:26348 (R;US)

CORROSION RESISTANT ALLOYS
See also STAINLESS STEELS
Chemical Composition
Ductile aluminide alloys for high temperature applications, 9:26370 (P;US)

COSMETICS
See CONSUMER PRODUCTS

COSMIC GAMMA RAYS
See COSMIC PHOTONS

COSMIC PARTICLES
See COSMIC RADIATION

COSMIC PHOTONS
Prior to July, 1975 information was indexed to PHOTONS.

Gamma Spectroscopy
A position-sensitive germanium detector for gamma-ray astronomy, 9:26841 (J;US)
The development of a segmented N-type germanium detector, and its application to astronomical gamma-ray spectroscopy, 9:26842 (J;US)

COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.
See also COSMIC PHOTONS
Modulation
Theory of nonstationary long-term modulation of cosmic rays, 9:27243 (R;SU;In Russian)

COSMIC X RAYS
See COSMIC PHOTONS

COUNTERS (RADIATION)
See RADIATION DETECTORS

COUNTY BUILDINGS
See PUBLIC BUILDINGS

COURT BUILDINGS

COVERINGS
Antireflection Coatings
Antireflection Pyrex envelopes for parabolic solar collectors, 9:25804 (J;US)
Design
Predicting long-term moisture in earthen covers, 9:25518 (R;US)
Radon attenuation handbook for uranium mill tailings cover design, 9:25511 (R;US)
Role of trench caps in the shallow land burial of low-level wastes, 9:25516 (R;US)
Materials Testing
Hydrogen container materials research, 9:25599 (RA;US)

COWS
Biological Models
Generation and characterization of aerosols of dispersed surface active phospholipids by ultrasonic and jet nebulization, 9:27107 (J;GB)
Lungs
Generation and characterization of aerosols of dispersed surface active phospholipids by ultrasonic and jet nebulization, 9:27107 (J;GB)

CRACK GROWTH
See CRACK PROPAGATION

CRACK PROPAGATION
Mathematical Models
Three-dimensional hydraulic fracture propagation in the presence of stress variations, 9:25306 (J;US)

CRACKING
Catalysts
Catalysis using hydrous metal oxide ion exchangers, 9:26524 (P;US)

CRACKS
Acoustic Testing
Simulated cracks, 9:26688 (RA;US)
Dislocations
Effect of thickness on plastic zone size in BCS theory of fracture, 9:26379 (J;NL)
Eddy Current Testing
Evaluation of a novel eddy-current probe for detecting cracks inside and at the edges of holes, 9:26719 (BA;US)
Electrical Testing
Electric current perturbation calculations for half-penny cracks, 9:26721 (BA;US)
Mapping
Direct and inverse methods for scattering by cracks at high frequencies, 9:26689 (RA;US)
Inverse ray tracing in anisotropic elastic solids, 9:26710 (BA;US)
Rayleigh Scattering
Theory of scattering of elastic waves from flat cracks of arbitrary shape, 9:26386 (J;NL)
Sample Preparation
Simulated cracks, 9:26688 (RA;US)
Scattering
Direct and inverse methods for scattering by cracks at high frequencies, 9:26689 (RA;US)
Simulation
Simulated cracks, 9:26688 (RA;US)
Size
Born sizing in cylindrical and planar geometries, 9:26690 (RA;US)
Ultrasonic sizing of cracks in web geometries, 9:26692 (RA;US)
Sizing
Electric current perturbation calculations for half-penny cracks, 9:26721 (BA;US)
Ultrasonic Testing
Direct and inverse methods for scattering by cracks at high frequencies, 9:26689 (RA;US)
Experimental determination of grain noise and crack inversion parameters, 9:26686 (RA;US)
On the effects of a finite aperture on the Inverse Born Approximation, 9:26718 (BA;US)
Ultrasonic sizing of cracks in web geometries, 9:26692 (RA;US)

CRANKING MODEL
Nuclear inertia for fission in a generalized cranking model, 9:27410 (R;US)

CRAY COMPUTERS
Algorithms
Performance prediction methods for evaluating PDE algorithms on MIMD machines, 9:27633 (RA;US)
Performance
Performance prediction methods for evaluating PDE algorithms on MIMD machines, 9:27633 (RA;US)

CREEKS
See STREAMS

CRESOLS
Chemical Properties
New methods for obtaining industrial chemical compounds from the by-products of coal gasification and carbonisation processes (Report on ECSC contract 7220-EC/201), 9:25217 (R;XE;In French)
Physical Properties
New methods for obtaining industrial chemical compounds from the by-products of coal gasification and carbonisation processes (Report on ECSC contract 7220-EC/201), 9:25217 (R;XE;In French)

CRESYLIC ACID
See CRESOLS

CRITICAL ASSEMBLIES
See ZERO POWER REACTORS

CRITICALITY
Computer Calculations
Criticality safety hazards arising from the transport of fissile materials. Final report, 9:26642 (R;XE)
Information Systems
Status, plans, and capabilities of the Nuclear Criticality Information System, 9:26062 (R;US)

CRITICALITY ACCIDENTS
See CRITICALITY
RADIATION ACCIDENTS

CROPS
Productivity
Field methods to assess the impact of air pollutants on crop yields, 9:26931 (R;US)

CRUDE OIL
See PETROLEUM

CRYOGENIC BUBBLE CHAMBERS
Design
100-cm hydrogen bubble chamber and investigating relativistic light nuclei-hydrogen interaction, 9:26816 (RA;SU;In Russian)
Deuteron Reactions
100-cm hydrogen bubble chamber and investigating relativistic light nuclei-hydrogen interaction, 9:26816 (RA;SU;In Russian)

CRYOSTATS
Sample Holders
Cryostats for study of a substance using positive muons at low temperatures, 9:26647 (R;SU;In Russian)

CRYSTAL GROWTH
Domain Structure
Monte Carlo studies of domain growth in two dimensions, 9:26325 (R;IT)
Kinetics
Monte Carlo studies of domain growth in two dimensions, 9:26325 (R;IT)
Research Programs
Growing single crystals of refractory materials, 9:26411 (J;US)
Simulation
Monte Carlo studies of domain growth in two dimensions, 9:26325 (R;IT)
CRYSTAL GROWTH METHODS
Silicon crystal growing by oscillating crucible technique, 9:25696 (P;US)
CRYSTAL LATTICES
Texture
Energy dispersive X-ray diffractometry in texture studies, 9:27438 (RA;GB)
X-Ray Diffraction
Energy dispersive X-ray diffractometry in texture studies, 9:27438 (RA;GB)
Refinement of crystal structure using powders, 9:26434 (RA;GB)
CRYSTAL STRUCTURE
See also CRYSTAL LATTICES
MICROSTRUCTURE
Measuring Methods
Investigation of bent monocrystals structural perfection using synchrotron radiation diffraction peculiarities, 9:27439 (R;SU)
CRYSTALLOGRAPHY
Research Programs
Characterizing materials by x-ray, 9:26354 (J;US)
CRYSTALS
See also LIQUID CRYSTALS
MONOCRYSTALS
Charged-Particle Transport
Dynamics of relativistic electrons(positrons) in a crystal, 9:27432 (R;UA;In Russian)
Electron Channeling
Coherent bremsstrahling and radiation of relativistic papticles channeling in crystals, 9:27429 (R;SU;In Russian)
Positron Channeling
Coherent bremsstrahling and radiation of relativistic papticles channeling in crystals, 9:27429 (R;SU;In Russian)
CT SCANNING
See CAT SCANNING
CTX SPHEROMAK
Confinement Time
Confinement time and energy balance in the CTX spheromak, 9:27470 (R;US)
Energy Balance
Confinement time and energy balance in the CTX spheromak, 9:27470 (R;US)
Equilibrium Plasma
Equilibrium and stability of the Los Alamos spheromak, 9:27474 (R;US)
Joule Heating
Ohmic heating to 100-eV and helicity injection in CTX, 9:27471 (R;US)
Magnetic Flux
Analysis of surface currents on the CTX mesh flux conserver, 9:27543 (R;US)
Operation
Mixed mode operation in CTX, 9:27473 (R;US)
Sustained spheromak technology, 9:27544 (R;US)
Plasma Confinement
Space resolved absolutely calibrated VUV spectroscopic measurements on CTX, 9:27472 (R;US)
Plasma Instability
Equilibrium and stability of the Los Alamos spheromak, 9:27474 (R;US)
CURIUM
Extraction Chromatography
Separation of tervalent lanthanides from actinides by extraction chromatography, 9:26505 (J;US)
Ion-Atom Collisions
Observation of a peak structure in positron spectra of U + Cm collisions, 9:27257 (R;DE)
CURRENT-DRIVE HEATING
Formation of a 100-kA tokamak discharge in the Princeton large torus by lower hybrid waves, 9:27480 (R;US)
CURRENTS (ELECTRIC)
See ELECTRIC CURRENTS
CUTTING TOOLS
Design
Electric arc saw apparatus, 9:26659 (P;US)
Electric Arcs
Electric arc saw apparatus, 9:26659 (P;US)
Materials
Hard metal composition, 9:26415 (P;US)
CYCLOHEXANE
Dewaxing
Preparation of oils for bacterial mutagenicity testing, 9:27214 (J;NL)
Photochemical Reactions
Reactions of group 8 transition-metal ions (Fe^+, Co^+, and Ni^+) with cyclic hydrocarbons in the gas phase, 9:26531 (J;US)
CYLINDERS
Objects of cylindrical shape. For containers see headings such as GAS CYLINDERS.
Design
Design of new overpacks for UF_6 cylinders, 9:26593 (RA;US)
Instability
Instability mechanisms and stability criteria of a group of circular cylinders subjected to cross-flow. Part 1: theory, 9:26662 (J;US)
Mechanical Vibrations
Instability mechanisms and stability criteria of a group of circular cylinders subjected to cross-flow. Part 1: theory, 9:26662 (J;US)
Performance Testing
Testing of the Model 48-14 overpack for UF_6 cylinders, 9:26595 (RA;US)
Repair
New method to repair uranium hexafluoride cylinders, 9:26589 (RA;US)
CYLINDRICAL PARABOLIC COLLECTORS
See PARABOLIC TROUGH COLLECTORS

D

D PLUS RESONANCES
See D-1865 RESONANCES
D RESONANCES
See also D-1865 RESONANCES
Particle Decay
Production and decay of charmed particles in e^+e^- collisions, 9:27306 (BA;US)
Particle Production
Production and decay of charmed particles in e^+e^- collisions, 9:27306 (BA;US)
Study of K^+ K/sub s/π^- final state produced by π^- and anti p beams, 9:27276 (R;US)
D ZERO RESONANCES
See D-1865 RESONANCES
D-1865 RESONANCES
Weak Particle Decay
Recent results on weak decays from the Mark II experiment, 9:27298 (R;US)
DATA ACQUISITION SYSTEMS
Design
A memory intensive functional architecture for distributed computer control systems, 9:26845 (J;US)
Improved computerized acquisition and analysis of gamma ray spectra, 9:26844 (J;US)
Distributed Data Processing
A memory intensive functional architecture for distributed computer control systems, 9:26845 (J;US)

Gating Circuits
Dual gated nuclear cardiac images, 9:27146 (J;US)
Memory Devices
A memory intensive functional architecture for distributed computer control systems, 9:26845 (J;US)
Real Time Systems
Review of the 3rd biennial conference on real-time computer applications in nuclear and particle physics, 9:26853 (J;US)
Technology Assessment
Review of the 3rd biennial conference on real-time computer applications in nuclear and particle physics, 9:26853 (J;US)
Technology Utilization
Review of the 3rd biennial conference on real-time computer applications in nuclear and particle physics, 9:26853 (J;US)
Time Resolution
Dual gated nuclear cardiac images, 9:27146 (J;US)
DATA BASE MANAGEMENT
Data management without a database manager, 9:27663 (RA;US)
Introduction to sampling to estimate database integrity, 9:27702 (RA;US)
Proposal for workshop on large economic data bases, 9:27677 (RA;US)
System/K: a knowledge base management system, 9:27693 (RA;US)
Using statistical software with a database management data theory, 9:27705 (RA;US)
Computers
Relational database machine for efficient processing of statistical queries, 9:27661 (RA;US)
Data Processing
Index coding: a compression technique for large statistical databases, 9:27695 (RA;US)
Utilization of character reference locality for efficient storage of data base, 9:27699 (RA;US)
Data Transmission
Multi-tree automation for efficient data transmission, 9:27660 (RA;US)
Information Retrieval
Common Data Input/Retrieval System, 9:27641 (R;US)
Memory Devices
Computer-independent data compression for large statistical databases, 9:27694 (RA;US)
Programming
DBMS conversion case study, 9:27639 (R;US)
Programming Languages
Complex data types and a data manipulation language for scientific and statistical databases, 9:27680 (RA;US)
Statistical data manipulation language, 9:27679 (RA;US)
Research Programs
Statistical data management research at Lawrence Berkeley Laboratory, 9:27691 (RA;US)
Statistical database research project in Japan and the CAS SDB project, 9:27697 (RA;US)
Security
Information theoretic approach to statistical databases and their security: a preliminary report, 9:27701 (RA;US)
Security model for the statistical database problem, 9:27703 (RA;US)
Statistical databases: their model, query language and security, 9:27704 (RA;US)
Standardization
Enhancements to the codata data definition language, 9:27654 (R;US)
Standardized Terminology
Energy Data Base corporate author entries, 9:27651 (R;US)
Tables
Extension of relational algebra for summary tables, 9:27682 (RA;US)
Uses
Data-bases for clinical histories, 9:27655 (RA;US)
Data structures for scientific simulation programs, 9:27681 (RA;US)
Evolution in storage and retrieval: the LABSTAT data base and software system, 9:27673 (RA;US)
Integrating data and documentation in a multi-national research project: the IEA second international mathematics study, 9:27666 (RA;US)
Research needs and database development: push and pull, 9:27659 (RA;US)
SIBYL: an economist's workbench, 9:27662 (RA;US)
DATA COVARIANCES
Data uncertainties
Sensitivity Analysis
Sensitivity functions for uncertainty analysis: Sensitivity and uncertainty analysis of reactor performance parameters, 9:25965 (J;US)
DATA DISPLAY DEVICES
See DISPLAY DEVICES
DATA DISPLAY SYSTEMS
See DISPLAY DEVICES
DATA PROCESSORS
See DIGITAL COMPUTERS
DATA TRANSMISSION
Computer Codes
Syntax and semantics of a LINCS control monologue, 9:27642 (R;US)
Security
Few results in message authentication, 9:27707 (R;US)
DAVIS BESSE REACTOR
See DAVIS BESSE-1 REACTOR
DAVIS BESSE-1 REACTOR
Pumps
On-line monitoring of main coolant pump seals, 9:25900 (R;US)
DAYLIGHTING
Energy efficient windows and daylignting, 9:26206 (RA;US)
Availability
Daylight availability as a function of atmospheric conditions, 9:25657 (R;US)
Design
Designing for daylighting. A key to energy performance, 9:26200 (R;US)
Mathematical Models
Daylight availability as a function of atmospheric conditions, 9:25657 (R;US)
Research Programs
Solar Energy Research Institute's daylighting laboratory, 9:26217 (BA;US)
DC SYSTEMS
Control Systems
Reactive power control to alleviate bus voltage violations in an ac-dc power system, 9:25871 (R;US)
DDT
Environmental Transport
Persistence and transfer of ^{36}Cl-DDT in the soil and biota of an old-field ecosystem: a six-year balance study, 9:27211 (J;US)
DEACTIVATION
Measuring Methods
Microflow reactor for studying catalyst deactivation, 9:25228 (R;US)
DEBRIS (NUCLEAR)
See FISSION PRODUCTS
DECIDUOUS TREES
See TREES
DECONTAMINATION
Standards
Decontamination of hot leg LMFBR components, 9:25939 (R;US)
DECONTAMINATION FACTOR
See DECONTAMINATION EFFICIENCY
DEEP INELASTIC HEAVY ION REACTIONS
Observation of a critical angular momentum for deep inelastic processes with light heavy ions, 9:27390 (R;US)
Reviews
Phenomenology of deep-inelastic processes, 9:27418 (J;NL)
DEER
Diet
Comparative winter diets of elk in New Mexico, 9:27052 (J;US)

DEFECTS
Not for CRYSTAL DEFECTS.
Detection
Ultrasonic flaw detection and sizing in turbine rotor component bore geometries, 9:26685 (RA;US)
Sizing
Progress on ultrasonic flaw sizing in turbine engine rotor components: bore and web geometries, 9:26715 (BA;US)
Ultrasonic Testing
On the effects of a finite aperture on the Inverse Born Approximation, 9:26718 (BA;US)
Progress on ultrasonic flaw sizing in turbine engine rotor components: bore and web geometries, 9:26715 (BA;US)
Ultrasonic scattring from flaws near surfaces, 9:26691 (RA;US)
DEFORMED NUCLEI
High Spin States
High-spin gamma-ray spectroscopy, 9:27399 (R;US)
DEHYDROGENASES
See OXIDOREDUCTASES
DELAWARE
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
DELETIONS (CHROMOSOMAL)
See CHROMOSOMAL ABERRATIONS
DELTA-1236 RESONANCES
Particle Production
Study on the Δii and Δ^0 isobar inclusive production in K^-p interactions at 32 GeV/c, 9:27286 (R;SU;In Russian)
DEMAGNETIZATION
Biasing and fast degaussing circuit for magnetic materials, 9:26754 (P;US)
DEMONSTRATION PLANTS
Comparative Evaluations
Ranking fossil energy demonstration candidates to meet selected national priorities, 9:25225 (R;US)
Financial Incentives
Future energy supply/demand relationships and the effects of selected synfuels' subsidies, 9:25224 (R;US)
DENMARK
Energy Models
Energy models for Denmark, 9:26096 (R;XE)
DEOXYPENTOSE NUCLEIC ACID

DETERGENTS
Biological Effects
Respiratory irritation due to carpet shampoos, 9:27191 (RA;US)
DETONATORS
Fabrication
Application of reel-to-reel processing to slapper detonator fabrication, 9:26650 (R;US)
DEUTERIUM
Energy Absorption
On the energy and momentum deposition in the ion beam-pellet interaction, 9:27621 (J;US)
Isotope Effects
Theoretical study of deuterium isotope effects in the reactions $H_2 + CH_3$ and $H + CH_4$, 9:26517 (J;US)
Variational transition state theory, 9:26570 (RA;US)
Isotope Separation
Homogenous tritium production reactor, 9:25584 (P;US)
Isotopic Exchange
Reactions of group 8 transition-metal ions (Fe^+, Co^+, and Ni^+) with cyclic hydrocarbons in the gas phase, 9:26531 (J;US)
Resonance Raman and molecular orbital studies of the effects of deuteration on the vibrational structure of the p-benzosemiquinone radical anion, 9:26533 (J;US)
DEUTERIUM COMPOUNDS
Chemical Reaction Kinetics
Theoretical studies of chemical reactions of importance in flames, 9:26569 (RA;US)
Isotope Effects
Theoretical studies of chemical reactions of importance in flames, 9:26569 (RA;US)
DEUTERIUM TARGET
Deuteron Reactions
Investigation of antideuteron-deuteron interactions on the baSe of "Lyudmila" set data, 9:27289 (RA;SU;In Russian)
Electron Reactions
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)
DEUTERIUM-LITHIUM HIGH FLUX NEUTRON SOURC
See NEUTRON SOURCE FACILITIES
DEUTERON BEAMS
Slowing-Down Length
On the energy and momentum deposition in the ion beam-pellet interaction, 9:27621 (J;US)
Thermalization
On the energy and momentum deposition in the ion beam-pellet interaction, 9:27621 (J;US)
DEUTERON REACTIONS
Cross Sections
Investigation of antideuteron-deuteron interactions on the baSe of "Lyudmila" set data, 9:27289 (RA;SU;In Russian)
Elastic Scattering
Cross section and vector analyzing power iT_{11} of the processes $^3He(d\ vector,d)^3He(d\ vector,p)^4He$ between 15 and 40 MeV, 9:27385 (J;US)
Interaction Range
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
Particle Production
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
Stripping
Cross section and vector analyzing power iT_{11} of the processes $^3He(d\ vector,d)^3He(d\ vector,p)^4He$ between 15 and 40 MeV, 9:27385 (J;US)
DEUTERON-DEUTERON INTERACTIONS

DISTRIBUTED COLLECTOR POWER PLANTS
Meetings
Fifth parabolic dish solar thermal power program annual review: proceedings, 9:25715 (R;US)
Research Programs
Fifth parabolic dish solar thermal power program annual review: proceedings, 9:25715 (R;US)

Specifications
Contribution to the study of medium solar power plants, 9:25720 (R;FR;In French)

DISTRIBUTION FACTOR (RAD DOSES)
See SPATIAL DOSE DISTRIBUTIONS

DISTRICT HEATING
See also GEOTHERMAL DISTRICT HEATING
Rational use of energy in the district heating service area of the Stadtwerke Wolfsburg AG, 9:26175 (R;DE;In German)
Feasibility Studies
City of Red Wing, district heating study, 9:26244 (R;US)
Red Wing district heating project. Phase II. Preliminary design and economic analysis report, 9:26245 (R;US)
Heat Pumps
Low-temperature district heat Voerde. Generation, transport and use of low-temperature waste heat, 9:26241 (R;DE;In German)
Regulations
Environmental regulatory requirements of hot water district heating systems in the Minneapolis-St. Paul metropolitan area, 9:26251 (R;US)
Waste Heat Utilization
Low-temperature district heat Voerde. Generation, transport and use of low-temperature waste heat, 9:26241 (R;DE;In German)

DIVERTORS
Neutral-Particle Transport
Analysis of pumping requirement for exhausting duct in close vicinity of divertor in tokamak reactor, 9:27603 (J;US)
Systems Analysis
Analysis of pumping requirement for exhausting duct in close vicinity of divertor in tokamak reactor, 9:27603 (J;US)

DMSO
Dewaxing
Preparation of oils for bacterial mutagenicity testing, 9:27214 (J;NL)
Fuel Slurries
Preparation of oils for bacterial mutagenicity testing, 9:27214 (J;NL)

DNA
Adducts
Hypersensitivity to cell killing and mutation induction by chemical carcinogens in an excision repair-deficient mutant of CHO cells, 9:27112 (J;NL)
Inhibition of DNA synthesis, independent of DNA adduct formation, by benzo[a]pyrene diol epoxide in mammalian cells, 9:27105 (J;US)
Biochemical Reaction Kinetics
Comparison of the kinetics fo ribooligonucleotide, deoxyribooligonucleotide, and hybrid oligonucleotide double-strand formation by temperature-jump kinetics, 9:27108 (J;US)
Biological Radiation Effects
Increased yields of exchanges but not of deletions in X-irradiated human peripheral lymphocytes following phytohemagglutinin stimulation, 9:27174 (J;US)
Biological Repair
Hypersensitivity to cell killing and mutation induction by chemical carcinogens in an excision repair-deficient mutant of CHO cells, 9:27112 (J;NL)
Biosynthesis
Inhibition of DNA synthesis, independent of DNA adduct formation, by benzo[a]pyrene diol epoxide in mammalian cells, 9:27105 (J;US)
Inactivation
Similar ultraviolet action spectra for the protection by glycerol of transforming DNA against single-strand breaks and inactivation of biological activity, 9:27173 (J;US)
Inhibition
Inhibition of DNA synthesis, independent of DNA adduct formation, by benzo[a]pyrene diol epoxide in mammalian cells, 9:27105 (J;US)
Methylation
Induction of sister chromatid exchanges by 5-fluorodeoxycytidine: correlation with DNA methylation, 9:27113 (J;DE)
Photochemistry
Irradiation of circular DNA with 254 nm radiation or sensitization in the presence of Ag^+ evidence for unwinding by photoproducts other than pyrimidine dimers, 9:27182 (J;GB)
Radiosensitivity
Irradiation of circular DNA with 254 nm radiation or sensitization in the presence of Ag^+ evidence for unwinding by photoproducts other than pyrimidine dimers, 9:27182 (J;GB)

DNA REPLICATION
Efficiency
Dissection of a replication origin of Xenopus DNA, 9:27119 (J;US)

DODEWAARD REACTOR
Off-Gas Systems
Preventing and suppressing Explosions in a BWR off-gas line with Explosafe, 9:26030 (RA;US)
Reactor Safety
Preventing and suppressing Explosions in a BWR off-gas line with Explosafe, 9:26030 (RA;US)

DOLOMITE
Sorptive Properties
Fuel cycle programs. Quarterly progress report, April-June 1983, 9:25482 (R;US)
Sulfidation
Simultaneous fluid-solid reactions in porous solids. II. Reactions between one fluid and two solid reactants, 9:25374 (J;GB)

DORMITORIES
See RESIDENTIAL BUILDINGS

DOSE RATES
Measuring Methods
Benchmark for the qualification of gamma shielding calculation methods for light-water type reactor spent fuels, 9:26639 (R;XE;In French)

DOSE REDUCTION FACTOR
See EFFICIENCY

DOSE RELATIVE FACTOR
See EFFICIENCY

DOSEMETERS
Design
A portable beta spectrometer/dosimeter, 9:26849 (J;US)
Performance
Development of a portable microdosimetric radiation protection monitor covering a dynamic range of 120 dB above noise, 9:26839 (J;US)
Portable Equipment
A portable beta spectrometer/dosimeter, 9:26849 (J;US)
Development of a portable microdosimetric radiation protection monitor covering a dynamic range of 120 dB above noise, 9:26839 (J;US)
Readout Systems
A portable beta spectrometer/dosimeter, 9:26849 (J;US)
Signal-to-Noise Ratio
Development of a portable microdosimetric radiation protection monitor covering a dynamic range of 120 dB above noise, 9:26839 (J;US)

DOSE-RESPONSE RELATIONSHIPS
Accuracy
Coulter volume cell sorting to improve the precision of radiation survival assays, 9:27175 (J;US)

DOSIMETERS
See DOSEMETERS

DOSIMETRY
See also BETA DOSIMETRY
MICRODOSIMETRY
NEUTRON DOSIMETRY
PERSONNEL DOSIMETRY
Comparative Evaluations
Mean dose vs local dose to the respiratory tract: implications for radiological protection, 9:27172 (R;US)

DOUBLE BETA DECAY
Semiconductor detectors and double beta decay, 9:26854 (J;US)

DOUBLET 3 DEVICES
See DOUBLET REACTORS

DOUBLET REACTORS
Management
Doublet III ECH Project administration plan, 9:27530 (R;US)
Microwave Equipment
Components and transmission systems for ECH, 9:27531 (R;US)
DOUNREAY PROTOTYPE FAST REACTOR
See PFR REACTOR
DRF
See EFFICIENCY
DRIFT CHAMBERS
Breakdown
Breakdown processes in wire chambers, prevention and rate capability, 9:26867 (J;US)
Calibration
Performance testing of drift chambers by means of pulse x radiation, 9:26819 (RA;SU;In Russian)
Counting Rates
Breakdown processes in wire chambers, prevention and rate capability, 9:26867 (J;US)
Fabrication
Fabrication of drift chambers for the IHEP neutrino calorimeter in 1981, 9:26820 (RA;SU;In Russian)
Gain
Breakdown processes in wire chambers, prevention and rate capability, 9:26867 (J;US)
Performance Testing
Fabrication of drift chambers for the IHEP neutrino calorimeter in 1981, 9:26820 (RA;SU;In Russian)
Performance testing of drift chambers by means of pulse x radiation, 9:26819 (RA;SU;In Russian)
Pulse Shapers
Amplifier-shaper with low threshold for a big drift chamber, 9:26822 (RA;SU;In Russian)
Simulators
Investigation of drift chamber mock-up performances, 9:26821 (RA;SU;In Russian)
Transistor Amplifiers
Amplifier-shaper with low threshold for a big drift chamber, 9:26822 (RA;SU;In Russian)
DRIFT INSTABILITY
Dispersion Relations
Linear density drift instabilities in very low beta plasmas: a different approach, 9:27502 (J;GB)
DRIFT TUBES
Breakdown
Breakdown processes in wire chambers, prevention and rate capability, 9:26867 (J;US)
Counting Rates
Breakdown processes in wire chambers, prevention and rate capability, 9:26867 (J;US)
Gain
Breakdown processes in wire chambers, prevention and rate capability, 9:26867 (J;US)
DRILL CORES
Lithology
Drilling report and core logs for the 1981 drilling of Kilauea Iki lava lake, Kilauea volcano, Hawaii, with comparative notes on earlier (1967-1979) drilling experiences, 9:27236 (R;US)
Petrology
Drilling report and core logs for the 1981 drilling of Kilauea Iki lava lake, Kilauea volcano, Hawaii, with comparative notes on earlier (1967-1979) drilling experiences, 9:27236 (R;US)
Temperature Logging
Temperature profiles from Salt Valley, Utah, thermal conductivity of 10 samples from drill hole DOE 3, and preliminary estimates of heat flow, 9:25843 (R;US)
DRILL SHIPS
See OFFSHORE PLATFORMS
SHIPS
DRILLING EQUIPMENT
Data Analysis
Draft standard guide for estimating the in-situ modulus of rock masses using the NX-borehole jack, 9:26656 (R;US)
Design
Draft standard guide for estimating the in-situ modulus of rock masses using the NX-borehole jack, 9:26656 (R;US)
Testing
Draft standard guide for estimating the in-situ modulus of rock masses using the NX-borehole jack, 9:26656 (R;US)
DRILLING PLATFORMS
See OFFSHORE PLATFORMS
DRILLING (ROCK)
See ROCK DRILLING
DROPLETS
Deposition
Rates and mechanisms of cloud water deposition to a subalpine balsam fir forest, 9:27003 (J;GB)
Particle Size
Characteristics of coal/light hydrocarbon slurries in spray combustion. Final report, September 1, 1980-June 30, 1983, 9:25284 (R;US)
DROSOPHILA
Dose-Response Relationships
The shapes of the radiation dose-mutation response curves in drosophila: Mechanisms and implications, 9:27185 (BA;US)
Genetic Radiation Effects
The shapes of the radiation dose-mutation response curves in drosophila: Mechanisms and implications, 9:27185 (BA;US)
Mutations
The shapes of the radiation dose-mutation response curves in drosophila: Mechanisms and implications, 9:27185 (BA;US)
DRY STORAGE
Operating experience of cask-type dry storage and spent fuel performance, 9:25417 (RA;US)
TN 1300 transport/storage cask system, 9:25418 (RA;US)
Heat Transfer
Heat transfer in a dry, horizontal LWR spent fuel assembly, 9:25452 (RA;US)
Planning
Planning and experience on the dry storage of Diorit spent fuel, 9:25415 (RA;US)
DRYERS
See also SOLAR DRYERS
Data Acquisition Systems
Microprocessor-based data acquisition system for an experimental biomass-fired corn dryer, 9:26238 (J;US)
Energy Efficiency
Research on an energy-efficient drying process. Interim report, September 24, 1982-November 30, 1983, 9:26232 (R;US)
D-T REACTORS
See also PULSED D-T REACTORS
Design
Radioactivation characteristics for deuterium-tritium fusion reactors, 9:27607 (J;US)
Reactor Shutdown
Radioactivation characteristics for deuterium-tritium fusion reactors, 9:27607 (J;US)
DTO
See DEUTERIUM COMPOUNDS
DTPA
Labelling
Tin-117m-labeled stannic (Sn^{4+}) chelate of diethylenetriamine pentaacetic acid (DTPA) for application in diagnosis and therapy, 9:27151 (P;US)
DUAL-PURPOSE POWER PLANTS
Economics
Contribution of new combined heat and power generation plants to electricity supply, 9:26250 (R;CH;In German)
Forecasting
Contribution of new combined heat and power generation plants to electricity supply, 9:26250 (R;CH;In German)
DUSTS
Diffusion
Dust particles in high-speed flows: calculations of small-particle re-entry hydrodynamics, 9:26975 (R;US)
DYE LASERS
Amplification
High repetition rate production of picosecond pulses at wavelengths <250nm, 9:26666 (R;US)

Measuring Methods
Streak camera measurement of tryptophan and rhodamine motions with picosecond time resolution, 9:26676 (J;GB)
Mode Locking
Highly efficient widely tunable subpicosecond double mode locked laser, 9:26677 (J;NL)
Optical Pumping
High repetition rate production of picosecond pulses at wavelengths <250nm, 9:26666 (R;US)
Tuning
Modified wide-band dye laser tunable over 5 cm^{-1} with 0.08 cm^{-1} bandwidth, 9:26675 (J;US)

DYMAC SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM

DYNAMIC LOADS
Computer Codes
TPLOT: an interactive time plot system for transient structural problems, 9:26643 (R;IT)
Data Processing
TPLOT: an interactive time plot system for transient structural problems, 9:26643 (R;IT)
Data Transmission
TPLOT: an interactive time plot system for transient structural problems, 9:26643 (R;IT)

DYNAMIC MATERIALS ACCOUNTABILITY SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM

DYNAMICS
Computer Calculations
Unconditionally stable element-by-element algorithms for dynamic problems, 9:27460 (R;US)

DYNAMICS (BEAM)
See BEAM DYNAMICS

DYSPROSIUM 147
Delayed Protons
High resolution positron q-value measurements and nuclear structure studies far from the stability line. Progress report, 1983-1984, 9:27397 (R;US)

DYSPROSIUM ALLOYS
X-Ray Diffraction
X-ray topography of terfernol, 9:26282 (RA;GB)

E

E-1422 RESONANCES
Particle Production
Study of K^+ K/sub s/π^- final state produced by π^- and anti p beams, 9:27276 (R;US)

EARTH ATMOSPHERE
See also IONOSPHERE
Mathematical Models
Carbon particles in the arctic, 9:26928 (RA;US)
Radionuclide Migration
Preliminary analysis of four numerical models for calculating the mesoscale transport of Kr-85, 9:27044 (J;GB)

EARTH PLANET
Impact Shock
Cosmic bombardment, 9:27247 (R;US)

EAST MESA GEOTHERMAL FIELD
Geothermal Power Plants
A calcium carbonate scale inhibitor for direct-contact binary geothermal service, 9:25852 (J;US)

EBR-2 REACTOR
Fuel Assemblies
Midplane and off-midplane axial leakage simulation of heterogeneous subassemblies in EBR-II, 9:25961 (R;US)
Neutron Leakage
Midplane and off-midplane axial leakage simulation of heterogeneous subassemblies in EBR-II, 9:25961 (R;US)
Transients
Minet validation study using EBR-II transient data, 9:26002 (R;US)

ECCS
Thermal Shock
Pressurized thermal shock: TEMPEST computer code simulation of thermal mixing in the cold leg and downcomer of a pressurized water reactor (Creare 61 and 64), 9:26046 (R;US)

ECHOGRAPHY
See ULTRASONOGRAPHY

ECONOMETRICS
Information Systems
CANSIM, the Canadian socio-economic management information system, 9:27670 (RA;US)
Econometric time series on DIALOG, 9:27672 (RA;US)

EDDY CURRENT TESTING
Eddy-current inspection for steam generator tubing program. Quarterly progress report for period ending September 30, 1983, 9:25913 (R;US)
Data Processing
Inversion of eddy current signals in a nonuniform probe field, 9:26731 (BA;US)
Design
Optimum design of eddy-current systems, 9:26694 (RA;US)
Magnetic Probes
Inversion of eddy current signals in a nonuniform probe field, 9:26731 (BA;US)
Optimization
Optimum design of eddy-current systems, 9:26694 (RA;US)
Probes
Evaluation of a novel eddy-current probe for detecting cracks inside and at the edges of holes, 9:26719 (BA;US)
Evaluation of an eddy-current tape-head probe, 9:26695 (RA;US)
Probe and sample preparation, 9:26697 (RA;US)
Sample Preparation
Probe and sample preparation, 9:26697 (RA;US)
Signals
Inversion of eddy current signals in a nonuniform probe field, 9:26731 (BA;US)

EDTA
Photolysis
Solution medium control of the photoredox yield in the Ru(bpy)s2i/methyl viologen/EDTA system, 9:26550 (J;US)

EDUCATIONAL FACILITIES
See also SCHOOL BUILDINGS
Technology Utilization
Unique ORNL facilities used by academic and industrial scientists, 9:27708 (J;US)

EDWIN I. HATCH-2 REACTOR
See HATCH-2 REACTOR

EFFECTIVE ENERGY (INTERNAL IRRADIATION)
See INTERNAL IRRADIATION
SPATIAL DOSE DISTRIBUTIONS

EFFICIENCY
See also ENERGY EFFICIENCY
Research Programs
More power from hydro, 9:25651 (J;US)

EFFLUENTS (CHEMICAL)

EFFLUENTS (GASEOUS)
See GASEOUS WASTES

EFFLUENTS (LIQUID)
See LIQUID WASTES

EFFLUENTS (RADIOACTIVE)
See RADIOACTIVE EFFLUENTS

EFFLUENTS (THERMAL)
See THERMAL EFFLUENTS

EINSTEIN GRAVITATION THEORY
See GENERAL RELATIVITY THEORY

ELASTIC PROPERTIES
See ELASTICITY

ELASTICITY
Computer Calculations
Formulation and numerical integration of elastoplastic and elasto-viscoplastic rate constitutive equations, 9:27442 (R;US)

ELECTRIC BATTERIES
Devices for production and/or storage of electrical energy from chemical reactions; excludes FUEL CELLS and RADIOISOTOPE BATTERIES.
See also LEAD-ACID BATTERIES
Electrodes
Battery electrode studies, 9:26082 (RA;US)
Effect of charging methods on battery electrodes, 9:26078 (R;US)
Research Programs
Advanced battery research, 9:26075 (RA;US)
Advanced battery development in the US, 9:26079 (R;US)
Applied battery and electrochemical research program, 9:26081 (RA;US)
Test Facilities
Industrial electrochemical projects, 9:26076 (RA;US)
ELECTRIC CABLES
Design
Progress in the development and testing of OTEC riser cables, 9:26768 (BA;US)
Electrical Insulation
Fully synthetic taped insulation cables, 9:25875 (P;US)
Electrical Testing
Energy Conservative Cable System Demonstration Project. Technical progress report, December 8, 1983-April 14, 1984, 9:25879 (R;US)
Field Tests
Progress in the development and testing of OTEC riser cables, 9:26768 (BA;US)
Fire Resistance
Cable tray fire experimentation, 9:26028 (RA;US)
Hazards
Assessment of seafloor burial of proposed OTEC power transmission cables. Final report, 9:25744 (R;US)
Mechanical Efficiency
Progress in the development and testing of OTEC riser cables, 9:26768 (BA;US)
ELECTRIC COILS
See also MAGNET COILS
Electric Impedance
The change in impedance of a single-turn coil due to a flaw in a coaxial conducting cylinder, 9:26720 (BA;US)
ELECTRIC CONDENSERS
See CAPACITORS
ELECTRIC CONDUCTORS
Defects
The change in impedance of a single-turn coil due to a flaw in a coaxial conducting cylinder, 9:26720 (BA;US)
Joining
Ceramic to metal attachment system (Ceramic electrode to metal conductor in MHD generator), 9:26169 (P;US)
ELECTRIC CURRENTS
See also FLASHOVER
Disturbances
Electric current perturbation calculations for half-penny cracks, 9:26721 (BA;US)
ELECTRIC FIELDS
Biological Effects
Preliminary study of the behavioral and biological effects of high intensity 60 Hz electric fields. Final report, 9:26120 (R;US)
Risk Assessment
Preliminary study of the behavioral and biological effects of high intensity 60 Hz electric fields. Final report, 9:26120 (R;US)
ELECTRIC FILTERS
Superconductors
Superconductive tapped delay lines for low-insertion-loss wideband analog signal-processing filters, 9:26577 (R;US)
ELECTRIC HEATING
Market
Energy cost-effectiveness of electric home heating, 9:26216 (J;US)
ELECTRIC MEASURING INSTRUMENTS
Timing Properties
Method and apparatus for measuring response time, 9:26893 (P;US)
ELECTRIC MOTORS
Service Life
Pacing plant motors for energy savings, 9:25874 (J;US)
Speed Regulators
Pacing plant motors for energy savings, 9:25874 (J;US)
ELECTRIC POWER
See also HYDROELECTRIC POWER
Background Noise
Design note about a 75 KVA quiet power distribution system, 9:25880 (R;US)
Energy Consumption
Monthly energy review, January 1984, 9:26147 (R;US)
Power Generation
Assessment of the quality of selected EIA data series. Coal and electric power data from 1977 to 1982, 9:25290 (R;US)
Production
Monthly energy review, January 1984, 9:26147 (R;US)
Rate Structure
Case studies on impacts of rate design on dispersed solar energy systems. Task 1. Literature review and survey of utility rates, 9:25664 (R;US)
Statistical Data
Assessment of the quality of selected EIA data series. Coal and electric power data from 1977 to 1982, 9:25290 (R;US)
Electric power monthly, January 1984, 9:26152 (R;US)
Tariffs
Oklahoma Corporation Commission PURPA program. Final progress report, October 1, 1980-September 30, 1982, 9:26155 (R;US)
ELECTRIC POWER INDUSTRY
Cost Benefit Analysis
Calculating the cost of producing energy for regulated and nonregulated industry, 9:26108 (R;US)
Energy Expenses
Calculating the cost of producing energy for regulated and nonregulated industry, 9:26108 (R;US)
ELECTRIC POWER SYSTEMS
See POWER SYSTEMS
ELECTRIC RAILWAYS
Design
Low cost catenary design-analysis. Final report, Task 1 and 2, 9:26220 (R;US)
ELECTRIC UTILITIES
Bibliographies
Electric utility reports, winter 1983, 9:26157 (R;US)
Crime Detection
State of New Mexico Attorney General's Office, Consumer and Economic Crimes Division energy unit. Period of the Grant, October 1977-September 1980, 9:26154 (R;US)
Economic Policy
State of New Mexico Attorney General's Office, Consumer and Economic Crimes Division energy unit. Period of the Grant, October 1977-September 1980, 9:26154 (R;US)
Energy Audits
Energy audits as an investment: the residential conservation service program analyzed, 9:26215 (J;US)
RCS index: a comparative guide to the implementation of the Residential Conservation Service Program for the reporting period April 1, 1981 - March 31, 1982 covering 179 utilities and 33 states, 9:26218 (B;US)
Flywheel Energy Storage
Analysis of fixed-base flywheel systems for electric utility applications, 9:26071 (J;US)
Fuel Consumption
Assessment of the quality of selected EIA data series. Coal and electric power data from 1977 to 1982, 9:25290 (R;US)
Load Management
Load management strategy testing model case study. Final report, 9:26156 (R;US)
Residential hourly and peak-demand model, 9:26100 (RA;US)
Regulations
State of New Mexico Attorney General's Office, Consumer and Economic Crimes Division energy unit. Period of the Grant, October 1977-September 1980, 9:26154 (R;US)
Statistical Data
Electric power monthly, January 1984, 9:26152 (R;US)

ELECTRICAL INSULATION
Inventions
Fully synthetic taped insulation cables, 9:25875 (P;US)
Synthetic Materials
Fully synthetic taped insulation cables, 9:25875 (P;US)
ELECTRICAL INSULATORS
Radiation Effects
Report on session 1981-1982, 9:25994 (R;GB)
Research Programs
Report on session 1981-1982, 9:25994 (R;GB)
ELECTRICAL TRANSIENTS
Control Systems
Supplemental control strategies for the transient stability enhancement of multimachine power systems, 9:25869 (R;US)
Simulation
Supplemental control strategies for the transient stability enhancement of multimachine power systems, 9:25869 (R;US)
Stability
Phase rotation as a means of augmenting transient stability, 9:25870 (R;US)
ELECTRIC-POWERED VEHICLES
See also HYBRID ELECTRIC-POWERED VEHICLES
Battery Chargers
Integral inverter/battery charger for use in electric vehicles. Final report, 9:26257 (R;US)
Battery Charging
Electrical vehicle refueling infrastructure. Final report, 9:26258 (R;US)
Inverters
Integral inverter/battery charger for use in electric vehicles. Final report, 9:26257 (R;US)
Permanent Magnets
Study and review of permanent magnets for electric vehicle propulsion motors, 9:26256 (R;US)
ELECTROCHEMICAL MACHINING
Performance
Residual stress determination in Inconel-600, 9:26391 (BA;US)
ELECTRODES
Fabrication
Optically transparent porous metal foam electrode, 9:26546 (J;US)
Joining
Ceramic to metal attachment system (Ceramic electrode to metal conductor in MHD generator), 9:26169 (P;US)
Membranes
Membrane electrode for the determination of actinyl(VI) cations, 9:26491 (J;US)
ELECTROMAGNETIC INTERACTIONS
See also PHOTON-PHOTON INTERACTIONS
Reviews
Electroweak interference, neutrino electron scattering and related topics, 9:27282 (R;DE)
Electroweak interference, 9:27280 (R;DE)
ELECTROMAGNETIC ISOTOPE SEPARATORS
Performance
Capability of the electromagnetic isotope enrichment facility at ORNL, 9:25586 (BA;NL)
ELECTROMAGNETIC PULSES
Nuclear electromagnetic pulse (EMP) and electric power systems, 9:26912 (R;US)
Amplitudes
Energy resolution enhancement of mercuric iodide detectors, 9:26838 (J;US)
Pulse Analyzers
Energy resolution enhancement of mercuric iodide detectors, 9:26838 (J;US)
ELECTROMAGNETIC SURVEYS
See also MAGNETOTELLURIC SURVEYS
Comparative Evaluations
Crosshole geophysical methods used to investigate the near vicinity of high level waste repositories, 9:25513 (R;US)
ELECTROMAGNETIC TESTING
See also EDDY CURRENT TESTING
Mathematical Models
Electric current perturbation techniques, 9:26696 (RA;US)
Probes
Probe-flaw interactions and inversion processes, 9:26693 (RA;US)
ELECTRON ACCEPTOR
See ELECTRONS
ELECTRON BEAMS
Beam Dynamics
Electron beam diagnostic for the Los Alamos free-electron laser oscillator experiment, 9:26782 (R;US)
Beam Transport
Observed current enhancement with propagation of the ETA electron beam in air, 9:26793 (R;US)
Study on intense relativistic electron beam propagation in a low density collisionless plasma, 9:26781 (RA;SU;In Russian)
Kilo Amp Beam Currents
Observed current enhancement with propagation of the ETA electron beam in air, 9:26793 (R;US)
Stabilization
Electrostatic wire stabilizing a charged particle beam, 9:26796 (P;US)
ELECTRON CHANNELING
Bremsstrahlung
Coherent bremsstrahling and radiation of relativistic papticles channeling in crystals, 9:27429 (R;SU;In Russian)
Numerical simulation of trajectories and characteristics of high energy particle radiation in averaged potential of crystal axes, 9:27422 (R;SU;In Russian)
Trajectories
Numerical simulation of trajectories and characteristics of high energy particle radiation in averaged potential of crystal axes, 9:27422 (R;SU;In Russian)
ELECTRON CYCLOTRON MASERS

ELECTRON EMISSION
Filaments
Electron emitting filaments for electron discharge devices, 9:26755 (P;US)
ELECTRON MICROSCOPY
Research Programs
Characterizing materials by analytical electron microscopy, 9:26356 (J;US)
ELECTRON NEUTRINOS
Mass
Calculation of molecular final states and their effect on a precision neutrino mass experiment, 9:27302 (R;US)
ELECTRON REACTIONS
Deep Inelastic Scattering
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)
Elastic Scattering
Electron scattering from ^{13}C, 9:27387 (R;IT)
Electroproduction
Pion electroproduction on the ^{4}He nuclei and p-odd nuclear forces, 9:27341 (R;UA;In Russian)
Inelastic Scattering
Electron scattering from ^{13}C, 9:27387 (R;IT)
P Invariance
Pion electroproduction on the ^{4}He nuclei and p-odd nuclear forces, 9:27341 (R;UA;In Russian)
ELECTRON SPECTROSCOPY
See also PHOTOELECTRON SPECTROSCOPY
Coincidence Spectrometry
Electron coincidence spectroscopy - momentum space wave functions of electrons in atoms and molecules, 9:27256 (R;AU)
ELECTRON-DEUTERON INTERACTIONS
Polarization-Asymmetry Ratio
Relativistic-invariant analysis of deuteron electrodisintegration. 1. Polarization effects, 9:27339 (R;UA;In Russian)
Scattering Amplitudes
Relativistic-invariant analysis of deuteron electrodisintegration. 1. Polarization effects, 9:27339 (R;UA;In Russian)

ELECTRON-ELECTRON COLLISIONS
Particle Production
Production and decay of charmed particles in e^+e^- collisions, 9:27306 (BA;US)
ELECTRONIC CIRCUITS
Control
Development of a functional representation of the static VAR unit, 9:26749 (R;US)
Mathematical Models
Development of a functional representation of the static VAR unit, 9:26749 (R;US)
Research Programs
Electronics Division research and development. Progress report, October 1, 1982-September 30, 1983, 9:26750 (R;US)
ELECTRON-PHONON COUPLING
Kinetic Equations
Electron-phonon interaction and the generalized kinetic equation for systems interacting with high-intensity electromagnetic wave fields, 9:27440 (R;SU)
ELECTRON-POSITRON INTERACTIONS
Electroweak interference, neutrino electron scattering and related topics, 9:27282 (R;DE)
Annihilation
Angular distributions of three-jet events in polarized e^+e^--pair annihilation, 9:27310 (R;SU)
First results from the Crystal Ball at DORIS II, 9:27281 (R;DE)
Jet Model
Angular distributions of three-jet events in polarized e^+e^--pair annihilation, 9:27310 (R;SU)
Limiting Fragmentation
Model-independent analysis of quark and gluon fragmentation, 9:27350 (J;NL)
Multiple Production
Fragmentation of quarks and gluons, 9:27307 (R;DE)
Neutral-Current Interactions
Electroweak interference, 9:27280 (R;DE)
Particle Production
Limits on J/PSI and Y production in e^+e^- interactions at $\sqrt{s}$=29 GeV, 9:27305 (J;NL)
Polarized vector meson production in colliding e^+e^--beams, 9:27338 (R;UA;In Russian)
Parton Model
Q^2-dependence of multiparticle distribution and fragmentation functions in QCD, 9:27321 (R;UA)
Reviews
Review of e^+e^--physics with PETRA, 9:27279 (R;DE)
ELECTRON-PROTON INTERACTIONS
Gribov-Lipatov Relation
Gribov-Lipatov relation in perturbative QCD, 9:27320 (R;UA)
Parton Model
Manifestation of weak interaction in the $ep \rightarrow e\mu^+\mu^-x$ reaction, 9:27343 (R;UA;In Russian)
Q^2-dependence of multiparticle distribution and fragmentation functions in QCD, 9:27321 (R;UA)
Weak Interactions
Manifestation of weak interaction in the $ep \rightarrow e\mu^+\mu^-x$ reaction, 9:27343 (R;UA;In Russian)
ELECTRON-RING ACCELERATORS
Beam-Beam Interactions
Lectures in accelerator theory, 9:26797 (BA;US)
Isabelle Storage Rings
Lectures in accelerator theory, 9:26797 (BA;US)
ELECTRONS
Bremsstrahlung
Photon asymmetry in coherent bremsstrahlung of polarized electrons, 9:27423 (R;SU;In Russian)
Channeling
Dynamics of relativistic electrons(positrons) in a crystal, 9:27432 (R;UA;In Russian)
ELECTROSTATIC PRECIPITATORS
Evaluation
Results of the HTHP ESP testing at Curtiss-Wright, 9:26638 (R;US)
Performance
Field study of a combined NH_3-SO_3 conditioning system on a cold-side fly ash precipitator at a coal-fired power plant, 9:25251 (R;US)
Testing

Control of activation levels to simplify waste management of fusion reactor ferritic steel components, 9:27521 (RA;US)
Radioactive Waste Management
Control of activation levels to simplify waste management of fusion reactor ferritic steel components, 9:27521 (RA;US)
Swelling
Swelling in several commercial alloys irradiated to very high neutron fluence, 9:26290 (RA;US)
FERROMAGNETIC MATERIALS
X-Ray Diffraction
Significance of X-ray imaging techniques in the study of ferro- or ferri-magnets, 9:26283 (RA;GB)
FERROUS COMPOUNDS
See IRON COMPOUNDS
FFTF REACTOR
Loss of Flow
Long term post-test simulation of the FFTF natural circulation tests using SSC, 9:26004 (R;US)
Reactor Operation
FFTF operating experience, 1982-1984, 9:25993 (R;US)

FIBER OPTICS
Equipment Interfaces
Absorption cell with fiber optics for concentration measurements in a flowing gas stream, 9:26498 (J;US)
FIBERGLASS
Thermal Conductivity
Thermal conductivity of semitransparent materials, 9:26219 (BA;US)
FIELD EFFECT TRANSISTORS
Physical Radiation Effects
Transient response of GaAs microwave power FET to x-ray pulses, 9:26752 (R;US)
Semiconductor Materials
Strained layer superlattice materials for millimeter wave FET's. Phase I. Final report, 9:26453 (R;US)
Transients
Transient response of GaAs microwave power FET to x-ray pulses, 9:26752 (R;US)
FIELD EQUATIONS
Wilson Loop
Loop equations, 9:27357 (R;SU)
FIELD THEORIES

FIREDAMP
See METHANE
FIREPLACES
Bibliographies
Bibliography: wood for fuel, 9:26202 (R;US)
FIRES
Aerosols
Characterization of radioactive aerosols from fires, 9:25558 (RA;US)
Computer Codes
FIRAC: a computer code to predict fire accident effects in nuclear facilities. Volume I, 9:25565 (RA;US)
Safety evaluation of ventilation networks in case of fire, 9:25561 (RA;US)
Use of deterministic computer codes to assess fire behavior and ventilation requirements in confined enclosures: present capabilities and future prospects, 9:25559 (RA;US)
Computerized Simulation
Fire source simulation, 9:25557 (RA;US)
Numerical simulation of thermodynamical characteristics evolution in an air handling system equipped laboratory in case of accidental fire, 9:25563 (RA;US)
Coordinated Research Programs
Conventional fire research and the safety of nuclear installations, 9:25570 (RA;US)
Environmental Effects
Comparative winter diets of elk in New Mexico, 9:27052 (J;US)
Environmental Impacts
Regulations for fire and explosion prevention in nuclear facilities. Volume I and current assessment of fire impact in a reprocessing plant upon the environment in Japan, 9:25556 (RA;US)
Flashover
Theoretical and experimental study of flashover, 9:26741 (RA;US)
Kerosene
Calculating the consequences of a kerosene pool fire: the FLAMME computer code, 9:25562 (RA;US)
Mathematical Models
Calculations of wall fire spread in an enclosure, 9:26745 (RA;US)
Field model of fire and its application to nuclear containment problems, 9:25564 (RA;US)
Model of multiroom fire spread, 9:26739 (RA;US)
Radiation Hazards
Characterization of radioactive aerosols from fires, 9:25558 (RA;US)
Research Programs
Cable tray fire experimentation, 9:26028 (RA;US)
General considerations on fire and explosions in a nuclear facility interaction with ventilation, 9:25555 (RA;US)
Numerical simulation of thermodynamical characteristics evolution in an air handling system equipped laboratory in case of accidental fire, 9:25563 (RA;US)
Risk Assessment
Analysis of fire and explosion accidents in a fuel reprocessing plant, 9:25560 (RA;US)
Characterization of radioactive aerosols from fires, 9:25558 (RA;US)
Potential fire or explosion risks in reprocessing plants, 9:25398 (RA;US)
Safety evaluation of ventilation networks in case of fire, 9:25561 (RA;US)
Safety Engineering
Principles of fire and explosion protection, 9:26743 (RA;US)
Ventilation
Quantifying the spread potentials of fires, 9:26744 (RA;US)
Use of deterministic computer codes to assess fire behavior and ventilation requirements in confined enclosures: present capabilities and future prospects, 9:25559 (RA;US)
FIREWOOD
See WOOD FUELS
FIRST WALL
Design
FIRST STEP blanket structure and fuel assembly design, 9:27541 (R;US)
Neutron Transport
Variable control of neutron albedo in toroidal fusion devices, 9:27618 (P;US)
Radioactivation
Alloy development for fast induced radioactivity decay for fusion reactor applications, 9:27522 (RA;US)
Control of activation levels to simplify waste management of fusion reactor ferritic steel components, 9:27521 (RA;US)
Radioactive Waste Management
Alloy development for fast induced radioactivity decay for fusion reactor applications, 9:27522 (RA;US)
Control of activation levels to simplify waste management of fusion reactor ferritic steel components, 9:27521 (RA;US)

Wall Loading
Magnetic forces on a ferromagnetic HT-9 first wall/blanket and coolant pipe, 9:27523 (RA;US)

FISCHER-TROPSCH SYNTHESIS
Catalysts
Catalyst and reactor development for a liquid phase Fischer-Tropsch process: indirect liquefaction catalyst development, 9:25607 (RA;US)
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, January 1-March 31, 1984, 9:25211 (R;US)
Fischer-Tropsch synthesis in slurry reactor systems, 9:25608 (RA;US)
Iron-manganese Fischer-Tropsch catalysts, 9:25609 (RA;US)
Liquid hydrocarbon fuels from syngas, 9:25614 (RA;US)
Metal boride catalysts for indirect liquefaction. Quarterly technical progress report, December 1, 1983-February 29, 1984, 9:25620 (R;US)
Proceedings of the DOE contractors' conference on indirect liquefaction, 9:25605 (R;US)
Promotion and characterization of zeolitic catalysts used in the synthesis of hydrocarbons from syngas, 9:25617 (RA;US)
Spectroscopic studies of metal/zeolite catalysis materials and products, 9:25618 (RA;US)
Syngas conversion and chemisorption studies on metal-zeolite catalysis, 9:25615 (RA;US)
Two-stage slurry Fischer-Tropsch/ZSM-5 process of converting syngas to high octane gasoline, 9:25606 (RA;US)
Zeolite-supported cobalt catalysts for the conversion of synthesis gas to hydrocarbon products, 9:25616 (RA;US)
Chemical Reactors
Assessment of the use of slurry reactors in Fischer-Tropsch synthesis, 9:25610 (RA;US)
Catalyst and reactor development for a liquid phase Fischer-Tropsch process: indirect liquefaction catalyst development, 9:25607 (RA;US)
Fischer-Tropsch synthesis in slurry reactor systems, 9:25608 (RA;US)
Fischer-Tropsch bubble-column hydrodynamics, 9:25611 (RA;US)
Slurry bubble column dynamics, 9:25613 (RA;US)
Slurry reactor hydrodynamic studies, 9:25612 (RA;US)
Fluid Mechanics
Fischer-Tropsch bubble-column hydrodynamics, 9:25611 (RA;US)
Slurry bubble column dynamics, 9:25613 (RA;US)
Mathematical Models
Slurry reactor hydrodynamic studies, 9:25612 (RA;US)
Meetings
Proceedings of the DOE contractors' conference on indirect liquefaction, 9:25605 (R;US)
Slurries
Two-stage slurry Fischer-Tropsch/ZSM-5 process of converting syngas to high octane gasoline, 9:25606 (RA;US)
Specificity
Catalyst and reactor development for a liquid phase Fischer-Tropsch process: indirect liquefaction catalyst development, 9:25607 (RA;US)
Fischer-Tropsch synthesis in slurry reactor systems, 9:25608 (RA;US)

FISCHER-TROPSCH
MOBIL PROCESS/Flowsheets
Two-stage slurry Fischer-Tropsch/ZSM-5 process of converting syngas to high octane gasoline, 9:25606 (RA;US)
MOBIL PROCESS/Reviews
Two-stage slurry Fischer-Tropsch/ZSM-5 process of converting syngas to high octane gasoline, 9:25606 (RA;US)

FISHES
See also TROUT
Aquaculture
Summary of channel catfish and rainbow trout production at the Gallatin Waste Heat Aquaculture Facility, 1979-1980, 9:27161 (R;US)
Growth
Comparative temperature-dependent growth rates of largemouth and smallmouth bass fry, 9:27187 (J;US)
Impingement
Impingement losses of white perch at Hudson River power plants: magnitude and biological significance, 9:25878 (J;US)
Production
Summary of channel catfish and rainbow trout production at the Gallatin Waste Heat Aquaculture Facility, 1979-1980, 9:27161 (R;US)
Species Diversity
Comparative temperature-dependent growth rates of largemouth and smallmouth bass fry, 9:27187 (J;US)

FISSILE MATERIALS
Criticality
Criticality safety hazards arising from the transport of fissile materials. Final report, 9:26642 (R;XE)
Criticality aspects of the transport of fissile materials, 9:25463 (RA;US)
Transport
Criticality safety hazards arising from the transport of fissile materials. Final report, 9:26642 (R;XE)
Criticality aspects of the transport of fissile materials, 9:25463 (RA;US)

FISSION
See also SPONTANEOUS FISSION
Cranking Model
Nuclear inertia for fission in a generalized cranking model, 9:27410 (R;US)

FISSION CHAMBERS
Position-sensitive fission counter for in-core flux profile monitoring, 9:25982 (R;US)

FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Environmental Exposure Pathway
Assessment of variability of radiation doses emanating from emission of airborne radioactive substances during normal operation of nuclear facilities, 9:27033 (R;DE;In German)
Removal
Fission product removal in Engineered Safety Feature (ESF) systems. Data base assessment and suggested experimental program, 9:26054 (R;US)

FISSION PRODUCTS
Nuclear Data Collections
Fission product and actinide data status in ENDF/B, 9:27382 (R;US)

FISSIONABLE MATERIALS MANAGEMENT

HIGH-TEMPERATURE FUEL CELLS
Fuel Systems
Development of BEACON technology. Quarterly report, October-December 1982, 9:25191 (R;US)
Materials
Electrocatalytic oxidation of carbon monoxide in a CO/O_2 fuel cell, 9:26545 (J;US)
FUEL CONSUMPTION
Econometrics
Fuel consumption for road transport in the USA - a comment, 9:26226 (J;GB)
FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE
FUEL CYCLE
Research Programs
Fuel cycle programs. Quarterly progress report, April-June 1983, 9:25482 (R;US)
Nuclear fuel cycle research, 9:25481 (RA;US)

FUEL ECONOMY
Standards
Fuel consumption for road transport in the USA - a comment, 9:26226 (J;GB)
FUEL ELEMENT CLUSTERS
Critical Heat Flux
Comparison of BIASI and Columbia CHF correlations using BODYFIT-2PE, 9:25883 (R;US)
Film Boiling
Low-pressure transient flow film boiling in vertically oriented rod bundles, 9:26066 (J;US)
Ruptures
LOCA simulation in the national research universal reactor program: postirradiation examination results for the third materials experiment (MT-3), 9:26041 (R;US)
FUEL ELEMENTS
See also FUEL PINS
FUEL RODS
SPENT FUEL ELEMENTS
Dissolution
Dissolution of uranium fuel tubes in nitric acid, 9:25395 (R;US)
Road Transport
Overview of DOE/PNC joint program on transportation technology, 9:25428 (RA;US)
FUEL FABRICATION PLANTS
Explosions
Interaction of fire and explosion with ventilation systems of fuel cycle plants, 9:25568 (RA;US)
Fires
Characterization of radioactive aerosols from fires, 9:25558 (RA;US)
Interaction of fire and explosion with ventilation systems of fuel cycle plants, 9:25568 (RA;US)
Ventilation Systems
Interaction of fire and explosion with ventilation systems of fuel cycle plants, 9:25568 (RA;US)
Pressure transients in scale-model ventilation systems, 9:25566 (RA;US)
FUEL GAS
See also NATURAL GAS
Desulfurization
Desulfurization of fuel gases in fluidized bed gasification and hot fuel gas cleanup systems, 9:25232 (P;US)
Hot Gas Cleanup
Desulfurization of fuel gases in fluidized bed gasification and hot fuel gas cleanup systems, 9:25232 (P;US)
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
FUEL OILS
See also RESIDUAL FUELS
Biological Effects
Comparative toxicities of coal- and shale-derived crude oils and a petroleum-derived fuel oil to the fresh water snails Helisoma trivolvis and Physa gyrina, 9:27209 (J;GB)
Fuel Consumption
R.I. Fuel Oil Conservation Marketing Program. Final performance report, 1980-1981, 9:26199 (R;US)
FUEL PELLETS
Design
Conceptual design of ICF reactor SENRI, Part II. Advances in design and pellet gain scaling, 9:27596 (BA;US)
Energy Absorption
On the energy and momentum deposition in the ion beam-pellet interaction, 9:27621 (J;US)
Gain
Conceptual design of ICF reactor SENRI, Part II. Advances in design and pellet gain scaling, 9:27596 (BA;US)
FUEL PENCILS
See FUEL PINS
FUEL PINS
Performance Testing
Irradiation of three T-111 clad uranium nitride fuel pins for 8070 hours at 990°C (1815°F), 9:25979 (R;US)
FUEL REPROCESSING
See REPROCESSING
FUEL REPROCESSING PLANTS
See also IDAHO CHEMICAL PROCESSING PLANT
Design
Integrated testing of equipment for FBR fuel reprocessing, 9:25401 (J;GB)
Explosions
Analysis of fire and explosion accidents in a fuel reprocessing plant, 9:25560 (RA;US)
Interaction of fire and explosion with ventilation systems of fuel cycle plants, 9:25568 (RA;US)
Potential fire or explosion risks in reprocessing plants, 9:25398 (RA;US)
Regulations for fire and explosion prevention in nuclear facilities. Volume I and current assessment of fire impact in a reprocessing plant upon the environment in Japan, 9:25556 (RA;US)
Fires
Analysis of fire and explosion accidents in a fuel reprocessing plant, 9:25560 (RA;US)
Behaviour of burning kerosene, aerosol formation and consequences, 9:26572 (RA;US)
Calculating the consequences of a kerosene pool fire: the FLAMME computer code, 9:25562 (RA;US)
Interaction of fire and explosion with ventilation systems of fuel cycle plants, 9:25568 (RA;US)
Potential fire or explosion risks in reprocessing plants, 9:25398 (RA;US)
Regulations for fire and explosion prevention in nuclear facilities. Volume I and current assessment of fire impact in a reprocessing plant upon the environment in Japan, 9:25556 (RA;US)
Solvent pool fire testing, 9:25567 (RA;US)
Off-Gas Systems
High precision ^{85}Kr monitor, 9:27041 (J;US)
Operation
Integrated testing of equipment for FBR fuel reprocessing, 9:25401 (J;GB)
Process Control
Energy dispersive K x-ray fluorescence analysis for on-line process control of heavy metal concentrations, 9:25403 (BA;US)
Radiation Monitoring
High precision ^{85}Kr monitor, 9:27041 (J;US)
Radioactive Effluents
High precision ^{85}Kr monitor, 9:27041 (J;US)
Ventilation Systems
Interaction of fire and explosion with ventilation systems of fuel cycle plants, 9:25568 (RA;US)
FUEL RODS
Electric Heating
Low-pressure transient flow film boiling in vertically oriented rod bundles, 9:26066 (J;US)
Fuel-Cladding Interactions
Fuel-cladding mechanical interaction in PCI-resistant LWR fuel designs during normal operation and power ramping, 9:25894 (J;US)
FUEL SHEATHS
See FUEL CANS
FUEL SLUGS
See FUEL RODS
FUEL SLURRIES
Additives
SRC-water slurry rheology. Final technical report, 9:25197 (R;US)
Atomization
Characteristics of coal/light hydrocarbon slurries in spray combustion. Final report, September 1, 1980-June 30, 1983, 9:25284 (R;US)
Chemical Preparation
Coal-mixture fuels for utility and industrial applications, 9:25872 (R;US)
SRC-water slurry rheology. Final technical report, 9:25197 (R;US)

Combustion Properties
Characteristics of coal/light hydrocarbon slurries in spray combustion. Final report, September 1, 1980-June 30, 1983, 9:25284 (R;US)
Corrosive Effects
Chemical vapor deposition of erosion-resistant TiB_2 coatings, 9:26408 (R;US)
Evaporation
Characteristics of coal/light hydrocarbon slurries in spray combustion. Final report, September 1, 1980-June 30, 1983, 9:25284 (R;US)
Flowmeters
Active ultrasonic cross-correlation flowmeters for mixed-phase pipe flows (Solid/liquid and solid/gas flows), 9:25273 (R;US)
Market
Coal-mixture fuels for utility and industrial applications, 9:25872 (R;US)
Rheology
SRC-water slurry rheology. Final technical report, 9:25197 (R;US)
Technology Assessment
Coal-mixture fuels for utility and industrial applications, 9:25872 (R;US)

FUEL SUSPENSIONS
See FUEL SLURRIES

FUEL-CLADDING INTERACTIONS
Fuel-cladding mechanical interaction in PCI-resistant LWR fuel designs during normal operation and power ramping, 9:25894 (J;US)

FUELS (NUCLEAR)
See NUCLEAR FUELS

FUELWOOD
See WOOD FUELS

FUME HOODS
Design
Containment facilities for pathological materials, 9:27154 (RA;US)
Kitchen range hoods and energy conservation, 9:26190 (RA;US)
Evaluation
Containment facilities for pathological materials, 9:27154 (RA;US)

FUMES
See AEROSOLS

FURNACES
See also WOOD BURNING FURNACES
Design
Development of a slurry-fed in-can melter for nuclear defense waste, 9:25497 (R;US)
Energy Consumption
A simple mathematical model for heat transfer and its application for continuous type reheating furnaces, 9:26236 (R;GB)
Evaluation
Glass furnace project: March-September 1983, 9:25507 (R;US)
Process Control
A simple mathematical model for heat transfer and its application for continuous type reheating furnaces, 9:26236 (R;GB)

FUSED SALTS
See MOLTEN SALTS

FUSION FUELS
See THERMONUCLEAR FUELS

FUSION (NUCLEAR)
See THERMONUCLEAR REACTIONS

FUSION REACTORS
See THERMONUCLEAR REACTORS

FUSION (WELDING)
See WELDING

G

GADOLINIUM
Form Factors
Magnetic form factors, 9:26401 (J;FR)

GAGES (PRESSURE)
See PRESSURE GAGES

GAGES (STRAIN)
See STRAIN GAGES

GALLIUM
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)

GALLIUM ALLOYS
Thermal Conductivity
Thermal conductivity and Lorenz number of plutonium and plutonium-gallium alloys, 9:26395 (BA;US)
Thermal Diffusivity
Thermal conductivity and Lorenz number of plutonium and plutonium-gallium alloys, 9:26395 (BA;US)

GALLIUM ARSENIDE SOLAR CELLS
Crystal Growth
High efficiency, low cost thin GaAs solar cells, 9:25682 (R;US)

GALLIUM ARSENIDES
Strained layer superlattice materials for millimeter wave FET's. Phase I. Final report, 9:26453 (R;US)

GAMMA CAMERAS
See also POSITRON CAMERAS
Computer-Aided Design
A modular scintillation camera for use in nuclear medicine, 9:27144 (J;US)
Data Acquisition Systems
A fast parallel encoding scheme for the Anger camera, 9:26840 (J;US)
Design
A fast parallel encoding scheme for the Anger camera, 9:26840 (J;US)
Development of small in-vivo imaging probes for tumor detection, 9:27141 (J;US)
Energy Resolution
Germanium-scintillation camera coincidence detection studies for imaging single photon emitters, 9:27142 (J;US)
Performance
A modular scintillation camera for use in nuclear medicine, 9:27144 (J;US)
Performance Testing
Development of small in-vivo imaging probes for tumor detection, 9:27141 (J;US)
Photomultipliers
A fast parallel encoding scheme for the Anger camera, 9:26840 (J;US)
Threshold Energy
Germanium-scintillation camera coincidence detection studies for imaging single photon emitters, 9:27142 (J;US)
Timing Properties
Germanium-scintillation camera coincidence detection studies for imaging single photon emitters, 9:27142 (J;US)

GAMMA DETECTION
Shower Counters
Segmented scintillator-lead photon calorimeter using a double wavelength shifter optical readout system, 9:26827 (R;DE)
Solid Scintillation Detectors
Segmented scintillator-lead photon calorimeter using a double wavelength shifter optical readout system, 9:26827 (R;DE)

GAMMA RADIATION
Attenuation
Dual energy attenuation correction for single photon emission computed tomography (SPECT), 9:27143 (J;US)

GAMMA SPECTRA
Spectra Unfolding
Methods for deconvoluting and interpreting complex gamma- and x-ray spectral regions, 9:26876 (J;US)

GAMMA SPECTROMETERS
Data Acquisition Systems
Improved computerized acquisition and analysis of gamma ray spectra, 9:26844 (J;US)
Design
A portable gamma ray spectrometer/computer, 9:26848 (J;US)
An ultralow background germanium gamma-ray spectrometer, 9:26846 (J;US)
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Improved computerized acquisition and analysis of gamma ray spectra, 9:26844 (J;US)
Energy Resolution
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Ge Semiconductor Detectors
A portable gamma ray spectrometer/computer, 9:26848 (J;US)
An ultralow background germanium gamma-ray spectrometer, 9:26846 (J;US)
High-spin gamma-ray spectroscopy, 9:27399 (R;US)
HgI2 Semiconductor Detectors
Large area mercuric iodide photodetectors, 9:26843 (J;US)
High-Purity GE Detectors
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Microprocessors
A portable gamma ray spectrometer/computer, 9:26848 (J;US)
Multi-Channel Analyzers
Improved computerized acquisition and analysis of gamma ray spectra, 9:26844 (J;US)
NaI Detectors
A portable gamma ray spectrometer/computer, 9:26848 (J;US)
Performance
An ultralow background germanium gamma-ray spectrometer, 9:26846 (J;US)
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Phase Shift
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Time Resolution
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
GAMMA SPECTROSCOPY
Data Analysis
GRPANL: a program for deconvoluting and interpreting complex peak clusters, 9:26475 (R;US)
Ge Semiconductor Detectors
A position-sensitive germanium detector for gamma-ray astronomy, 9:26841 (J;US)
The development of a segmented N-type germanium detector, and its application to astronomical gamma-ray spectroscopy, 9:26842 (J;US)
Position Sensitive Detectors
A position-sensitive germanium detector for gamma-ray astronomy, 9:26841 (J;US)
GAS ANALYSIS
Chemiluminescence
Portable instrument and method for detecting reduced sulfur compounds in a gas, 9:26899 (P;US)
GAS APPLIANCES
Combustion Products
Pollutant emission rates from indoor combustion appliances and sidestream cigarette smoke, 9:27199 (RA;US)
Ventilation Systems
Effects of ventilation on residential air pollution due to emissions from a gas-fired range, 9:26976 (RA;US)
GAS BURNERS
Design
NO_2 formation in range-top burners, 9:25342 (RA;US)
Fume Hoods
Kitchen range hoods and energy conservation, 9:26190 (RA;US)
Health Hazards
Respiratory effects of household exposures to tobacco smoke and gas cooking on non-smokers, 9:26953 (RA;US)
Indoor Air Pollution
Case for entirely removing the gas range from indoors, 9:26924 (RA;US)
Effects of ventilation on residential air pollution due to emissions from a gas-fired stove, 9:26189 (RA;US)
Indoor carbon monoxide pollution in the Netherlands, 9:26950 (RA;US)
NO_2 formation in range-top burners, 9:25342 (RA;US)
Pulmonary functions of children and indoor NO_2 concentrations in Portage, Wisconsin, 9:26954 (RA;US)
Respiratory effects of household exposures to tobacco smoke and gas cooking on non-smokers, 9:26953 (RA;US)
GAS COOLANTS

GAS COOLED FAST BREEDER REACTOR
See GCFR REACTOR
GAS ENGINES
See INTERNAL COMBUSTION ENGINES
GAS SPILLS
Budgets
Congressional budget request, FY 1985. Volume 3. Energy supply research and development, 9:26132 (R;US)
Environmental Effects
Effects of a spill of LNG on mean flow and turbulence under low wind speed, slightly stable atmospheric conditions, 9:25337 (R;US)
Field Tests
Effects of a spill of LNG on mean flow and turbulence under low wind speed, slightly stable atmospheric conditions, 9:25337 (R;US)
GAS TURBINE ENGINES
Automobiles
Advanced Gas Turbine (AGT): Power-train system development, 9:26253 (R;US)
GAS TURBINES
See also COAL-FIRED GAS TURBINES
Fuel Substitution
Testing of a small combustion turbine burning reformed methanol, 9:26263 (R;US)
Performance Testing
Testing of a small combustion turbine burning reformed methanol, 9:26263 (R;US)
GAS UTILITIES
Statistical Data
Natural gas monthly, 9:26148 (R;US)
GAS WELLS
See NATURAL GAS WELLS
GASEOUS DIFFUSION
Diffusion of gases in porous solids: simulations and measurements. Seventh quarterly report, January 16-April 15, 1984, 9:26515 (R;US)
GASEOUS EFFLUENTS
See GASEOUS WASTES
GASEOUS WASTES
See also FLUE GAS
Chemical Analysis
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
Monitoring
Mercury emissions from a modified in-situ oil shale retort, 9:27001 (J;GB)
Sampling
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
GASES
See also ELECTRON GAS and FERMI GAS.

GLASS SCINTILLATORS
Cherenkov Radiation
Cherenkov and scintillation light measurements with scintillating glass, SGC1C, 9:26863 (J;US)
Design
Scintillating glass, fiber-optic plate detectors for active target and tracking applications in high energy physics experiments, 9:26866 (J;US)
Energy Losses
Signal and noise measurements for muons in scintillating glass with vacuum photodiode reading, 9:26868 (J;US)
Energy Resolution
A measurement of the energy resolution and related properties of an SCG1-C scintillation glass shower counter array for 1-25 GeV positions, 9:26864 (J;US)
Performance Testing
Scintillating glass, fiber-optic plate detectors for active target and tracking applications in high energy physics experiments, 9:26866 (J;US)
Photodiodes
Signal and noise measurements for muons in scintillating glass with vacuum photodiode reading, 9:26868 (J;US)
Photosensitivity
A measurement of the energy resolution and related properties of an SCG1-C scintillation glass shower counter array for 1-25 GeV positions, 9:26864 (J;US)

Spatial Resolution
Scintillating glass, fiber-optic plate detectors for active target and tracking applications in high energy physics experiments, 9:26866 (J;US)
Time Resolution
Cherenkov and scintillation light measurements with scintillating glass, SGC1C, 9:26863 (J;US)
GLASSY METALS
See METALLIC GLASSES
GLAUBER'S SALT
See SODIUM SULFATES
GLUCOSE
Fermentation
Farm-sized immobilized cell reactor for the conversion of biomass to ethanol. Final project report, 9:25632 (R;US)
Metabolism
Imaging local brain function with emission computed tomography, 9:27130 (J;US)
Vacuum Fermentation
Ethanol production and recovery from biomass sugars, 9:25634 (RA;US)
GLUEBALLS
Status of the glueballs, 9:27275 (R;US)
GLUONIUM
See GLUEBALLS
GLUONS
Distribution Functions
Gribov-Lipatov relation in perturbative QCD, 9:27320 (R;UA)
Particle Production
Angular distributions of three-jet events in polarized e^+e^--pair annihilation, 9:27310 (R;SU)
GOBAR GAS
See METHANE
GOLD
X-Ray Emission Analysis
X-ray emission experiments at 1.06 μm and 0.35 μm, 9:27583 (BA;US)
GOLD 197 TARGET
Electron Reactions
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)
GOLD ALLOYS
Electric Conductivity
Electrical resistivity of liquid Ag-Au alloy, 9:26321 (R;IT)
Microstructure
Cooling rate dependent structure of amorphous (Au/sub x/Cu/sub 1-x/)$_{81}$La$_{9}$, 9:26277 (R;US)
GRADED LIE GROUPS
Irreducible Representations
Representations of osp(1.4) in terms of three boson pairs and matrices of arbitrary even order. The basic theorem, 9:27365 (R;SU)
GRAIN ALCOHOL
See ETHANOL
GRAIN BOUNDARIES
X-Ray Diffraction
Diffraction studies of grain boundary structure using synchrotron radiation, 9:26281 (RA;GB)
GRAINS (CEREAL)
See CEREALS
GRAND UNIFIED THEORY
Semiconductor detectors and double beta decay, 9:26854 (J;US)
GRANITES
See also QUARTZ MONZONITE
Adsorption
Distribution of alpha activity from neptunium on rock fissures, 9:27068 (J;GB)
Radionuclide Migration
Distribution of alpha activity from neptunium on rock fissures, 9:27068 (J;GB)
GRANULAR MATERIALS
For unspecified materials having a granular texture.
Fluid Flow
Application of molecular dynamics to macroscopic particles, 9:27238 (R;US)
Mass Transfer
Application of molecular dynamics to macroscopic particles, 9:27238 (R;US)
GRAPHITE
Atom Transport
Diffusion of molybdenum through H-451 graphite, 9:26009 (R;US)
Brazing
Graphite-ceramic rf Faraday-thermal shield and plasma limiter, 9:27620 (P;US)
Clathrates
Staging transitions in graphite intercalation compounds, 9:26432 (R;US)
Coordinated Research Programs
FRG/US - cooperation on the characterization of reactor graphites, 9:25926 (RA;DE;In German)
Corrosion
Changes in the macroporosity of nuclear reactor graphite caused by oxygen corrsion, 9:26447 (RA;DE)
Creep
FRG/US - cooperation on the characterization of reactor graphites, 9:25926 (RA;DE;In German)
High fluence creep behaviour of near isotropic pitch coke graphite, 9:26445 (RA;DE)
High temperature irradiation behaviour and creep of graphitic matrix material in a low neutron flux, 9:26446 (RA;DE)
Deformation
Influence of notch and specimengeometry on the deformation as well as on the fracture mechanics of a reactor graphite, 9:26448 (RA;DE;In German)
Elasticity
Shear elastic modulus of graphite, 9:26461 (J;GB)
Fracture Mechanics
Influence of notch and specimengeometry on the deformation as well as on the fracture mechanics of a reactor graphite, 9:26448 (RA;DE;In German)
Oxidation
FRG/US - cooperation on the characterization of reactor graphites, 9:25926 (RA;DE;In German)
Physical Radiation Effects
FRG/US - cooperation on the characterization of reactor graphites, 9:25926 (RA;DE;In German)
High fluence creep behaviour of near isotropic pitch coke graphite, 9:26445 (RA;DE)
High temperature irradiation behaviour and creep of graphitic matrix material in a low neutron flux, 9:26446 (RA;DE)
Suitability tests for HTR reflector graphites, 9:25925 (RA;DE)
Porosity
Changes in the macroporosity of nuclear reactor graphite caused by oxygen corrsion, 9:26447 (RA;DE)
Possibilities and limitations in porosity determination on graphite and carbon, 9:26449 (RA;DE)
Research Programs
Graphites for space and defense, 9:26456 (J;US)
Shear Properties
Shear elastic modulus of graphite, 9:26461 (J;GB)
GRAPHITE FIBERS
See CARBON FIBERS
GRAPHITE MODERATOR
See GRAPHITE
GREAT BRITAIN
See UNITED KINGDOM
GREAT LAKES REGION
See FEDERAL REGION V
GREECE
Cultural Objects
Neutron-activation study of figurines, pottery, and workshop materials from the Athenian Agora, Greece (Neutron reactions; France, Israel, Cyprus), 9:26496 (J;US)
Excavation
Neutron-activation study of figurines, pottery, and workshop materials from the Athenian Agora, Greece (Neutron reactions; France, Israel, Cyprus), 9:26496 (J;US)
GRIBOV-LIPATOV RELATION
Quantum Chromodynamics
Gribov-Lipatov relation in perturbative QCD, 9:27320 (R;UA)

GROUND MOTION
Mathematical Models
Drawing up the mathematical basis for the advanced calculation of ground movement elements under the conditions of the coal deposits in the Saar district, 9:25257 (R;DE;In German)
GROUND SOURCE HEAT PUMPS
Performance
TECH House I horizontal coil ground coupled heat pump: 1983 cooling season performance, 9:26212 (R;US)
GROUND SUBSIDENCE
Forecasting
Socio-economic, subsidence, transportation, and legal ramifications of potential liquefaction plant sitings. Task B. Prediction of subsidence potential over abandoned mine land. Quarterly report, October 1-December 31, 1983, 9:25266 (R;US)
GROUND WATER
Availability
Groundwater impacts of enhanced oil recovery, 9:25325 (RA;US)
Flow Models
First status report on regional and local ground-water flow modeling for Richton Dome, Mississippi, 9:25486 (R;US)
Potentiometry
Potentiometric-level monitoring program - Mississippi and Louisiana: annual status report for fiscal year 1983, 9:25487 (R;US)
Radionuclide Migration
Fuel cycle programs. Quarterly progress report, April-June 1983, 9:25482 (R;US)
Geochemistry of trench leachates at low-level radioactive waste burial sites, 9:25489 (R;US)
Mapping subsurface radionuclide migration and groundwater flow with organic tracers, 9:25532 (R;US)
Multimedia radionuclide exposure assessment modeling. Annual report, October 1980-September 1981, 9:27035 (R;US)
Neutralizing barrier for reducing contaminant migration from a uranium mill tailings disposal pond, 9:25533 (R;US)
Nuclear fuel cycle research, 9:25481 (RA;US)
GROUTING
Waste Product Utilization
Development of low-cost grouts from spent oil shale, 9:25383 (RA;US)
GROWTH (CRYSTAL)
See CRYSTAL GROWTH
GRUENEISEN FORMULA
Explosions
Grueneisen parameter measurements for high explosives, 9:26907 (R;US)
GUAM
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
GULF GENERAL ATOMIC FAST BREEDER REACTOR
See GCFR REACTOR
GULF OF MEXICO
Continental Shelf
Estimated oil and gas reserves, Gulf of Mexico Outer Continental Shelf and Continental Slope, 9:25296 (R;US)
Continental Slope
Estimated oil and gas reserves, Gulf of Mexico Outer Continental Shelf and Continental Slope, 9:25296 (R;US)
Natural Gas Deposits
Estimated oil and gas reserves, Gulf of Mexico Outer Continental Shelf and Continental Slope, 9:25296 (R;US)
Petroleum Deposits
Estimated oil and gas reserves, Gulf of Mexico Outer Continental Shelf and Continental Slope, 9:25296 (R;US)
GUN COTTON
See NITROCELLULOSE
GYROTRONS

H

HADRON REACTIONS
Pair Production
Dependence on the target-nucleus atomic number of spectra of lepton pairs produced in hadron-nucleus interactions, 9:27329 (R;SU;In Russian)
HADRON-HADRON INTERACTIONS
Diffraction Models
Model for elastic scattering and diffraction dissociation processes of hadrons at high energies. 2. Asymptotic behaviour of hadron form factors, 9:27317 (R;SU;In Russian)
Elastic Scattering
Model for elastic scattering and diffraction dissociation processes of hadrons at high energies. 2. Asymptotic behaviour of hadron form factors, 9:27317 (R;SU;In Russian)
Limiting Fragmentation
Model-independent analysis of quark and gluon fragmentation, 9:27350 (J;NL)
Pair Production
Angular distributions of dileptons in polarized hadronic collisions: Test of electroweak gauge models, 9:27315 (R;IT)
Spin Flip
How to deal with spin in the quark model at high energies, 9:27312 (R;SU)
HADRONIC PARTICLE DECAY
Particle decay due to hadronic interaction.
Lattice Field Theory
Rho-$\pi\pi$ coupling constant in lattice gauge theory, 9:27376 (J;NL)
HADRONS
See also BARYONS
RESONANCE PARTICLES
Form Factors
Model for elastic scattering and diffraction dissociation processes of hadrons at high energies. 2. Asymptotic behaviour of hadron form factors, 9:27317 (R;SU;In Russian)
Quark Model
How to deal with spin in the quark model at high energies, 9:27312 (R;SU)
Wave Functions
How to deal with spin in the quark model at high energies, 9:27312 (R;SU)
HAFNIUM
Electronic Structure
Excitation-autoionisation of Ti^{3+}, Zr^{3+} and Hf^{3+} in the distorted-wave approximation with exchange, 9:27263 (J;GB)
HAFNIUM ALLOYS
Magnetic Properties
Magnetic properties of $HfZn_2$, 9:26381 (J;NL)
HAIR
Chemical Analysis
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)
X-Ray Fluorescence Analysis
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)
HALDEN HEAVY BOILING WATER REACTOR
See HBWR REACTOR
HALL GENERATORS
See MHD GENERATORS
HALOGENATED ALIPHATIC HYDROCARBONS
See also CHLORINATED ALIPHATIC HYDROCARBONS
FREONS
IODINATED ALIPHATIC HYDROCARBONS
Indoor Air Pollution
Individual human exposure to volatile organic compounds encountered during normal daily activities, 9:26964 (RA;US)
HAMILTONIAN FUNCTION
Equations of Motion
New integrable classical system with two degrees of freedom, 9:27453 (R;SU;In Russian)

HARMONIC OSCILLATOR MODELS
Dynamical single-particle basis in large-amplitude nuclear motion, 9:27408 (R;DE)
HARMONIC OSCILLATORS
Lagrangian Function
Generalized Lagrangian and conservation law for the damped harmonic oscillator, 9:27459 (J;US)
HARTREE APPROXIMATION
See HARTREE-FOCK METHOD
HARTREE-FOCK METHOD
Hamiltonians
Comparison of model Hartree-Fock type calculation schemes involving various non-degenerate and quasi-degenerate intrinsic Hamiltonians, 9:27409 (R;IT)
HARVESTING EQUIPMENT
Computerized Simulation
Evaluation of logging systems designed to recover harvesting residues for energy, 9:25694 (R;US)
HATCH-2 REACTOR
Reactor Accidents
Report to Congress on abnormal occurrences, July-September 1983, 9:26033 (R;US)
HAWAII
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
Soils
Reactor sharing grant 1980-82. Final report, 9:27054 (R;US)
HAZARDOUS MATERIALS
Not for radioactive materials.
Information Systems
Hazardous materials information hotline using System 2000, 9:27226 (R;US)
Leaching
Cementing reactions in the hazardous waste environment, 9:27058 (R;US)
HBWR REACTOR
Fuel Assemblies
Irradiation history and interim postirradiation data for IFA-432, 9:25891 (R;US)
HCDA
See REACTOR CORE DISRUPTION
H-COAL PROCESS
Environmental Impacts
H-Coal environmental and health process studies: process description and sampling strategy, 9:25258 (R;US)
HD 8077
See NICKEL BASE ALLOYS
HDO
See DEUTERIUM COMPOUNDS
HEAD END PROCESSES
Fission Products
Behaviour of the gaseous radionuclides released during the first reprocessing operations, 9:25501 (R;XE;In French)
Gaseous Wastes
Behaviour of the gaseous radionuclides released during the first reprocessing operations, 9:25501 (R;XE;In French)
Radioactive Waste Processing
Behaviour of the gaseous radionuclides released during the first reprocessing operations, 9:25501 (R;XE;In French)
HEADING MACHINES
Jets
Application of high speed water jets in conjunction with a mechanical impact device, 9:26766 (R;DE;In German)
HEALTH HAZARDS
Research Programs
Department of Energy fiscal year 1984 budget on environment programs. Hearing before the Subcommittee on Natural Resources, Agriculture Research and Environment, U.S. House of Representatives, Ninety-Eighth Congress, first session, 19 Apr 1983, 9:26126 (B;US)
Risk Assessment
The risks of measuring risk, 9:27222 (BA;US)
HEALTH PHYSICS
See RADIATION PROTECTION
HEART
Radioisotope Scanning
Heart testing compound, 9:26564 (P;US)
Scintiscanning
Monoclonal antibodies as physiologic probes, 9:26566 (BA;US)
HEAT DISSIPATION
See HEAT TRANSFER
THERMAL EFFLUENTS
HEAT ENGINES
See also INTERNAL COMBUSTION ENGINES
Design
Experiments with an intrinsically irreversible acoustic heat engine, 9:26680 (J;US)
OTEC pilot plant heat engine, 9:25734 (R;US)
Operation
Experiments with an intrinsically irreversible acoustic heat engine, 9:26680 (J;US)
Protective Coatings
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
HEAT EXCHANGERS
See also DIRECT CONTACT HEAT EXCHANGERS
Biological Fouling
Biofouling and cleaning experiments for OTEC heat exchangers, 9:25743 (R;US)
Cleaning
Biofouling and cleaning experiments for OTEC heat exchangers, 9:25743 (R;US)
Comparative Evaluations
Performance measurements for residential air-to-air heat exchangers, 9:26185 (RA;US)
Design
Ceramic heat exchanger design methodology. Final report, 9:26578 (R;US)
Energy Consumption
Performance measurements for residential air-to-air heat exchangers, 9:26649 (RA;US)
Evaluation
Realistic tests of an air-to-air heat exchanger, 9:26188 (RA;US)
Experimental Data
Transient simulation and experimental verification of gas-steam and liquid-steam, shell and tube type heat exchangers, 9:25183 (R;US)
Mathematical Models
Transient simulation and experimental verification of gas-steam and liquid-steam, shell and tube type heat exchangers, 9:25183 (R;US)
Optimization
Technical, economical and energetic optimization of thermic systems, 9:25666 (R;FR;In French)
Performance
Effect of inlet and outlet shellside flow and heat transfer on the performance of HTGR straight tube heat exchangers, 9:25921 (R;US)
Performance measurements for residential air-to-air heat exchangers, 9:26649 (RA;US)
Performance Testing
Testing of the APL OTEC heat exchanger as an evaporator, 9:25741 (R;US)
HEAT PIPES
Heat pipe technology issues, 9:25947 (R;US)
Design
A heat pipe concept for cooling a liquid-pool blanket of a tandem mirror fusion reactor, 9:27599 (J;US)
Development and manufacturing of a more cost-effective heat pipe solar water heater. Final report, 9:25781 (R;US)
Magnetohydrodynamics
A heat pipe concept for cooling a liquid-pool blanket of a tandem mirror fusion reactor, 9:27599 (J;US)
Manufacturing
Development and manufacturing of a more cost-effective heat pipe solar water heater. Final report, 9:25781 (R;US)
Performance
A heat pipe concept for cooling a liquid-pool blanket of a tandem mirror fusion reactor, 9:27599 (J;US)

Performance Testing
Testing and analysis of a heat pipe solar collector, 9:25805 (J;US)

HEAT PUMPS
See also GROUND SOURCE HEAT PUMPS
Diesel Engines
Wear and service life as limitation on the use of small diesel engines for driving heat pumps, 9:26174 (R;DE;In German)
Optimization
Wear and service life as limitation on the use of small diesel engines for driving heat pumps, 9:26174 (R;DE;In German)

HEAT RESISTING ALLOYS
See also STAINLESS STEEL-304
STAINLESS STEEL-304L
STAINLESS STEEL-310
STAINLESS STEEL-316
STAINLESS STEEL-321
STAINLESS STEEL-347
Chemical Composition
Ductile aluminide alloys for high temperature applications, 9:26370 (P;US)
Corrosion
Materials compatibility with the volcanic environment. Final report, 9:26285 (R;US)
Meetings
High-temperature alloys: theory and design, 9:26278 (R;US)
Seals
Alkali-free phosphate glasses for high temperature, high electrical resistivity applications, 9:26454 (R;US)

HEAT SOURCES (RADIOISOTOPE)
See RADIOISOTOPE HEAT SOURCES

HEAT STORAGE
See also SENSIBLE HEAT STORAGE
Calculation Methods
Influence of convection on the distribution of temperature in hot water storage systems, 9:26072 (R;DE;In German)
Research Programs
Solar energy, 9:25789 (RA;US)
Stratification
Influence of convection on the distribution of temperature in hot water storage systems, 9:26072 (R;DE;In German)
Temperature Distribution
Influence of convection on the distribution of temperature in hot water storage systems, 9:26072 (R;DE;In German)

HEAT STORAGE DEVICES
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT STORAGE SYSTEMS
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT TRANSFER
Computer Calculations
Calculation of temperatures using a HP-41 CV microcomputer, 9:26678 (RA;US)
Mathematical Models
A simple mathematical model for heat transfer and its application for continuous type reheating furnaces, 9:26236 (R;GB)

HEAT TRANSMISSION

Moment of Inertia
Nuclear inertia for fission in a generalized cranking model, 9:27410 (R;US)

HEAVY OILS
See PETROLEUM

HEISENBERG MODEL
Simulation
Monte Carlo simulation of the two-dimensional classical Heisenberg model with easy-plane anisotropy, 9:27444 (J;GB)

HELIOSTATS
Computerized Control Systems
Software/firmware design specification for 10 MW/sub e/ Solar Thermal Central Receiver Pilot Plant, 9:25719 (R;US)

HELIUM
Cooling Systems
Optimized He 2 cooling systems for space application. Behavior and handling of superfluid helium at G 0, phase 1. Final Report, Sep. 1981, 9:26651 (R;DE;GE)
Corrosive Effects
Corrosion and oxidation of vanadium-base alloys in helium environments, 9:26308 (RA;US)
Electron Reactions
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)
Ion-Atom Collisions
Reactive resonances and angular distributions in the rotating linear model ($F + H_2 \rightarrow HF + H$; $He + H_3^+ \rightarrow HeH^+ + H$), 9:27260 (R;US)
Leaks
Intercomparison of the calibration of helium leaks for use in leak detection, 9:26641 (R;LU)
Removal
Analysis of pumping requirement for exhausting duct in close vicinity of divertor in tokamak reactor, 9:27603 (J;US)
Superfluidity
Optimized He 2 cooling systems for space application. Behavior and handling of superfluid helium at G 0, phase 1. Final Report, Sep. 1981, 9:26651 (R;DE;GE)
HELIUM 3 TARGET
Deuteron Reactions
Cross section and vector analyzing power iT_{11} of the processes ^3He(d vector,d)^3He(d vector,p)^4He between 15 and 40 MeV, 9:27385 (J;US)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM 4 TARGET
Electron Reactions
Pion electroproduction on the ^4He nuclei and p-odd nuclear forces, 9:27341 (R;UA;In Russian)
HELIUM DILUTION REFRIGERATORS
Efficiency
Thermodynamic analysis of a refrigeration cycle with flow imbalance, 9:26645 (R;SU;In Russian)
HELIUM METHOD
See ISOTOPE DATING
HEMATITE
Deposition
Deposition of model crud on boiling zircaloy surfaces at high temperature, 9:26367 (J;US)
HEMATOPORPHYRINS
Labelling
Radionuclide labeled lymphocytes for therapeutic use, 9:27152 (P;US)
HEMIC DISEASES
Etiology
Periodic neutropenia and monocytopenia, 9:27158 (J;US)
HEMOCYANIN
X-Ray Spectroscopy
X-ray absorption spectroscopy of hemocyanin and hemerythrin, 9:27102 (R;US)
HEPTANE
Refractivity
Quantitative analysis without analyte identification by refractive index detection, 9:26487 (J;US)
Volumetric Analysis
Quantitative analysis without analyte identification by refractive index detection, 9:26487 (J;US)
HERBS
Populations
Surveys for Astragalus beatleyae on Nellis Bombing Range, Nye County, Nevada, 9:27070 (R;US)
Spatial Distribution

Information Systems
Use of SAS in the IDB, 9:25495 (R;US)
Inventories
Use of SAS in the IDB, 9:25495 (R;US)
Monitored Retrievable Storage
Simulation of the MRS receiving and handling facility, 9:25478 (R;US)
Packaging
Construction and inservice inspection rules for nuclear spent fuel and high-level waste transport packagings, 9:25468 (RA;US)
Design rules for containment systems of nuclear spent fuel and high-level waste transport packagings, 9:25470 (RA;US)
Development of waste package designs for disposal in a salt repository, 9:25493 (RA;US)
Long-term performance of mateials used for high-level waste packaging. Third quarterly report, year two, October 1983-December 1983, 9:25510 (R;US)
Rail Transport
Risk analysis of transporting vitrified high-level radioactive waste by train, 9:25537 (RA;US)

Transport
OLDAGE, a computer program for calculating nuclear fuel cycle flow balances. Monitored Retrievable Storage study. FY-83 studies. Task C (Computer program used to calculate amount of spent fuel and/or high-level waste transferred to and from various fuel cycle facilities), 9:25477 (R;US)
Storage and transportation of spent fuel and high-level waste using dry storage casks, 9:25419 (RA;US)
Vitrification
Underground disposal of vitrified high level radioactive waste: a review of research and development, 9:25483 (R;GB)

HIGH-PURITY GE DETECTORS
Design
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Energy Resolution
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Germanium-scintillation camera coincidence detection studies for imaging single photon emitters, 9:27142 (J;US)
Performance
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Phase Shift
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Threshold Energy
Germanium-scintillation camera coincidence detection studies for imaging single photon emitters, 9:27142 (J;US)
Time Resolution
Characteristics of high-rate energy spectroscopy systems using HPGe coaxial detectors and time-variant filters, 9:26850 (J;US)
Timing Properties
Germanium-scintillation camera coincidence detection studies for imaging single photon emitters, 9:27142 (J;US)

HIGH-TEMPERATURE FUEL CELLS
See also MOLTEN CARBONATE FUEL CELLS
Research Programs
Advanced fuel cell development, 9:26171 (RA;US)

HIGH-VOLTAGE PULSE GENERATORS
Electrical Properties
Particular applications, 9:26667 (R;US)

HIROSHIMA
A-Bomb Survivors
Bibliography of literature relevant to the reassessment of A-bomb radiation dosimetry in Hiroshima and Nagasaki, 9:27168 (R;US)

HO2
See HYDROPEROXY RADICALS

HODOSCOPES
Design
Measurement of electronic shower position and size with a saturated avalanche tube hodoscope and a fine grained scintillation hodoscope, 9:26865 (J;US)
Performance
A time-of-flight hodoscope saving the number of photomultipliers, 9:26870 (J;US)
Performance Testing
Measurement of electronic shower position and size with a saturated avalanche tube hodoscope and a fine grained scintillation hodoscope, 9:26865 (J;US)
Photomultipliers
A time-of-flight hodoscope saving the number of photomultipliers, 9:26870 (J;US)
Plastic Scintillation Detectors
A time-of-flight hodoscope saving the number of photomultipliers, 9:26870 (J;US)
Scintillation Counters
Measurement of electronic shower position and size with a saturated avalanche tube hodoscope and a fine grained scintillation hodoscope, 9:26865 (J;US)
Spatial Resolution
Measurement of electronic shower position and size with a saturated avalanche tube hodoscope and a fine grained scintillation hodoscope, 9:26865 (J;US)
Time-of-Flight Method
A time-of-flight hodoscope saving the number of photomultipliers, 9:26870 (J;US)
Wires
Measurement of electronic shower position and size with a saturated avalanche tube hodoscope and a fine grained scintillation hodoscope, 9:26865 (J;US)

HOG FUEL
See WOOD WASTES

HOPPERS
Valves
Review of valve designs for coal-gasification lockhopper service, 9:25223 (R;US)

HOSPITALS
Energy Analysis
Health Care Facilities Energy Analysis Study. A report on the development of a manual system to evaluate energy efficiency in health care facilities. Task 5, final report, 9:26197 (R;US)
Energy Efficiency
Health Care Facilities Energy Analysis Study. A report on the development of a manual system to evaluate energy efficiency in health care facilities. Task 5, final report, 9:26197 (R;US)
Solar Water Heaters
Solar water-heating system refurbishments: Ingham County Geriatric Medical Care Facility. Final technical report, 9:25765 (R;US)

HOT WATER HEATERS
See WATER HEATERS

HOTELS
Energy Demand
Proposed simplified methods for predicting thermal behaviour and energy consumption of buildings. Technical memo, 9:26213 (R;US)
Metering
Proposed simplified methods for predicting thermal behaviour and energy consumption of buildings. Technical memo, 9:26213 (R;US)

HOT-WATER SYSTEMS
Geochemical Surveys
Geology, resistivity, and hydrogeochemistry of the Ojo Caliente Hot Springs area, northern New Mexico, 9:25844 (J;US)
Geology
Geology, resistivity, and hydrogeochemistry of the Ojo Caliente Hot Springs area, northern New Mexico, 9:25844 (J;US)
Resistivity Surveys
Geology, resistivity, and hydrogeochemistry of the Ojo Caliente Hot Springs area, northern New Mexico, 9:25844 (J;US)

HOUSES
Air Quality
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26981 (RA;US)
Attached Greenhouses
Attached-sunspace designs: A nationwide economic appraisal, 9:25786 (J;US)
Cooling Systems
Underground-desiccant cooling system, 9:25773 (R;US)
Design
Passive solar residential design and construction projects in the southeastern United States. Technical summary and final report, 9:25759 (R;US)
Electric Heating
Energy cost-effectiveness of electric home heating, 9:26216 (J;US)
Energy Conservation
Rational use of energy in the district heating service area of the Stadtwerke Wolfsburg AG, 9:26175 (R;DE;In German)

Energy Efficiency
Indoor air quality in new energy-efficient houses and retrofitted houses, 9:26121 (RA;US)
Passive Solar Heating Systems
Attached-sunspace designs: A nationwide economic appraisal, 9:25786 (J;US)
Passive solar collector project. Final report, 9:25772 (R;US)
Passive solar residential design and construction projects in the southeastern United States. Technical summary and final report, 9:25759 (R;US)
Photovoltaic Power Supplies
Photovoltaics for residential applications, 9:25708 (R;US)
Solar Cell Arrays
Thermal modeling of residential photovoltaic arrays, 9:25684 (R;US)
Solar Space Heating
Solar home heating in Michigan, 9:25768 (R;US)
Solar Water Heating
Solar home heating in Michigan, 9:25768 (R;US)
Space Heating
Rational use of energy in the district heating service area of the Stadtwerke Wolfsburg AG, 9:26175 (R;DE;In German)
Ventilation
Insturmentation for a radon research house, 9:26980 (RA;US)
Ventilation Systems
Performance measurements for residential air-to-air heat exchangers, 9:26649 (RA;US)

HTGR TYPE REACTORS
Coated Fuel Particles
Material properties and fission product reduction of SiC coatings, 9:25927 (RA;DE;In German)
Design
Status of HTGR steam cycle/cogeneration lead plant design, 9:25958 (R;US)
Fission Product Release
Diffusion of molybdenum through H-451 graphite, 9:26009 (R;US)
Heat Exchangers
Effect of inlet and outlet shellside flow and heat transfer on the performance of HTGR straight tube heat exchangers, 9:25921 (R;US)
Materials Testing
Friction and wear behavior of Inconel 625 with Ni_3Ti, TiN, TiC-CVD coatings in an HTGR environment, 9:25923 (R;US)
Neutron Reflectors
Suitability tests for HTR reflector graphites, 9:25925 (RA;DE)
Reactor Control Systems
HTGR steam cycle/cogeneration control system structure and operator interface, 9:25983 (R;US)
Reactor Materials
Changes in the macroporosity of nuclear reactor graphite caused by oxygen corrsion, 9:26447 (RA;DE)
Contributions for the third international carbon conference CARBON '80, 9:26444 (R;DE;In German and English)
Effect of creep-fatigue damage relationships upon HTGR heat exchanger design, 9:25922 (R;US)
FRG/US - cooperation on the characterization of reactor graphites, 9:25926 (RA;DE;In German)
High fluence creep behaviour of near isotropic pitch coke graphite, 9:26445 (RA;DE)
High temperature irradiation behaviour and creep of graphitic matrix material in a low neutron flux, 9:26446 (RA;DE)
Influence of notch and specimengeometry on the deformation as well as on the fracture mechanics of a reactor graphite, 9:26448 (RA;DE;In German)
Loop and capsule in pile devices for irradiation studies of high-temperature resistant materials, 9:25924 (RA;UA;In Russian)
Suitability tests for HTR reflector graphites, 9:25925 (RA;DE)
Research Programs
Loop and capsule in pile devices for irradiation studies of high-temperature resistant materials, 9:25924 (RA;UA;In Russian)
Steam Generators
Effect of creep-fatigue damage relationships upon HTGR heat exchanger design, 9:25922 (R;US)

HUDSON RIVER
Power Plants
Impingement losses of white perch at Hudson River power plants: magnitude and biological significance, 9:25878 (J;US)
HUGENHOLTZ-PINES THEORY
See HYDROGEN
HUMAN POPULATIONS
See also MINORITY GROUPS
Behavior
Determinants of residential energy use, 9:26113 (RA;US)
Genetics
Continuous migration model with stable demography, 9:27099 (J;AT)
Radiation Doses
Evaluation of doses to workers and general public from the carriage of radiopharmaceuticals: an application of the INTERTRAN code, 9:25534 (RA;US)
Evaluation of the radiological risk resulting from road transportation of tritiated water, 9:25413 (RA;US)
Optimization of radiation protection in the transportation of radioisotopes, 9:25535 (RA;US)
Radiation exposure resulting from the transport of radioactive materials within the United Kingdom, 9:25542 (RA;US)
Radiation exposure due to railway transport of radioactive materials, 9:25544 (RA;US)
World-wide risk assessment of the transportation of radioactive materials, 9:25412 (RA;US)
HUMANS
See HUMAN POPULATIONS
HYBRID ELECTRIC-POWERED VEHICLES
Computer Codes
Hybrid vehicle simulation. Master's thesis, 9:26259 (R;US)
Computerized Simulation
Hybrid vehicle simulation. Master's thesis, 9:26259 (R;US)
Permanent Magnets
Study and review of permanent magnets for electric vehicle propulsion motors, 9:26256 (R;US)
HYBRID REACTORS
Design
High field compact tokamak reactor (HFCTR) conceptual design. Final report, 9:27526 (R;US)
HYDRAULIC FRACTURES
Stresses
Determination of in situ stress from anelastic strain recovery measurements of oriented core: comparison to hydraulic fracture stress measurements in the Rollins Sandstone, Piceance Basin, Colorado, 9:25339 (R;US)
HYDRAULIC RAMS
See PUMPS
HYDRIDES
See also SILANES
Nuclear Magnetic Resonance
NMR studies of electronic structure and hydrogen diffusion in transition metal hydrides, 9:27441 (R;US)
HYDROBROMIC ACID
Chemical Reaction Kinetics
Variational transition state theory, 9:26570 (RA;US)
HYDROCARBONS
See also ALKYNES
ANTHRACENE
BENZENE
BENZOPYRENE
NAPHTHALENE
PHENANTHRENE
POLYCYCLIC AROMATIC HYDROCARBONS
TETRALIN
TOLUENE
Aerosol Monitoring
Application of selective solvent extraction to carbonaceous aerosols, 9:26986 (RA;US)
Biosynthesis
Microalgal production of oils and lipids, 9:25701 (BA;US)
Conversion
Molecular ingredients of heterogeneous catalysis, 9:26268 (R;US)
Cracking
Catalysis using hydrous metal oxide ion exchangers, 9:26524 (P;US)

Environmental Transport
Ozone and hydrocarbon measurements in recent oxidant transport studies, 9:26993 (R;US)
Phase Transformations
Heat-capacity study of phase transitions in the liquid-crystal racemic 4-(2'-methylbutyl)phenyl-4'-n-nonyloxybiphenyl-4-carboxylate (2M4P9OBC), 9:26459 (J;US)
Nature of the smectic-A - smectic-C phase transition in liquid crystals, 9:26462 (J;US)
Solvent Extraction
Application of selective solvent extraction to carbonaceous aerosols, 9:26986 (RA;US)
Synthesis
Method and apparatus for synthesizing hydrocarbons, 9:25641 (P;US)

HYDROCYANIC ACID
Chemical Reaction Kinetics
Theoretical studies of chemical reactions of importance in flames, 9:26569 (RA;US)

HYDROELECTRIC POWER
Homemade electricity: an introduction to small-scale wind, hydro, and photovoltaic systems, 9:26163 (R;US)
Resource Assessment
Federal study evaluates new hydro potential, 9:25650 (J;US)

HYDROELECTRIC POWER PLANTS
See also PUMPED STORAGE POWER PLANTS
SMALL-SCALE HYDROELECTRIC POWER PLANTS
Efficiency
More power from hydro, 9:25651 (J;US)
Environmental Impacts
Eagle Rock hydroelectric project, FERC No. 2789 - Idaho. Final environmental impact statement, 9:27083 (R;US)
Outages
More power from hydro, 9:25651 (J;US)
Reliability
More power from hydro, 9:25651 (J;US)
Site Selection
Federal study evaluates new hydro potential, 9:25650 (J;US)

HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROGEN
Adsorption
Work function-chemisorption study of hydrogen on iron: kinetics and strain effects, 9:26387 (J;US)
Atom-Molecule Collisions
Reactive resonances and angular distributions in the rotating linear model ($F + H_2 \rightarrow HF + H$; $He + H_3^+ \rightarrow HeH^+ + H$), 9:27260 (R;US)
Chemical Bonds
Hydrogen bond breaking by oxygen and nitrogen, 9:26536 (J;US)
Chemical Reaction Kinetics
Theoretical studies of chemical reactions of importance in flames, 9:26569 (RA;US)
Combustion
Collision dynamics studies of selected hydrogen/oxygen reactions, 9:25602 (RA;US)
Experimental facilities to study hydrogen combustion and detonation, 9:26056 (R;US)
Hydrogen diffusion flames burning in a Mark-III containment design, 9:26031 (R;US)
Combustion Kinetics
Chemical kinetics in hydrogen-air flames, 9:26573 (R;US)
Variational transition state theory, 9:26570 (RA;US)
Consumption Rates
SRC-I naphtha reforming study. Part 1: SRC-I naphtha distillation and hydrotreating. Part 2: SRC-I naphtha reforming. Final technical report, 9:25195 (R;US)
Detonations
Experimental facilities to study hydrogen combustion and detonation, 9:26056 (R;US)
Excited States
Diatomics-in-molecules approximation for Rydberg states of H_3, 9:27265 (J;US)
Photoionization
Photoelectron studies of excited molecular states: H_2C ^{1}/PI//sub u/ and N_2O_3 ^{1}/PI//sub u/, 9:27255 (R;US)
Reaction Kinetics
Theoretical study of deuterium isotope effects in the reactions $H_2 + CH_3$ and $H + CH_4$, 9:26517 (J;US)
Rydberg Correction
Diatomics-in-molecules approximation for Rydberg states of H_3, 9:27265 (J;US)
Rydberg States
Photoelectron studies of excited molecular states: H_2C ^{1}/PI//sub u/ and N_2O_3 ^{1}/PI//sub u/, 9:27255 (R;US)

HYDROGEN 1 MINUS BEAMS
Beam Production
Extraction of H^- beams from a magnetically filtered, multicusp source, 9:26803 (R;US)
Production and neutralization of negative ions and beams. AIP Conference Proceedings No. 111 , 9:26800 (R;US)
Ion Sources
Status of the new high intensity H^- injector at LAMPF, 9:26806 (R;US)
Meetings
Production and neutralization of negative ions and beams. AIP Conference Proceedings No. 111 , 9:26800 (R;US)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN BROMIDES
See HYDROBROMIC ACID

HYDROGEN CYANIDES
See HYDROCYANIC ACID

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS 2 PLUS
For H_3^+ ions.
Ion-Atom Collisions
Reactive resonances and angular distributions in the rotating linear model ($F + H_2 \rightarrow HF + H$; $He + H_3^+ \rightarrow HeH^+ + H$), 9:27260 (R;US)

HYDROGEN ISOTOPES
See also DEUTERIUM
TRITIUM
Gaseous Diffusion Process
Proposed method of hydrogen isotope separation using palladium alloy membranes, 9:25585 (RA;GB)

HYDROGEN MINUS 1 BEAMS
See HYDROGEN 1 MINUS BEAMS

HYDROGEN NITRATES
See NITRIC ACID

HYDROGEN PRODUCTION
Biophotolysis
Biochemical and physiological characterization of hydrogenase and hydrogen metabolism in microalgae, 9:25596 (RA;US)
Photo/biological production of hydrogen and oxygen. Progress report, June 1982-May 1983, 9:25595 (RA;US)
Study of hydrogen production by tropical marine photosynthetic bacteria for applied systems. Part III, 9:25591 (RA;US)
Water-splitting photosystem II preparations from spinach: structural, biochemical, and biophysical properties, 9:25597 (RA;US)
Biosynthesis
Genetic engineering of photosynthetic hydrogen evolution in heterocystous blue-green algae, 9:25594 (RA;US)
Light and dark production of hydrogen by photosynthetic bacteria, 9:25592 (RA;US)
Photobiological production of hydrogen by photosynthetic bacteria, 9:25593 (RA;US)
Producing hydrogen with a bacteriorhodopsin solar energy cell. Final technical report, 9:25589 (R;US)
Photoelectrolysis
Photo-Kolbe reaction in biomass wastestreams, 9:25598 (RA;US)
Thermochemical Processes
Design of GA thermochemical water-splitting process for the Mirror Advanced Reactor System, 9:27562 (R;US)

Engineering scoping study of the production of hydrogen and oxygen from the cerium oxide-sodium phosphate/carbonate thermochemical cycle, 9:25590 (R;US)

HYDROGEN STORAGE
Coated silica shells: an advanced hydrogen storage system, 9:25600 (R;US)
Research Programs
Iron-titanium 'sponge' can store hydrogen for vehicles, powerplants, 9:25601 (J;US)

HYDROGEN SULFATES
See SULFURIC ACID

HYDROGEN SULFIDES
Catalytic Effects
Integration of advanced preparation with coal liquefaction. Second quarterly technical progress report, January 1-March 31, 1984, 9:25208 (R;US)
Ion-Molecule Collisions
Photoionization study of $(H_2S)_2$ and $(H_2S)_3$, 9:26519 (J;US)
Photoionization
Photoionization study of $(H_2S)_2$ and $(H_2S)_3$, 9:26519 (J;US)

HYDROGENASE
See HYDROGENASES

HYDROGENASES
Code number 1.12
Biochemistry
Biochemical and physiological characterization of hydrogenase and hydrogen metabolism in microalgae, 9:25596 (RA;US)
Genetic engineering of photosynthetic hydrogen evolution in heterocystous blue-green algae, 9:25594 (RA;US)
Enzyme Activity
Genetic engineering of photosynthetic hydrogen evolution in heterocystous blue-green algae, 9:25594 (RA;US)
Purification
Biochemical and physiological characterization of hydrogenase and hydrogen metabolism in microalgae, 9:25596 (RA;US)

HYDROGENATION
Catalysts
Catalytic hydrotreatment studies with model compounds. Quarterly report, January 1-March 31, 1984 (Effects of water), 9:25212 (R;US)
Development of significantly improved catalysts for coal liquefaction and upgrading of coal extracts. Quarterly progress report No. 8, July 1-September 30, 1983, 9:25198 (R;US)
Hydrotreatment catalyst activity enhancement. Quarterly report No. 3, February 1-April 30, 1984, 9:25215 (R;US)
Microflow reactor for studying catalyst deactivation, 9:25228 (R;US)
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, May-July 1983, 9:25185 (R;US)

HYDROLOGY
Data Processing
Warmwassersphaere - handling and processing of hydrographic data, 9:27229 (R;DE)

HYDROPEROXY RADICALS
HO2
Chemical Reaction Kinetics
Collision dynamics studies of selected hydrogen/oxygen reactions, 9:25602 (RA;US)

HYDROXIDES
Catalytic Effects
Hydroxide-catalyzed synthesis of heterocyclic aromatic amine derivatives from nitriles, 9:26542 (J;US)
Fluorescence
Immobilized enzyme system for the conversion of benzo[a]pyrene to fluorescent metabolites, 9:26504 (J;US)

HYDROXY COMPOUNDS
For organic compounds only and excluding SACCHARIDES, GLYCOSIDES and HYDROXY ACIDS.
See also ALCOHOLS
PHENOLS
Infrared Spectra
Determination of reactive components in silicone foams, 9:26486 (J;US)

HYDROXYBENZENE
See PHENOL

HYDROXYL IONS
See HYDROXIDES

HYDROXYL RADICALS
Chemical Reaction Kinetics
Theoretical studies of chemical reactions of importance in flames, 9:26569 (RA;US)
Variational transition state theory, 9:26570 (RA;US)
Combustion Kinetics
Variational transition state theory, 9:26570 (RA;US)
Scavenging
Role of hydroxyl radical svengers in preventing DNA strand breaks induced by X irradiation of toluene-treated Escherichia coli, 9:27176 (J;US)

HYDROXYNAPHTHALENES
See NAPHTHOLS

HYDROXYPROLINE
Radiation Chemistry
Role of the local environment on the radiation chemistry of biological molecules: proline in single crystals. Progress report, July 15, 1983-July 14, 1984, 9:26558 (R;US)

HYDROXYTOLUENES
See CRESOLS

HYDROXYXYLENES
See XYLENOLS

HYPERFRAGMENTS
See HYPERNUCLEI

HYPERNUCLEI
Research Programs
Hypernuclear research at the AGS, 9:27274 (R;US)

I

IAEA SAFEGUARDS
Technology Assessment
Further development of international safeguards, 9:25581 (R;US)

I-BEAM TYPE REACTORS
Design
Inertial confinement fusion by light ion beam, 9:27591 (BA;US)
Heavy Ion Accelerators
Overview of MRB fusion, 9:27506 (R;US)
Reviews
Inertial confinement fusion by light ion beam, 9:27591 (BA;US)

ICE
Shock Waves
Hugoniot of water ice, 9:27245 (R;US)

ICR HEATING
Dispersion Relations
Characteristics of ICRF heating near the second harmonic, 9:27489 (J;AT)

IDAHO
See also RAFT RIVER VALLEY
Economic Development
Growth and energy development in the rural west, 9:27089 (RA;US)
Geothermal Fields
Evidence of former higher temperatures from alteration minerals, Bostic 1-A Well, Mountain Home, Idaho, 9:25831 (J;US)

IDAHO CHEMICAL PROCESSING PLANT
Chemical Effluents
Revised ICPP effluent data 1976 through 1983, 9:27039 (R;US)
Radioactive Effluents
Revised ICPP effluent data 1976 through 1983, 9:27039 (R;US)

IDAHO NATIONAL ENGINEERING LABORATORY
Prior to 1976 known as NRTS and older material is so indexed.
Radiation Monitoring
1983 Environmental monitoring program report for Idaho National Engineering Laboratory Site, 9:27028 (R;US)
Radioactive Waste Facilities
Decontamination and decommissioning of the TAN/TSF-3 concrete pad. Final report, 9:25499 (R;US)

IDENTIFICATION SYSTEMS
Capacitive label reader, 9:25582 (P;US)
IEA
See INTERNATIONAL ENERGY AGENCY
IGNITION
Ignition studies, 9:26758 (RA;US)
ILLINOIS
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
Geologic Structures

Mechanisms of intergranular failures in Alloy 600 in high temperature environments, 9:26276 (R;US)

INCONEL 625
Wear Resistance
Friction and wear behavior of Inconel 625 with Ni_3Ti, TiN, TiC-CVD coatings in an HTGR environment, 9:25923 (R;US)
INCONEL 706
Physical Radiation Effects
Ring ductility of irradiated Inconel 706 and Nimonic PE16, 9:26317 (R;US)
INCONEL 718
Creep
Low strain, long life creep fatigue of AF2-1DA and INCO 718, 9:26330 (R;US)
Strains
Low strain, long life creep fatigue of AF2-1DA and INCO 718, 9:26330 (R;US)
INCONEL X750
Electrochemical Corrosion
Galvanic corrosion of an aluminum O-ring, 9:26346 (R;US)
INDIA
Geothermal Resources
Geothermal direct use in India, 9:25816 (J;US)
INDIAN POINT-2 REACTOR
Environmental Effects
Population biology in the courtroom: the Hudson River controversy, 9:27208 (J;US)
INDIANA
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
Geologic Structures
New Madrid seismotectonic study. Activities during fiscal year 1982, 9:27233 (R;US)
Seismicity
New Madrid seismotectonic study. Activities during fiscal year 1982, 9:27233 (R;US)
INDIUM
Auger Electron Spectroscopy
Data acquisition and processing modes for quantitative Auger electron spectroscopy, 9:26506 (J;US)
INDIUM ALLOYS
Use of layer strains in strained-layer superlattices to make devices for operation in new wavelength ranges, E.G., InAsSb at 8 to 12 μm (InAs/sub 1-x/Sb/sub x/), 9:26875 (P;US)
INDIUM ARSENIDES
Strained layer superlattice materials for millimeter wave FET's. Phase I. Final report, 9:26453 (R;US)
Use of layer strains in strained-layer superlattices to make devices for operation in new wavelength ranges, E.G., InAsSb at 8 to 12 μm (InAs/sub 1-x/Sb/sub x/), 9:26875 (P;US)
INDIUM PHOSPHIDE SOLAR CELLS
Electrical Properties
Contribution to the study of solar cells. ITO/InP p cells, 9:25680 (R;FR;In French)
Fabrication
Contribution to the study of solar cells. ITO/InP p cells, 9:25680 (R;FR;In French)
Sputtering
Contribution to the study of solar cells. ITO/InP p cells, 9:25680 (R;FR;In French)
INDIUM SELENIDE SOLAR CELLS
Crystal Growth
Development of stable high-efficiency polycrystalline thin film solar cells based on $CuInSe_2$, 9:25689 (R;US)
Performance
Development of stable high-efficiency polycrystalline thin film solar cells based on $CuInSe_2$, 9:25689 (R;US)
INDIUM SELENIDES
Chemical Vapor Deposition
Chemical vapor deposited copper indium diselenide thin film materials research. Final report, 15 November 1982-14 January 1984, 9:25690 (R;US)
INDOOR AIR POLLUTION
Air Pollution Abatement
Control strategies to protect indoor air quality, 9:26118 (RA;US)
Indoor air pollution and public policy: regulatory issues, 9:27049 (RA;US)
International symposium on indoor air pollution, health and energy conservation. Extended summaries, 9:27186 (R;US)
Air Samplers
Trace organic components in office space, 9:26932 (RA;US)
Carbon Monoxide
Ventilation requirements in buildings. II. Particulate matter and carbon monoxide from cigarette smoking, 9:26997 (J;GB)
Chemical Composition
International symposium on indoor air pollution, health and energy conservation. Extended summaries, 9:27186 (R;US)
Correlations
Survey of indoor formaldehyde levels and apparent building-related illness in conventional housing in Delaware County, Indiana, 9:27192 (RA;US)
Health Hazards
Chemical dusts, vapours and fumes as causes of asthma, 9:26956 (RA;US)
Environmental control of indoor air pollution with subsequent challenge testing in humans, 9:27189 (RA;US)
Health effects of indoor formaldehyde exposure, 9:27195 (RA;US)
Indoor climate problems in Danish dwellings. Complaints and diseases referred to the type and materials of dwellings and the use of airings, 9:27188 (RA;US)
Indoor climate in low-ventilated day-care institutions, 9:26958 (RA;US)
International symposium on indoor air pollution, health and energy conservation. Extended summaries, 9:27186 (R;US)
Multivariate analysis of health effects in a cohort of mobile home residents exposed to formaldehyde, 9:27194 (RA;US)
Legal Aspects
Legal aspects of indoor air pollution in energy efficient residences, 9:27046 (RA;US)
Mathematical Models
Dynamic modeling of indoor air quality using high resolution measurements, 9:26922 (RA;US)
Dynamic simulation of radon daughter exposure in apartments using solar rockbed heat storage systems, 9:27026 (RA;US)
Indoor air pollution simulations using dynamic multi-compartment models, 9:26919 (RA;US)
Indoor air pollution due to organic gases and vapours of solvents in building materials., 9:26920 (RA;US)
Predicting radon fluxes and source locations using multichamber analysis, 9:27025 (RA;US)
Source emissions and predictive modeling of indoor air pollution, 9:26921 (RA;US)
Monitoring
Monitoring indoor pollutants in two small office buildings to support a modeling study, 9:26994 (R;US)
Pollution Regulations
Approach to a national indoor air pollution policy, 9:27048 (RA;US)
Indoor air-pollution: some Canadian experiences, 9:26971 (RA;US)
Indoor air pollution: formaldehyde as an example of the approach in the Netherlands, 9:27047 (RA;US)
Nordic guidelines for building regulation regarding indoor air quality, 9:26194 (RA;US)
Strategy for reduction of toxic indoor emissions, 9:26972 (RA;US)
Risk Assessment
Indoor air quality in new energy-efficient houses and retrofitted houses, 9:26121 (RA;US)
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26981 (RA;US)
Performance measurements for residential air-to-air heat exchangers, 9:26649 (RA;US)
Spatial Distribution
Spatial variation of carbon monoxide and oxides of nitrogen concentrations inside residences, 9:26948 (RA;US)
Total Suspended Particulates
Ventilation requirements in buildings. II. Particulate matter and carbon monoxide from cigarette smoking, 9:26997 (J;GB)

INDUCED RADIOACTIVITY
See RADIOACTIVITY
INDUCTION FURNACES
Improved mathematical model for melt flow in induction furnaces and comparison with experimental data, 9:26374 (J;US)
INDUSTRIAL ACCIDENTS
Computer Codes
Computer programs for statistical graphics in safety analysis, 9:25293 (BA;US)
Information Systems
Use of the computer in processing accident, injury, illness and employment information in United States mines, 9:25295 (BA;US)

Catalytic Effects
Liquid hydrocarbon fuels from syngas, 9:25614 (RA;US)
Schladitz whiskers as catalysts and catalyst supports applied to methanol synthesis, 9:25637 (R;US)
Corrosion
Simulations of erosion/corrosion surface chemical reactions with a laser beam, 9:26348 (R;US)
Electron Reactions
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)
Environmental Transport
Transport of trace metals in the Magela Creek system, Northern Territory. I. Concentrations and loads of iron, manganese, cadmium, copper, lead and zinc during flood periods in the 1978-1979 wet season, 9:25529 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. II. Trace metal concentrations in the Magela Creek billabongs at the end of the 1978 dry season, 9:25530 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. III. Billabong sediments, 9:25531 (R;AU)
Form Factors
Magnetic form factors, 9:26401 (J;FR)
Indoor Air Pollution
Aluminum, iron, and lead concentrations of personal, indoor, and outdoor respirable particles, 9:26951 (RA;US)
Neutron Reactions
Scattering of MeV neutrons from elemental iron, 9:27396 (J;US)
Photochemical Reactions
Reactions of group 8 transition-metal ions (Fe^+, Co^+, and Ni^+) with cyclic hydrocarbons in the gas phase, 9:26531 (J;US)
Physical Radiation Effects
Crystallography of vacancy loops in body-centred-cubic metals, 9:26338 (RA;GB)
Vacancy formation and migration energies in strained crystals, 9:26337 (RA;GB)
Surface Potential
Work function-chemisorption study of hydrogen on iron: kinetics and strain effects, 9:26387 (J;US)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)
IRON 52
Diffusion
Cation self-diffusion in Fe_2O_3, 9:26404 (R;US)
IRON 54 TARGET
Proton Reactions
Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni, 9:27394 (J;NL)
IRON 55
Biogeochemistry
Aquatic chemistry of plutonium in seasonally anoxic lake waters, 9:27080 (J;GB)
Radioecological Concentration
Aquatic chemistry of plutonium in seasonally anoxic lake waters, 9:27080 (J;GB)
IRON 56 REACTIONS
Fusion Reactions
Identification of new astatine isotopes using the gas-filled magnetic separator, SASSY, 9:27403 (R;US)
IRON 56 TARGET
Proton Reactions
Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni, 9:27394 (J;NL)
IRON 59
Diffusion
Cation self-diffusion in Fe_2O_3, 9:26404 (R;US)
IRON ALLOYS

STEELS

Corrosion Resistance
Improved oxidation sulfidation resistance of Fe-Cr-Ni alloys, 9:26372 (P;US)

Creep
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation: irradiation creep and swelling, 9:26291 (RA;US)
Sulfur and antimony segregation to creep cavity surfaces in Ni and an FCC Fe-Ni-Cr alloy, 9:26280 (R;US)

Microstructure
Transmutation of manganese - substituted steels in STARFIRE, 9:26316 (R;US)

Physical Radiation Effects
Comparison of neutron and heavy-ion damage in a single-phase austenite, 9:26400 (BA;US)

Scaling
Oxidation-sulfidation behavior of Fe-Cr-Ni alloys containing additions of Zr, Nb, OR Ti, 9:26279 (R;US)

Segregation
Sulfur and antimony segregation to creep cavity surfaces in Ni and an FCC Fe-Ni-Cr alloy, 9:26280 (R;US)

Sulfidation
Oxidation-sulfidation behavior of Fe-Cr-Ni alloys containing additions of Zr, Nb, OR Ti, 9:26279 (R;US)

Swelling
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation: irradiation creep and swelling, 9:26291 (RA;US)
Swelling in simple ferritic alloys irradiated to high fluence, 9:26293 (RA;US)

IRON COMPLEXES

Absorption Spectra
Kinetic study of reactions involving ferrous nitrosyl complexes, 9:25252 (RA;US)

Chemical Reaction Kinetics
Kinetic study of reactions involving ferrous nitrosyl complexes, 9:25252 (RA;US)
Thermodynamics and kinetics of the coordination of NO to Fe(II)NTA in aqueous solutions, 9:25253 (RA;US)

Electron Transfer
One-electron transfer equilibria and kinetics of N-methylphenothiazine in micellar systems, 9:26526 (J;US)

Photochemical Reactions
Quantum yield determinations for sub-nanosecond-lived excited states and photoproducts. Applications to inorganic complexes and photosynthetic models, 9:26554 (J;US)

Redox Reactions
One-electron transfer equilibria and kinetics of N-methylphenothiazine in micellar systems, 9:26526 (J;US)

IRON COMPOUNDS
See also IRON NITRIDES
IRON OXIDES
IRON SULFIDES

Catalytic Effects
Investigations on the application of iron salt containing waste acids for the catalytic gasification of coals and cokes with H_2/H_2O, 9:25182 (R;DE;In German)

IRON NITRIDES

Magnetization
Moessbauer and magnetic studies of ϵ-Fe/sub x/N, $2<x<3$, 9:26410 (J;US)

Moessbauer Effect
Moessbauer and magnetic studies of ϵ-Fe/sub x/N, $2<x<3$, 9:26410 (J;US)

X-Ray Diffraction
Moessbauer and magnetic studies of ϵ-Fe/sub x/N, $2<x<3$, 9:26410 (J;US)

IRON OXIDES

Solar Thermal Power Plants
1 MWe central receiver type solar thermal electric power pilot plant, 9:25727 (RA;US)
Tower Focus Power Plants
1 MWe central receiver type solar thermal electric power pilot plant, 9:25727 (RA;US)
JET ENGINE FUELS
Prices
Petroleum Marketing Monthly, February 1984, 9:25316 (R;US)
Sales
Petroleum Marketing Monthly, February 1984, 9:25316 (R;US)
JET MODEL
Reviews
Fragmentation of quarks and gluons, 9:27307 (R;DE)
JETS
Heat Transfer
Investigation of heat and mass transport in turbulent liquid jets, 9:25737 (R;US)
Mass Transfer
Investigation of heat and mass transport in turbulent liquid jets, 9:25737 (R;US)
JINR SYNCHROTRON
Research Programs
Program of experimental study at JINR synchrophasotron in the range of relativistic nuclear physics, 9:27380 (RA;SU;In Russian)
JOSEPHSON JUNCTIONS
Uses
Josephson technology, 9:27445 (RA;CH)
JUELICH-DIDO REACTOR
See FRJ-2 REACTOR

K

K-25 PLANT
See ORGDP
KAOLINITE
Permeability
Leaching aluminum from calcined kaolinitic clay with nitric acid. Report of investigations/1983, 9:27059 (R;US)
KAON MINUS-PROTON INTERACTIONS
Particle Production
Study on the Δii and Δ° isobar inclusive production in K⁻p interactions at 32 GeV/c, 9:27286 (R;SU;In Russian)
KELP
See SEAWEEDS
KENTUCKY
Ethanol Plants
Kentucky's new generation power alcohol distillery, 9:25644 (BA;US)
Geologic Structures
New Madrid seismotectonic study. Activities during fiscal year 1982, 9:27233 (R;US)
Seismicity
New Madrid seismotectonic study. Activities during fiscal year 1982, 9:27233 (R;US)
KENYA
Energy Conservation
Energy conservation in Kenya: progress, potentials, problems, 9:26136 (RA;US)
KERNKRAFTWERK PHILIPPSBURG-2
See PHILIPPSBURG-2 REACTOR
KEROGEN
Chemical Analysis
Molecular substituent parameters applied to the specification of inorganic arsenic and organoarsenic compounds in shale oil and oil shale kerogen by HPLC-GFAA, 9:25379 (RA;US)
Nuclear Magnetic Resonance
Relaxation behavior in the carbon-13 nuclear magnetic resonance spectrometric analysis of kerogen with cross polarization and magic-angle spinning, 9:25381 (J;US)
KEROSENE
Combustion
Calculating the consequences of a kerosene pool fire: the FLAMME computer code, 9:25562 (RA;US)
Combustion Kinetics
Behaviour of burning kerosene, aerosol formation and consequences, 9:26572 (RA;US)
Prices
Petroleum Marketing Monthly, February 1984, 9:25316 (R;US)
Sales
Petroleum Marketing Monthly, February 1984, 9:25316 (R;US)
KIDNEYS
Biological Effects
Dose-response analysis of cadmium in man: body burden vs kidney dysfunction, 9:27207 (J;US)
Contamination
Cadmium load of the population in the over 50 age group in the South Bavarian region, 9:27202 (R;DE;In German)
Dialysis
Evaluation of body composition and nitrogen content of renal patients on chronic dialysis as determined by total body neutron activation, 9:27157 (J;US)
Failures
Evaluation of body composition and nitrogen content of renal patients on chronic dialysis as determined by total body neutron activation, 9:27157 (J;US)
KIESELGUHR
See DIATOMACEOUS EARTH
KINK INSTABILITY
3-D MHD stability of high-beta free-boundary tokamak plasmas with finite edge-pressure-gradient and limiter stabilization, 9:27466 (R;US)
KKP-2 PHILIPPSBURG REACTOR
See PHILIPPSBURG-2 REACTOR
KNOCK-ON ELECTRONS
See ELECTRONS
KRYPTON
Radioactive Waste Processing
Behaviour of the gaseous radionuclides released during the first reprocessing operations, 9:25501 (R;XE;In French)
KRYPTON 75
Mass
High resolution positron q-value measurements and nuclear structure studies far from the stability line. Progress report, 1983-1984, 9:27397 (R;US)
KRYPTON 77
Mass
High resolution positron q-value measurements and nuclear structure studies far from the stability line. Progress report, 1983-1984, 9:27397 (R;US)
KRYPTON 85
Radiation Monitoring
High precision ^{85}Kr monitor, 9:27041 (J;US)
Radioactivity Transport
High precision ^{85}Kr monitor, 9:27041 (J;US)

Radioecological Concentration
Preliminary analysis of four numerical models for calculating the mesoscale transport of Kr-85, 9:27044 (J;GB)

L

L REACTOR
Thermal Effluents
Processes influencing cooling of reactor effluents, 9:25989 (R;US)
LA SALLE COUNTY-1 REACTOR
Reactor Licensing
Safety Evaluation Report related to the operation of LaSalle County Station, Units 1 and 2. Docket Nos. 50-373 and 50-374, 9:26034 (R;US)
Safety
Safety Evaluation Report related to the operation of LaSalle County Station, Units 1 and 2. Docket Nos. 50-373 and 50-374, 9:26034 (R;US)
LA SALLE COUNTY-2 REACTOR
Reactor Licensing
Safety Evaluation Report related to the operation of LaSalle County Station, Units 1 and 2. Docket Nos. 50-373 and 50-374, 9:26034 (R;US)
Safety
Safety Evaluation Report related to the operation of LaSalle County Station, Units 1 and 2. Docket Nos. 50-373 and 50-374, 9:26034 (R;US)
LABELLED COMPOUNDS
Compounds labelled with either stable or radioactive isotopes.
See also RADIOPHARMACEUTICALS
Chemical Preparation
Heart testing compound, 9:26564 (P;US)
Monoclonal antibodies as physiologic probes, 9:26566 (BA;US)
Process for the production of 5'-deoxy-5-[^{18}F]fluorouridine, 9:26563 (P;US)
Radionuclide labeled lymphocytes for therapeutic use, 9:27152 (P;US)
Tin-117m-labeled stannic (Sn^{4+}) chelate of diethylenetriamine pentaacetic acid (DTPA) for application in diagnosis and therapy, 9:27151 (P;US)
LABOR RELATIONS
Agreements
Collective bargaining agreement between Department of Energy Headquarters and the National Treasury Employees Union, 9:27627 (R;US)
LABORATORY BUILDINGS
Budgets
Toward a high-temperature materials laboratory, 9:26363 (J;US)
Planning
Toward a high-temperature materials laboratory, 9:26363 (J;US)
LABORATORY EQUIPMENT
See also FUME HOODS
Equipment Interfaces
Absorption cell with fiber optics for concentration measurements in a flowing gas stream, 9:26498 (J;US)
LAKE MICHIGAN
Fishes
Fish abundance and distribution near three heated effluents to Lake Michigan, 9:27082 (J;CA)
LAKES
Sediments
Mixing rates in Shagawa Lake, Minnesota, sediments as determined from ^{106}Ru profiles, 9:27230 (J;GB)
LAMBDA-2250 RESONANCES
Hadronic Particle Decay
Study of Asub(c)sup(+) charm baryon production in approximately 58 GeV neutron beam, 9:27292 (R;SU)
Particle Production
Study of Asub(c)sup(+) charm baryon production in approximately 58 GeV neutron beam, 9:27292 (R;SU)
LAMBDA-2260 RESONANCES
See LAMBDA-2250 RESONANCES
LAMPF LINAC
Hydrogen 1 Minus Beams
Status of the new high intensity H^- injector at LAMPF, 9:26806 (R;US)
LAND FILLS
See SANITARY LANDFILLS
LAND USE
Management
Guntersville Reservoir land management plan. Appendix 1. Public involvement, 9:26131 (R;US)
Planning
Guntersville Reservoir land management plan. Appendix 1. Public involvement, 9:26131 (R;US)
LANDFILLS

LANOXIN
See DIGOXIN
LANTHANIDES
See RARE EARTHS
LANTHANUM
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
LANTHANUM ALLOYS
Microstructure
Cooling rate dependent structure of amorphous (Au/sub x/Cu/sub 1-x/)$_{81}$La$_{19}$, 9:26277 (R;US)
Heterogeneous growth in transition metal/rare earth films during bias sputter-deposition (Ni-La and Ni-Y), 9:26335 (R;US)
LARAMIE ENERGY RESEARCH CENTER
Research Programs
Review of 10 and 150 ton LETC oil shale retort programs prior to 1976, 9:25356 (RA;US)
LARVAE
Distribution
Transport of oyster larvae in an estuary, 9:27098 (J;DE)
Growth
Transport of oyster larvae in an estuary, 9:27098 (J;DE)
LARVAL STAGE
See LARVAE
LASER FUSION REACTORS
Breeding Blankets
Tritium breeding and activation in the cascade reactor, 9:27563 (R;US)
Radioactivation
Tritium breeding and activation in the cascade reactor, 9:27563 (R;US)
LASER IMPLOSIONS
Laser implosion fusion experiments at Ile Osaka, 9:27584 (BA;US)
Absorption
Absorption, double layers, and dynamics at laser-plasma interaction and pellet fusion gains with reheat, 9:27572 (BA;US)
Electrostatics
Absorption, double layers, and dynamics at laser-plasma interaction and pellet fusion gains with reheat, 9:27572 (BA;US)
Failure Mode Analysis
Rayleigh-Taylor instability and resulting failure modes of ablatively imploded inertial fusion targets, 9:27581 (BA;US)
Heat Transfer
Thermal transport measurements in 1.05 um laser irradiation of spherical targets, 9:27579 (BA;US)
Hydrodynamics
Investigation of hydrodynamic stability of high aspect ratio targets in laser implosion experiments, 9:27578 (BA;US)
Theoretical and computational investigation on implosion process, 9:27585 (BA;US)
Rayleigh-Taylor Instability
Rayleigh-Taylor instability and resulting failure modes of ablatively imploded inertial fusion targets, 9:27581 (BA;US)

Simulation
Recent advances in microwave simulation of laser-plasma interactions, 9:27574 (BA;US)

LASER SPECTROSCOPY
Technology Assessment
Applied physics and laser spectroscopy research, 9:26989 (RA;US)

LASER TARGETS
Ablation
High density transition laser driven implosions, 9:27582 (BA;US)
Laser implosion fusion experiments at Ile Osaka, 9:27584 (BA;US)
Acceleration
Observation of Rayleigh-Taylor-like structures in a laser-accelerated foil, 9:27551 (R;US)
Electron Transfer
Recent studies in electron transport and laser interaction at INRS-energie, 9:27586 (BA;US)
Suprathermal electron generation transport and deposition in CO_2 laser irradiated targets, 9:27571 (BA;US)
Energy Balance
Suprathermal electron generation transport and deposition in CO_2 laser irradiated targets, 9:27571 (BA;US)
Fabrication
Method to produce large, uniform hollow spherical shells, 9:27611 (P;US)
Failure Mode Analysis
Rayleigh-Taylor instability and resulting failure modes of ablatively imploded inertial fusion targets, 9:27581 (BA;US)
Gain
Absorption, double layers, and dynamics at laser-plasma interaction and pellet fusion gains with reheat, 9:27572 (BA;US)
Critical elements of high gain: An update, 9:27575 (BA;US)
Heat Transfer
Recent studies in electron transport and laser interaction at INRS-energie, 9:27586 (BA;US)
Thermal transport measurements in 1.05 um laser irradiation of spherical targets, 9:27579 (BA;US)
Hydrodynamics
Investigation of hydrodynamic stability of high aspect ratio targets in laser implosion experiments, 9:27578 (BA;US)
Theoretical and computational investigation on implosion process, 9:27585 (BA;US)
Laser Implosions
Direct illumination spherical target experiments, 9:27577 (BA;US)
High density transition laser driven implosions, 9:27582 (BA;US)
Rayleigh-Taylor instability and resulting failure modes of ablatively imploded inertial fusion targets, 9:27581 (BA;US)
Recent advances in microwave simulation of laser-plasma interactions, 9:27574 (BA;US)
Theoretical and computational investigation on implosion process, 9:27585 (BA;US)
Laser-Radiation Heating
Experiments and theory on half-harmonic light and two-plasmon decay, 9:27515 (R;US)
Magnetic Shielding
Scaling of electron range reduction by magnetic insulation, 9:27546 (R;US)
Rayleigh-Taylor Instability
Analysis of stability and symmetry implications for ICF, 9:27576 (BA;US)
Observation of Rayleigh-Taylor-like structures in a laser-accelerated foil, 9:27551 (R;US)
Rayleigh-Taylor instability and resulting failure modes of ablatively imploded inertial fusion targets, 9:27581 (BA;US)
Research Programs
Inertial fusion program and National Laser Users Facility projects. Annual report, October 1, 1981-September 30, 1982, 9:27517 (R;US)
Laboratory for laser energetics. Annual report, 1 October 1980-30 September 1981, 9:27516 (R;US)
Stability
Analysis of stability and symmetry implications for ICF, 9:27576 (BA;US)
Symmetry
Analysis of stability and symmetry implications for ICF, 9:27576 (BA;US)
X-Ray Emission Analysis
X-ray emission experiments at 1.06 μm and 0.35 μm, 9:27583 (BA;US)

LASER WELDING
Computer Codes
Users manual for the laser welding code WELD2D, 9:26576 (R;US)

LASER-PRODUCED PLASMA
Brillouin Effect
Scaling of laser-plasma interactions with laser wavelength and plasma size, 9:27573 (BA;US)
Study of stimulated Brillouin and Raman scattering. Final report, 1982-1983, 9:27519 (R;US)
Plasma Diagnostics
Holographic interferometry using twenty-picosecond uv pulses to obtain time resolved hydro measurements of selenium and gold plasmas, 9:27536 (R;US)
Photoemissive materials for 0.35μm laser fiducials in x-ray streak cameras, 9:27565 (R;US)
Plasma Instability
Scaling of laser-plasma interactions with laser wavelength and plasma size, 9:27573 (BA;US)
Raman Effect
Scaling of laser-plasma interactions with laser wavelength and plasma size, 9:27573 (BA;US)
Study of stimulated Brillouin and Raman scattering. Final report, 1982-1983, 9:27519 (R;US)
Research Programs
Review of recent experimental and theoretical laser-plasma research carried out at Soreq, 9:27570 (BA;US)

LASER-RADIATION HEATING
Plasma Simulation
Plasma simulation studies of electron acceleration for beat wave and single frequency-laser heating schemes, 9:27477 (R;US)
Simulation
Recent advances in microwave simulation of laser-plasma interactions, 9:27574 (BA;US)

LASERS
Light Amplification by Stimulated Emission of Radiation.
See also FREE ELECTRON LASERS
RING LASERS
Efficiency
Critical elements of high gain: An update, 9:27575 (BA;US)
Windows
Laser window with annular grooves for thermal isolation, 9:26674 (P;US)

LASL
Coordinated Research Programs
DOE joint experimental rock fragmentation research program, 9:25351 (RA;US)
Research Programs
Institutional supporting research highlights in physics and mathematics, fiscal year 1983, 9:27242 (R;US)

LATTICES (CRYSTAL)
See CRYSTAL LATTICES

LAVA
Corrosive Effects
Materials compatibility with the volcanic environment. Final report, 9:26285 (R;US)
Rock Drilling
Drilling report and core logs for the 1981 drilling of Kilauea Iki lava lake, Kilauea volcano, Hawaii, with comparative notes on earlier (1967-1979) drilling experiences, 9:27236 (R;US)

LAWRENCE LIVERMORE LABORATORY
Digital Computers
Supercomputers: the next ten years - a user's view, 9:27645 (R;US)

Radioactivity
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)

LEACHATES
Chemical Composition
Geochemistry of trench leachates at low-level radioactive waste burial sites, 9:25489 (R;US)

LEAD
Acetates
Delayed behavioral toxicity of lead with increasing exposure concentration, 9:27218 (J;US)
Biological Effects
Delayed behavioral toxicity of lead with increasing exposure concentration, 9:27218 (J;US)
Environmental Transport
Transport of trace metals in the Magela Creek system, Northern Territory. I. Concentrations and loads of iron, manganese, cadmium, copper, lead and zinc during flood periods in the 1978-1979 wet season, 9:25529 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. II. Trace metal concentrations in the Magela Creek billabongs at the end of the 1978 dry season, 9:25530 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. III. Billabong sediments, 9:25531 (R;AU)
Indoor Air Pollution
Aluminum, iron, and lead concentrations of personal, indoor, and outdoor respirable particles, 9:26951 (RA;US)
Neutron Transport
Slow neutron scattering on bismuth and lead and electric polarizability of the neutron, 9:27428 (R;SU)
Pion Minus Reactions
πi meson production under 118 deg angle in the inclusive π^- A $\rightarrow \pi^+$ x reaction at 1.5 GeV/c incident momentum, 9:27287 (R;SU;In Russian)
Toxicity
Delayed behavioral toxicity of lead with increasing exposure concentration, 9:27218 (J;US)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)

LEAD 208
Energy Levels
Improved determination of the quadrupole moment of the first excited state of ^{208}Pb, 9:27402 (R;AU)

LEAD 208 REACTIONS
Fission
Dynamical features of Coulomb-fission, 9:27405 (R;DE;In German)

LEAD 208 TARGET
Carbon 12 Reactions
Improved determination of the quadrupole moment of the first excited state of ^{208}Pb, 9:27402 (R;AU)
Oxygen 16 Reactions
Improved determination of the quadrupole moment of the first excited state of ^{208}Pb, 9:27402 (R;AU)
Oxygen 18 Reactions
Resolution of a coulomb reorientation ambiguity in ^{18}O, 9:27388 (J;NL)

LEAD ALLOYS
Corrosive Effects
Corrosion of type 316 stainless steel in flowing Pb-17 at. % Li, 9:26306 (RA;US)
Environmental effects on properties of structural alloys, 9:26309 (RA;US)
Mathematical Models
Superconducting proximity effects for in situ and model layered systems. Metallurgy, fabrication, and applications, 9:26664 (BA;US)
Neutron Transport
Nuclear analysis of liquid metal blanket designs, 9:27512 (R;US)
Physical Radiation Effects
Tritium production and distribution in a Zircaloy-clad Li_7Pb_2 assembly irradiated in the Oak Ridge Research Reactor, 9:26366 (J;NL)

LEAD COMPOUNDS
Catalytic Effects
Method and system for producing lower alcohols (Heteropolyatomic lead salt coated with alkali metal formate), 9:25640 (P;US)

LEAD METHOD
See ISOTOPE DATING

LEAD-ACID BATTERIES
Research Programs
Industrial electrochemical projects, 9:26076 (RA;US)

LEAK DETECTORS
Mass Spectrometers
Improved gaseous leak detector, 9:26890 (P;US)
Water Saturation
Operating manual for water in hydrocarbon leak detector, 9:26654 (R;US)

LEAKAGE
See LEAKS

LEAKS
Detection
Intercomparison of the calibration of helium leaks for use in leak detection, 9:26641 (R;LU)

LEAVES
Deformation
Growth analysis of soybean exposed to simulated acid rain and gaseous air pollutants, 9:27217 (J;GB)
Necrosis
Growth analysis of soybean exposed to simulated acid rain and gaseous air pollutants, 9:27217 (J;GB)

LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET

LEPTONS
See also ELECTRONS
MUONS
Mass Formulae
Numerical model for the mass spectrum of six generations of leptons, 9:27332 (RA;SU;In Russian)
Pair Production
Angular distributions of dileptons in polarized hadronic collisions: Test of electroweak gauge models, 9:27315 (R;IT)

LETTUCE
Plant Growth
Effects of simulated acidic rain on yields of Raphanus sativus, Lactuca sativa, Triticum aestivum and Medicago sativa, 9:27221 (J;GB)

LEWIS ACIDS
Electronegativity
Absolute hardness: companion parameter to absolute electronegativity, 9:26518 (J;US)
Hardness
Absolute hardness: companion parameter to absolute electronegativity, 9:26518 (J;US)

LEWIS BASES
Electronegativity
Absolute hardness: companion parameter to absolute electronegativity, 9:26518 (J;US)
Hardness
Absolute hardness: companion parameter to absolute electronegativity, 9:26518 (J;US)

LIE SUPERALGEBRA

LIGHT
See VISIBLE RADIATION

LIGHT WATER COOLED REACTORS
See WATER COOLED REACTORS

LIGHTING SYSTEMS
Energy Efficiency Standards
Competitive impact of Building Energy Performance Standards on the lighting and fixtures industries, 9:26198 (R;US)
Research Programs
Lighting systems research, 9:26207 (RA;US)

LIGHTNING
Simulators
Lightning simulator circuit parameters and performance for severe-threat, high-action-integral testing, 9:26751 (R;US)
UV laser triggering of crowbars used in the Sandia lightning simulator, 9:26671 (R;US)
LIGNITE
Combustion Kinetics
Aerosol formation from pulverized coal combustion. Quarterly reports 1, 2 and 3, 9:25285 (R;US)
LIMESTONE
Dehydration
Utilization of coal, 9:25282 (RA;US)
Hydration
Utilization of coal, 9:25282 (RA;US)
LIMITERS
Brazing
Graphite-ceramic rf Faraday-thermal shield and plasma limiter, 9:27620 (P;US)
Design
Advanced limiters for ISX, 9:27507 (R;US)
Surface Coating
Improved performance of TiC-coated graphite limiters by surface texturing, 9:27560 (R;US)
LINACS
See LINEAR ACCELERATORS
LINEAR ACCELERATORS
See also FMIT LINAC
LAMPF LINAC
QUADRUPOLE LINACS
STANFORD 20-GEV LINAC
STANFORD LINEAR COLLIDER
Beam Bunching
Longitudinal bunching of electrons in the Advanced Test Accelerator, 9:26794 (R;US)
Beam Currents
Beam experiment programs in the USA, 9:26790 (R;US)
Beam Optics
Designing self-matching linacs, 9:26785 (R;US)
Kilo Amp Beam Currents
Longitudinal bunching of electrons in the Advanced Test Accelerator, 9:26794 (R;US)
Space Charge
Beam experiment programs in the USA, 9:26790 (R;US)
LINEAR PROGRAMMING
Computer Codes
Linear systems analysis program. Programmer's manual, Version 2.2 (VAX/VMS), 9:27643 (R;US)
LINEAR Z PINCH DEVICES
Compact Torus
Linear pinch driven by a moving compact torus, 9:27569 (R;US)
Power Supplies
Matching parameters of a plasma shell and power supply electric circuit in a linear Z pinch device, 9:27532 (R;SU;In Russian)
LIOUVILLE EQUATION
See BOLTZMANN-VLASOV EQUATION
LIPIDS
See also PHOSPHOLIPIDS
Biosynthesis
Microalgal production of oils and lipids, 9:25701 (BA;US)
Solvent Properties
Improved procedure for high purity gaseous peroxyacyl nitrate production: use of heavy lipid solvents, 9:26478 (J;GB)
LIQUEFIED NATURAL GAS
Chemical Analysis
Vapor spill pipe monitor, 9:25341 (P;US)
Gas Spills
Effects of a spill of LNG on mean flow and turbulence under low wind speed, slightly stable atmospheric conditions, 9:25337 (R;US)
Sampling
Vapor spill pipe monitor, 9:25341 (P;US)
LIQUID COLUMN CHROMATOGRAPHY
Equipment Interfaces
Microbore liquid chromatography with flow cell Fourier transform infrared spectrometric detection, 9:26484 (J;US)
Extraction Columns
Microbore liquid chromatography with flow cell Fourier transform infrared spectrometric detection, 9:26484 (J;US)
LIQUID CONTAMINATION MONITORS
Comparative Evaluations
An on-line radio-nuclide liquid effluent monitor with a reduced contamination rate, 9:25991 (J;US)
Design
An on-line radio-nuclide liquid effluent monitor with a reduced contamination rate, 9:25991 (J;US)
Performance
An on-line radio-nuclide liquid effluent monitor with a reduced contamination rate, 9:25991 (J;US)
LIQUID CRYSTALS
Applied physics and laser spectroscopy research, 9:26989 (RA;US)
Phase Transformations
Heat-capacity study of phase transitions in the liquid-crystal racemic 4-(2′-methylbutyl)phenyl-4′-n-nonyloxybiphenyl-4-carboxylate (2M4P9OBC), 9:26459 (J;US)
Nature of the smectic-A - smectic-C phase transition in liquid crystals, 9:26462 (J;US)
LIQUID EFFLUENTS
See LIQUID WASTES
LIQUID FUELS
See also FUEL OILS
GASOLINE
KEROSENE
Chemical Analysis
Determination of molecular weight distribution of aromatic components in petroleum products by chemical ionization mass spectrometry with chlorobenzene as reagent gas, 9:25330 (J;US)
Production
Biomass conversion to liquid fuels: potential of some Arizona chaparral brush and tree species, 9:25624 (J;GB)
LIQUID METAL COOLANT
See LIQUID METALS
LIQUID METAL TEST FACILITIES
See TEST FACILITIES
LIQUID METALS
Diffraction
Thermodynamic properties of liquid metals, 9:26319 (R;IT)
Mixing Heat
Relation between the heats of mixing of the liquid and solid in metallic systems, 9:26388 (J;GB)
Stirring
Improved mathematical model for melt flow in induction furnaces and comparison with experimental data, 9:26374 (J;US)
Thermodynamic Properties
Thermodynamic properties of liquid metals, 9:26319 (R;IT)
LIQUID PHASE METHANOL PROCESS
Bench-Scale Experiments
Liquid phase methanol update, 9:25630 (RA;US)
Catalysts
Liquid phase methanol update, 9:25630 (RA;US)
Feasibility Studies
Liquid phase methanol update, 9:25630 (RA;US)
Mathematical Models
Liquid phase methanol update, 9:25630 (RA;US)
Process Development Units
Liquid phase methanol update, 9:25630 (RA;US)
LIQUID SCINTILLATION DETECTORS
Pulse Discriminators
A digital pulse-shape discriminating unit for neutron-gamma discrimination with NE213, 9:26873 (J;US)
LIQUID WASTES
See also WASTE WATER
Chemical Analysis
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)
Sampling
Experimental evaluation of the steady state and dynamic performance characteristics of the interactive units of a coal

gasification process. Quarterly report, 4 April 1983-3 July 1983, 9:25186 (R;US)

LIQUID-DOMINATED HYDROTHERMAL CONVECTIVE
See HOT-WATER SYSTEMS

LITHIUM
Corrosive Effects
Corrosion of path A PCA and 12 Cr-1 MoVW steel in thermally convective lithium, 9:26305 (RA;US)
Environmental effects on properties of structural alloys, 9:26309 (RA;US)
Eigenvalues
Cubic spline method for solving second-order differential equations: theory and application to the Thomas-Fermi model for ions, 9:27461 (J;NL)

LITHIUM ALLOYS
See also LITHIUM BASE ALLOYS
Corrosive Effects
Corrosion of type 316 stainless steel in flowing Pb-17 at. % Li, 9:26306 (RA;US)
Environmental effects on properties of structural alloys, 9:26309 (RA;US)
Neutron Transport
Nuclear analysis of liquid metal blanket designs, 9:27512 (R;US)

LITHIUM BASE ALLOYS
Physical Radiation Effects
Tritium production and distribution in a Zircaloy-clad Li_7Pb_2 assembly irradiated in the Oak Ridge Research Reactor, 9:26366 (J;NL)

LITHIUM CHLORIDES
Photochemical Reactions
Improvement of the photoelectrochemical oxidation of halides by platinization of metal dichalcogenide photoanodes, 9:26555 (J;US)

LITHIUM COMPLEXES
Ground States
High-resolution photothermal ionization spectroscopy of lithium-related shallow donors in germanium, 9:26458 (J;US)

LITHIUM COMPOUNDS
See also LITHIUM OXIDES
Compatibility
Chemical compatibility between lithium compounds and transition metals, 9:27557 (RA;GB)

LITHIUM IONS
Slowing-Down Length
On the energy and momentum deposition in the ion beam-pellet interaction, 9:27621 (J;US)
Thermalization
On the energy and momentum deposition in the ion beam-pellet interaction, 9:27621 (J;US)

LITHIUM OXIDES
Compatibility
Compatibility studies of structural alloys with solid breeder materials, 9:26307 (RA;US)
Microstructure
Degradation of sodium β''-alumina: effect of microstructure, 9:26087 (J;US)
Neutron Flux
Radioactivation characteristics for deuterium-tritium fusion reactors, 9:27607 (J;US)
Neutron Reactions
First blanket experiment by FNS, 9:27534 (RA;JP;In Japanese)
Physical Properties
Fuels and materials chemistry, 9:25882 (RA;US)
Physical Radiation Effects
Fuels and materials chemistry, 9:25882 (RA;US)

LITHIUM-SULFUR BATTERIES
Seals
Hermetically sealed electrical feedthrough for high temperature secondary cells, 9:26086 (P;US)

LIVER
Contamination
Cadmium load of the population in the over 50 age group in the South Bavarian region, 9:27202 (R;DE;In German)

LMFBR TYPE REACTORS
See also CLINCH RIVER BREEDER REACTOR
EBR-2 REACTOR
SUPER PHENIX REACTOR
SLAM: a sodium-limestone concrete ablation model, 9:26042 (R;US)
Cold Traps
Sodium technology for fast reactors, 9:25928 (RA;US)
Commercialization
Government commercialization of large scale technology: the United States Breeder Reactor Program 1964-1976, 9:25935 (R;US)
Coolant Cleanup Systems
Method for removing cesium from a nuclear reactor coolant, 9:25945 (P;US)
Decontamination
Decontamination of hot leg LMFBR components, 9:25939 (R;US)
Design
Cost-competitive, inherently safe LMFBR pool plant, 9:25930 (R;US)
Failed Element Monitors
Improved gas tagging and cover gas combination for nuclear reactor, 9:25944 (P;US)
Fuel Assemblies
In-pile loss-of-flow TREAT test L05 with prototype fast reactor fuel, 9:26013 (R;US)
Loss of Flow
Visual observation of fuel and clad relocation during LMFBR transients, 9:26057 (R;US)
Pipes
Seismic response and damping tests of small bore LMFBR piping and supports, 9:26022 (R;US)
Primary Coolant Circuits
Development of the three-dimensional SHAPS code capabilities for application to LMFBR piping systems, 9:26014 (R;US)
System seismic analysis of an innovative primary system for a large pool type LMFBR plant, 9:26017 (R;US)
Thermal laminarization of a stratified pipe flow, 9:25931 (R;US)
Reactor Accidents
Review of proposed failure criteria for ductile materials, 9:26050 (R;US)
Reactor Control Systems
Automated rule-base control for nuclear power plants, 9:25984 (R;US)
Reactor Core Disruption
In-pile loss-of-flow TREAT test L05 with prototype fast reactor fuel, 9:26013 (R;US)
Observation of ionic sodium uranate precursors in a laser simulation of the conditions inside the bubble formed in an HCDA of an LMFBR, 9:26068 (J;US)
Plugging of intersubassembly gaps by downward flowing molten steel, 9:26015 (R;US)
Reactor Cores
Observation of ionic sodium uranate precursors in a laser simulation of the conditions inside the bubble formed in an HCDA of an LMFBR, 9:26068 (J;US)
Reactor Kinetics
Calculational methodology and associated uncertainties: Sensitivity and uncertainty analysis of reactor performance parameters, 9:25963 (J;US)
Reactor Materials
Influence of a temperature change on in-reactor creep, 9:26311 (R;US)
Reactor Protection Systems
Nuclear reactor safety device, 9:25988 (P;US)
Reactor Safety
Key asset - inherent safety of LMFBR Pool Plant, 9:26012 (R;US)
Shielding Materials
Alternate shield material feasibility, 9:25936 (R;US)
Steam Generators
Comments on US LMFBR steam generator base technology, 9:25933 (R;US)
Transients
TWIST: a Transient Two-dimensional Intra-Subassembly Thermal-Hydraulics model for LMFBRs, 9:25929 (R;US)

LNG
See LIQUEFIED NATURAL GAS
LNG SPILLS
See GAS SPILLS
LOAD (DYNAMIC)
See DYNAMIC LOADS
LOAD MANAGEMENT
Planning
Load management strategy testing model case study. Final report, 9:26156 (R;US)
LOANS
See FINANCIAL ASSISTANCE
LOCA
See LOSS OF COOLANT
LOCAL GOVERNMENT
Emergency Plans
Emergency response planning guidelines for state and local governments for radioactive materials transportation accidents, 9:25547 (RA;US)
LONGITUDINAL PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
LONG-RANGE TRANSPORT
Mathematical Models
Atmospheric transport and dispersion of pollutants and related meteorological studies. Progress report, FY 1982, 9:26925 (R;US)
LONGWALL MINING
Backfilling
Theoretical investigations for an underground longwall mining method (working to the strike) for steeply dipping coal seams with cemented rockfill, 9:25262 (R;DE;In German)
Roofs
Stability of chain pillars and gate roads at South Bulli 'B' mine longwalls, 9:25261 (R;AU)
Stowing
Minimizing underground and surface subsidence by rapidly setting stowage, 9:25263 (R;DE;In German)
Strata Control
Stability of chain pillars and gate roads at South Bulli 'B' mine longwalls, 9:25261 (R;AU)
Support Pillars
Stability of chain pillars and gate roads at South Bulli 'B' mine longwalls, 9:25261 (R;AU)
LOOSE PARTS MONITORING
Performance
Loose-part monitoring programs and recent operational experience in selected US and western European commercial nuclear power stations, 9:25973 (R;US)
LOS ALAMOS MESON PHYSICS FACILITY
See LAMPF LINAC
LOS ALAMOS SCIENTIFIC LABORATORY
See LASL
LOSS OF COOLANT
Fuel Element Failure
Use of a heat transfer coefficient for describing the radiative exchange between water vapour and the bounding walls. Final report, 9:25889 (R;XE)
Radiant Heat Transfer
Use of a heat transfer coefficient for describing the radiative exchange between water vapour and the bounding walls. Final report, 9:25889 (R;XE)
Simulation
LOCA simulation in the national research universal reactor program: postirradiation examination reaflts for the third materials experiment (MT-3), 9:26041 (R;US)
Test Facilities
LOBI: Influence of PWR primary loops on blowdown, first results. Final report, 9:26020 (R;XE)
LOSS OF FLOW
Fuel Element Failure
Visual observation of fuel and clad relocation during LMFBR transients, 9:26057 (R;US)
Test Facilities
Visual observation of fuel and clad relocation during LMFBR transients, 9:26057 (R;US)
LOUISIANA
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
Geologic Structures
Subsurface and seismic investigation of the geopressured-geothermal potential of the Abbeville area of south Louisiana, 9:25823 (R;US)
Subsurface geology and geopressured/geothermal resource evaluation of the Lirette-Chauvin-Lake Boudreaux area, Terrebonne Parish, Louisiana, 9:25820 (R;US)
Geology
Subsurface geology and potential for geopressured-geothermal energy in the Turtle Bayou field-Kent Bayou field area, Terrebonne Parish, Louisiana, 9:25821 (R;US)
Geopressured Systems
Subsurface geology and potential for geopressured-geothermal energy in the Turtle Bayou field-Kent Bayou field area, Terrebonne Parish, Louisiana, 9:25821 (R;US)
Subsurface evaluation of the geopressured-geothermal Chloe Prospect, Calcasieu Parish, Louisiana, 9:25822 (R;US)
Subsurface and seismic investigation of the geopressured-geothermal potential of the Abbeville area of south Louisiana, 9:25823 (R;US)
Subsurface geology and geopressured/geothermal resource evaluation of the Lirette-Chauvin-Lake Boudreaux area, Terrebonne Parish, Louisiana, 9:25820 (R;US)
Hydrology
Potentiometric-level monitoring program - Mississippi and Louisiana: annual status report for fiscal year 1983, 9:25487 (R;US)
Resource Potential
Subsurface geology and potential for geopressured-geothermal energy in the Turtle Bayou field-Kent Bayou field area, Terrebonne Parish, Louisiana, 9:25821 (R;US)
Subsurface geology and geopressured/geothermal resource evaluation of the Lirette-Chauvin-Lake Boudreaux area, Terrebonne Parish, Louisiana, 9:25820 (R;US)
Sedimentation
Subsurface geology and geopressured/geothermal resource evaluation of the Lirette-Chauvin-Lake Boudreaux area, Terrebonne Parish, Louisiana, 9:25820 (R;US)
Stratigraphy
Subsurface evaluation of the geopressured-geothermal Chloe Prospect, Calcasieu Parish, Louisiana, 9:25822 (R;US)
Subsurface geology and geopressured/geothermal resource evaluation of the Lirette-Chauvin-Lake Boudreaux area, Terrebonne Parish, Louisiana, 9:25820 (R;US)
LOW INCOME GROUPS
Financial Assistance
Guide to state energy assistance offices, 9:26116 (R;US)
LOW-BETA PLASMA
Beta from 0 to 0.01.
Drift Instability
Linear density drift instabilities in very low beta plasmas: a different approach, 9:27502 (J;GB)
LOWER HYBRID HEATING
Formation of a 100-kA tokamak discharge in the Princeton large torus by lower hybrid waves, 9:27480 (R;US)
Wave Propagation
Linear theory of lower hybrid heating, 9:27463 (R;US)
LOWER HYBRID RESONANCE HEATING
See LOWER HYBRID HEATING
LOW-LEVEL RADIOACTIVE WASTES
Containers
Module container system for LLW disposal, 9:25490 (RA;US)
Forecasting
Use of SAS in the IDB, 9:25495 (R;US)
Information Systems
Use of SAS in the IDB, 9:25495 (R;US)
Inventories
Use of SAS in the IDB, 9:25495 (R;US)
Leaching
Geochemistry of trench leachates at low-level radioactive waste burial sites, 9:25489 (R;US)
Radioactive Waste Management
Low-level radioactive waste regional compacts. Hearing before the Subcommittee on Energy Conservation and Power, of the House of Representatives, Ninety-Eighth Congress, first

session on H.R. 1012, H.R. 3002, and H.R. 3777, 3 Nov 1983, 9:25526 (B;US)
Waste Transportation
Low-level waste transportation: legislative issues in the Northeast United States, 9:25447 (RA;US)

LUBRICATING OILS
Chemical Properties
Friction and wear characteristics of molecular compound classes from lubricating base oils. Part 1. Separation and chemical characterization, 9:25328 (R;US)
Fractionation
Friction and wear characteristics of molecular compound classes from lubricating base oils. Part 1. Separation and chemical characterization, 9:25328 (R;US)
Physical Properties
Friction and wear characteristics of molecular compound classes from lubricating base oils. Part 1. Separation and chemical characterization, 9:25328 (R;US)

LUCCU OIL

LUNGS
Biological Functions
Sulfur dioxide and ammonium sulfate effects on pulmonary function and bronchial reactivity in human subjects, 9:27205 (J;US)
Biological Models
Statistical lung model for microdosimetry, 9:27171 (R;US)
Carcinomas
Correlations between lung cancer and phosphates, 9:27110 (RA;US)
Delayed Radiation Effects
Tumor induction in BALB/c mice after fractionated or protracted exposure to fission-spectrum neutrons, 9:27177 (J;US)
Dosimetry
In vivo assessment of lung burdens at the Los Alamos National Laboratory, 9:27433 (R;US)
Fibrosis
Lung collagen metabolism in rats exposed to nitrogen dioxide, 9:27190 (RA;US)

LUTETIUM ISOTOPES
Mass Spectroscopy
Analytical capabilities of RIMS: absolute sensitivity and isotopic analysis (Resonance ionization mass spectrometry), 9:26470 (R;US)

LWBR TYPE REACTORS
Breeding Ratio
Nuclear fuel cycle research, 9:25481 (RA;US)
Performance
Nuclear analysis and performance of the Light Water Breeder Reactor (LWBR) core power operation at Shippingport, 9:25940 (R;US)

LWR TYPE REACTORS
See WATER COOLED REACTORS

LYMPHOCYTES
Biological Radiation Effects
Increased yields of exchanges but not of deletions in X-irradiated human peripheral lymphocytes following phytohemagglutinin stimulation, 9:27174 (J;US)
Measurement of lymphoblastogenic activity from thorium workers, 9:27181 (J;GB)
Labelling
Radionuclide labeled lymphocytes for therapeutic use, 9:27152 (P;US)

LYMPHOID CELLS
See LYMPHOCYTES

M

MA 754
See NICKEL BASE ALLOYS

MA 956

MACHINE TOOLS
Materials
Hard metal composition, 9:26415 (P;US)

MACHINING
Robots
Robotic deburring. Part 1. Preliminary observations, 9:26575 (R;US)

MAGMA SYSTEMS
Energy Recovery
Magma energy: the ultimate heat source for geothermal fields, 9:25854 (J;US)

MAGNESIUM 24 TARGET
Proton Reactions
Scattering of polarized protons on ^{24}Mg, ^{27}Al, and ^{32}S and anomalies in the giant resonance region of ^{28}Al, of ^{28}Si, and of ^{33}Cl, 9:27392 (J;NL;In French)

MAGNESIUM ALLOYS
Internal Friction
Internal Friction study of solute segregation to dislocations, 9:26380 (J;US)

MAGNESIUM COMPLEXES
Photochemical Reactions
Quantum yield determinations for sub-nanosecond-lived excited states and photoproducts. Applications to inorganic complexes and photosynthetic models, 9:26554 (J;US)

MAGNESIUM OXIDES
Synthesis
Precursor chemistry effects on development of particulate morphology during evaporative decomposition of solutions (Powder synthesis), 9:26409 (R;US)

MAGNET COILS
Plane-toroidal solenoid near ferromagnets, 9:27550 (R;SU;In Russian)
Octupolar Configurations
Octupole anchor for tandem mirrors, 9:27561 (R;US)

MAGNETIC BREMSSTRAHLUNG
See SYNCHROTRON RADIATION

MAGNETIC COILS
See MAGNET COILS

MAGNETIC ENERGY STORAGE EQUIPMENT
Superconducting Magnets
Superconducting magnetic energy storage for utility applications, 9:26069 (R;US)

MAGNETIC FIELD CONFIGURATIONS
For pinch configurations, use the narrower terms of PINCH EFFECT.

MAINE
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
MAIZE
Acid Hydrolysis
Farm-sized immobilized cell reactor for the conversion of biomass to ethanol. Final project report, 9:25632 (R;US)
Drying
Microprocessor-based data acquisition system for an experimental biomass-fired corn dryer, 9:26238 (J;US)
Enzymatic Hydrolysis
Kentucky's new generation power alcohol distillery, 9:25644 (BA;US)
Fermentation
Kentucky's new generation power alcohol distillery, 9:25644 (BA;US)
Genetic Mapping
Application of restriction fragment length polymorphism to plant breeding, 9:27118 (BA;US)
Genetics
Analysis by transposable element mutagenesis of tissue-specific R alleles in maize, 9:27117 (R;US)
Hybridization
Application of restriction fragment length polymorphism to plant breeding, 9:27118 (BA;US)
Plant Breeding
Application of restriction fragment length polymorphism to plant breeding, 9:27118 (BA;US)
MAIZE OIL
See CORN OIL
MALE GENITALS
Ontogenesis
Monoclonal antibodies as physiologic probes, 9:26566 (BA;US)
MALIGNANCIES
See NEOPLASMS
MAMMALS
Infectivity
Inhibition of DNA synthesis, independent of DNA adduct formation, by benzo[a]pyrene diol epoxide in mammalian cells, 9:27105 (J;US)
MAMMARY GLANDS
Delayed Radiation Effects
Tumor induction in BALB/c mice after fractionated or protracted exposure to fission-spectrum neutrons, 9:27177 (J;US)
MAN
All of mankind, of any age or of either sex.
Dose Rates
Transport analyses for determination of man-rem dose rates with regard to different modes of transport, routing and packaging, 9:25539 (RA;US)
Environmental Exposure Pathway
Transport analyses for determination of man-rem dose rates with regard to different modes of transport, routing and packaging, 9:25539 (RA;US)
MANGANESE
Environmental Transport
Transport of trace metals in the Magela Creek system, Northern Territory. I. Concentrations and loads of iron, manganese, cadmium, copper, lead and zinc during flood periods in the 1978-1979 wet season, 9:25529 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. II. Trace metal concentrations in the Magela Creek billabongs at the end of the 1978 dry season, 9:25530 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. III. Billabong sediments, 9:25531 (R;AU)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)
MANGANESE 54
Radioecological Concentration
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)
MANGANESE ALLOYS
Microstructure
Transmutation of manganese - substituted steels in STARFIRE, 9:26316 (R;US)
Tensile Properties
Influence of processing on the cryogenic mechanical properties of high strength high manganese stainless steel, 9:27547 (R;US)
MANOMETERS

MEDICAL CENTERS
See also HOSPITALS
Solar Water Heating
Solar water-heating system for the Ingham County geriatric medical care facility, Okemos, Michigan. Operational and maintenance instruction manual, 9:25766 (R;US)

MEDICAL RECORDS
Data Base Management
Data-bases for clinical histories, 9:27655 (RA;US)
Issues related to medical statistical databases, 9:27657 (RA;US)
Information Systems
Quality control activities in support of the plutonium workers study. Assessment of coding consistency for data collected at Rocky Flats, 9:27166 (R;US)

MELTDOWN
Core Catchers
Molten thermite teeming into an iron oxide particle bed, 9:26039 (R;US)
Thermal Stresses
Safety analysis of a stratified reactor foundation subject to core meltdown, 9:26001 (R;DE;In German)

MEMBRANE TRANSPORT
Biological Models
Asymmetry of the mitochondrial membrane, 9:27200 (RA;US)

MEMBRANES
See also CELL MEMBRANES
Chemical Preparation
Membrane electrode for the determination of actinyl(VI) cations, 9:26491 (J;US)
Electrochemistry
Asymmetry of the mitochondrial membrane, 9:27200 (RA;US)

MENTAL DISORDERS
Diagnosis
Imaging local brain function with emission computed tomography, 9:27130 (J;US)

MERCURY
Aerosol Monitoring
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:26488 (J;US)
Emission Spectra
Selection of atomic emission lines for tunable atomic line molecular spectrometry of benzene, 9:26485 (J;US)
Laser Spectroscopy
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:25234 (J;US)
Monitoring
Mercury emissions from a modified in-situ oil shale retort, 9:27001 (J;GB)
Stirring
Improved mathematical model for melt flow in induction furnaces and comparison with experimental data, 9:26374 (J;US)
X-Ray Fluorescence Analysis
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)

MERCURY 186
Energy Levels
Aligned visub(13/2) bands coupled to different shapes in ^{186}Hg, 9:27400 (J;NL)

MESH GENERATION
Algorithms
PLTMGC: a multi-grid continuation program for parameterized nonlinear elliptic systems, 9:27646 (R;US)

MESON NONETS
Pseudoscalar Mesons
Scalar partners of the mesons of the n^- Nonet, 9:27318 (R;SU;In Russian)

MESON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET

METACERCARIAE
See LARVAE

METAL CASTINGS
See CASTINGS

METAL SPRAYING
See SPRAY COATING

METALLIC GLASSES
Microstructure
Cooling rate dependent structure of amorphous (Au/sub x/Cu/sub 1-x/)$_{81}$La$_{19}$, 9:26277 (R;US)

METALLOPROTEINS
See also HEMOCYANIN
Biosynthesis
Molecular response of cadmium resistant Datura innoxia cells to heavy metal stress, 9:27198 (R;US)

METALLURGY
Use of a more specific term is recommended; see also EXTRACTIVE METALLURGY or FABRICATION.
Research Programs
Theory of alloys: from the Schroedinger equation to the rolling mill, 9:26361 (J;US)

METALS

TRANSITION ELEMENTS
ZINC

Bonding
Ceramic-glass-metal seal by microwave heating, 9:26270 (P;US)
Corrosion
Materials compatibility with the volcanic environment. Final report, 9:26285 (R;US)
Cracks
Evaluation of photoacoustic microscopy for fatigue crack detection, 9:26702 (RA;US)
Edge Dislocations
Absorption of the radiation point defects by the linear edge dislocation dipoles, 9:26439 (R;SU;In Russian)
Electron Emission
Trial charge density profiles at the metallic surface and work functions calculations, 9:26320 (R;IT)
Joining
Ceramic to metal attachment system (Ceramic electrode to metal conductor in MHD generator), 9:26169 (P;US)
Mathematical Models
Single-ion and pair-interaction potentials near simple metal surfaces, 9:26368 (J;US)
Mechanical Properties
Mechanical properties of metals and alloys, 9:26358 (J;US)
Nondestructive Testing
Evaluation of photoacoustic microscopy for fatigue crack detection, 9:26702 (RA;US)
Physical Radiation Effects
Comments upon the International Conference on point defects and defect interactions in metals, 9:26314 (R;XE)
Point Defects
Absorption of the radiation point defects by the linear edge dislocation dipoles, 9:26439 (R;SU;In Russian)
Stress Analysis
Analytical and experimental evaluation of biaxial contact stress, 9:26418 (BA;US)
Work Functions
Trial charge density profiles at the metallic surface and work functions calculations, 9:26320 (R;IT)
X-Ray Emission Analysis
Theory of x-ray emission satellite band shapes, 9:27267 (J;GB)
X-Ray Fluorescence Analysis
Energy dispersive K x-ray fluorescence analysis for on-line process control of heavy metal concentrations, 9:25403 (BA;US)

METEOROIDS
Monitoring
Cosmic bombardment, 9:27247 (R;US)

METEORS
See METEOROIDS

METHANE
Catalytic Effects
The flash methanolysis of wood for the production of fuels and chemicals, 9:25628 (BA;US)
Chemical Reaction Yield
Development of BEACON technology. Quarterly report, January-March 1982, 9:25188 (R;US)
Development of BEACON technology. Quarterly report, April-June 1982, 9:25189 (R;US)
Reaction Kinetics
Theoretical study of deuterium isotope effects in the reactions $H_3 + CH_3$ and $H + CH_4$, 9:26517 (J;US)
Recovery
Brine and gas recovery from geopressured systems. I. Parametric calculations, 9:25851 (R;US)
Measurement of dynamic reservoir conditions. Fourth project status report, July 1-September 30, 1983, 9:25265 (R;US)
Resource Assessment
Coalbed methane potential of "J" group coals in the vicinity of Tuscaloosa, Alabama, 9:25271 (B;US)
Synthesis
FeTi methanation catalyst, 9:25645 (J;US)
Thermal Conductivity
Thermal conductivity of mixtures of methane with carbon dioxide, 9:26543 (J;DE)

METHANOL
Conversion
Ethanol production method and system, 9:25642 (P;US)
Cost
Cost of liquid fuels from coal. Part III. Methanol and methanol-derived gasoline, 9:25633 (R;GB)
Oxidation
Physical and chemical investigations on real catalyst surfaces, 9:26512 (R;DE;In German)
Production
Cost of liquid fuels from coal. Part III. Methanol and methanol-derived gasoline, 9:25633 (R;GB)
Energy efficient alcohol fuel production, 9:25643 (BA;US)
Reformer Processes
Testing of a small combustion turbine burning reformed methanol, 9:26263 (R;US)
Sorption
Concentration-dependent transport of gases and vapors in glassy polymers. II. Organic vapors in ethyl cellulose, 9:26544 (J;NL)
Synthesis
Method and apparatus for synthesizing hydrocarbons, 9:25641 (P;US)
Schladitz whiskers as catalysts and catalyst supports applied to methanol synthesis, 9:25637 (R;US)

METHANOL FUELS
Pure methanol, methanol-water mixtures, or methanol with additives; for methanol-gasoline mixtures, use GASOHOL.
Combustion Properties
Study of the combustion of various alternate fuels, 9:25625 (B;US)
Financial Incentives
Methanol as an automotive fuel. Staff Report prepared by the Subcommittee on Fossil and Synthetic Fuels, U.S. House of Representatives, Ninety-Eighth Congress, 2d Session, Feb 1984, 9:26266 (B;US)
Fuel Substitution
Study of the combustion of various alternate fuels, 9:25625 (B;US)
Government Policies
Methanol as an automotive fuel. Staff Report prepared by the Subcommittee on Fossil and Synthetic Fuels, U.S. House of Representatives, Ninety-Eighth Congress, 2d Session, Feb 1984, 9:26266 (B;US)
Performance Testing
Testing of a small combustion turbine burning reformed methanol, 9:26263 (R;US)

METHYL ALCOHOL

Auger Electron Spectroscopy
Sulfur poisoning of a Ni(111) crystal with small angle boundaries (SAB) and its effect on CO adsorption, 9:27268 (J;NL)
Biological Effects
Field evaluation of hazardous waste site bioassessment protocols. Volume 2, 9:27203 (R;US)
Catalytic Effects
Hydrotreatment catalyst activity enhancement. Quarterly report No. 3, February 1-April 30, 1984, 9:25215 (R;US)
Methanation of carbon dioxide on Ni(100) and the effects of surface modifiers, 9:25626 (J;US)
Electron Diffraction
Sulfur poisoning of a Ni(111) crystal with small angle boundaries (SAB) and its effect on CO adsorption, 9:27268 (J;NL)
Electron Spin Resonance
Molecular characterization of vanadyl and nickel non-porphyrin compounds in heavy crude petroleums and residua, 9:25327 (R;US)
Environmental Transport
Transport of trace metals in the Magela Creek system, Northern Territory. III. Billabong sediments, 9:25531 (R;AU)
Form Factors
Magnetic form factors, 9:26401 (J;FR)
Fracture Properties
Effects of antimony additions on the fracture of nickel at 600°C, 9:26378 (J;US)
Photochemical Reactions
Reactions of group 8 transition-metal ions (Fe^+, Co^+, and Ni^+) with cyclic hydrocarbons in the gas phase, 9:26531 (J;US)
Physical Radiation Effects
Vacancy formation and migration energies in strained crystals, 9:26337 (RA;GB)
Recrystallization
Dynamic recrystallization and dynamic recovery in <111> single crystals of nickel and copper, 9:26382 (J;US)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)

NICKEL 58
Gas Production Rates
Neutron source characterization for materials experiments, 9:27524 (RA;US)
Neutron Reactions
Neutron source characterization for materials experiments, 9:27524 (RA;US)

NICKEL 58 TARGET
Proton Reactions
Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni, 9:27394 (J;NL)

NICKEL 59
Gas Production Rates
Neutron source characterization for materials experiments, 9:27524 (RA;US)
Neutron Reactions
Neutron source characterization for materials experiments, 9:27524 (RA;US)

NICKEL 60 TARGET
Proton Reactions
Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni, 9:27394 (J;NL)

NICKEL ALLOYS
See also NICKEL BASE ALLOYS
Corrosion Resistance
Improved oxidation sulfidation resistance of Fe-Cr-Ni alloys, 9:26372 (P;US)
Creep
Sulfur and antimony segregation to creep cavity surfaces in Ni and an FCC Fe-Ni-Cr alloy, 9:26280 (R;US)
Marketing
Marketing ORNL-made materials, 9:26362 (J;US)
Microstructure
Heterogeneous growth in transition metal/rare earth films during bias sputter-deposition (Ni-La and Ni-Y), 9:26335 (R;US)
Microstructure and tensile properties of neutron-irradiated (Fe/sub 0.61/Ni/sub 0.39)$_3$V ordered alloy, 9:26399 (BA;US)
Physical Properties
Physical properties of V(Fe, Co, Ni)$_3$ alloys from 300 to 1000 K, 9:26397 (BA;US)
Physical Radiation Effects
Comparison of neutron and heavy-ion damage in a single-phase austenite, 9:26400 (BA;US)
Design of D9: a radiation damage-resistant alloy, 9:25943 (J;US)
Microstructure and tensile properties of neutron-irradiated (Fe/sub 0.61/Ni/sub 0.39)$_3$V ordered alloy, 9:26399 (BA;US)
Scaling
Oxidation-sulfidation behavior of Fe-Cr-Ni alloys containing additions of Zr, Nb, OR Ti, 9:26279 (R;US)
Segregation
Sulfur and antimony segregation to creep cavity surfaces in Ni and an FCC Fe-Ni-Cr alloy, 9:26280 (R;US)
Sulfidation
Oxidation-sulfidation behavior of Fe-Cr-Ni alloys containing additions of Zr, Nb, OR Ti, 9:26279 (R;US)
Tensile Properties
Microstructure and tensile properties of neutron-irradiated (Fe/sub 0.61/Ni/sub 0.39)$_3$V ordered alloy, 9:26399 (BA;US)
Thermal Conductivity
Transport properties of concentrated Ag-Pd and Cu-Ni alloys from 300-1000 K, 9:26394 (BA;US)

NICKEL BASE ALLOYS
Chemical Composition
Ductile aluminide alloys for high temperature applications, 9:26370 (P;US)
Order Parameters
Local atomic ordering in nickel based Ir and Rh alloys, 9:26324 (R;IT)
Physical Radiation Effects
Compositional redistribution in alloy films under high-voltage electron microscope irradiation, 9:26365 (J;NL)
Swelling
Swelling in several commercial alloys irradiated to very high neutron fluence, 9:26290 (RA;US)
Ultrasonic Testing
Finite element modeling of ultrasonic inspection of weldments, 9:26706 (BA;US)

NICKEL ORES
Chlorination
Simultaneous fluid-solid reactions in porous solids. II. Reactions between one fluid and two solid reactants, 9:25374 (J;GB)
NICKEL OXIDES
Synthesis
Precursor chemistry effects on development of particulate morphology during evaporative decomposition of solutions (Powder synthesis), 9:26409 (R;US)
NICKEL-CADMIUM BATTERIES
Performance Testing
Nickel cadmium cell SD 15 K, qualification and operation of a modularized battery 50 Ah, 100 V, 9:26077 (R;DE;In German)
NICKEL-IRON BATTERIES
See IRON-NICKEL BATTERIES
NIMONIC PE16
Fatigue
Evaluation of fatigue properties of HFIR-irradiated nimonic PE-16 at 430°C, 9:26289 (RA;US)
Physical Radiation Effects
Ring ductility of irradiated Inconel 706 and Nimonic PE16, 9:26317 (R;US)
NIOBIUM
Fractography
White beam synchrotron fractography of molybdenum and niobium single crystals, 9:26284 (RA;GB)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
NIOBIUM ALLOYS
See also INCONEL 600
INCONEL 625
INCONEL 706
INCONEL 718
NIOBIUM BASE ALLOYS
Corrosion Resistance
Improved oxidation sulfidation resistance of Fe-Cr-Ni alloys, 9:26372 (P;US)
Fabrication
Niobium-titanius superconducting materials, 9:26663 (BA;US)
Microstructure
Microstructure of 9 Cr-1 MoVNb and 12 Cr-1 MoVW ferritic steels after irradiation at elevated temperatures in HFIR, 9:26294 (RA;US)
Physical Properties
Niobium-titanius superconducting materials, 9:26663 (BA;US)
NIOBIUM BASE ALLOYS
Physical Radiation Effects
Investigation of the effects of irradiation on the microstructure and properties of commercially produced Nb_3Sn, 9:26343 (RA;GB)
NITRIC ACID
Catalytic Effects
Leaching aluminum from calcined kaolinitic clay with nitric acid. Report of investigations/1983, 9:27059 (R;US)
NITRIC OXIDE
NO.
Air Pollution Abatement
Pollutant emission rates from indoor combustion appliances and sidestream cigarette smoke, 9:27199 (RA;US)
Chemical Reaction Kinetics
Kinetic study of reactions involving ferrous nitrosyl complexes, 9:25252 (RA;US)
Thermodynamics and kinetics of the coordination of NO to Fe(II)NTA in aqueous solutions, 9:25253 (RA;US)
Wet flue gas simulataneous desulfurization and denitrification system, 9:25254 (RA;US)
Combustion Products
Influence of thiophene on the selective reduction of NO by NH_3, 9:25256 (J;US)
Ecological Concentration
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26981 (RA;US)
Indoor Air Pollution
Indoor air quality in new energy-efficient houses and retrofitted houses, 9:26957 (RA;US)
Reduction
Influence of thiophene on the selective reduction of NO by NH_3, 9:25256 (J;US)
Spectroscopy
Tunable atomic line molecular (TALM) spectrometer, 9:27266 (J;GB)
NITRIDES
See also IRON NITRIDES
SILICON NITRIDES
Synthesis
Synthesis of refractory materials, 9:26414 (P;US)
NITRITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Chemical Reaction Kinetics
Aqueous reactions of nitrite with bisulfite ions in sulfate aerosol formation, 9:26983 (RA;US)
NITROCELLULOSE
Moisture
Flowing afterglow in argon and helium: differences in two reactor designs in application to the analysis of moisture, 9:26499 (J;NL)
NITROGEN
Activation Analysis
Determination of low-Z elements simultaneously by charged particle activation analysis, 9:26988 (RA;US)
Evaluation of body composition and nitrogen content of renal patients on chronic dialysis as determined by total body neutron activation, 9:27157 (J;US)
In vivo quantification of body nitrogen for nutritional assessment, 9:27159 (J;US)
Atmospheric Chemistry
Application of thermal analysis and photoelectron spectroscopy for the characterizatoin of particulate matter, 9:26984 (RA;US)
Environmental Transport
Chemistry of western Atlantic precipitation at the mid-Atlantic coast and on Bermuda, 9:27079 (J;US)
Molecule-Molecule Collisions
Vibrational and rotational energy transfer upon molecular collisions, 9:27271 (J;NL)
Photoionization
Photoelectron studies of excited molecular states: H_2C ^{1}/PI//sub u/ and N_2O_3 ^{1}/PI//sub u/, 9:27255 (R;US)
Quantitative Chemical Analysis
Photoacoustic spectroscopy in gases based on wavelength modulation, 9:27006 (J;US)
Regeneration
Nitrogen regeneration by the subtropical marine copepod, 9:27123 (J;GB)
Rydberg States
Photoelectron studies of excited molecular states: H_2C ^{1}/PI//sub u/ and N_2O_3 ^{1}/PI//sub u/, 9:27255 (R;US)
Uses
Improvement of safety in fighting mine fires, by means of inertization of fire zones, 9:25291 (R;DE;In German)
NITROGEN COMPOUNDS
See also NITRIDES
NITRITES
NITROGEN OXIDES
Atmospheric Chemistry
Basic energy science, 9:26528 (RA;US)
NITROGEN DIOXIDE
NO_2.
Air Pollution Abatement
Pollutant emission rates from indoor combustion appliances and sidestream cigarette smoke, 9:27199 (RA;US)
Air Pollution Monitors
Study on the personal exposure dose to nitrogen dioxide, 9:26962 (RA;US)
Air Samplers
Multipollutant sampler for indoor and outdoor ambient air, 9:26952 (RA;US)
Ecological Concentration
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26959 (RA;US)

Health Hazards
Effects of ambient urban air pollution on asthmatics, 9:26955 (RA;US)
Pulmonary functions of children and indoor NO_2 concentrations in Portage, Wisconsin, 9:26954 (RA;US)
Indoor Air Pollution
Effect of cigarette smoking on residential NO_2 levels, 9:26946 (RA;US)
Effects of ventilation on residential air pollution due to emissions from a gas-fired stove, 9:26189 (RA;US)
Indoor air quality in new energy-efficient houses and retrofitted houses, 9:26957 (RA;US)
Indoor nitrogen dioxide pollution in the Netherlands, 9:26933 (RA;US)
Personal monitoring for nitrogen dioxide exposure: methodological considerations for a community study, 9:26963 (RA;US)
Spectroscopy
Tunable atomic line molecular (TALM) spectrometer, 9:27266 (J;GB)
Toxicity
Lung collagen metabolism in rats exposed to nitrogen dioxide, 9:27190 (RA;US)

NITROGEN NITRIDES
See NITROGEN

NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE
Ecological Concentration
Effects of ventilation on residential air pollution due to emissions from a gas-fired range, 9:26976 (RA;US)
Indoor Air Pollution
NO_2 formation in range-top burners, 9:25342 (RA;US)
Simultaneous measurement of airborne amines, nitrosating potential and nitrosamines, 9:26941 (RA;US)
Mobile Pollutant Sources
Clean air targets and the politics of urban travel: a case study, 9:26973 (R;US)

NITROSO COMPOUNDS
Indoor Air Pollution
Simultaneous measurement of airborne amines, nitrosating potential and nitrosamines, 9:26941 (RA;US)

NMR
See NUCLEAR MAGNETIC RESONANCE

NOBLE GASES
See RARE GASES

NOISE (REACTOR)
See REACTOR NOISE

NOMOGRAMS
Radiation Doses
Derivation and use of nomograms in diagnostic radiography, 9:27127 (R;AU)

NONAXIAL NUCLEI
See DEFORMED NUCLEI

NONDESTRUCTIVE TESTING
See also ACOUSTIC TESTING
ELECTROMAGNETIC TESTING
THERMAL TESTING
Porosity estimation in composites, 9:26699 (RA;US)
Born Approximation
Born sizing in cylindrical and planar geometries, 9:26690 (RA;US)
Microscopy
Evaluation of photoacoustic microscopy for fatigue crack detection, 9:26702 (RA;US)
Interdisciplinary program for quantitative nondestructive evaluation. Semi-annual report, October 1, 1982-February 28, 1983, 9:26683 (R;US)
Research Programs
Interdisciplinary program for quantitative nondestructive evaluation. Semi-annual report, October 1, 1982-February 28, 1983, 9:26683 (R;US)

NONLINEAR PROBLEMS
Algorithms
Approximate Newton method for coupled nonlinear systems, 9:27647 (R;US)
Numerical Solution
Techniques for large sparse systems arising from continuation methods, 9:27648 (R;US)

NONLINEAR SYSTEMS
See NONLINEAR PROBLEMS

NONRADIOACTIVE WASTE DISPOSAL
See WASTE DISPOSAL

NONRADIOACTIVE WASTES

Pipes
At-sea test of a large diameter steel, cold water pipe, 9:25742 (R;US)
Design of 1/3 scale fiberglass OTEC (Ocean Thermal Energy Conversion) cold water pipe, 9:25749 (R;US)
Ocean Thermal Energy Conversion cold water pipe at-sea test program status report. Design, fabrication, materials testing, 9:25750 (R;US)
OTEC (Ocean Thermal Energy Conversion) cold water pipe preliminary design study. Appendices to final report, 9:25754 (R;US)
OTEC (Ocean Thermal Energy Conversion) CWP (Cold Water Pipe) Laboratory Test Program. Ocean Systems Test Plan, 9:25748 (R;US)
OTEC (Ocean Thermal Energy Conversion) CWP (Cold Water Pipe) Laboratory Test Program. Materials Project Test Report, 9:25753 (R;US)
Planning
OTEC Ocean Engineering Technology Development, 9:25756 (BA;US)
Power Transmission Lines
Assessment of seafloor burial of proposed OTEC power transmission cables. Final report, 9:25744 (R;US)
Repair
Study to develop an inspection, maintenance, and repair plan for OTEC (Ocean Thermal Energy Conversion) modular experiment plants. Final report, 9:25752 (R;US)
Site Surveys
Environmental design criteria for the 1/3 scale OTEC (Ocean Thermal Energy Conversion) cold water pipe At-Sea Test Site off Honolulu, Hawaii, 9:25747 (R;US)
Specifications
OTEC (Ocean Thermal Energy Conversion) plant optimal design, fabrication and inspection specifications for OTEC ocean engineering systems, 9:25755 (R;US)
Stress Analysis
Methods for and examples of dynamic load and stress analysis of OTEC (Ocean Thermal Energy Conversion) cold water pipe designs. Volume 1, 9:25746 (R;US)
Technology Assessment
OTEC Ocean Engineering Technology Development, 9:25756 (BA;US)
Working Fluids
Preliminary considerations for the selection of a working medium for the solar sea power plant, 9:25739 (R;US)

OCEANS
See SEAS
OCTANE
Phase Studies
Phase compositions of aqueous/hydrocarbon systems containing organic salts, alcohol, and sodium chloride, 9:26540 (J;US)
ODOCOILEUS
See DEER
ODOR
Psychology
Olfactory and chemical characterization of indoor air - towards a psychrophysical model for air quality, 9:27097 (RA;US)
OFF-GAS SYSTEMS
Computerized Simulation
Aspen simulation of oil shale retort off-gas cleanup with venturi scrubbers, 9:25382 (R;US)
Explosions
Preventing and suppressing Explosions in a BWR off-gas line with Explosafe, 9:26030 (RA;US)
Fillers
Preventing and suppressing Explosions in a BWR off-gas line with Explosafe, 9:26030 (RA;US)
Scrubbers
Aspen simulation of oil shale retort off-gas cleanup with venturi scrubbers, 9:25382 (R;US)
OFFICE BUILDINGS
Design
Air quality control of ventilation in an office building, 9:26186 (RA;US)
Direct Gain Systems
Maryland National Capital Park and Planning Commission, Shady Grove Solar Office Building. Volume 1. Final technical report, 9:25763 (R;US)
Energy Consumption
Alternative work schedules energy conservation potential. Task IV report, 9:26109 (R;US)
Alternative work schedules energy conservation potential. Task V report. Executive summary and implementation, 9:26110 (R;US)
Alternative work schedules energy conservation potential. Task III report, 9:26111 (R;US)
Alternative work schedules energy conservation potential. Task 1 report, 9:26112 (R;US)
Indoor Air Pollution
Impact of different ventilation and lighting levels on building illness: an experimental study, 9:26944 (RA;US)
Influence of ventilation on indoor/outdoor air contaminants in an office building, 9:26187 (RA;US)
Investigation of health concerns and environmental measurements in a large office building, 9:26943 (RA;US)
Monitoring indoor pollutants in two small office buildings to support a modeling study, 9:26994 (R;US)
Respiratory irritation due to carpet shampoos, 9:27191 (RA;US)
Spatial variation of carbon monoxide and oxides of nitrogen concentrations inside residences, 9:26948 (RA;US)
Trace organic components in office space, 9:26932 (RA;US)
Passive Solar Heating Systems
Maryland National Capital Park and Planning Commission Shady Grove solar office building. Volume 2. Final technical report, 9:25764 (R;US)
Solar Air Conditioners
California State Office Building - Site III: project overview, 9:25762 (R;US)
Solar Heating Systems
California State Office Building - Site III: project overview, 9:25762 (R;US)
Maryland National Capital Park and Planning Commission, Shady Grove Solar Office Building. Volume 1. Final technical report, 9:25763 (R;US)
Maryland National Capital Park and Planning Commission Shady Grove solar office building. Volume 2. Final technical report, 9:25764 (R;US)

Solar Water Heaters
California State Office Building - Site III: project overview, 9:25762 (R;US)
Ventilation
Air quality control of ventilation in an office building, 9:26186 (RA;US)
Control of the ventilation by CO_2 content, 9:26969 (RA;US)
OFFSHORE PLATFORMS
Includes gravity or fixed, floating, and towed platforms.
Design
Preliminary design of a cruising OTEC modular experiment, 9:25735 (R;US)
Inspection
Potential inspection, maintenance and repair techniques for the OTEC (Ocean Thermal Energy Conversion) systems, 9:25751 (R;US)
Maintenance
Potential inspection, maintenance and repair techniques for the OTEC (Ocean Thermal Energy Conversion) systems, 9:25751 (R;US)
Repair
Potential inspection, maintenance and repair techniques for the OTEC (Ocean Thermal Energy Conversion) systems, 9:25751 (R;US)
OHIO
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
OIL SANDS
Resource Development
Regional socioeconomic analysis of tar sands development in Utah, 9:25343 (R;US)
OIL SHALE PROCESSING PLANTS
Demonstration Plants
Ranking fossil energy demonstration candidates to meet selected national priorities, 9:25225 (R;US)
Off-Gas Systems
Aspen simulation of oil shale retort off-gas cleanup with venturi scrubbers, 9:25382 (R;US)
Waste Water
Analytical methods for quantitating performance of oil shale wastewater treatment, 9:25384 (RA;US)
Microbial aspects of oil shale wastewater treatment, 9:25385 (RA;US)
Processes for the physico-chemical treatment of oil shale wastewaters, 9:25386 (RA;US)
OIL SHALE WASTE WATER
See OIL SHALES
WASTE WATER
OIL SHALES

Activation Energy
Reactivity of spent Chattanooga Oil Shale, 9:25380 (R;US)
Coordinated Research Programs
DOE joint experimental rock fragmentation research program, 9:25351 (RA;US)
Explosive Fracturing
Development of a predictive capability for oil shale rubblization: result of recent cratering experiments, 9:25352 (R;US)
DOE joint experimental rock fragmentation research program, 9:25351 (RA;US)
Engineering models of fragment motion for evaluating rubbling designs, 9:25346 (RA;US)
Fracture modeling: overview, theory and oil shale calculations, 9:25345 (RA;US)
Fracturing for true in situ and near-surface true in situ processes, 9:25371 (RA;US)
Goals of the present rock fragmentation program and instrumentation, 9:25349 (RA;US)
History of LANL rock fragmentation field experiments, 9:25347 (RA;US)
Observations and results from recent field experiments, 9:25348 (RA;US)
Oil shale fragmentation research at Los Alamos, 9:25350 (RA;US)
Results of recent field experiments at Anvil Points, 9:25372 (RA;US)
Fractures
Fracture modeling: overview, theory and oil shale calculations, 9:25345 (RA;US)
Fragmentation
DOE joint experimental rock fragmentation research program, 9:25351 (RA;US)
Goals of the present rock fragmentation program and instrumentation, 9:25349 (RA;US)
History of LANL rock fragmentation field experiments, 9:25347 (RA;US)
Oil shale fragmentation research at Los Alamos, 9:25350 (RA;US)
Results of recent field experiments at Anvil Points, 9:25372 (RA;US)
Gaseous Wastes
Mercury emissions from a modified in-situ oil shale retort, 9:27001 (J;GB)
Geochemistry
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Hydraulic Fracturing
Fracturing for true in situ and near-surface true in situ processes, 9:25371 (RA;US)
In-Situ Retorting
Geokinetics, Inc., introduction and background, 9:25360 (RA;US)
Investigation of the geokinetics horizontal in situ oil shale retorting process. Quarterly report, October, November, December 1983, 9:25354 (R;US)
Oil yield losses in non-uniform in situ oil shale retorts, 9:25373 (R;US)
Permeability contrast effects on in situ oil shale retorting efficiency, 9:25366 (RA;US)
Review of 10 and 150 ton LETC oil shale retort programs prior to 1976, 9:25356 (RA;US)
Sandia/Geokinetics retort 23: a horizontal in situ retorting experiment, 9:25361 (RA;US)
Sandia National Laboratories program for in situ oil shale research, 9:25365 (RA;US)
True in-situ recovery of shale oil, 9:25358 (RA;US)
Modified In-Situ Processes
10 ton retort tracer tests, 9:25370 (RA;US)
Analysis of occidental vertical modified in situ retorts No. 7 & No. 8, 9:25364 (RA;US)
Experimental tracer tests on LETC 150 ton retort, 9:25368 (RA;US)
Low void retorting, 9:25369 (RA;US)
Modified in-situ retorting: review of past R & D at LLNL, 9:25357 (RA;US)
Multidimensional tracer flow and oil shale retorting models, 9:25367 (RA;US)
Occidental Oil Shale, Inc., introduction and background, 9:25359 (RA;US)
Rio Blanco vertical modified in situ retorting, 9:25363 (RA;US)
Vertical modified in situ retorting occidental retort 6, mini-retorts, 9:25362 (RA;US)
Permeability
Oil yield losses in non-uniform in situ oil shale retorts, 9:25373 (R;US)
Research Programs
Fossil energy: oil shale R & D program, 9:25344 (RA;US)
Retorting
Fossil energy: oil shale R & D program, 9:25344 (RA;US)
Process for oil shale retorting using gravity-driven solids flow and solid-solid heat exchange, 9:25376 (P;US)
Simultaneous fluid-solid reactions in porous solids. II. Reactions between one fluid and two solid reactants, 9:25374 (J;GB)
Staged fluidized bed, 9:25378 (P;US)
Vacuum process for recovery of oil from oil shale, 9:25353 (R;US)
Retorts
Mercury emissions from a modified in-situ oil shale retort, 9:27001 (J;GB)
Separation Processes
Improved solvent recovery of Eastern shale oil, 9:25377 (P;US)

OIL WELLS
Carbon Dioxide Injection
Development of mobility control methods to improve oil recovery by CO_2. Final report, 9:25300 (R;US)
Enhanced oil recovery by CO_2 foam flooding. Final report, 9:25301 (R;US)
Caustic Flooding
Process for tertiary oil recovery using tall oil pitch, 9:25309 (P;US)
Hydraulic Fracturing
Three-dimensional hydraulic fracture propagation in the presence of stress variations, 9:25306 (J;US)
In-Situ Combustion
Comparison of formation resistivity changes induced by wet and dry in situ combustion, 9:25302 (R;US)
Fire flood method for recovering petroleum from oil reservoirs of low permeability and temperature, 9:25310 (P;US)
Steam Injection
Correlation of crude oil steam distillation yields with basic crude oil properties, 9:25308 (J;US)
Update of comparative analysis of steam delivery costs for surface and downhole steam drive technologies, 9:25304 (R;US)
Well Casings
Enhanced Recovery Packer Program. Phase III. Final report, 9:25305 (R;US)
OIL YIELDS
Correlations
Correlation of crude oil steam distillation yields with basic crude oil properties, 9:25308 (J;US)
OKLAHOMA
Cogeneration
Oklahoma Corporation Commission PURPA program. Final progress report, October 1, 1980-September 30, 1982, 9:26155 (R;US)
Economic Policy
Oklahoma Corporation Commission PURPA program. Final progress report, October 1, 1980-September 30, 1982, 9:26155 (R;US)
OLIVE OIL
Combustion Properties
Study of the combustion of various alternate fuels, 9:25625 (B;US)
Fuel Substitution
Study of the combustion of various alternate fuels, 9:25625 (B;US)
OMEGA FACILITY
Laser Implosions
Progress toward direct drive laser fusion, 9:27587 (BA;US)
Thermal transport measurements in 1.05 um laser irradiation of spherical targets, 9:27579 (BA;US)
Performance
Uniformity of energy deposition for laser driven fusion, 9:27580 (BA;US)
Research Programs
Inertial fusion program and National Laser Users Facility projects. Annual report, October 1, 1981-September 30, 1982, 9:27517 (R;US)
Laboratory for laser energetics. Annual report, 1 October 1980-30 September 1981, 9:27516 (R;US)
OPERATION (REACTOR)
See REACTOR OPERATION
OPTICAL MICROSCOPY
Photoacoustic Effect
Evaluation of photoacoustic microscopy fatigue crack detection, 9:26714 (BA;US)
OPTICAL PROPERTIES
Harmonics
Optical second-harmonic generation for surface studies, 9:26471 (R;US)
OPTICAL SYSTEMS
Defects
Characterization of micron-sized, optical coating defects by photothermal deflection microscopy, 9:27518 (R;US)
Machining
Damage introduced into silicon by diamond turning, 9:26775 (RA;GB)
Silicon
Damage introduced into silicon by diamond turning, 9:26775 (RA;GB)
X Radiation
Damage introduced into silicon by diamond turning, 9:26775 (RA;GB)
OREGON
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
Geology
Geology of the Cougar Reservoir Area, Lane County, Oregon. Chapter 4, 9:25826 (RA;US)
Geology of the Lookout Point area, Lane County, Oregon. Chapter 5, 9:25827 (RA;US)
Geology of the Waldo Lake-Swift Creek area, Lane and Klamath Counties, Oregon. Chapter 6, 9:25828 (RA;US)
Overview of the geology of the central Oregon Cascade Range. Chapter 2, 9:25824 (RA;US)
Geothermal Exploration
Geothermal exploration in the central Oregon Cascade Range. Chapter 8, 9:25834 (RA;US)
Geothermal Resources
Preliminary geology of the Outerson Mountain-Devils Creek area, Marion County, Oregon. Chapter 3, 9:25825 (RA;US)
Geothermal Wells
Oregon geothermal gradient data published, 9:25818 (B;US)
Heat Flow
Heat flow in the Oregon Cascades. Chapter 7, 9:25833 (RA;US)
Hot Springs
Geology of the Cougar Reservoir Area, Lane County, Oregon. Chapter 4, 9:25826 (RA;US)
Lithology
Geology of the Waldo Lake-Swift Creek area, Lane and Klamath Counties, Oregon. Chapter 6, 9:25828 (RA;US)
Stratigraphy
Preliminary geology of the Outerson Mountain-Devils Creek area, Marion County, Oregon. Chapter 3, 9:25825 (RA;US)

PAPER INDUSTRY
Dryers
Research on an energy-efficient drying process. Interim report, September 24, 1982-November 30, 1983, 9:26232 (R;US)
Process Control
Advanced sensor development program for the pulp and paper industry. Annual report, 9:26233 (R;US)

PARABOLIC DISH COLLECTORS
Materials Testing
Solar tests of aperture plate materials for solar thermal dish collectors, 9:25713 (R;US)
Meetings
Fifth parabolic dish solar thermal power program annual review: proceedings, 9:25715 (R;US)
Performance
Experimental performance characterization of line-focus collectors, 9:25803 (J;US)
Research Programs
Fifth parabolic dish solar thermal power program annual review: proceedings, 9:25715 (R;US)
PARABOLIC POINT COLLECTORS
See PARABOLIC DISH COLLECTORS
PARABOLIC TROUGH COLLECTORS
Coverings
Antireflection Pyrex envelopes for parabolic solar collectors, 9:25804 (J;US)
Evaluation
Concentrating solar collector: technical note, 9:25792 (R;US)
Performance
Experimental performance characterization of line-focus collectors, 9:25803 (J;US)
PARADOX BASIN
Seismicity
Seismicity of the Paradox Basin and the Colorado Plateau interior, 9:25485 (R;US)
PARAFFIN
Latent Heat Storage
Thermal energy storage system combining mass and PCM, 9:25808 (R;US)
PARAMAGNETIC RESONANCE (NUCLEAR)
See NUCLEAR MAGNETIC RESONANCE
PARKS
See PUBLIC LANDS
RECREATIONAL AREAS
PARTICLE BEAM FUSION ACCELERATOR
Design
Advances in ICF using light ion beams, 9:27589 (BA;US)
PARTICLE DECAY
See also HADRONIC PARTICLE DECAY
Representations of Poincare group associated with unstable particles, 9:27325 (R;SU)
PARTICLE IDENTIFICATION
Cherenkov Counters
Pointing out and identification system in a vertex detector for secondary particles, 9:26824 (RA;SU;In Russian)
Drift Chambers
Pointing out and identification system in a vertex detector for secondary particles, 9:26824 (RA;SU;In Russian)
PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Air Pollution Abatement
Pollutant emission rates from indoor combustion appliances and sidestream cigarette smoke, 9:27199 (RA;US)
Air Pollution Monitors
Carbon monoxide and aerosol concentrations in public access buildings, 9:26934 (RA;US)
Chemical Analysis
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:25234 (J;US)
Ecological Concentration
Effects of ventilation on residential air pollution due to emissions from a gas-fired range, 9:26976 (RA;US)
Health Hazards
Effects of ambient urban air pollution on asthmatics, 9:26955 (RA;US)
Indoor Air Pollution
Control of indoor air pollution by hypernegionization (HNI) and passive electret filtration, 9:26917 (RA;US)
Effect of air control systems on the indoor distribution of viable particulates, 9:26918 (RA;US)
Indoor air quality in new energy-efficient houses and retrofitted houses, 9:26957 (RA;US)
Personal exposures to respirable particulates; a tale of two cities - Kingston and Harriman, Tennessee, 9:26965 (RA;US)
Personal exposure versus monitoring station data for respirable particles, 9:26966 (RA;US)
Sampling
Sampling and determination of boron in the atmosphere, 9:26481 (J;US)
Solvent Extraction
Characterization of particles from several sources and three urban areas by solvent extraction, 9:27000 (J;GB)
PARTITION
Not to be used in connection with ion exchange or ion exchange chromatography.
Calculation Methods
Octanol-water partition coefficient of benzo(a)pyrene: measurement, calculation, and environmental implications, 9:26476 (J;US)
PARTON MODEL
Correlation Functions
Spectral properties of parton correlation functions and multiparton wave functions, 9:27328 (R;SU;In Russian)
Distribution Functions
Q^2-dependence of multiparticle distribution and fragmentation functions in QCD, 9:27321 (R;UA)
PART-TIME WORK SCHEDULES
See ALTERNATIVE WORK SCHEDULES
PASSENGERS
See OCCUPANTS
PASSIVE SOLAR COOLING SYSTEMS
Research Programs
Passive research and development, 9:25775 (RA;US)
PASSIVE SOLAR HEATING SYSTEMS
See also DIRECT GAIN SYSTEMS
Construction
Passive solar collector project. Final report, 9:25772 (R;US)
Cooling Load
Simplified method for estimating the cooling loads of passive solar systems, 9:25760 (R;US)
SLR-PLUS Version 1.0 Reference Manual, 9:25758 (R;US)
Design
Passive solar residential design and construction projects in the southeastern United States. Technical summary and final report, 9:25759 (R;US)
Rotating-prism, movable-mass, solar energy system. A slide show with accompaning cassette narration describing a device development, 9:25771 (R;US)
Rotating-prism, movable-mass solar energy system. Final report, 9:25770 (R;US)
Heat Storage
Heat storage and distribution inside passive solar buildings, 9:25784 (BA;GB)
Heating Load
SLR-PLUS Version 1.0 Reference Manual, 9:25758 (R;US)
Images
Rotating-prism, movable-mass, solar energy system. A slide show with accompaning cassette narration describing a device development, 9:25771 (R;US)
Maintenance
Maryland National Capital Park and Planning Commission Shady Grove solar office building. Volume 2. Final technical report, 9:25764 (R;US)
Meetings
Eighth national passive solar conference. Final report, 9:25780 (R;US)
Performance
Passive solar collector project. Final report, 9:25772 (R;US)
Prisms
Rotating-prism, movable-mass solar energy system. Final report, 9:25770 (R;US)
Research Programs
Passive research and development, 9:25775 (RA;US)
Test Facilities
Calorimetric test facility for field measuring thermal performance of passive/hybrid solar components, 9:26901 (BA;US)

PASSIVE SOLAR WATER HEATERS
Design
Development and manufacturing of a more cost-effective heat pipe solar water heater. Final report, 9:25781 (R;US)
Heat Pipes
Development and manufacturing of a more cost-effective heat pipe solar water heater. Final report, 9:25781 (R;US)
Manufacturing
Development and manufacturing of a more cost-effective heat pipe solar water heater. Final report, 9:25781 (R;US)
PATIENTS
Sensitivity
Environmental control of indoor air pollution in hospital and home environment in relation to cardiovascular disease, 9:27156 (RA;US)
PAULI MATRICES
See PAULI SPIN OPERATORS
PAULI SPIN OPERATORS
Spin
Connection between generators of three- and four dimensional turns with Hamilton's operators for particles with spins 1 and 1/2, 9:27450 (R;SU;In Russian)
PBFA
See PARTICLE BEAM FUSION ACCELERATOR
PCB
See CHLORINATED AROMATIC HYDROCARBONS
PDX DEVICES
Environmental Impacts
Environmental monitoring report for calendar year 1983, 9:27556 (R;US)
Equilibrium Plasma
Princeton spectral equilibrium code: PSEC, 9:27479 (R;US)
Impurities
Vertical poloidal asymmetries of low-Z element radiation in the PDX tokamak, 9:27597 (J;AT)
Monitoring
Environmental monitoring report for calendar year 1983, 9:27556 (R;US)
Rotating Plasma
Plasma rotation in the PDX tokamak, 9:27492 (J;AT)
PEANUT OIL
Combustion Properties
Study of the combustion of various alternate fuels, 9:25625 (B;US)
Fuel Substitution
Study of the combustion of various alternate fuels, 9:25625 (B;US)
PEARL SPAR
See DOLOMITE
PEAT
Briquetting
Peat fuel enterprises in America, 9:25272 (RA;US)
PEATLANDS

PEP STORAGE RINGS
Beam Dynamics
Analysis of damping measurements in PEP, 9:26791 (R;US)
PERCHLORATES
Physical Radiation Effects
Damage and other changes that occur in some inorganic materials subjected to synchrotron radiation, 9:26437 (RA;GB)
PERFORMANCE
Temperature Dependence
Mirror benders for high thermal loading, 9:26883 (RA;GB)
PERHYDROXYL RADICAL
See HYDROPEROXY RADICALS
PERMANENT MAGNETS
Study and review of permanent magnets for electric vehicle propulsion motors, 9:26256 (R;US)
PERMUTIT (INORGANIC)
See INORGANIC ION EXCHANGERS
PEROXYACETYL NITRATE
Solvent Extraction
Improved procedure for high purity gaseous peroxyacyl nitrate production: use of heavy lipid solvents, 9:26478 (J;GB)
Synthesis
Improved procedure for high purity gaseous peroxyacyl nitrate production: use of heavy lipid solvents, 9:26478 (J;GB)
PERSONNEL
Studies of groups of persons employed in a particular field of endeavor. For studies on individuals in a group see also MAN.
See also ASTRONAUTS
PROFESSIONAL PERSONNEL
Medical Surveillance
Personnel and plant area monitoring at the University of Minnesota-Duluth gasifier, 9:25226 (R;US)
Radiation Doses
Evaluation of doses to workers and general public from the carriage of radiopharmaceuticals: an application of the INTERTRAN code, 9:25534 (RA;US)
Radiation exposure resulting from the transport of radioactive materials within the United Kingdom, 9:25542 (RA;US)
Statistical data on the transport of radioactive materials in Italy and radiation dose evaluation to transport workers, 9:25543 (RA;US)
Study of the exposures received by the persons involved in the transportation of radioactive materials, 9:25541 (RA;US)
World-wide risk assessment of the transportation of radioactive materials, 9:25412 (RA;US)
Radiation Hazards
Proposed UK legislation to provide radiological protection for workers, with emphasis on its application to the transport of radioactive materials, 9:25430 (RA;US)
Radiation Protection
Identification of dose-reduction techniques for BWR and PWR repetitive high-dose jobs, 9:26008 (R;US)
Training
Compliance training, 9:25472 (RA;US)
Problems in educational training: number and type of workers involved in the transport of radioactive materials, 9:25471 (RA;US)
PERSONNEL DOSIMETRY
Bibliographies
Bibliography of literature relevant to the reassessment of A-bomb radiation dosimetry in Hiroshima and Nagasaki, 9:27168 (R;US)
PERSONNEL FILM DOSIMETRY
See PERSONNEL DOSIMETRY
PERSONNEL MONITORING
Information Systems
Quality control activities in support of the plutonium workers study. Assessment of coding consistency for data collected at Rocky Flats, 9:27166 (R;US)
PERTURBATION THEORY
Parton Model
Q^2-dependence of multiparticle distribution and fragmentation functions in QCD, 9:27321 (R;UA)
PESTICIDES
Immune Reactions
Environmental control of indoor air pollution in hospital and home environment in relation to cardiovascular disease, 9:27156 (RA;US)

PETROLEUM
Limited to crude oil; see also COAL LIQUIDS, SHALE OIL, etc.
API Gravity
Correlation of crude oil steam distillation yields with basic crude oil properties, 9:25308 (J;US)
Chemical Analysis
Molecular characterization of vanadyl and nickel non-porphyrin compounds in heavy crude petroleums and residua, 9:25327 (R;US)
Rotationally cooled laser-induced fluorescence/gas chromatography, 9:25329 (J;US)
Speciation of vanadyl porphyrins and non-porphyrin compounds in heavy crude oils by HPLC-GFAA and the competitive equilibria between vanadyl porphyrins and multidentate ligands, 9:25326 (RA;US)
Demetallization
Reactions of inorganic and organoarsenic compounds with substituted catechols, 9:25312 (RA;US)
Distillation
Correlation of crude oil steam distillation yields with basic crude oil properties, 9:25308 (J;US)
Economic Elasticity
Oil-price shock: market response and contingency planning, 9:25317 (R;US)
Energy Consumption
Monthly energy review, January 1984, 9:26147 (R;US)
Enhanced Recovery
Development of an analytical framework to assess the role of new technologies for liquid and gaseous fuels. Volume IV. Decision analysis of national research and development funding for unconventional oil technologies. Final report, 9:25298 (R;US)
Marketing
Petroleum marketing monthly, 9:25315 (R;US)
Prices
Surprise price shifts, tax changes and the supply behaviour of resource extracting firms, 9:25319 (R;DE)
Production
Monthly energy review, January 1984, 9:26147 (R;US)
Pacific summary report: Outer Continental Shelf oil and gas activities in the Pacific and their onshore impacts, 9:25321 (R;US)
Surprise price shifts, tax changes and the supply behaviour of resource extracting firms, 9:25319 (R;DE)
Reserves
Bering Sea summary report: Outer Continental Shelf oil and gas activities in the Bering Sea and their onshore impacts, 9:25320 (R;US)
Data base streamlines DOE EIA-23 reporting, 9:25311 (J;US)
Estimated oil and gas reserves, Gulf of Mexico Outer Continental Shelf and Continental Slope, 9:25296 (R;US)
Pacific summary report: Outer Continental Shelf oil and gas activities in the Pacific and their onshore impacts, 9:25321 (R;US)
Statistical Data
Petroleum supply monthly, 9:25314 (R;US)
Supply and Demand
EMF 7 model comparisons: key relationships and parameters, 9:25313 (R;US)
Supply Disruption
Oil-price shock: market response and contingency planning, 9:25317 (R;US)
Viscosity
Correlation of crude oil steam distillation yields with basic crude oil properties, 9:25308 (J;US)
PETROLEUM COKE
See COKE

PION MINUS REACTIONS
Inclusive Interactions
Average number of neutrons in πp p, π^- n and π^- ^{12}C interactions at p=4 GeV/c, 9:27295 (R;SU;In Russian)
Particle Production
π^+ meson production under 118 deg angle in the inclusive $\pi^- A \rightarrow \pi^+ x$ reaction at 1.5 GeV/c incident momentum, 9:27287 (R;SU;In Russian)
Cumulative proton production in pion-carbon interactions at 5 GeV/c, 9:27288 (R;SU;In Russian)
PION MINUS-NEUTRON INTERACTIONS
Inclusive Interactions
Average number of neutrons in π^- p, π^- n and π^- ^{12}C interactions at p=4 GeV/c, 9:27295 (R;SU;In Russian)
Particle Production
Comparison of space-time characteristics of the radiation region of secondary pions produced in π^- N and π^- C interactions at 40 GeV/c in different frames of reference, 9:27326 (R;SU;In Russian)

PION MINUS-PROTON INTERACTIONS
Inclusive Interactions
Average number of neutrons in π^- p, π^- n and π^- ^{12}C interactions at p=4 GeV/c, 9:27295 (R;SU;In Russian)
Multiple Production
Measurement of high-psub(T) correlations in 340 GeV/c pp and 280 GeV/c π^- p reactions, 9:27303 (J;NL)
Particle Production
Interference of secondary pions and time-space characteristics of their emission volume in π^- p interactionS at 40 GeV/c, 9:27291 (R;SU)
Status of the glueballs, 9:27275 (R;US)
Study of K^+ K/sub s/π^- final state produced by π^- and anti p beams, 9:27276 (R;US)
PION REACTIONS
See also PION MINUS REACTIONS
Investigation of pion-nucleon interactions at energies up to 1 GeV at the "Kaspij" device, 9:27297 (RA;SU;In Russian)
Charge-Exchange Reactions
Study of giant resonances with pions, 9:27398 (R;US)
Inelastic Scattering
Study of giant resonances with pions, 9:27398 (R;US)
Knock-Out Reactions
Asymmetries in angular distributions of nucleon emission intensity in high energy hadron-nucleus collisions, 9:27293 (R;SU)
PION-NUCLEON INTERACTIONS
See also PION-PROTON INTERACTIONS
P Invariance
P-odd effects in the πip $+q \rightarrow \mu^+ + \mu^- + q'$, q+ anti q' $\rightarrow$ $\pi^{+-} + \mu^+ + \mu^-$ processes and P-odd constant of π^{+-} qq'-interaction, 9:27353 (R;UA;In Russian)
PION-PROTON INTERACTIONS
See also PION MINUS-PROTON INTERACTIONS
Particle Production
Possibility of a measurement of the gluon structure function of pion from J/psi production data, 9:27316 (R;SU;In Russian)
PIONS
See also PIONS MINUS
PIONS NEUTRAL
PIONS PLUS
Coherent Production
Interference correlations of identical particles in models with closely spaced sources, 9:27323 (R;SU)
Correlations
Interference correlations of identical particles in models with closely spaced sources, 9:27323 (R;SU)
Particle Production
Pion absorpton and production in few nucleon systems, 9:27348 (R;US)
Soft and hard quark collisions in large transverse-momentum hadron-nucleus processes, 9:27322 (R;SU)
Structure Functions
Possibility of a measurement of the gluon structure function of pion from J/psi production data, 9:27316 (R;SU;In Russian)
PIONS MINUS
Multiple Production
Experimental estimation of the contribution of secondary inelastic interactions in the multiplicity of πp mesons in pA-interactions, 9:27284 (R;SU;In Russian)
Particle Production
Comparison of space-time characteristics of the radiation region of secondary pions produced in π^- N and π^- C interactions at 40 GeV/c in different frames of reference, 9:27326 (R;SU;In Russian)
Interference of secondary pions and time-space characteristics of their emission volume in π^- p interactionS at 40 GeV/c, 9:27291 (R;SU)
Scaling of semi-inclusive spectra of π^- mesons from pp interactions, 9:27324 (R;SU)
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
PIONS NEUTRAL
Electroproduction
Pion electroproduction on the ^{4}He nuclei and p-odd nuclear forces, 9:27341 (R;UA;In Russian)
Photoproduction
Measurement of Psub(γ) component of the polarization vector of recoil protons in π^0-meson photoproduction reaction for the angle THETAsub(πsub(0))* =60deg in resonance region, 9:27283 (R;SU;In Russian)
PIONS PLUS
Particle Production
π^+ meson production under 118 deg angle in the inclusive π^- A $\rightarrow \pi^+$ x reaction at 1.5 GeV/c incident momentum, 9:27287 (R;SU;In Russian)
Comparison of space-time characteristics of the radiation region of secondary pions produced in π^- N and π^- C interactions at 40 GeV/c in different frames of reference, 9:27326 (R;SU;In Russian)
Interference of secondary pions and time-space characteristics of their emission volume in π^- p interactionS at 40 GeV/c, 9:27291 (R;SU)
Single pion production in the νsub(μ)N$\rightarrow\mu^-$ Nπ neutrino reactions, 9:27334 (RA;SU;In Russian)
PIPE FITTINGS
Nondestructive Testing
The clamping force of heat shrinkable fittings, 9:26730 (BA;US)
Shrinkage
The clamping force of heat shrinkable fittings, 9:26730 (BA;US)
Stress Analysis
The clamping force of heat shrinkable fittings, 9:26730 (BA;US)
PIPELINES
Reliability
Reliability analysis for stiff versus flexible piping, 9:26657 (R;US)
Stress Analysis
Reliability analysis for stiff versus flexible piping, 9:26657 (R;US)
PIPES
Acceleration
At-sea test of a large diameter steel, cold water pipe, 9:25742 (R;US)
Computerized Simulation
Method of pipe whip and impact analyses, 9:26655 (R;US)
Design
Design of 1/3 scale fiberglass OTEC (Ocean Thermal Energy Conversion) cold water pipe, 9:25749 (R;US)
Ocean Thermal Energy Conversion cold water pipe at-sea test program status report. Design, fabrication, materials testing, 9:25750 (R;US)
Fabrication
Ocean Thermal Energy Conversion cold water pipe at-sea test program status report. Design, fabrication, materials testing, 9:25750 (R;US)
Failures
Metallurgical investigation of a gray cast iron 16-in.-diam water line failure at Oak Ridge National Laboratory, 9:26389 (J;US)
Fluid-Structure Interactions
Development of the three-dimensional SHAPS code capabilities for application to LMFBR piping systems, 9:26014 (R;US)
Heat Transfer
Thermal laminarization of a stratified pipe flow, 9:25931 (R;US)
Hydraulics
Thermal laminarization of a stratified pipe flow, 9:25931 (R;US)
Hydrodynamics
Development of the three-dimensional SHAPS code capabilities for application to LMFBR piping systems, 9:26014 (R;US)
Impact Tests
Method of pipe whip and impact analyses, 9:26655 (R;US)
Materials
OTEC (Ocean Thermal Energy Conversion) CWP (Cold Water Pipe) Laboratory Test Program. Materials Project Test Report, 9:25753 (R;US)

Materials Testing
Ocean Thermal Energy Conversion cold water pipe at-sea test program status report. Design, fabrication, materials testing, 9:25750 (R;US)
Nondestructive Testing
The clamping force of heat shrinkable fittings, 9:26730 (BA;US)
Restraints
Reliability analysis of stiff versus flexible piping. Status report, 9:25893 (R;US)
Scale Models
Design of 1/3 scale fiberglass OTEC (Ocean Thermal Energy Conversion) cold water pipe, 9:25749 (R;US)
Seismic Effects
Impact of changes in damping and spectrum peak broadening on the seismic response of piping systems, 9:26044 (R;US)
Seismic response and damping tests of small bore LMFBR piping and supports, 9:26022 (R;US)
Shock Absorbers
Parametric studies on the load-deflection characteristics of hydraulic snubbers, 9:25969 (R;US)
Reliability analysis of stiff versus flexible piping. Status report, 9:25893 (R;US)
Specifications
OTEC (Ocean Thermal Energy Conversion) cold water pipe preliminary design study. Appendices to final report, 9:25754 (R;US)
Stress Analysis
Development of the three-dimensional SHAPS code capabilities for application to LMFBR piping systems, 9:26014 (R;US)
Reliability analysis of stiff versus flexible piping. Status report, 9:25893 (R;US)
The clamping force of heat shrinkable fittings, 9:26730 (BA;US)
Stresses
At-sea test of a large diameter steel, cold water pipe, 9:25742 (R;US)
Magnetic forces on a ferromagnetic HT-9 first wall/blanket and coolant pipe, 9:27523 (RA;US)
Supports
Reliability analysis of stiff versus flexible piping. Status report, 9:25893 (R;US)
Two-Phase Flow
Numerical treatment of pipe boundary conditions in two-phase flow, 9:25960 (R;US)

PITCH ANGLE
See INCLINATION

PITCHBLENDE
Leaching
Numerical simulation of uranium in-situ mining, 9:25391 (J;GB)

PITTSBURG-MIDWAY SOLVENT REFINED COAL PRO
See SRC PROCESS

PLANT CELLS
Metalloproteins
Molecular response of cadmium resistant Datura innoxia cells to heavy metal stress, 9:27198 (R;US)

PLANT FOSSILS
See FOSSILS

PLANT GROWTH
Inhibition
Growth analysis of soybean exposed to simulated acid rain and gaseous air pollutants, 9:27217 (J;GB)

PLANTS
See also ALGAE
HERBS
SEAWEEDS
SHRUBS
TRADESCANTIA
TREES
Biochemistry
Comparison of the mechanism of cellulose biosynthesis in plants and bacteria (Acetobacter xylinum), 9:27104 (J;US)

PLANTS (POWER)
See POWER PLANTS

PLASMA
See also COLD PLASMA
EQUILIBRIUM PLASMA
LASER-PRODUCED PLASMA
LOW-BETA PLASMA
RELATIVISTIC PLASMA
ROTATING PLASMA
Charged-Particle Transport
Electron transport in one-dimensional plasmas, 9:27498 (J;US)
Plasma transport in stochastic magnetic fields. Pt. 3. Kinetics of test particle diffusion, 9:27500 (J;GB)
Cyclotron Radiation
Extension of Trubnikov's radiation loss formula to relativistic temperatures, 9:27490 (J;AT)
Distribution Functions
Microstability theory for distributions separable in energy and pitch angle, 9:27487 (R;US)
Electronic Structure
Two-centre electronic wave functions in plasmas, 9:27484 (R;GB)
Energy Absorption
Electron transport in one-dimensional plasmas, 9:27498 (J;US)
Energy Losses
Extension of Trubnikov's radiation loss formula to relativistic temperatures, 9:27490 (J;AT)
Laser-Radiation Heating
Absorption, double layers, and dynamics at laser-plasma interaction and pellet fusion gains with reheat, 9:27572 (BA;US)
Lyapunov Method
Generalized Poisson brackets and nonlinear Liapunov stability: application to reduced MHD, 9:27476 (R;US)
Lyapunov stability conditions for a relativistic multifluid plasma, 9:27478 (R;US)
Magnetohydrodynamics
Generalized Poisson brackets and nonlinear Liapunov stability: application to reduced MHD, 9:27476 (R;US)
Neoclassical Transport Theory
Theoretical studies of Elmo Bumpy Torus. Annual report, 9:27462 (R;US)
Neutral-Particle Transport
Monte Carlo treatment for neutral particle transport problems in a toroidal plasma, 9:27504 (J;US)
Plasma Microinstabilities
Microstability theory for distributions separable in energy and pitch angle, 9:27487 (R;US)
Poisson Equation
Generalized Poisson brackets and nonlinear Liapunov stability: application to reduced MHD, 9:27476 (R;US)
Lyapunov stability conditions for a relativistic multifluid plasma, 9:27478 (R;US)
Radiative Cooling
Measurement of radiation loss rate of an iron-seeded plasma, 9:27494 (J;AT)
Solitons
Soliton experiments in plasmas, 9:27499 (J;GB)
Transport
Hydrodynamic theory of convective transport across a dynamically stabilized diffuse boundary layer, 9:27468 (R;DE)

PLASMA ACCELERATORS
See PLASMA GUNS

PLASMA BEAM INJECTION
Propagation and space focusing in vacuum, 9:27592 (BA;US)

PLASMA DIAGNOSTICS
Alpha Particles
A nuclear diagnostic for fast alpha particles, 9:27496 (J;US)
Fiber Optics
Two novel plasma diagnostics, 9:27475 (R;US)
Holography
Holographic interferometry using twenty-picosecond uv pulses to obtain time resolved hydro measurements of selenium and gold plasmas, 9:27536 (R;US)
Soft X Radiation
Absolute measurement of radiation losses of a tokamak in the region of ultrasoft X-radiation, 9:27467 (R;DE;In German)
X-Ray Spectra
Photoemissive materials for 0.35μm laser fiducials in x-ray streak cameras, 9:27565 (R;US)

PLASMA GUNS
Specifications
Steady state compact toroidal plasma production, 9:27503 (P;US)
PLASMA HEATING
See also HIGH-FREQUENCY HEATING
LASER-RADIATION HEATING
Control Theory
Proposed scenario for burn control in tokamak reactor, 9:27495 (J;US)
PLASMA MACROINSTABILITIES
See also BALLOONING INSTABILITY
KINK INSTABILITY
TEARING INSTABILITY
Stabilization
MHD stability properties of bean-shaped tokamaks, 9:27481 (R;US)
PLASMA SCRAPE-OFF LAYER
Turbulence
Scaling of edge-plasma turbulence in the Caltech tokamak, 9:27491 (J;AT)
PLASMA SIMULATION
Solution adaptive triangular meshes with application to the simulation of plasma equilibrium, 9:27464 (R;US)
PLASMONS
Decay
Experiments and theory on half-harmonic light and two-plasmon decay, 9:27515 (R;US)
PLASTIC PROPERTIES
See PLASTICITY
PLASTIC SCINTILLATION COUNTERS
See PLASTIC SCINTILLATION DETECTORS
PLASTIC SCINTILLATION DETECTORS
Design
A low-energy photon localization system for a tagged annihilation photon beam, 9:26851 (J;US)
The plastic box - A 4π detector for intermediate energy heavy ion physics, 9:26861 (J;US)
Performance
A low-energy photon localization system for a tagged annihilation photon beam, 9:26851 (J;US)
A time-of-flight hodoscope saving the number of photomultipliers, 9:26870 (J;US)
Spatial Resolution
The plastic box - A 4π detector for intermediate energy heavy ion physics, 9:26861 (J;US)
PLASTICITY
Computer Calculations
Formulation and numerical integration of elastoplastic and elasto-viscoplastic rate constitutive equations, 9:27442 (R;US)
PLASTICS
See also POLYSTYRENE
POLYURETHANES
THERMOPLASTICS
Sample Preparation
Preparation of internal crack samples and ultrasonic measurements in composites, 9:26700 (RA;US)
Ultrasonic Testing
Preparation of internal crack samples and ultrasonic measurements in composites, 9:26700 (RA;US)
PLATINUM
Catalytic Effects
Improvement of the photoelectrochemical oxidation of halides by platinization of metal dichalcogenide photoanodes, 9:26555 (J;US)
Molecular ingredients of heterogeneous catalysis, 9:26268 (R;US)
Electrodeposition
Arsenic and platinum deposition during cathodic hydrogenation, 9:26547 (J;US)
Improvement of the photoelectrochemical oxidation of halides by platinization of metal dichalcogenide photoanodes, 9:26555 (J;US)
PLATINUM COMPLEXES
Decay
Comparison of radiationless decay processes in osmium and platinum porphyrins, 9:27264 (J;US)
PLESIOTHERAPY
See RADIOTHERAPY
PLT DEVICES
Current-Drive Heating
Formation of a 100-kA tokamak discharge in the Princeton large torus by lower hybrid waves, 9:27480 (R;US)
Environmental Impacts
Environmental monitoring report for calendar year 1983, 9:27556 (R;US)
Extreme Ultraviolet Radiation
Spectrometer sensitivity calibration in the extreme uv by means of branching ratios of magnetic dipole lines, 9:27482 (R;US)
Lower Hybrid Heating
Formation of a 100-kA tokamak discharge in the Princeton large torus by lower hybrid waves, 9:27480 (R;US)
Monitoring
Environmental monitoring report for calendar year 1983, 9:27556 (R;US)
PLUMES
Aerial Monitoring
Cooling tower plume rise analyses by airborne lidar, 9:26996 (J;GB)
Diffusion
Cooling tower plume rise analyses by airborne lidar, 9:26996 (J;GB)
Mathematical Models
Modification of plume models to account for dry deposition, 9:26929 (R;US)
PLUTONIUM
Biological Accumulation
Natural chelates for radionuclide decorporation, 9:27184 (P;US)
Calibration Standards
Certification of a plutonium metal reference material for chemical analysis, 9:26467 (R;XE)
Certification
Certification of a plutonium metal reference material for chemical analysis, 9:26467 (R;XE)
Chelating Agents
Natural chelates for radionuclide decorporation, 9:27184 (P;US)
Ecological Concentration
Evaluation of an automated assay system to measure soil radionuclides by L x-ray and γ-ray spectrometry, 9:27067 (J;US)
Particle Resuspension
Update and inclusion of resuspension model codes, 9:27065 (R;US)
Radiation Monitoring
Violinist: sophisticated pu field monitor, 9:27042 (J;US)
Redox Reactions
Kinetic study of electron transfer reactions between plutonium(VI) and a series of N-alkylphenothiazines, 9:26567 (J;CH)
Thermal Conductivity
Thermal conductivity and Lorenz number of plutonium and plutonium-gallium alloys, 9:26395 (BA;US)
Thermal Diffusivity
Thermal conductivity and Lorenz number of plutonium and plutonium-gallium alloys, 9:26395 (BA;US)
Tissue Distribution
Statistical lung model for microdosimetry, 9:27171 (R;US)
Transmission Electron Microscopy
Development of plutonium transmission electron microscopy, 9:26328 (R;US)
PLUTONIUM 238
Concentration Ratio
Factors affecting plant absorption, transport and fate of plutonium, 9:27169 (R;US)
Root Absorption
Factors affecting plant absorption, transport and fate of plutonium, 9:27169 (R;US)
Safety

PORTSMOUTH GASEOUS DIFFUSION PLANT
POSITION SENSITIVE DETECTORS
Position-sensitive fission counter for in-core flux profile monitoring, 9:25982 (R;US)
Comparative Evaluations
Recent developments in detectors for high spatial resolution positron CT, 9:27131 (J;US)
Design
A position-sensitive germanium detector for gamma-ray astronomy, 9:26841 (J;US)
Performance Testing
A position-sensitive germanium detector for gamma-ray astronomy, 9:26841 (J;US)
Spatial Resolution
Recent developments in detectors for high spatial resolution positron CT, 9:27131 (J;US)
Time Resolution
Recent developments in detectors for high spatial resolution positron CT, 9:27131 (J;US)
POSITRON BEAMS
Beam Monitoring
Test of lead glass shower counters, 9:26857 (J;US)
Beam Position
Test of lead glass shower counters, 9:26857 (J;US)
Scintillation Counting
A measurement of the energy resolution and related properties of an SCG1-C scintillation glass shower counter array for 1-25 GeV positions, 9:26864 (J;US)
POSITRON CAMERAS
Coincidence Methods
A stationary positron emission ring tomograph using BGO detector and analog readout, 9:27136 (J;US)
Design
A stationary positron emission ring tomograph using BGO detector and analog readout, 9:27136 (J;US)
Performance characteristics of the McMaster positron emission tomograph, 9:27135 (J;US)
Some aspects of the construction of HISPET: a high spatial resolution positron emission tomograph, 9:27132 (J;US)
Efficiency
Geometry study of a high resolution pet detection system using small detectors, 9:27148 (J;US)
Fabrication
Some aspects of the construction of HISPET: a high spatial resolution positron emission tomograph, 9:27132 (J;US)
Geometry
Geometry study of a high resolution pet detection system using small detectors, 9:27148 (J;US)
Multiwire Proportional Chambers
Some aspects of the construction of HISPET: a high spatial resolution positron emission tomograph, 9:27132 (J;US)
Performance
A stationary positron emission ring tomograph using BGO detector and analog readout, 9:27136 (J;US)
Dynamic imaging with high resolution time-of-flight pet camera - TOFPET I, 9:27139 (J;US)
Performance characteristics of the McMaster positron emission tomograph, 9:27135 (J;US)
Some aspects of the construction of HISPET: a high spatial resolution positron emission tomograph, 9:27132 (J;US)
Readout Systems
A stationary positron emission ring tomograph using BGO detector and analog readout, 9:27136 (J;US)
Sensitivity
Geometry study of a high resolution pet detection system using small detectors, 9:27148 (J;US)
Performance characteristics of the McMaster positron emission tomograph, 9:27135 (J;US)
Some aspects of the construction of HISPET: a high spatial resolution positron emission tomograph, 9:27132 (J;US)
Signal-to-Noise Ratio
Some aspects of the construction of HISPET: a high spatial resolution positron emission tomograph, 9:27132 (J;US)
Spatial Resolution
A stationary positron emission ring tomograph using BGO detector and analog readout, 9:27136 (J;US)
Dynamic imaging with high resolution time-of-flight pet camera - TOFPET I, 9:27139 (J;US)
Geometry study of a high resolution pet detection system using small detectors, 9:27148 (J;US)
Performance characteristics of the McMaster positron emission tomograph, 9:27135 (J;US)
Recent developments in image reconstruction using a time-of-flight-assisted positron emission tomograph: Super Pett I, 9:27140 (J;US)
Some aspects of the construction of HISPET: a high spatial resolution positron emission tomograph, 9:27132 (J;US)
Time Resolution
Dynamic imaging with high resolution time-of-flight pet camera - TOFPET I, 9:27139 (J;US)
POSITRON CHANNELING
Bremsstrahlung
Coherent bremsstrahling and radiation of relativistic papticles channeling in crystals, 9:27429 (R;SU;In Russian)
Numerical simulation of trajectories and characteristics of high energy particle radiation in averaged potential of crystal axes, 9:27422 (R;SU;In Russian)
Trajectories
Numerical simulation of trajectories and characteristics of high energy particle radiation in averaged potential of crystal axes, 9:27422 (R;SU;In Russian)
POSITRON COMPUTED TOMOGRAPHY
A stationary positron emission ring tomograph using BGO detector and analog readout, 9:27136 (J;US)
Initial characterization of a bgo-Photodiode detector for high resolution positron emission tomography, 9:27137 (J;US)
Recent developments in detectors for high spatial resolution positron CT, 9:27131 (J;US)
Some aspects of the construction of HISPET: a high spatial resolution positron emission tomograph, 9:27132 (J;US)

Collimators
High-resolution circular ring positron tomograph with dichotomic sampling: Dichotom-I, 9:27150 (J;GB)
Image Processing
Dynamic imaging with high resolution time-of-flight pet camera - TOFPET I, 9:27139 (J;US)
Modeling of accidental coincidences in both conventional and time-of-flight positron-emission tomography, 9:27133 (J;US)
Recent developments in image reconstruction using a time-of-flight-assisted positron emission tomograph: Super Pett I, 9:27140 (J;US)
Sampling
High-resolution circular ring positron tomograph with dichotomic sampling: Dichotom-I, 9:27150 (J;GB)
Spatial Resolution
Geometry study of a high resolution pet detection system using small detectors, 9:27148 (J;US)

POSITRON-ELECTRON-PROTON STORAGE RING
See PEP STORAGE RINGS

POSITRONS
Annihilation
Study of radiation defects in germanium by positron annihilation method, 9:26326 (RA;UA;In Russian)
Channeling
Dynamics of relativistic electrons(positrons) in a crystal, 9:27432 (R;UA;In Russian)
Electromagnetic Radiation
Electromagnetic radiation of relativistic positrons during a small-angle reflection from a solid surface, 9:27259 (RA;UA;In Russian)
Radiation spectrum of superhigh energy positrons reflected from the solid surface, 9:27258 (RA;UA;In Russian)
Reflection
Electromagnetic radiation of relativistic positrons during a small-angle reflection from a solid surface, 9:27259 (RA;UA;In Russian)
Radiation spectrum of superhigh energy positrons reflected from the solid surface, 9:27258 (RA;UA;In Russian)

POST-IRRADIATION EXAMINATION
Activation Analysis
Characterization of activities associated with irradiated fuel element claddings, 9:25396 (R;XE)
Alpha Spectroscopy
Characterization of activities associated with irradiated fuel element claddings, 9:25396 (R;XE)
Autoradiography
Characterization of activities associated with irradiated fuel element claddings, 9:25396 (R;XE)
Gamma Spectroscopy
Characterization of activities associated with irradiated fuel element claddings, 9:25396 (R;XE)

POSTULATED PARTICLES
See also CHARM PARTICLES
GLUONS
INTERMEDIATE BOSONS
MAGNETIC MONOPOLES
QUARKS
Particle Production
Heavy particle production at the SSC, 9:27347 (R;US)

POTASSIUM
Activation Analysis
Evaluation of body composition and nitrogen content of renal patients on chronic dialysis as determined by total body neutron activation, 9:27157 (J;US)
In vivo quantification of body nitrogen for nutritional assessment, 9:27159 (J;US)
Catalytic Effects
Methanation of carbon dioxide on Ni(100) and the effects of surface modifiers, 9:25626 (J;US)
Crystal Structure
Structural energetics of heavy alkali metals: Pseudopotential theory revisited, 9:26322 (R;IT)
Eigenvalues
Cubic spline method for solving second-order differential equations: theory and application to the Thomas-Fermi model for ions, 9:27461 (J;NL)
Surface Properties
Single-ion and pair-interaction potentials near simple metal surfaces, 9:26368 (J;US)

POTASSIUM 40
Radioecological Concentration
1983 environmental monitoring report, Sandia National Laboratories, Albuquerque, New Mexico, 9:27037 (R;US)
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)

POTASSIUM CARBONATES
Catalytic Effects
Catalyzed gasification of coal: isotope and XPS studies, 9:25205 (R;US)

POTASSIUM CHLORIDES
Argon 40 Reactions
Two-pion correlations in heavy ion collisions: measurement of source dimensions using pion interferometry, 9:27304 (J;CH)

POTASSIUM COMPOUNDS
See also POTASSIUM CARBONATES
POTASSIUM CHLORIDES
POTASSIUM IODIDES
Clathrates
Staging transitions in graphite intercalation compounds, 9:26432 (R;US)

POTASSIUM IODIDES
Photoelectron Spectroscopy
Resonance ionization spectroscopy measurement of the vapor pressure of several molecular species, 9:27254 (R;US)
Photoionization
Resonance ionization spectroscopy measurement of the vapor pressure of several molecular species, 9:27254 (R;US)

POWER DISTRIBUTION SYSTEMS
Noise Pollution Abatement
Design note about a 75 KVA quiet power distribution system, 9:25880 (R;US)
Noise Pollution Control
Design note about a 75 KVA quiet power distribution system, 9:25880 (R;US)
System Failure Analysis
Nuclear electromagnetic pulse (EMP) and electric power systems, 9:26912 (R;US)

POWER PLANTS

Containment Buildings
Long term creep calculation of reactor containment, 9:25970 (R;US)

Excursions
ZAPP - a computer program for simulation of reactor power transients, 9:26000 (R;AU)

Fuel Cycle
Critical and sub-critical experiments on lattices of UO_2/PuO_2 fuel in water poisoned with gadolinium nitrate solution, 9:25986 (R;US)

Pressure Vessels
Evaluation of selected approximations used in pressure vessel fluence calculations, 9:25968 (R;US)
Heavy-Section Steel Technology Program. Quarterly progress report for July-September 1983. Vol. 3, 9:25971 (R;US)

Primary Coolant Circuits
Numerical treatment of pipe boundary conditions in two-phase flow, 9:25960 (R;US)

Reactor Control Systems
Critical and sub-critical experiments on lattices of UO_2/PuO_2 fuel in water poisoned with gadolinium nitrate solution, 9:25986 (R;US)

POWER SUPPLIES

See also PHOTOVOLTAIC POWER SUPPLIES

Comparative Evaluations
New generation low power radiation survey instruments, 9:27043 (J;US)

Materials
Alloys for nuclear power systems in space, 9:25588 (J;US)

Research Programs
Alloys for nuclear power systems in space, 9:25588 (J;US)

POWER SYSTEMS

Includes electric power networks with associated generating and transmission facilities.

See also AC SYSTEMS
DC SYSTEMS
INTERCONNECTED POWER SYSTEMS

Electrical Transients
Supplemental control strategies for the transient stability enhancement of multimachine power systems, 9:25869 (R;US)

Energy Storage Systems
Simulation-based energy storage evaluation methods. Executive summary, 9:26080 (R;US)

Frequency Analysis
Underfrequency load shedding, 9:26091 (R;US)

Load Analysis
Underfrequency load shedding, 9:26091 (R;US)

Load Management
Analysis and characterization of security regions in power systems. Part I. Load flow feasibility conditions in power networks, 9:25867 (R;CA)

Network Analysis
Analysis and characterization of security regions in power systems. Part I. Load flow feasibility conditions in power networks, 9:25867 (R;CA)

Security
Analysis and characterization of security regions in power systems. Part II. Security regions in power networks, 9:25868 (R;CA)

Steady-State Conditions
Analysis and characterization of security regions in power systems. Part II. Security regions in power networks, 9:25868 (R;CA)

POWER TRANSMISSION LINES

Environmental Impact Statements
Bonneville Power Administration proposed fiscal year 1980 program. Final environmental impact statement, 9:27093 (R;US)
Bonneville Power Administration proposed fiscal year 1980 program. Facility location supplement, northwest Montana/north Idaho support and Libby integration. Final environmental impact statement, final supplement, 9:27094 (R;US)
Bonneville Power Administration proposed fiscal year 1979 program. Facility location supplement. San Juan Islands Area Service, 115-kV submarine transmission cable. Final supplement, final environmental impact statement, 9:27091 (R;US)
Bonneville Power Administration: Crow Butte Slough Crossing. Supplement to final EIS, Ashe-Slatt (Pebble Springs) 500-kV transmission line, 9:27095 (R;US)
Bonneville Power Administration proposed fiscal year 1979 program, facility planning supplement Southwest Oregon Area Service. Final environmental impact statement, final supplement, 9:27092 (R;US)

Hazards
Assessment of seafloor burial of proposed OTEC power transmission cables. Final report, 9:25744 (R;US)

Magnetic Insulation
Small gap experiments in magnetically insulated transmission lines, 9:27613 (J;US)

PRASEODYMIUM 141 TARGET

Iron 56 Reactions
Identification of new astatine isotopes using the gas-filled magnetic separator, SASSY, 9:27403 (R;US)

PRECIPITATIONS (ATMOSPHERIC)

See ATMOSPHERIC PRECIPITATIONS

PRENATAL EXPOSURE

Dose-Response Relationships
Utilization of critical periods during development to study the effects of low levels of environmental agents, 9:27090 (BA;US)

Low Dose Irradiation
Utilization of critical periods during development to study the effects of low levels of environmental agents, 9:27090 (BA;US)

Risk Assessment
Utilization of critical periods during development to study the effects of low levels of environmental agents, 9:27090 (BA;US)

PRESSURE GAGES

Design
In Situ measurement of solar pond density profiles, 9:25802 (J;US)

Performance
In Situ measurement of solar pond density profiles, 9:25802 (J;US)

PRESSURE MEASUREMENT

Equipment
New experimental techniques with the split Hopkinson pressure bar, 9:26703 (R;US)

Mathematical Models
New experimental techniques with the split Hopkinson pressure bar, 9:26703 (R;US)

PRESSURE SUPPRESSION

Fission Product Release
Fission product removal in Engineered Safety Feature (ESF) systems. Data base assessment and suggested experimental program, 9:26054 (R;US)

PRESSURE VESSELS

Dynamic Loads
Response of containment vessels to explosive blast loading, 9:26661 (J;US)

Neutron Flux
Benchmarking of pressure vessel fluence calculations, 9:25896 (R;US)
Evaluation of selected approximations used in pressure vessel fluence calculations, 9:25968 (R;US)

Research Programs
Heavy-Section Steel Technology Program. Quarterly progress report for July-September 1983. Vol. 3, 9:25971 (R;US)
Possible research program on a large scale nuclear pressure vessel. Final report, 9:25888 (R;XE)
Reactor vessels and safety, 9:25917 (J;US)

Strains
Response of containment vessels to explosive blast loading, 9:26661 (J;US)
Thermal Shock
Reactor vessels and safety, 9:25917 (J;US)
Transport
Transportation of the reactor vessel/internals of retired nuclear power plants as a single package, 9:26010 (RA;US)
PRESSURIZED WATER COOLED MODERATED REACTO
See PWR TYPE REACTORS
PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS
PRESTRESSED CONCRETE
Creep
Long term creep calculation of reactor containment, 9:25970 (R;US)
PRIMARY COOLANT CIRCUITS
See also COOLANT CLEANUP SYSTEMS
Pipes
Development of the three-dimensional SHAPS code capabilities for application to LMFBR piping systems, 9:26014 (R;US)
Numerical treatment of pipe boundary conditions in two-phase flow, 9:25960 (R;US)
Thermal laminarization of a stratified pipe flow, 9:25931 (R;US)
Seismic Effects
System seismic analysis of an innovative primary system for a large pool type LMFBR plant, 9:26017 (R;US)
PRINCETON LARGE TORUS
See PLT DEVICES
PROBES
Design
Development of small in-vivo imaging probes for tumor detection, 9:27141 (J;US)
Performance Testing
Development of small in-vivo imaging probes for tumor detection, 9:27141 (J;US)
PROCESS HEAT REACTORS
Design
Status of HTGR steam cycle/cogeneration lead plant design, 9:25958 (R;US)
Reactor Control Systems
HTGR steam cycle/cogeneration control system structure and operator interface, 9:25983 (R;US)
PROCESS SOLUTIONS
X-Ray Fluorescence Analysis
Energy dispersive K x-ray fluorescence analysis for on-line process control of heavy metal concentrations, 9:25403 (BA;US)
PRODUCTION (HYDROGEN)
See HYDROGEN PRODUCTION
PROFESSIONAL PERSONNEL
Training
Health physics/radiation protection enrollments and degrees, 1983, 9:27626 (R;US)
PROJECT (UPSHOT)

Multiple-independent detector system, 9:26871 (J;US)
Design
Multiple-independent detector system, 9:26871 (J;US)
Gases
Photoelectron range limitations to the spatial resolution for x-rays in gas proportional chambers, 9:26859 (J;US)
Spatial Resolution
Photoelectron range limitations to the spatial resolution for x-rays in gas proportional chambers, 9:26859 (J;US)
PROPPING AGENTS
Rock mechanics effects observed subsequent to multiple fracturing of wellbores, 9:25338 (R;US)
PROPYLENE
Hydrogenation
Supported f-element complexes: surface chemistry and catalysis. Progress report, April 1, 1983-April 1, 1984, 9:26513 (R;US)
PROTACTINIUM 233
Intestinal Absorption
Metabolic studies of neptunium in the adult baboon: retention, distribution, kinetics, and enhanced excretion by chelation therapy. Technical progress report summary, 9:27165 (R;US)
Tissue Distribution
Metabolic studies of neptunium in the adult baboon: retention, distribution, kinetics, and enhanced excretion by chelation therapy. Technical progress report summary, 9:27165 (R;US)
PROTECTION (RADIATION)
See RADIATION PROTECTION
PROTECTIVE COATINGS
Testing
Simulations of erosion/corrosion surface chemical reactions with a laser beam, 9:26348 (R;US)
PROTON BEAMS
Polarization
Polarized protons at the AGS, 9:26779 (BA;US)
Spin Orientation
Focal plane polarimeter design, 9:26805 (R;US)
PROTON REACTIONS
Charge-Exchange Reactions
Excitation of giant spin-isospin multipole vibrations in sup(54,56)Fe and sup(58,60)Ni, 9:27394 (J;NL)
Elastic Scattering
Scattering of polarized protons on ^{24}Mg, ^{27}Al, and ^{32}S and anomalies in the giant resonance region of ^{25}Al, of ^{30}Si, and of ^{33}Cl, 9:27392 (J;NL;In French)
Multiple Production
Experimental estimation of the contribution of secondary inelastic interactions in the multiplicity of π^- mesons in pA-interactions, 9:27284 (R;SU;In Russian)
Particle Production
Soft and hard quark collisions in large transverse-momentum hadron-nucleus processes, 9:27322 (R;SU)
Quark Model
Soft and hard quark collisions in large transverse-momentum hadron-nucleus processes, 9:27322 (R;SU)
Scattering
Nuclear structure approach to the Coulomb correction of the imaginary nucleon-nucleus optical potential, 9:27395 (J;US)
PROTON-ANTIPROTON INTERACTIONS
Colliding Beams
D phi detector, 9:26799 (R;US)

Multiple Production
Recent results from the UA5 experiment at the CERN panti p collider, 9:27277 (R;DE)
Stochastic methods for the description of multiparticle production, 9:27345 (R;US)
Particle Production
Evidence for the t-quark in p-barp collider data, 9:27300 (R;GB)
Finding the t-quark in W boson decay debris, 9:27301 (R;GB)
Heavy particle production at the SSC, 9:27347 (R;US)
Study of K^+ K/sub s/π^- final state produced by π^- and anti p beams, 9:27276 (R;US)

PROTON-DEUTERON INTERACTIONS
Particle Production
Pion absorpton and production in few nucleon systems, 9:27348 (R;US)

PROTON-PROTON INTERACTIONS
Elastic Scattering
Method for analyzing elastic scattering data sampled with the SFM-detector at the CERN ISR, 9:27299 (R;SE)
Particle Production
Pion absorpton and production in few nucleon systems, 9:27348 (R;US)
Scaling of semi-inclusive spectra of π^- mesons from pp interactions, 9:27324 (R;SU)

PROTONS
Particle Production
Cumulative proton production in pion-carbon interactions at 5 GeV/c, 9:27288 (R;SU;In Russian)
Weak Particle Decay
Proton decay, 9:27285 (R;IT)

Air Cleaning Systems
Fire and explosion protection of air cleaning systems, 9:26029 (RA;US)
Containment Buildings
Analytical modelling of hydrogen transport. Final report, 9:26055 (R;US)
Safety analysis of a stratified reactor foundation subject to core meltdown, 9:26001 (R;DE;In German)
Coolant Cleanup Systems
Evaluation of inorganic sorbent treatment for LWR coolant process streams, 9:25915 (R;US)
Correlations
Benchmark reference data on post irradiation analysis of light water reactor fuel samples, 9:25887 (R;XE)
ECCS
Pressurized thermal shock: TEMPEST computer code simulation of thermal mixing in the cold leg and downcomer of a pressurized water reactor (Creare 61 and 64), 9:26046 (R;US)
Fuel Assemblies
Assessment of TRAC and RELAP5 codes with ORNL POST-CHF tests, 9:26005 (R;US)
Development of an advanced extended-burnup fuel assembly design incorporating Urania-Gadolinia. Fourth semi-annual progress report, October 1982-March 1983, 9:25901 (R;US)
Development of an extended-burnup Mark B design. Eighth progress report, July 1982-June 1983, 9:25902 (R;US)
Fuel Element Clusters
Low-pressure transient flow film boiling in vertically oriented rod bundles, 9:26066 (J;US)
Fuel Management
Analysis and synthesis of the theoretical studies performed on the control and safety of LWR's burning plutonium fuel. Final report, 9:26021 (R;XE)
Leaks
Estimation of pre-existing LWR containment leakage areas for severe accident conditions, 9:26003 (R;US)
Loose Parts Monitoring
Loose-part monitoring programs and recent operational experience in selected US and western European commercial nuclear power stations, 9:25973 (R;US)
Loss of Coolant
LOBI: Influence of PWR primary loops on blowdown, first results. Final report, 9:26020 (R;XE)
Pipes
Impact of changes in damping and spectrum peak broadening on the seismic response of piping systems, 9:26044 (R;US)
Reliability analysis of stiff versus flexible piping. Status report, 9:25893 (R;US)
Pressure Vessels
Benchmarking of pressure vessel fluence calculations, 9:25896 (R;US)
Transportation of the reactor vessel/internals of retired nuclear power plants as a single package, 9:26010 (RA;US)
Primary Coolant Circuits
LOBI: Influence of PWR primary loops on blowdown, first results. Final report, 9:26020 (R;XE)
Pumps
Statistical analysis of nuclear power plant pump failure rate variability: some preliminary results, 9:26051 (R;US)
Radioactive Effluents
Evaluation of inorganic sorbent treatment for LWR coolant process streams, 9:25915 (R;US)
Reactivity Insertions
NAIADQ, a computer program for calculating reactivity transients in low power experimental water reactors, 9:25999 (R;AU)
Reactor Accidents
Digraph matrix analysis applications to systems interactions, 9:26061 (R;US)
Estimation of pre-existing LWR containment leakage areas for severe accident conditions, 9:26003 (R;US)
Prototypical steam generator (MB-2) transient testing program. Task plan/scaling analysis report, 9:26053 (R;US)
Reactor Dismantling
Transportation of the reactor vessel/internals of retired nuclear power plants as a single package, 9:26010 (RA;US)
Reactor Maintenance
Evaluation of robotic inspection systems at nuclear power plants, 9:25892 (R;US)
Reactor Materials
Fuels and materials chemistry, 9:25882 (RA;US)
Reactor Noise
Use of neutron noise for diagnosis of in-vessel anomalies in light-water reactors, 9:25985 (R;US)
Reactor Safety
Analysis and synthesis of the theoretical studies performed on the control and safety of LWR's burning plutonium fuel. Final report, 9:26021 (R;XE)
Fuels and materials chemistry, 9:25882 (RA;US)
LOBI: Influence of PWR primary loops on blowdown, first results. Final report, 9:26020 (R;XE)
Spent Fuels
Benchmark reference data on post irradiation analysis of light water reactor fuel samples, 9:25887 (R;XE)
Steam Generators
Eddy-current inspection for steam generator tubing program. Quarterly progress report for period ending September 30, 1983, 9:25913 (R;US)
Evaluation of on-line chelant addition to PWR steam generators. Steam generator cleaning project, 9:25899 (R;US)
Prototypical steam generator (MB-2) transient testing program. Task plan/scaling analysis report, 9:26053 (R;US)
Thermal Shock
Pressurized thermal shock: TEMPEST computer code simulation of thermal mixing in the cold leg and downcomer of a pressurized water reactor (Creare 61 and 64), 9:26046 (R;US)
Transients
Assessment of TRAC and RELAP5 codes with ORNL POST-CHF tests, 9:26005 (R;US)
Low-pressure transient flow film boiling in vertically oriented rod bundles, 9:26066 (J;US)
RETRAN02/MOD02: an outside perspective, 9:26018 (R;US)
PYRIDINE
Solvent Properties
Role of preasphaltenes in coal conversion reactions. Second quarterly report, year two, 9:25239 (R;US)
PYRIDINES
See also BIPYRIDINES

PYRIDINE
QUINOLINES
Gas Chromatography
Determination of alkyl anilines and alkyl pyridines in solvent refined coal distillates and aqueous extracts by gas chromatography/mass spectrometry, 9:25249 (J;US)
Mass Spectroscopy
Determination of alkyl anilines and alkyl pyridines in solvent refined coal distillates and aqueous extracts by gas chromatography/mass spectrometry, 9:25249 (J;US)

PYRITE
Chemical Reactions
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Quarterly progress report 8, July 1-September 30, 1983, 9:25287 (R;US)
Thermal Analysis
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Quarterly progress report 8, July 1-September 30, 1983, 9:25287 (R;US)

PYRITES
See PYRITE

PYROLYSIS
See also CRACKING
Kinetics
Volatiles mass transport with particles of softened coal. Technical progress report, July 27, 1983-October 26, 1983, 9:25213 (R;US)
Mathematical Models
Volatiles mass transport with particles of softened coal. Technical progress report, July 27, 1983-October 26, 1983, 9:25213 (R;US)

PYROLYTIC GASES
Production

Q

QUAD CITIES-1 REACTOR
Reactor Accidents
Report to Congress on abnormal occurrences, July-September 1983, 9:26033 (R;US)

QUADRUPOLE LINACS
Beam Optics
Designing self-matching linacs, 9:26785 (R;US)
Cavity Resonators
Lumped-circuit model of four-vane RFQ resonator, 9:26787 (R;US)
Practical aspects of tuning a ringed RFQ, 9:26773 (R;US)
Design
General-purpose RFQ design program, 9:26784 (R;US)
Tuning
Practical aspects of tuning a ringed RFQ, 9:26773 (R;US)

QUALITY ASSURANCE
Planning
Safety research in energy-production field. Yearly report for 1982. Nordic project cooperation, 9:26032 (R;DK;In Danish)

QUANTUM CHROMODYNAMICS
Heavy quarks, 9:27308 (R;DE)
Instantons
Instantons in supersymmetric theories, 9:27447 (R;SU)
String Models
Loops and strings in QCD, 9:27355 (R;SU)
Wilson Loop
Loops and strings in QCD, 9:27355 (R;SU)

QUANTUM ELECTRODYNAMICS
Conformal Invariance
Conformal invariance in gauge theories. Quantum electrodynamics, 9:27361 (R;SU)

QUANTUM FIELD THEORY
See also PHI4-FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM ELECTRODYNAMICS
Lorentz Transformations
Modifications of forms of relativistic dynamics related to the Poincare transformations, 9:27358 (R;SU)
Nonlinear Problems
Stability properties of solutions to nonlinear models possessing a sign-undefined metric, 9:27367 (R;SU)
Poincare Groups
Modifications of forms of relativistic dynamics related to the Poincare transformations, 9:27358 (R;SU)

QUANTUM MECHANICS
Instantons
Instantons in supersymmetric theories, 9:27447 (R;SU)

QUARK CONFINEMENT
See BAG MODEL

QUARK MODEL
See also BAG MODEL
FLAVOR MODEL
STRING MODELS
Limits of application of the nolocal quark model, 9:27330 (R;SU;In Russian)
Hadrons
Relativistic quark model in infinite momentum frame and static properties of hadrons, 9:27311 (R;SU)

QUARK-ANTIQUARK INTERACTIONS
Elastic Scattering
Complete analysis of polarization in two-particle QCD processes, 9:27319 (R;UA)
P Invariance
P-odd effects in the πip $+q \rightarrow \mu^+ + \mu^- + q'$, q+ anti $q' \rightarrow \pi^{+-} + \mu^+ + \mu^-$ processes and P-odd constant of π^{+-} qq'-interaction, 9:27353 (R;UA;In Russian)

QUARK-GLUON INTERACTIONS
Elastic Scattering
Complete analysis of polarization in two-particle QCD processes, 9:27319 (R;UA)

QUARK-QUARK INTERACTIONS
Elastic Scattering
Complete analysis of polarization in two-particle QCD processes, 9:27319 (R;UA)

QUARKS
Pair Production
Possibility of search for free quarks with a fractional charge, 9:27336 (RA;SU;In Russian)
Particle Decay
Review of e^+e^--physics with PETRA, 9:27279 (R;DE)
Particle Identification
Evidence for the t-quark in p-barp collider data, 9:27300 (R;GB)
Possibility of search for free quarks with a fractional charge, 9:27336 (RA;SU;In Russian)
Particle Production
Angular distributions of three-jet events in polarized e^+e^--pair annihilation, 9:27310 (R;SU)
Heavy particle production at the SSC, 9:27347 (R;US)
Weak Neutral Currents
Electroweak interference, 9:27280 (R;DE)

QUARTZ
Characterization of a fast, sensitive gamma detector utilizing microchannel plate photomultiplier, 9:26834 (J;US)

QUARTZ MONZONITE
Cracks
Rapid technique for counting cracks in granitic rocks, 9:27239 (R;US)
Microstructure
Rapid technique for counting cracks in granitic rocks, 9:27239 (R;US)

QUASIPOTENTIAL EQUATION
Impulse Approximation
"Collapse onto scattering centre" in quasipotential theory, 9:27452 (R;SU;In Russian)
Supersymmetry
Supersymmetric quasipotential equations. Supersymmetric generalization of the Todorov-type equations, 9:27363 (R;SU)

QUINOLINES
Adsorption
Quinoline partitioning in subsurface materials: adsorption, desorption, and solute competition, 9:27060 (K;US)
Studies in coal liquefaction with application to the SRC and related processes. Quarterly report, May-July 1983, 9:25185 (R;US)
Hydrogenation
Catalytic hydrotreatment studies with model compounds. Quarterly report, January 1-March 31, 1984, 9:25212 (R;US)
Soil Chemistry
Quinoline partitioning in subsurface materials: adsorption, desorption, and solute competition, 9:27060 (R;US)
QUINONE
See BENZOQUINONES

R

RACIAL GROUPS
See MINORITY GROUPS
RADAR
Antennas
Performance of Beverage antennas at low angles, 9:26753 (R;US)
RADIATION ACCIDENTS
Radiation levels in a gaseous diffusion plant assuming a low-enriched criticality event corresponding to the ANSI-Standard minimum accident of concern, 9:25554 (R;US)
Report to Congress on abnormal occurrences, July-September 1983, 9:26033 (R;US)
Emergency Plans
Guidance on offsite emergency radiation measurement systems. Phase 2: The milk pathway, 9:26065 (R;US)

Air Transport
Carriage of radioactive materials in Europe in consideration of the provisions concerning traffic, including the possibilities

of a transformation of the 1984 edition of the IAEA regulations, 9:25441 (RA;US)
Radiation exposure resulting from the transport of radioactive materials within the United Kingdom, 9:25542 (RA;US)
Statistical data on the transport of radioactive materials in Italy and radiation dose evaluation to transport workers, 9:25543 (RA;US)

Classification
IAEA regulations for the safe transport of radioactive materials: revised A_1 and A_2 values, 9:25407 (RA;US)

Government Policies
Overview of the US government's radioactive material (RAM) shipping program: the DOE perspective, 9:25433 (RA;US)

Land Transport
Carriage of radioactive materials in Europe in consideration of the provisions concerning traffic, including the possibilities of a transformation of the 1984 edition of the IAEA regulations, 9:25441 (RA;US)
Physical security measures for the transportation of specially categorized nuclear material, 9:25577 (RA;US)
Transport of RAM in tanks: how to fit into the IAEA safety philosophy, 9:25408 (RA;US)

Lawsuits
Significant recent developments in the United States courts affecting nuclear materials transportation, 9:25449 (RA;US)

Maritime Transport
Carriage of radioactive materials in Europe in consideration of the provisions concerning traffic, including the possibilities of a transformation of the 1984 edition of the IAEA regulations, 9:25441 (RA;US)

Packaging
Ability of type A packages to withstand regulatory tests. Final report, 9:26640 (R;LU)
Analyses of notification, routing, and packaging for shipments of nuclear materials, 9:25432 (RA;US)
Analysis of NEPA/CEQ requirements with respect to nuclear materials transportation, 9:25448 (RA;US)
Catalogue of facilities in Member States of the European Community for testing the packaging of radioactive materials, 9:25476 (R;XE)
Containment system evaluation, 9:26596 (RA;US)
Design of radioactive material shipping packaging for low-velocity puncture resistance, 9:26587 (RA;US)
Guide to quality assurance measures for manufacturing and use of RAM packagings, 9:26623 (RA;US)
Licensing experience in obtaining approval of Type B packagings, 9:25410 (RA;US)
RAMPAC: a database of certified packagings for radioactive materials, 9:25455 (RA;US)
Safety assessment and fire test on Type B packages of combustible thermal insulator for radioactive materials, 9:25411 (RA;US)
Thermal analysis of packaging using the integral method, 9:25451 (RA;US)

Physical Protection
Cargo security: a review of physical security techniques for shipping radioactive materials, 9:25574 (RA;US)
How to implement physical protection measures for transport or how to sit most comfortable between two chairs, 9:25575 (RA;US)
Physical security measures for the transportation of specially categorized nuclear material, 9:25577 (RA;US)

Public Opinion
Enhancing public acceptance of radioactive materials transport through improving and enlarging public understanding, 9:25421 (RA;US)

Rail Transport
Beyond the Association of American Railroads and Department of Energy workshop in 1981, 9:25450 (RA;US)
Model railroad industry nuclear emergency response plan, 9:25549 (RA;US)
Planning of railway transport of radioactive materials as a consequence of public concern: the role of Competent Authority, 9:25431 (RA;US)
Radiation exposure resulting from the transport of radioactive materials within the United Kingdom, 9:25542 (RA;US)
Radiation exposure due to railway transport of radioactive materials, 9:25544 (RA;US)
Statistical data on the transport of radioactive materials in Italy and radiation dose evaluation to transport workers, 9:25543 (RA;US)
Stowing of packages containing radioactive materials on conveyances in normal and accidental conditions, 9:25469 (RA;US)

Road Transport
Overview of DOE/PNC joint program on transportation technology, 9:25428 (RA;US)
Risk assessment for truck-transport assuming different concepts of the back-end of the fuel cycle, 9:25540 (RA;US)
Statistical data on the transport of radioactive materials in Italy and radiation dose evaluation to transport workers, 9:25543 (RA;US)
Stowing of packages containing radioactive materials on conveyances in normal and accidental conditions, 9:25469 (RA;US)
World-wide risk assessment of the transportation of radioactive materials, 9:25412 (RA;US)

Routing
Analyses of notification, routing, and packaging for shipments of nuclear materials, 9:25432 (RA;US)

Security
Cargo security: a review of physical security techniques for shipping radioactive materials, 9:25574 (RA;US)

Transport
Acceptability criterion applicable to accidental cases in the transport of radioactive materials, 9:25414 (RA;US)
Analysis of NEPA/CEQ requirements with respect to nuclear materials transportation, 9:25448 (RA;US)
Current status of research and development for safe transport of nuclear materials in Japan, 9:25426 (RA;US)
Emergency response planning guidelines for state and local governments for radioactive materials transportation accidents, 9:25547 (RA;US)
Enhancing public acceptance of radioactive materials transport through improving and enlarging public understanding, 9:25421 (RA;US)
IAEA coordinated research programme on safe transport of radioactive materials, 9:25427 (RA;US)
Importance of reportable events with regard to public acceptance, 9:25446 (RA;US)
Meeting the challenge of the future in international transport operations: a transporter's point of view, 9:25437 (RA;US)
Need to increase public awareness of the safety of radioactive materials transport, 9:25444 (RA;US)
Overview of the US government's radioactive material (RAM) shipping program: the DOE perspective, 9:25433 (RA;US)
Problems in educational training: number and type of workers involved in the transport of radioactive materials, 9:25471 (RA;US)
Radioactive materials transportation: state regulation and enforcement, 9:25456 (RA;US)
Radioactive material transportation information program, 9:25473 (RA;US)
Radioactive Material Transportation (RAMT) data base: a study of industry shipments, 9:25474 (RA;US)
Recent developments in the area of insurance and indemnity coverage for transportation of radioactive materials in the United States, 9:25445 (RA;US)
Review of selected nuclear transport event case histories, 9:25443 (RA;US)
Shipping papers: cornerstone of radioactive material transportation, 9:25439 (RA;US)
Significant recent developments in the United States courts affecting nuclear materials transportation, 9:25449 (RA;US)
Study of the exposures received by the persons involved in the transportation of radioactive materials, 9:25541 (RA;US)
Things that can go wrong when time is of the essence, 9:25551 (RA;US)
Traffic manager, 9:25434 (RA;US)
Transport and storage of RAM: the role of BAM, 9:25429 (RA;US)

US accident/incident ex erience in the transportation of nuclear fuel cycle material (1971-1982), 9:25438 (RA;US)
Transport Regulations
Controls necessary to assure regulatory compliance on radioactive material shipments, 9:25436 (RA;US)
Cooperative government/nuclear industry intervention in achieving motor carrier rules uniformity for transporting radioactive material, 9:25435 (RA;US)
IAEA regulations for the safe transport of radioactive materials: revised A_1 and A_2 values, 9:25407 (RA;US)
IAEA's role in achieving and assuring safety in the transport of radioactive materials, 9:25409 (RA;US)
Implementation of HM-164: a historical perspective, 9:25458 (RA;US)
Regulation versus reality, 9:25475 (RA;US)

RADIOACTIVE WASTE DISPOSAL
Backfilling
Evaluation of engineering aspects of backfill placement for high level nuclear waste (HLW) deep geologic repositories, 9:25509 (R;US)
Fuel cycle programs. Quarterly progress report, April-June 1983, 9:25482 (R;US)
Bench-Scale Experiments
Underground disposal for radioactive wastes: study of the thermal impact in a fractured medium, 9:25502 (R;LU;In French)
Casks
Low-cost/high-integrity waste casks, 9:25491 (RA;US)
Containers
Development of waste package designs for disposal in a salt repository, 9:25493 (RA;US)
Coordinated Research Programs
Management activities for the DOE's National Waste Terminal Storage Program. Technical progress report for the quarter 1 April-30 June, 1983, 9:25484 (R;US)
Cost
Costs for disposal of Savannah River high-level waste in a commercial repository (Salt, tuff and basalt geologic deposits), 9:25498 (R;US)
Criticality
Nuclear criticality safety analysis of a spent fuel waste package in a tuff repository, 9:25573 (R;US)
Engineered Safety Systems
Evaluation of engineering aspects of backfill placement for high level nuclear waste (HLW) deep geologic repositories, 9:25509 (R;US)
Geochemistry
Geochemistry of trench leachates at low-level radioactive waste burial sites, 9:25489 (R;US)
Geologic Deposits
Geotechnical aspects of hackroy sandy loam and crushed tuff, 9:25506 (R;US)
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Heat Transfer
Underground disposal for radioactive wastes: study of the thermal impact in a fractured medium, 9:25502 (R;LU;In French)
High-Level Radioactive Wastes
Costs for disposal of Savannah River high-level waste in a commercial repository (Salt, tuff and basalt geologic deposits), 9:25498 (R;US)
Evaluation of engineering aspects of backfill placement for high level nuclear waste (HLW) deep geologic repositories, 9:25509 (R;US)
First status report on regional and local ground-water flow modeling for Richton Dome, Mississippi, 9:25486 (R;US)
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Long-term performance of mateials used for high-level waste packaging. Third quarterly report, year two, October 1983-December 1983, 9:25510 (R;US)
Management activities for the DOE's National Waste Terminal Storage Program. Technical progress report for the quarter 1 April-30 June, 1983, 9:25484 (R;US)
Preliminary post-emplacement safety analysis of the subseabed disposal of high-level nuclear waste, 9:25572 (R;US)
Programme of research into the management and storage of radioactive waste. Nuclide migration and mathematical modelling, 9:25480 (R;GB)
Seismicity of the Paradox Basin and the Colorado Plateau interior, 9:25485 (R;US)
Testing and evaluation of solidified high-level waste forms. Joint annual progress report. Final report, 9:25503 (R;LU)
Underground disposal of vitrified high level radioactive waste: a review of research and development, 9:25483 (R;GB)
Institutional Factors
Management activities for the DOE's National Waste Terminal Storage Program. Technical progress report for the quarter 1 April-30 June, 1983, 9:25484 (R;US)
Irish Sea
Currents in the Eastern Irish Sea, 9:25496 (R;GB)
Leaching
Testing and evaluation of solidified high-level waste forms. Joint annual progress report. Final report, 9:25503 (R;LU)
Low-Level Radioactive Wastes
Alternative methods for dispoal of low-level radioactive wastes. Task 1. Description of methods and assessment of criteria (Alternative methods are belowground vaults, aboveground vaults; earth mounded concrete bunkers, mined cavities, augered holes), 9:25514 (R;US)
Experience and related research and development in applying corrective measures at the major low-level radioactive waste disposal sites (Shallow Land Burial), 9:25515 (R;US)
Geochemistry of trench leachates at low-level radioactive waste burial sites, 9:25489 (R;US)
Geotechnical aspects of hackroy sandy loam and crushed tuff, 9:25506 (R;US)
Module container system for LLW disposal, 9:25490 (RA;US)
Role of trench caps in the shallow land burial of low-level wastes, 9:25516 (R;US)
Marine Disposal
Preliminary post-emplacement safety analysis of the subseabed disposal of high-level nuclear waste, 9:25572 (R;US)
Mill Tailings
Predicting long-term moisture in earthen covers, 9:25518 (R;US)
Radon attenuation handbook for uranium mill tailings cover design, 9:25511 (R;US)
Packaging
Long-term performance of mateials used for high-level waste packaging. Third quarterly report, year two, October 1983-December 1983, 9:25510 (R;US)
Management activities for the DOE's National Waste Terminal Storage Program. Technical progress report for the quarter 1 April-30 June, 1983, 9:25484 (R;US)
Radionuclide Migration
Mapping subsurface radionuclide migration and groundwater flow with organic tracers (Shallow-land burial), 9:25532 (R;US)
Regulations
Management activities for the DOE's National Waste Terminal Storage Program. Technical progress report for the quarter 1 April-30 June, 1983, 9:25484 (R;US)
Risk Assessment
Preliminary post-emplacement safety analysis of the subseabed disposal of high-level nuclear waste, 9:25572 (R;US)
Site Selection
First status report on regional and local ground-water flow modeling for Richton Dome, Mississippi, 9:25486 (R;US)
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)

Management activities for the DOE's National Waste Terminal Storage Program. Technical progress report for the quarter 1 April-30 June, 1983, 9:25484 (R;US)
Meteorological and air quality characterization of the Deaf Smith and Swisher County locations in the Palo Duro Basin, Texas, 9:25488 (R;US)
Potentiometric-level monitoring program - Mississippi and Louisiana: annual status report for fiscal year 1983, 9:25487 (R;US)
Seismicity of the Paradox Basin and the Colorado Plateau interior, 9:25485 (R;US)
Stratigraphic and volcano-tectonic relations of Crater Flat Tuff and some older volcanic units, Nye County, Nevada, 9:25523 (R;US)

Solid Wastes
Testing and evaluation of solidified high-level waste forms. Joint annual progress report. Final report, 9:25503 (R;LU)

Specifications
Alternative methods for dispoal of low-level radioactive wastes. Task 1. Description of methods and assessment of criteria (Alternative methods are belowground vaults, aboveground vaults; earth mounded concrete bunkers, mined cavities, augered holes), 9:25514 (R;US)

Underground Disposal
Management activities for the DOE's National Waste Terminal Storage Program. Technical progress report for the quarter 1 April-30 June, 1983, 9:25484 (R;US)
Programme of research into the management and storage of radioactive waste. Nuclide migration and mathematical modelling, 9:25480 (R;GB)
Role of trench caps in the shallow land burial of low-level wastes, 9:25516 (R;US)
Underground disposal of vitrified high level radioactive waste: a review of research and development, 9:25483 (R;GB)

RADIOACTIVE WASTE FACILITIES

Coverings
Experience and related research and development in applying corrective measures at the major low-level radioactive waste disposal sites (Shallow Land Burial), 9:25515 (R;US)

Decommissioning
Decontamination and decommissioning of the TAN/TSF-3 concrete pad. Final report, 9:25499 (R;US)

Decontamination
Decontamination and decommissioning of the TAN/TSF-3 concrete pad. Final report, 9:25499 (R;US)

Design
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Simulation of the MRS receiving and handling facility, 9:25478 (R;US)

Explosions
Interaction of fire and explosion with ventilation systems of fuel cycle plants, 9:25568 (RA;US)

Fires
Interaction of fire and explosion with ventilation systems of fuel cycle plants, 9:25568 (RA;US)

Ground Subsidence
Experience and related research and development in applying corrective measures at the major low-level radioactive waste disposal sites (Shallow Land Burial), 9:25515 (R;US)

Interfaces
WIPP design flexibility for defense TRU waste transportation systems interface, 9:25423 (RA;US)

Intrusion
Experience and related research and development in applying corrective measures at the major low-level radioactive waste disposal sites (Shallow Land Burial), 9:25515 (R;US)

Materials Handling Equipment
Radwaste receiving and handling facility for mine disposal, 9:25494 (RA;US)

Pilot Plants
Encapsulation pilot plant of radioactive wastes in thermosetting resins. Final report, 9:25500 (R;LU;In French)

Radioactive Waste Processing
Encapsulation pilot plant of radioactive wastes in thermosetting resins. Final report, 9:25500 (R;LU;In French)

Ventilation Systems
Interaction of fire and explosion with ventilation systems of fuel cycle plants, 9:25568 (RA;US)

RADIOACTIVE WASTE MANAGEMENT

Plutonium
Integral experiment relating to calibration and interpretation of plutonium solid waste measurements at Dounreay nuclear power development establishment, 9:25937 (R;GB)

Radiation Monitoring
Integral experiment relating to calibration and interpretation of plutonium solid waste measurements at Dounreay nuclear power development establishment, 9:25937 (R;GB)

Regional Cooperation
Low-level radioactive waste regional compacts. Hearing before the Subcommittee on Energy Conservation and Power, of the House of Representatives, Ninety-Eighth Congress, first session on H.R. 1012, H.R. 3002, and H.R. 3777, 3 Nov 1983, 9:25526 (B;US)

RADIOACTIVE WASTE PROCESSING

Denitrification
Waste generation reduction: nitrates FY 1983 status report, 9:25520 (R;US)

Encapsulation
Encapsulation pilot plant of radioactive wastes in thermosetting resins. Final report, 9:25500 (R;LU;In French)

Evaluation
Glass furnace project: March-September 1983, 9:25507 (R;US)

High-Level Radioactive Wastes
Improved method for extracting lanthanides and actinides from acid solutions, 9:25527 (P;US)

Low-Level Radioactive Wastes
Glass furnace project: March-September 1983, 9:25507 (R;US)

Resins
Encapsulation pilot plant of radioactive wastes in thermosetting resins. Final report, 9:25500 (R;LU;In French)

Simulation
Development of a slurry-fed in-can melter for nuclear defense waste, 9:25497 (R;US)

Solidification
Development of a slurry-fed in-can melter for nuclear defense waste, 9:25497 (R;US)
Glass furnace project: March-September 1983, 9:25507 (R;US)

RADIOACTIVE WASTE STORAGE
See also MONITORED RETRIEVABLE STORAGE

Bench-Scale Experiments
Underground disposal for radioactive wastes: study of the thermal impact in a fractured medium, 9:25502 (R;LU;In French)

Heat Transfer
Underground disposal for radioactive wastes: study of the thermal impact in a fractured medium, 9:25502 (R;LU;In French)

High-Level Radioactive Wastes
Combined storage system for LWR spent fuel and high-level waste, 9:25440 (RA;US)
Storage and transportation of spent fuel and high-level waste using dry storage casks, 9:25419 (RA;US)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
HIGH-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS

Classification
Isotopic analysis of radioactive waste packages (an inexpensive approach), 9:25492 (RA;US)

Decontamination
Characterization of activities associated with irradiated fuel element claddings, 9:25396 (R;XE)

Maritime Transport
Nordic study on reactor waste, 9:25538 (RA;US)

Road Transport
Nordic study on reactor waste, 9:25538 (RA;US)

RADIOACTIVITY
For measured values of radioactivity and for unidentified radiation sources; not for experimental studies.

Data Acquisition Systems
Hanford Environmental Data System, 9:27063 (R;US)

Data Base Management
Hanford Environmental Data System, 9:27063 (R;US)
Monitoring
Hanford Environmental Data System, 9:27063 (R;US)
RADIOCARBON DATING

RADIONUCLIDE MIGRATION
In environment.
Mathematical Models
Preliminary analysis of four numerical models for calculating the mesoscale transport of Kr-85, 9:27044 (J;GB)
RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
RADIONUCLIDES
See RADIOISOTOPES
RADIOPHARMACEUTICALS
Air Transport
Optimization of radiation protection in the transportation of radioisotopes, 9:25535 (RA;US)
Road Transport
Evaluation of doses to workers and general public from the carriage of radiopharmaceuticals: an application of the INTERTRAN code, 9:25534 (RA;US)
Optimization of radiation protection in the transportation of radioisotopes, 9:25535 (RA;US)
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
Accelerators
Particle beam accelerators for radiotherapy and radioisotopes, 9:27153 (J;JP)
Monte Carlo Method
Applying the reciprocal dose principle to heterogeneous phantoms: practical experience from Monte Carlo studies, 9:27434 (J;GB)
RADISHES
Plant Growth
Effects of simulated acidic rain on yields of Raphanus sativus, Lactuca sativa, Triticum aestivum and Medicago sativa, 9:27221 (J;GB)
RADIUM 215
High Spin States
In-beam study of ^{213}Rn, ^{215}Ra and ^{217}Ra: strongly enhanced E3 transitions in odd-A N = 127 isotones, 9:27404 (J;SE)
RADIUM 217
High Spin States
In-beam study of ^{213}Rn, ^{215}Ra and ^{217}Ra: strongly enhanced E3 transitions in odd-A N = 127 isotones, 9:27404 (J;SE)
RADIUM 225
Energy Levels
Evidence for near-stable octupole deformation in ^{225}Ra, 9:27406 (J;NL)
Nuclear structure of ^{225}Ra, 9:27407 (J;NL)
RADIUM 226
Radioecological Concentration
Comparison of radon fluxes with gamma-radiation exposure rates and soil ^{226}Ra concentrations, 9:27167 (R;US)
RADIUM A
See POLONIUM 218
RADON
Diffusion
Predicting long-term moisture in earthen covers, 9:25518 (R;US)
Radon attenuation handbook for uranium mill tailings cover design, 9:25511 (R;US)
Ecological Concentration
Indoor air quality in new energy-efficient houses and retrofitted houses, 9:26121 (RA;US)
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26959 (RA;US)
Indoor Air Pollution
Activity of radon daughters in high rise buildings and the influence of soil emanation, 9:27022 (RA;US)
Eberline's new microcomputer based radon daughter instrument, 9:27020 (RA;US)
Indoor air quality in new energy-efficient houses and retrofitted houses, 9:26957 (RA;US)
Indoor radon levels. Field experience using the track etch method, 9:27011 (RA;US)
Indoor radon and lung cancer: models and methods, 9:27024 (RA;US)
Instrumentation for a radon research house, 9:27018 (RA;US)
Measurements of radon daughters in 5 600 Swedish homes, 9:27109 (RA;US)
Modelling radon daughter concentrations in non-equilibrium situations, 9:27019 (RA;US)
Predicting radon fluxes and source locations using multichamber analysis, 9:27025 (RA;US)
Sources of indoor radon in houses, 9:27021 (RA;US)
Radioecological Concentration
Distribution of indoor radon concentrations and source magnitudes: measurements and policy implications, 9:26979 (RA;US)
Insturmentation for a radon research house, 9:26980 (RA;US)
RADON 213
High Spin States
In-beam study of ^{213}Rn, ^{215}Ra and ^{217}Ra: strongly enhanced E3 transitions in odd-A N = 127 isotones, 9:27404 (J;SE)
RADON 222
Indoor Air Pollution
Distribution of indoor radon concentrations and source magnitudes: measurements and policy implications, 9:27012 (RA;US)
Indoor radon levels: effects of energy-efficiency in homes, 9:27016 (RA;US)
Indoor radon concentrations, 9:27017 (RA;US)

Integrated and grab sample radon data from dwellings in Maine and Texas, 9:27027 (RA;US)
Measuring and modeling the time variations of airborne ^{222}Radon concentrations in houses in Maine, USA, 9:27015 (RA;US)
Radon concentrations in buildings and regional geology, 9:27013 (RA;US)

RADON 226
Indoor Air Pollution
Air filtration and radon daughter levels, 9:27014 (RA;US)
Radioecological Concentration
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)

RAFT RIVER VALLEY
Fluid Injection
Interpretation of self-potential measurements during injection tests at Raft River, Idaho. Final report, 9:25850 (R;US)
Self-Potential Surveys
Interpretation of self-potential measurements during injection tests at Raft River, Idaho. Final report, 9:25850 (R;US)

RAIL TRANSPORT
Accidents
Model railroad industry nuclear emergency response plan, 9:25549 (RA;US)

RAILWAYS

Calculating the cost of producing energy for regulated and nonregulated industry, 9:26108 (R;US)

REINDEER
See DEER

RELATIVISTIC PLASMA
Distribution Functions
Microstability theory for distributions separable in energy and pitch angle, 9:27487 (R;US)
Plasma Microinstabilities
Microstability theory for distributions separable in energy and pitch angle, 9:27487 (R;US)

RELEASE (FISSION PRODUCT)
See FISSION PRODUCT RELEASE

RELIABILITY
Research Programs
More power from hydro, 9:25651 (J;US)

REMOTE HANDLING EQUIPMENT
Evaluation of robotic inspection systems at nuclear power plants, 9:25892 (R;US)

RENEWABLE ENERGY SOURCES
See also BIOMASS
GEOTHERMAL ENERGY
HYDROELECTRIC POWER
SOLAR ENERGY
WIND POWER
Technology Transfer
Project status report on field research tasks and technical services, June 1, 1983-September 30, 1983, 9:26164 (R;US)

REPROCESSING
See also PUREX PROCESS
Feasibility Studies
Reprocessing of nuclear fuels, 9:25397 (R;DE;In German)

RESEARCH PROGRAMS
To be used jointly with descriptor(s) for subject field and/or organization concerned.
Administrative Procedures
Environmental research and development. Hearing before the Subcommittee on Toxic Substances and Environmental Oversight, United States Senate, Ninety-Eight Congress, first session, October 17, 1983, 9:26127 (B;US)
Budgets
Link between the environment and cancer: DOE's research efforts. Hearing before the Subcommittee on Natural Resources, Agriculture Research and Environment, U.S. House of Representatives, Ninety-Eighth Congress, first session, 3 Mar 1983, 9:27178 (B;US)
Government Policies
Annual science and technology report to the Congress: 1982, 9:27628 (R;US)

RESERVOIR ROCK
Electric Conductivity
Comparison of formation resistivity changes induced by wet and dry in situ combustion, 9:25302 (R;US)
Fracture Mechanics
Three-dimensional hydraulic fracture propagation in the presence of stress variations, 9:25306 (J;US)
Permeability
Stratigraphic permeability in the Baca geothermal system, Redondo Creek Area, Valles Caldera, New Mexico, 9:25846 (J;US)
Stress Intensity Factors
Three-dimensional hydraulic fracture propagation in the presence of stress variations, 9:25306 (J;US)

RESERVOIRS (WATER)
See WATER RESERVOIRS

RESIDENCES
See HOUSES

RESIDENTIAL BUILDINGS
See also APARTMENT BUILDINGS

HOUSES
MOBILE HOMES
Air Infiltration
Air leakage in some homes retrofitted to save energy, 9:26182 (RA;US)
Inexpensive perfluorocarbon tracer technique for wide-scale infiltration measurements in homes, 9:26181 (RA;US)
Minimum acceptable infiltration rates for buildings, 9:26191 (RA;US)
Energy Conservation
Major energy conservation retrofits. A planning guide for northern climates, 9:26195 (R;US)
Energy Efficiency
Performance contracting for energy efficiency: an introduction with case studies, 9:26211 (R;US)
Financing
Performance contracting for energy efficiency: an introduction with case studies, 9:26211 (R;US)
Geothermal Space Heating
The economics of solar, geothermal and conventional space heating, 9:25787 (J;US)
Heat Exchangers
Performance measurements for residential air-to-air heat exchangers, 9:26185 (RA;US)
Heating Systems
Analysis of energy-efficient strategies for increasing ventilation rates in residences, 9:26184 (RA;US)
Indoor Air Pollution
Characterization of aerosols and inorganic gases in indoor environments, 9:26947 (RA;US)
Distribution of indoor radon concentrations and source magnitudes: measurements and policy implications, 9:27012 (RA;US)
Effect of cigarette smoking on residential NO_2 levels, 9:26946 (RA;US)
Effects of ventilation on residential air pollution due to emissions from a gas-fired stove, 9:26189 (RA;US)
Follow-up study of indoor air quality in Wisconsin homes, 9:26939 (RA;US)
Indoor nitrogen dioxide pollution in the Netherlands, 9:26933 (RA;US)
Indoor radon levels. Field experience using the track etch method, 9:27011 (RA;US)
Indoor radon levels: effects of energy-efficiency in homes, 9:27016 (RA;US)
Indoor radon concentrations, 9:27017 (RA;US)
Instrumentation for a radon research house, 9:27018 (RA;US)
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26959 (RA;US)
Measurements of radon daughters in 5 600 Swedish homes, 9:27109 (RA;US)
Measuring and modeling the time variations of airborne ^{222}Radon concentrations in houses in Maine, USA, 9:27015 (RA;US)
Modelling radon daughter concentrations in non-equilibrium situations, 9:27019 (RA;US)
Nordic guidelines for building regulation regarding indoor air quality, 9:26194 (RA;US)
Pollutant emissions rates from indoor combustion appliances and sidestream cigarette smoke, 9:26949 (RA;US)
Radon concentrations in buildings and regional geology, 9:27013 (RA;US)
Spatial variation of carbon monoxide and oxides of nitrogen concentrations inside residences, 9:26948 (RA;US)
Survey of indoor formaldehyde levels and apparent building-related illness in conventional housing in Delaware County, Indiana, 9:27192 (RA;US)
Solar Space Heating
Housing standards: change to HUD 4930.2 Intermediate Minimum Property Standard (IMPS) supplement for solar heating and domestic hot water systems, 9:26214 (R;US)
The economics of solar, geothermal and conventional space heating, 9:25787 (J;US)
Solar Water Heaters
Housing standards: change to HUD 4930.2 Intermediate Minimum Property Standard (IMPS) supplement for solar heating and domestic hot water systems, 9:26214 (R;US)
Space Heating
The economics of solar, geothermal and conventional space heating, 9:25787 (J;US)
Ventilation
Instrumentation for a radon research house, 9:27018 (RA;US)
Weatherization
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26959 (RA;US)
Nordic guidelines for building regulation regarding indoor air quality, 9:26194 (RA;US)
RESIDENTIAL SECTOR
Energy Audits
Energy audits as an investment: the residential conservation service program analyzed, 9:26215 (J;US)
Energy Conservation
RCS index: a comparative guide to the implementation of the Residential Conservation Service Program for the reporting period April 1, 1981 - March 31, 1982 covering 179 utilities and 33 states, 9:26218 (B;US)
Energy Consumption
Determinants of residential energy use, 9:26113 (RA;US)
Indicators of residential energy use and conservation, 9:26142 (RA;US)
Energy Demand
Analysis of appliance efficiency standards, 9:26135 (RA;US)
Analysis of energy conservation measures in residential buildings, 9:26139 (RA;US)
Indicators of residential energy use and conservation, 9:26142 (RA;US)
Residential end-use demand modeling: improvments to the ORNL model, 9:26099 (RA;US)
Residential hourly and peak-demand model, 9:26100 (RA;US)
RESIDUAL FUEL OIL
See RESIDUAL FUELS
RESIDUAL FUELS
Prices
Petroleum Marketing Monthly, February 1984, 9:25316 (R;US)
Sales
Petroleum Marketing Monthly, February 1984, 9:25316 (R;US)
RESIDUAL STRESSES
Acoustic Testing
Residual stress characterization by use of elastic wave scattering measurements, 9:26723 (BA;US)
The use of acoustic signal attenuation in the examination of residual strains: Part B-- The use of experimentally derived acoustic strain correlations in the evaluation of residual strains and stresses, 9:26727 (BA;US)
Temperature Dependence
The use of the temperature dependence of ultrasonic velocity to measure residual stress, 9:26725 (BA;US)
RESIDUES
See also ASHES
SMOKES
Agglomeration
Subcontracted R and D final report: gasifier feed preparation (Program Area 15.1.1), 9:25194 (R;US)
RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES
RESIDUUMS
See RESIDUAL FUELS
RESINS
Health Hazards
Chemical dusts, vapours and fumes as causes of asthma, 9:26956 (RA;US)
Production
Chemical refining of coal (Report on ECSC contract 7220-EC/816), 9:25220 (R;XE)
RESISTIVITY SURVEYS
Comparative Evaluations
Crosshole geophysical methods used to investigate the near vicinity of high level waste repositories, 9:25513 (R;US)
RESONANCE PARTICLES
Particle Decay
Relativistic quark model in infinite momentum frame and static properties of hadrons, 9:27311 (R;SU)

Quark Model
Relativistic quark model in infinite momentum frame and static properties of hadrons, 9:27311 (R;SU)

RESOURCE DEVELOPMENT
Budgets
Energy and water development appropriations for 1985. Hearings before a subcommittee of the Committee on Appropriations, House of Representives, Ninety-Eighth Congress, second session, 9:26146 (B;US)
Environmental Impacts
Department of Energy fiscal year 1984 budget on environment programs. Hearing before the Subcommittee on Natural Resources, Agriculture Research and Environment, U.S. House of Representatives, Ninety-Eighth Congress, first session, 19 Apr 1983, 9:26126 (B;US)
Health Hazards
Department of Energy fiscal year 1984 budget on environment programs. Hearing before the Subcommittee on Natural Resources, Agriculture Research and Environment, U.S. House of Representatives, Ninety-Eighth Congress, first session, 19 Apr 1983, 9:26126 (B;US)
Socio-Economic Factors
Regional socioeconomic analysis of tar sands development in Utah, 9:25343 (R;US)

RESOURCE RECOVERY FACILITIES
Feasibility Studies
Bi-State Development Agency resource recovery project. Phase II report, 9:26246 (R;US)

RESPIRABLE DUSTS
See DUSTS

RESPIRATORY SYSTEM
See also BRONCHI
LUNGS
Radiation Doses
Mean dose vs local dose to the respiratory tract: implications for radiological protection, 9:27172 (R;US)
Radioisotope Scanning
Dual gated nuclear cardiac images, 9:27146 (J;US)

RESPIRATORY SYSTEM DISEASES
See also ASTHMA
Epidemiology
Health effects of air pollution due to coal combustion in the Chestnut Ridge Region of Pennsylvania: results of cross-sectional analysis in adults, 9:27212 (J;US)

RETINOL
See VITAMIN A

RETORTED SHALES
See SPENT SHALES

RETORTS
Mathematical Models
Modified in-situ retorting: review of past R & D at LLNL, 9:25357 (RA;US)

RETROFITTING
Technology Assessment
Coal-mixture fuels for utility and industrial applications, 9:25872 (R;US)

REVERSE-FIELD PINCH
Magnetic Field Configurations
Internal magnetic field measurements in a translating field-reversed configuration, 9:27545 (R;US)
Plasma Instability
Current driven instabilities of the kinetic shear Alfven wave: application to reversed field pinches and spheromaks, 9:27483 (R;US)

RHENIUM 183
Energy Levels
Level scheme of ^{183}Re and systematics of odd-A Re isotopes. Interplay of epsilon$_3$ and epsilon$_4$ deformations in the W-Re region, 9:27401 (J;NL)

RHO-765 RESONANCES
Electromagnetic Particle Decay
Polarization effects in vector meson electromagnetic decay (rho $\rightarrow \pi^+ 1^+ 1^-$, $A_1 \rightarrow \pi^+ 1^+ 1^-$), 9:27342 (R;UA;In Russian)
Hadronic Particle Decay
Rho-$\pi\pi$ coupling constant in lattice gauge theory, 9:27376 (J;NL)

RHODAMINES
Motion
Streak camera measurement of tryptophan and rhodamine motions with picosecond time resolution, 9:26676 (J;GB)

RHODE ISLAND
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)

RHODIUM ALLOYS
Order Parameters
Local atomic ordering in nickel based Ir and Rh alloys, 9:26324 (R;IT)

RHODIUM COMPLEXES
Catalytic Effects
Electrocatalytic oxidation of carbon monoxide in a CO/O_2 fuel cell, 9:26545 (J;US)
Structural Chemical Analysis
Preparation and spectral electrochemical characterization of dirhodium(II) complexes with bridging 1,8-naphthyridine ligands. X-ray crystal structure of tris(μ-acetato)(2,7-bis(2-pyridyl)-1,8-naphthyridine) dirhodium(II) hexafluorophosphate, 9:26530 (J;US)
Synthesis
Synthesis of molybdenum-rhodium and molybdenum-iridium compounds linked by a heterodifunctional ligand and formation of molybdenum-iridiumdihydrides by reaction with molecular hydrogen, 9:26532 (J;US)
Voltametry
Preparation and spectral electrochemical characterization of dirhodium(II) complexes with bridging 1,8-naphthyridine ligands. X-ray crystal structure of tris(μ-acetato)(2,7-bis(2-pyridyl)-1,8-naphthyridine) dirhodium(II) hexafluorophosphate, 9:26530 (J;US)

RHODOPSIN
Amino Acid Sequence
Energy conversion by the retinal protein, bacteriorhodopsin, 9:27101 (RA;US)
Biochemical Reaction Kinetics
Energy conversion by the retinal protein, bacteriorhodopsin, 9:27101 (RA;US)

RIBONUCLEIC ACID
See RNA

RICHLAND FFTF REACTOR
See FFTF REACTOR

RICHLAND NPR REACTOR
See N-REACTOR

RIEMANN WAVES
See SHOCK WAVES

RING LASERS
Specifications
Reflex ring laser amplifier system, 9:27614 (P;US)

RINGOTRON
See ELECTRON-RING ACCELERATORS

RINGS (STORAGE)
See STORAGE RINGS

RISA
See ORGANIC IODINE COMPOUNDS

RISER CRACKING
See COAL LIQUEFACTION

RNA
Biochemical Reaction Kinetics
Comparison of the kinetics fo ribooligonucleotide, deoxyribooligonucleotide, and hybrid oligonucleotide double-strand formation by temperature-jump kinetics, 9:27108 (J;US)

RNA POLYMERASE
See RNA

ROAD TRANSPORT
Fuel Consumption
Fuel consumption for road transport in the USA - a comment, 9:26226 (J;GB)

ROADWAYS (MINES)
See MINE ROADWAYS

ROBOTS
Evaluation of robotic inspection systems at nuclear power plants, 9:25892 (R;US)

Uses
Robotic deburring. Part 1. Preliminary observations, 9:26575 (R;US)
ROCK BEDS
Fractures
Relationship between the gas conductivity and geometry of a natural fracture, 9:25335 (R;US)
Gas Flow
Relationship between the gas conductivity and geometry of a natural fracture, 9:25335 (R;US)
Heat Storage
Thermal energy storage media for advanced compressed air energy storage systems, 9:26074 (J;US)
ROCK DRILLING
Drilling Equipment
Draft standard guide for estimating the in-situ modulus of rock masses using the NX-borehole jack, 9:26656 (R;US)
ROCK SALT
See SALT DEPOSITS
ROCKS
Explosive Fracturing
Engineering models of fragment motion for evaluating rubbling designs, 9:25346 (RA;US)
Fragmentation
Engineering models of fragment motion for evaluating rubbling designs, 9:25346 (RA;US)
Oil shale fragmentation research at Los Alamos, 9:25350 (RA;US)
ROCKY MOUNTAIN REGION
See FEDERAL REGION VIII
RODS (CONTROL)
See CONTROL ELEMENTS
RODS (FUEL)
See FUEL RODS
ROLLING
Energy Conservation
Energy saving processes in the production of flat rolled steel products, 9:26230 (R;DE;In German)
ROOTS
Neutron Radiography
Neutron radiography technique for studying young roots growing in soil, 9:27162 (BA;NL)
ROTATING PLASMA
Beam Injection Heating
Plasma rotation in the PDX tokamak, 9:27492 (J;AT)
Joule Heating
Plasma rotation in the PDX tokamak, 9:27492 (J;AT)
ROTORS
Defects
Progress on ultrasonic flaw sizing in turbine engine rotor components: bore and web geometries, 9:26715 (BA;US)
Ultrasonic Testing
Ultrasonic flaw detection in turbine rotor component web geometries, 9:26684 (RA;US)
RUBIDIUM
Crystal Structure
Structural energetics of heavy alkali metals: Pseudopotential theory revisited, 9:26322 (R;IT)
Eigenvalues
Cubic spline method for solving second-order differential equations: theory and application to the Thomas-Fermi model for ions, 9:27461 (J;NL)
Surface Properties
Single-ion and pair-interaction potentials near simple metal surfaces, 9:26368 (J;US)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)
RUBIDIUM 82
Uptake
Dynamic imaging with high resolution time-of-flight pet camera - TOFPET I, 9:27139 (J;US)
RUBIDIUM IODIDES
Photoelectron Spectroscopy
Resonance ionization spectroscopy measurement of the vapor pressure of several molecular species, 9:27254 (R;US)
Photoionization
Resonance ionization spectroscopy measurement of the vapor pressure of several molecular species, 9:27254 (R;US)
RUSSELLVILLE-1 ARKANSAS REACTOR
See ARKANSAS-1 REACTOR
RUSSELLVILLE-2 ARKANSAS REACTOR
See ARKANSAS-2 REACTOR
RUTHENIUM
Photolysis
Solution medium control of the photoredox yield in the Ru(bpy)$_3$2i/methyl viologen/EDTA system, 9:26550 (J;US)
RUTHENIUM 106
Radioecological Concentration
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)
RUTHENIUM COMPLEXES
Catalytic Effects
Ruthenium complexes of 1,3-bis(2-pyridylimino)isoindolines as alcohol oxidation catalysts, 9:25639 (J;US)

S

SAFEGUARDS
See also IAEA SAFEGUARDS
Laws
US statutes of general interest to safeguards and security officers. Volume 2. Text of Atomic Energy Act, Executive Orders and other laws, 9:25578 (R;US)
SAFETY ENGINEERING
Precalculation of the effect of fires on mine ventilation systems, 9:26746 (RA;US)
SAFETY (NUCLEAR)
See RADIATION PROTECTION
SAFETY (REACTOR)
See REACTOR SAFETY
SALINE ZONE
See OIL SHALES
SALMONELLA TYPHIMURIUM
Photosensitivity
Role of the supX gene in sensitizing Salmonella typhimurium cells to respiration shutoff induced by far ultraviolet irradiation, 9:27183 (J;GB)
SALT CAVERNS
Compressed Air Energy Storage
Factors affecting storage of compressed air in solution mined salt cavities, 9:26070 (J;US)
Design
Leached salt cavern design using a fracture criterion for rock salt, 9:25331 (R;US)
Leaching
Leached salt cavern design using a fracture criterion for rock salt, 9:25331 (R;US)
Solution Mining
Factors affecting storage of compressed air in solution mined salt cavities, 9:26070 (J;US)
Stability
Leached salt cavern design using a fracture criterion for rock salt, 9:25331 (R;US)
SALT DEPOSITS
Creep
Analysis of borehole inclusion stress measurement concepts proposed for use in the Waste Isolation Pilot Plant (WIPP), 9:25521 (R;US)
Leached salt cavern design using a fracture criterion for rock salt, 9:25331 (R;US)
Elasticity
Analysis of borehole inclusion stress measurement concepts proposed for use in the Waste Isolation Pilot Plant (WIPP), 9:25521 (R;US)

Fractures
Leached salt cavern design using a fracture criterion for rock salt, 9:25331 (R;US)
Hydrology
Potentiometric-level monitoring program - Mississippi and Louisiana: annual status report for fiscal year 1983, 9:25487 (R;US)
Poisson Ratio
Analysis of borehole inclusion stress measurement concepts proposed for use in the Waste Isolation Pilot Plant (WIPP), 9:25521 (R;US)
Leached salt cavern design using a fracture criterion for rock salt, 9:25331 (R;US)
Seismic Surveys
Interactive seismic interpretation system ISAS, 9:27231 (R;DE;In German)
Stress Analysis
Analysis of borehole inclusion stress measurement concepts proposed for use in the Waste Isolation Pilot Plant (WIPP), 9:25521 (R;US)
Yield Strength
Analysis of borehole inclusion stress measurement concepts proposed for use in the Waste Isolation Pilot Plant (WIPP), 9:25521 (R;US)
Young Modulus
Leached salt cavern design using a fracture criterion for rock salt, 9:25331 (R;US)

SALTON SEA GEOTHERMAL FIELD
Age Estimation
Inversion approach for thermal data from a convecting hydrothermal system, 9:25830 (R;US)
Flow Rate
Inversion approach for thermal data from a convecting hydrothermal system, 9:25830 (R;US)

SALTS
Use specific salts whenever possible
See also MOLTEN SALTS
Precipitation
Laboratory demonstration of self-creation capability of saturated solar ponds, 9:25807 (J;US)

SAMARIUM
Mass Spectra
Ionization spectra of neodymium and samarium by resonance ionization mass spectrometry, 9:26493 (J;US)
Mass Spectroscopy
Ionization spectra of neodymium and samarium by resonance ionization mass spectrometry, 9:26494 (J;US)
Photoionization
Ionization spectra of neodymium and samarium by resonance ionization mass spectrometry, 9:26493 (J;US)

SAMARIUM COMPOUNDS
Photoemission
Surface versus shake-down effects in the deep-core photoemission of Sm- and Eu-based intermetallics, 9:26376 (J;US)

SANDIA LABORATORIES
Coordinated Research Programs
DOE joint experimental rock fragmentation research program, 9:25351 (RA;US)
Data Base Management
DBMS conversion case study, 9:27639 (R;US)
Research Programs
Sandia National Laboratories program for in situ oil shale research, 9:25365 (RA;US)

SANDSTONES
Hydraulic Fracturing
Determination of in situ stress from anelastic strain recovery measurements of oriented core: comparison to hydraulic fracture stress measurements in the Rollins Sandstone, Piceance Basin, Colorado, 9:25339 (R;US)
Permeability
Porosity and permeability of tight sands, 9:25334 (R;US)
Relationship of pore structure to fluid behavior in low permeability gas sands: Phase II. Final technical report, 9:25333 (R;US)
Porosity
Porosity and permeability of tight sands, 9:25334 (R;US)
Relationship of pore structure to fluid behavior in low permeability gas sands: Phase II. Final technical report, 9:25333 (R;US)
Stresses
Determination of in situ stress from anelastic strain recovery measurements of oriented core: comparison to hydraulic fracture stress measurements in the Rollins Sandstone, Piceance Basin, Colorado, 9:25339 (R;US)

SANITARY LANDFILLS
Water Pollution Control
Cementing reactions in the hazardous waste environment, 9:27058 (R;US)

SATELLITES
Radiation Detectors
Comparative lifetesting results for microchannel plates in windowless EUV photon detectors, 9:26833 (J;US)

SAUDI ARABIA
International Agreements
International solar agreements. Final technical report, 9:25652 (R;US)
International Cooperation
International solar agreements. Final technical report, 9:25652 (R;US)

SAVANNAH RIVER PLANT
Aquatic Ecosystems
Evaluation of the Steel Creek ecosystem in relation to the proposed restart of the L-Reactor: interim report, 9:27081 (R;US)
Radioactive Waste Disposal
Costs for disposal of Savannah River high-level waste in a commercial repository, 9:25498 (R;US)

SAVANNAH RIVER PLANT L REACTOR
See L REACTOR

SCANDINAVIA
See also DENMARK
FINLAND
Radioactive Wastes
Nordic study on reactor waste, 9:25538 (RA;US)

SCANDIUM
Form Factors
Magnetic form factors, 9:26401 (J;FR)

SCANNERS (IMAGE)

SEDIMENTS
Contamination
Transport of trace metals in the Magela Creek system, Northern Territory. III. Billabong sediments, 9:25531 (R;AU)
Mixing
Mixing rates in Shagawa Lake, Minnesota, sediments as determined from ^{106}Ru profiles, 9:27230 (J;GB)
Radionuclide Migration
Preliminary post-emplacement safety analysis of the subseabed disposal of high-level nuclear waste, 9:25572 (R;US)
Solvent Extraction
Extraction efficiency of anthracene form sediments, 9:27078 (J;US)
SEEDIS
Computer Index of Social, Economic, Environmental, and Demographic Data.
Data Base Management
Distributed data management in a minicomputer network: the SEEDIS experience, 9:27664 (RA;US)
SEISMIC EFFECTS
Risk Assessment
Observations on seismic probabilistic risk assessments (PRAs), 9:26063 (R;US)
SEISMIC SURVEYS
Comparative Evaluations
Crosshole geophysical methods used to investigate the near vicinity of high level waste repositories, 9:25513 (R;US)
Data Processing
Interactive seismic interpretation system ISAS, 9:27231 (R;DE;In German)
SEISMICITY
Risk Assessment
Seismic hazard characterization of the eastern United States: methodology and interim results for ten sites, 9:25990 (R;US)
SELENIUM
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)

Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)

SELF-DIFFUSION
Pressure Dependence
Transport and relaxation processes in supercritical fluids. Technical progress report, December 31, 1983-March 31, 1984 (Toluene at supercritical conditions given), 9:25206 (R;US)
Temperature Dependence
Transport and relaxation processes in supercritical fluids. Technical progress report, December 31, 1983-March 31, 1984 (Toluene at supercritical conditions given), 9:25206 (R;US)

SEMICONDUCTOR COUNTERS
See SEMICONDUCTOR DETECTORS

SEMICONDUCTOR DETECTORS
See also GE SEMICONDUCTOR DETECTORS
HGI2 SEMICONDUCTOR DETECTORS
Applied physics and laser spectroscopy research, 9:26989 (RA;US)
Use of layer strains in strained-layer superlattices to make devices for operation in new wavelength ranges, E.G., InAsSb at 8 to 12 μm (InAs/sub 1-x/Sb/sub x/), 9:26875 (P;US)

SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Physical Radiation Effects
Problems and progress in radiation physics of semiconductors, 9:26440 (RA;UA;In Russian)
X-Ray Diffraction
Application of synchrotron radiation technique to the assessment of thin layers grown on III-V semiconductor substrates, 9:26435 (RA;GB)

SEMINAL VESICLES
See MALE GENITALS

SENA REACTOR
See ARDENNES REACTOR

SENIOR CENTERS
See PUBLIC BUILDINGS

SENSIBLE HEAT STORAGE
Indoor Air Pollution
Dynamic simulation of radon daughter exposure in apartments using solar rockbed heat storage systems, 9:27026 (RA;US)

SEPA
See SOUTHEASTERN POWER ADMINISTRATION

SEPARATION PROCESSES
See also DISTILLATION
ISOTOPE SEPARATION
REPROCESSING
Separations by supported liquid membrane cascades, 9:26483 (P;US)

SEQUESTRENE
See EDTA

SERI
See SOLAR ENERGY RESEARCH INSTITUTE

SET THEORY
Linear Programming
Set covering, partition and packing, 9:27638 (R;US)

SHAFT EXCAVATIONS
Drilling
Overview of raise boring and blind shaft drilling with practical applications and particular reference to design limits for accuracy, 9:26648 (R;US)
Drilling Equipment
Overview of raise boring and blind shaft drilling with practical applications and particular reference to design limits for accuracy, 9:26648 (R;US)

SHALE OIL
Biological Effects
Comparative toxicities of coal- and shale-derived crude oils and a petroleum-derived fuel oil to the fresh water snails Helisoma trivolvis and Physa gyrina, 9:27209 (J;GB)
Chemical Analysis
Molecular substituent parameters applied to the specification of inorganic arsenic and organoarsenic compounds in shale oil and oil shale kerogen by HPLC-GFAA, 9:25379 (RA;US)
Demetallization
Reactions of inorganic and organoarsenic compounds with substituted catechols, 9:25312 (RA;US)
Refining
Julia Creek project: shale oil refining investigation, 9:25355 (R;AU)
Solvent Extraction
Improved solvent recovery of Eastern shale oil, 9:25377 (P;US)

SHEATHS (FUEL)
See FUEL CANS

SHEETS
Thinner than PLATES but thicker than FOILS.
Fracture Properties
Role of geometry in plastic instability and fracture of tubes and sheet, 9:26384 (J;NL)
Plasticity
Role of geometry in plastic instability and fracture of tubes and sheet, 9:26384 (J;NL)

SHELL MODELS
Nuclear shell models only; for electron shell models use ELECTRONIC STRUCTURE.
Variational Methods
Comparison of model Hartree-Fock type calculation schemes involving various non-degenerate and quasi-degenerate intrinsic Hamiltonians, 9:27409 (R;IT)

SHELLS (CONTAINMENT)
See CONTAINMENT SHELLS

SHIELDING
Computer Calculations
Benchmark for the qualification of gamma shielding calculation methods for light-water type reactor spent fuels, 9:26639 (R;XE;In French)
Cross Sections
Comparison of one- and two-dimensional cross-section sensitivity calculations for a fusion reactor shielding experiment, 9:27623 (J;US)
Reactor Safety Experiments
Comparison of one- and two-dimensional cross-section sensitivity calculations for a fusion reactor shielding experiment, 9:27623 (J;US)

SHIELDING MATERIALS
Feasibility Studies
Alternate shield material feasibility, 9:25936 (R;US)

SHIELDS
Neutron Transport
Optimized broad energy group structures for radiation transport in air and in LWR-shields, 9:27424 (R;CH)
Photon Transport
Optimized broad energy group structures for radiation transport in air and in LWR-shields, 9:27424 (R;CH)
Radiation Streaming
Integral methods for handling the slit problem in the reactor shield, 9:27426 (R;CH;In German)

SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR

SHIPPINGPORT REACTOR
Activity Levels
Shippingport Station Decommissioning Project decommissioning plan. Part 2. Volume 11, 9:25910 (R;US)
Decontamination
Shippingport Station Decommissioning Project decommissioning plan. Part 2. Volume 11, 9:25910 (R;US)
LWBR Type Reactors
Nuclear analysis and performance of the Light Water Breeder Reactor (LWBR) core power operation at Shippingport, 9:25940 (R;US)
Reactor Decommissioning
Safety analysis for Shippingport Station Decommissioning Project. Vol.9. Pt.1. Rev.1, 9:25918 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume IV, 9:25906 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume XII, 9:25909 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume VII, 9:25907 (R;US)

Shippingport Station Decommissioning Project decommissioning plan. Volume VI, Part II, 9:25916 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume 3, 9:25905 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Part 2. Volume 6, 9:25919 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Part 2. Volume 9, 9:25920 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Part 2. Volume 11, 9:25910 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume I, 9:25903 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume XI, Part I, 9:25957 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume No. VIII, Part I, 9:25955 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume II, 9:25904 (R;US)
Shipppingport Station Decommissioning Project decommissioning plan. Volume 10, 9:25908 (R;US)

Reactor Dismantling
Safety analysis for Shippingport Station Decommissioning Project. Vol.9. Pt.1. Rev.1, 9:25918 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume IV, 9:25906 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume XII, 9:25909 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume VII, 9:25907 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume 3, 9:25905 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Part 2. Volume 6, 9:25919 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Part 2. Volume 9, 9:25920 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Part 2. Volume 11, 9:25910 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume I, 9:25903 (R;US)
Shippingport Station Decommissioning Project decommissioning plan. Volume No. VIII, Part I, 9:25955 (R;US)
Shipppingport Station Decommissioning Project decommissioning plan. Volume 10, 9:25908 (R;US)

SHIPS
Design
Notes on the design of ships used in international transport of irradiated nuclear fuel, 9:25461 (RA;US)

SHOCK ABSORBERS
Design
Analysis method for the design of transport packaging shock absorbing end covers, 9:26635 (RA;US)
Impact limiter design methodology, 9:26636 (RA;US)
Impact Tests
Analysis of the behaviour under impact loads of a shell-type shock absorber for LWR spent fuel transport packaging, 9:26634 (RA;US)
Development of a toroidal shell-type shock absorber for an irradiated fuel shipping cask, 9:26633 (RA;US)
Materials Testing
Shock response of flexible polyurethane foams, 9:26637 (RA;US)
Performance Testing
Investigations on shock absorbers for type B packagings, 9:26632 (RA;US)

SHOCK WAVES
Production
Development of a high-pressure quasi-isentropic plane wave generating capability, 9:26704 (R;US)

SHOTFIRING
See EXPLOSIVE FRACTURING

SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Analog-to-Digital Converters
Brookhaven FASTBUS ADC's, 9:26814 (R;US)
Calibration
Electron shower counter performances for neutrino calorimeter, 9:26823 (RA;SU;In Russian)
Design
D phi detector, 9:26799 (R;US)
Energy Resolution
A measurement of the energy resolution and related properties of an SCG1-C scintillation glass shower counter array for 1-25 GeV positions, 9:26864 (J;US)
Test of lead glass shower counters, 9:26857 (J;US)
Fastbus System
Brookhaven FASTBUS ADC's, 9:26814 (R;US)
Glass Scintillators
A measurement of the energy resolution and related properties of an SCG1-C scintillation glass shower counter array for 1-25 GeV positions, 9:26864 (J;US)
Performance Testing
Test of lead glass shower counters, 9:26857 (J;US)
Simulators
Electron shower counter performances for neutrino calorimeter, 9:26823 (RA;SU;In Russian)

SHRUBS
Chemical Composition
Biomass conversion to liquid fuels: potential of some Arizona chaparral brush and tree species, 9:25624 (J;GB)
Resource Assessment
Biomass conversion to liquid fuels: potential of some Arizona chaparral brush and tree species, 9:25624 (J;GB)

SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES

SIGNAL DISTORTION
Corrections
Energy resolution enhancement of mercuric iodide detectors, 9:26838 (J;US)

SILANES
Chemical Reaction Yield
Silicon-29 nuclear magnetic resonance study of hydroxyl sites on dehydrated silica gel surfaces, using silylation as a probe, 9:26522 (J;US)
Chemical Shift
Temperature dependence of the magnetic susceptibility and proton and carbon-13 chemical shifts of tetramethylsilane, 9:26527 (J;GB)
Detonation Limits
Silane-propane ignitor/burner, 9:25235 (P;US)
Gas Chromatography
Determination of reactive components in silicone foams, 9:26486 (J;US)
Gel Permeation Chromatography
Determination of reactive components in silicone foams, 9:26486 (J;US)
Infrared Spectra
Determination of reactive components in silicone foams, 9:26486 (J;US)
NMR Spectra
Determination of reactive components in silicone foams, 9:26486 (J;US)
Silicon-29 nuclear magnetic resonance study of hydroxyl sites on dehydrated silica gel surfaces, using silylation as a probe, 9:26522 (J;US)
Spontaneous Combustion
Silane-propane ignitor/burner, 9:25235 (P;US)

SILICA
Annealing
Annealing of vitreous silica, 9:26460 (J;GB)
Birefringence
Annealing of vitreous silica, 9:26460 (J;GB)
Chemical Reactions
Silicon-29 nuclear magnetic resonance study of hydroxyl sites on dehydrated silica gel surfaces, using silylation as a probe, 9:26522 (J;US)
NMR Spectra
Silicon-29 nuclear magnetic resonance study of hydroxyl sites on dehydrated silica gel surfaces, using silylation as a probe, 9:26522 (J;US)

Radiation Effects
Vibrational Raman studies of particle induced damage in oxide glass, 9:26450 (R;US)

SILICA GEL
Dehydration
Silicon-29 nuclear magnetic resonance study of hydroxyl sites on dehydrated silica gel surfaces, using silylation as a probe, 9:26522 (J;US)

SILICEOUS ROCK
See SANDSTONES

SILICON
Crystal Defects
Investigation of monocrystal surface structure disturbances using synchrotron radiation, 9:26438 (R;SU)
Crystal Growth Methods
Silicon crystal growing by oscillating crucible technique, 9:25696 (P;US)
Electrical Properties
Process research on polycrystalline silicon material. Final technical report, 9:25674 (R;US)
Ion Implantation
High dose oxygen implantation into silicon. A model for calculating the oxygen distribution, 9:26455 (RA;DD;In German)
Leaching
Relationship between reaction layer thickness and leach rate for nuclear waste glasses, 9:25517 (R;US)
Physical Radiation Effects
Study of radiation defect formation in Au-doped n-silicon, 9:26443 (RA;UA;In Russian)
Positron Channeling
Radiation peak of 1-10 GeV positrons chenneling in Si, 9:27431 (R;SU;In Russian)
Production
Method and apparatus for producing high purity silicon, 9:25697 (P;US)
Purification
Method and apparatus for producing high purity silicon, 9:25697 (P;US)

SILICON 28 TARGET
Carbon 12 Reactions
Observation of a critical angular momentum for deep inelastic processes with light heavy ions, 9:27390 (R;US)

SILICON ALLOYS
Physical Radiation Effects
Compositional redistribution in alloy films under high-voltage electron microscope irradiation, 9:26365 (J;NL)

SILICON CARBIDES
Coatings
Material properties and fission product reduction of SiC coatings, 9:25927 (RA;DE;In German)
Corrosion Resistance
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Deposition
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Performance Testing
Material properties and fission product reduction of SiC coatings, 9:25927 (RA;DE;In German)
X-Ray Diffraction
Assessment of the properties of synchrotron radiation for a study of polytypes in silicon carbide, 9:26436 (RA;GB)

SILICON COMPOUNDS
See also SILANES, SILOXANES and SILICONES.
See also SILANES
SILICON CARBIDES
SILICON NITRIDES
SILICON OXIDES
Chemical Reactions
Silicon-29 nuclear magnetic resonance study of hydroxyl sites on dehydrated silica gel surfaces, using silylation as a probe, 9:26522 (J;US)

SILICON HYDRIDES
See SILANES

SILICON NITRIDES
Joining
Joining silicon nitride based ceramics: a technical assessment, 9:26406 (R;US)

SILICON OXIDES
See also QUARTZ
SILICA
Physical Radiation Effects
Radiation defects in silicon dioxide: nonbridging oxygen atoms, 9:26442 (RA;UA;In Russian)

SILICON SOLAR CELLS
Chemical Vapor Deposition
Chemical vapor deposition of amorphous semiconductor films. Semiannual report, 1 May 1983-31 October 1984, 9:25688 (R;US)
Crystal Doping
Process research of non-CZ silicon material. Quarterly report No. 2, January 1, 1984-March 31, 1984, 9:25676 (R;US)
Electrical Properties
Characterization of Si solar cells, 9:25679 (R;FR;In French)
Fabrication
Process research of non-CZ silicon material. Quarterly report No. 2, January 1, 1984-March 31, 1984, 9:25676 (R;US)
Manufacturing
Amorphous silicon solar cells. Final Report, Mar. 1981, 9:25683 (R;DE;GE)
Marketing
Marketing ORNL-made materials, 9:26362 (J;US)
Performance
Process research on polycrystalline silicon material. Final technical report, 9:25674 (R;US)
Processing
High-efficiency beam-processed solar cells, 9:25695 (J;US)
Research Programs
High-efficiency beam-processed solar cells, 9:25695 (J;US)
Solar Concentrators
Optimisation of concentrating array of silicon solar cells, 9:25677 (R;XE;In French)
Surface Coating
Development and prototype production of photovoltaic energy supply systems, 9:25671 (R;DE;In German)
Surface Treatments
Development and prototype production of photovoltaic energy supply systems, 9:25671 (R;DE;In German)

SILICONES
Some considerations on silicone oil in high-current and energy-disconnecting mechanisms, 9:27538 (R;US)

SILVER
Auger Electron Spectroscopy
Data acquisition and processing modes for quantitative Auger electron spectroscopy, 9:26506 (J;US)
Catalytic Effects
Photochemical transformation. 35. Stereochemistry of electron transfer from photoexcited aromatic rings to carbon-chlorine bonds. Syn stereochemistry of migration in photo-Wagner-Meerwein rearrangements, 9:26553 (J;US)
Chemical Reactions
Chemical interactions of tellurium vapors with reactor materials, 9:26038 (R;US)
Electron Reactions
A-dependence of deep-inelastic electron scattering from nuclei, 9:27384 (R;US)
X-Ray Emission Analysis
X-ray emission experiments at 1.06 μm and 0.35 μm, 9:27583 (BA;US)

SILVER ALLOYS
Electric Conductivity
Electrical resistivity of liquid Ag-Au alloy, 9:26321 (R;IT)
Thermal Conductivity
Transport properties of concentrated Ag-Pd and Cu-Ni alloys from 300-1000 K, 9:26394 (BA;US)

SIMS
See MASS SPECTROSCOPY

SINGLE CRYSTALS
See MONOCRYSTALS
SINGLE PHOTON EMISSION COMPUTED TOMOGRAPHY
Corrections
Dual energy attenuation correction for single photon emission computed tomography (SPECT), 9:27143 (J;US)
High-Purity GE Detectors
Germanium-scintillation camera coincidence detection studies for imaging single photon emitters, 9:27142 (J;US)
SISTER CHROMATID EXCHANGES
Induction
Induction of sister chromatid exchanges by 5-fluorodeoxycytidine: correlation with DNA methylation, 9:27113 (J;DE)
SKELETAL FOSSILS
See FOSSILS
SKY
Infrared Radiation
Passive research and development, 9:25775 (RA;US)
SLC
See STANFORD LINEAR COLLIDER
SLUGS (FUEL)

SLURRIES (FUEL)
See FUEL SLURRIES
SMALL-SCALE HYDROELECTRIC POWER PLANTS
Water over the dam: a small scale hydro workbook for Colorado, 9:25649 (R;US)
SMOKATRON
See ELECTRON-RING ACCELERATORS
SMOKES
See also TOBACCO SMOKES
Toxicity
Quantifying smoke hazards, 9:27197 (R;US)
SODIUM
Chemical Reactions
SLAM: a sodium-limestone concrete ablation model, 9:26042 (R;US)
Eigenvalues
Cubic spline method for solving second-order differential equations: theory and application to the Thomas-Fermi model for ions, 9:27461 (J;NL)
Emission Spectra
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:26488 (J;US)
Laser Spectroscopy
Time-resolved laser-induced breakdown spectrometry of aerosols, 9:25234 (J;US)
Surface Properties
Multilayer lattice relaxation at metal surfaces, 9:26375 (J;US)
Single-ion and pair-interaction potentials near simple metal surfaces, 9:26368 (J;US)
SODIUM CHLORIDES
Chemical Reactions
Reactions of photoexcited triplet states of zinc porphyrin with transient radicals in aqueous solutions, 9:26556 (J;IL)
Erosion
Multicomponent crystal surface erosion under ion bombardment, 9:26441 (RA;UA;In Russian)
Neon 20 Reactions
Two-pion correlations in heavy ion collisions: measurement of source dimensions using pion interferometry, 9:27304 (J;CH)
Phase Studies
Phase compositions of aqueous/hydrocarbon systems containing organic salts, alcohol, and sodium chloride, 9:26540 (J;US)
Physical Radiation Effects
Multicomponent crystal surface erosion under ion bombardment, 9:26441 (RA;UA;In Russian)
SODIUM CITRATES
See SODIUM COMPOUNDS
SODIUM COMPOUNDS
See also SODIUM CHLORIDES
SODIUM NITRATES
SODIUM OXIDES
SODIUM PHOSPHATES
SODIUM SULFATES
Agglomeration
Aggregation of sulfosuccinate surfactants in water, 9:26521 (J;US)
Electric Conductivity
Aggregation of sulfosuccinate surfactants in water, 9:26521 (J;US)
Neutron Diffraction
Aggregation of sulfosuccinate surfactants in water, 9:26521 (J;US)
Phase Diagrams
Aggregation of sulfosuccinate surfactants in water, 9:26521 (J;US)
SODIUM IODIDE DETECTORS
See NAI DETECTORS
SODIUM LAURYL SULFATES
See SODIUM COMPOUNDS
SODIUM MINERALS

SODIUM NITRATES
Physical Radiation Effects
Damage and other changes that occur in some inorganic materials subjected to synchrotron radiation, 9:26437 (RA;GB)
SODIUM OXIDES
Microstructure
Degradation of sodium β''-alumina: effect of microstructure, 9:26087 (J;US)
SODIUM PHOSPHATES
Radiation Effects
Vibrational Raman studies of particle induced damage in oxide glass, 9:26450 (R;US)
SODIUM SULFATES
Corrosive Effects
Corrosion of 5083 aluminum by aqueous sodium sulfate, 9:26349 (R;US)
SODIUM-SULFUR BATTERIES
Solid Electrolytes
Degradation of sodium β''-alumina: effect of microstructure, 9:26087 (J;US)
SOFT X RADIATION
Reflection
Evaluation of highly polished surface quality using grazing incidence soft X-ray reflection and scattering, 9:26879 (RA;GB)
Scattering
Evaluation of highly polished surface quality using grazing incidence soft X-ray reflection and scattering, 9:26879 (RA;GB)
SOILS
Activation Analysis
Reactor sharing grant 1980-82. Final report, 9:27054 (R;US)
Chemical Analysis
Evaluation of an automated assay system to measure soil radionuclides by L x-ray and γ-ray spectrometry, 9:27067 (J;US)
Chemical Composition
Reactor sharing grant 1980-82. Final report, 9:27054 (R;US)
Contamination
Decontamination and decommissioning of the TAN/TSF-3 concrete pad. Final report, 9:25499 (R;US)
Hydraulic Conductivity
Hydraulic testing of crushed Bandelier Tuff, 9:27056 (R;US)
Radiation Monitoring
Decontamination and decommissioning of the TAN/TSF-3 concrete pad. Final report, 9:25499 (R;US)
Radionuclide Migration
Comparison of radon fluxes with gamma-radiation exposure rates and soil ^{226}Ra concentrations, 9:27167 (R;US)
Rare Earths
Rare earth element behavior in the development of energy resources, 9:25236 (R;US)
SOLAR ABSORBERS
Optical Properties
Study of stabilized CuO/Al solar absorbers. Final report, 9:25791 (R;US)

Spectrally Selective Surfaces
Preparation and characterization of black molybdenum films: application to solar energy photothermic conversion, 9:25795 (R;FR;In French)

SOLAR ACCESS
Prior to September 1980 this concept was indexed to SOLAR RIGHTS.
Assessment of solar blockage from tree canopies. Final report, September 30, 1981-December 30, 1982, 9:25655 (R;US)

SOLAR AIR CONDITIONERS
Operation
California State Office Building - Site III: project overview, 9:25762 (R;US)
Testing
California State Office Building - Site III: project overview, 9:25762 (R;US)

SOLAR AIR CONDITIONING
Desiccants
Modeling of solid-side mass transfer in desiccant particle beds, 9:25783 (R;US)

SOLAR BATTERIES
See SOLAR CELL ARRAYS

SOLAR CELL ARRAYS
Cost
Installation, cost, and performance testing of a 30 kW photovoltaic array field based on a low cost modular design, 9:25687 (R;US)
Encapsulation
Industrial technology for economic and reliable encapsulation of large surface arrays of solar cells, 9:25678 (R;XE;In French)
Installation
Installation, cost, and performance testing of a 30 kW photovoltaic array field based on a low cost modular design, 9:25687 (R;US)
Performance Testing
Installation, cost, and performance testing of a 30 kW photovoltaic array field based on a low cost modular design, 9:25687 (R;US)
PV concentrator structure and array test results, 9:25685 (R;US)
Semiconductor Diodes
Diodes in photovoltaic modules and arrays. Final report, 9:25675 (R;US)
Thermal Analysis
Thermal modeling of residential photovoltaic arrays, 9:25684 (R;US)

SOLAR COLLECTORS
See also FLAT PLATE COLLECTORS
SOLAR PONDS
Aging
Developing of practical methods for the determination of the stagnation temperature and the durability of solar collectors, 9:25790 (R;DE;In German)
Certification
Directory of SRCC certified solar collector ratings: supplement to Fall 1983 edition, 9:25798 (R;US)
Diffraction
Diffractive solar collection systems, 9:25779 (RA;US)
Directories
Directory of SRCC certified solar collector ratings: supplement to Fall 1983 edition, 9:25798 (R;US)
Optical Properties
Orientational relationships for optically non-symmetric solar collectors, 9:25806 (J;GB)
Optical Systems
Diffractive solar collection systems, 9:25779 (RA;US)
Orientation
Orientational relationships for optically non-symmetric solar collectors, 9:25806 (J;GB)
Performance Testing
Developing of practical methods for the determination of the stagnation temperature and the durability of solar collectors, 9:25790 (R;DE;In German)
Prisms
Rotating-prism, movable-mass solar energy system. Final report, 9:25770 (R;US)
Research Programs
Solar energy, 9:25789 (RA;US)
Stagnation
Developing of practical methods for the determination of the stagnation temperature and the durability of solar collectors, 9:25790 (R;DE;In German)

SOLAR CONCENTRATORS
See also SOLAR REFLECTORS
Fabrication
Electroforming of complicated structures for the nuclear and aerospace industry, 9:26652 (R;DE)
Testing
JPL tests of a LaJet concentrator facet, 9:25793 (R;US)

SOLAR COOLING SYSTEMS
See also PASSIVE SOLAR COOLING SYSTEMS
SOLAR AIR CONDITIONERS
Demonstration Programs
LBL building 71 solar cooling project, 9:25778 (RA;US)
Economic Analysis
Active solar cooling, 9:25776 (RA;US)
Field Tests
Support for SOLERAS solar cooling engineering field tests, 9:25777 (RA;US)
Performance Testing
Active solar cooling, 9:25776 (RA;US)

SOLAR DOMESTIC WATER HEATING
See SOLAR WATER HEATING

SOLAR DRYERS
Efficiency
Solar drying. Final report, 9:25769 (R;US)

SOLAR ENERGY
Bioconversion
Bioconversion of solar energy, 9:25703 (BA;US)
Directories
1984 state solar directory, 9:25653 (R;US)
International Agreements
International solar agreements. Final technical report, 9:25652 (R;US)
International Cooperation
International solar agreements. Final technical report, 9:25652 (R;US)
Rate Structure
New Mexico residential solar rate initiatives. Executive summary and rulemaking document, 9:25665 (R;US)
Research Programs
Energy and Environment Division, annual report, FY 1981, 9:25603 (R;US)
Resource Assessment
The stochastic sun: Understanding the intermittent resource, 9:25662 (J;US)
Resource Development
The stochastic sun: Understanding the intermittent resource, 9:25662 (J;US)
Sensible Heat Storage
Storing solar energy in thermally stratified tanks, 9:25811 (J;US)
Tax Credits
California's solar, wind, and conservation tax credits, 9:26166 (R;US)

SOLAR ENERGY CONVERSION

Solar home heating in Michigan, 9:25768 (R;US)

Data Acquisition Systems
A data acquisition and instrumentation system for a solar industrial process heat installation, 9:25788 (J;US)

Design
Maryland National Capital Park and Planning Commission, Shady Grove Solar Office Building. Volume 1. Final technical report, 9:25763 (R;US)
Solar energy system, Baltimore County Jail, Towson, Maryland. Final report, 9:25767 (R;US)

Flat Plate Collectors
Performance of a drain-back solar heating and hot water system with auxiliary heat pump. Final report, 9:25761 (R;US)

Indoor Air Pollution
Dynamic simulation of radon daughter exposure in apartments using solar rockbed heat storage systems, 9:27026 (RA;US)

Operation
California State Office Building - Site III: project overview, 9:25762 (R;US)
Maryland National Capital Park and Planning Commission Shady Grove solar office building. Volume 2. Final technical report, 9:25764 (R;US)

Performance
A data acquisition and instrumentation system for a solar industrial process heat installation, 9:25788 (J;US)
Maryland National Capital Park and Planning Commission, Shady Grove Solar Office Building. Volume 1. Final technical report, 9:25763 (R;US)

Testing
California State Office Building - Site III: project overview, 9:25762 (R;US)

SOLAR INDUSTRY

Marketing Research
Market analysis of the solar energy industry, 9:25663 (R;US)

Surveys
Market analysis of the solar energy industry, 9:25663 (R;US)

SOLAR ONE POWER PLANT
See BARSTOW SOLAR PILOT PLANT

SOLAR PONDS

Density
In Situ measurement of solar pond density profiles, 9:25802 (J;US)

Gels
Demonstration of a solar gel pond. Final report, 9:25797 (R;US)

Hydrostatics
In Situ measurement of solar pond density profiles, 9:25802 (J;US)

Mathematical Models
A numerical model to describe the layer behavior in salt-gradient solar ponds, 9:25799 (J;US)
Simulation of a solar pond with a stratified storage zone, 9:25801 (J;US)

Performance
Effect of soil conditions on solar pond performance, 9:25809 (R;US)

Pressure Measurement
In Situ measurement of solar pond density profiles, 9:25802 (J;US)

Stability
Effects of friction and extraction on the stability of solar ponds, 9:25800 (J;US)
Laboratory demonstration of self-creation capability of saturated solar ponds, 9:25807 (J;US)

Stratification
Simulation of a solar pond with a stratified storage zone, 9:25801 (J;US)

Supersaturation
Laboratory demonstration of self-creation capability of saturated solar ponds, 9:25807 (J;US)

SOLAR POWER PLANTS

Waste Disposal
Coal gasification waste disposal: the impact of regulation, 9:25255 (J;US)
SOLIDS
Chemical Reactions
Simultaneous fluid-solid reactions in porous solids. II. Reactions between one fluid and two solid reactants, 9:25374 (J;GB)
Elasticity
Inverse ray tracing in anisotropic elastic solids, 9:26710 (BA;US)
Inclusions
Ultrasonic 3-D reconstruction of inclusions in solids using the Inverse Born Approximation, 9:26713 (BA;US)
Moisture
Analysis of moisture in solids: a review of the last decade, or from Pande to the present, 9:26888 (R;US)
Photoemission
Photoemission studies of mixed valent systems, 9:27437 (R;US)

Positron Collisions
Electromagnetic radiation of relativistic positrons during a small-angle reflection from a solid surface, 9:27259 (RA;UA;In Russian)
Radiation spectrum of superhigh energy positrons reflected from the solid surface, 9:27258 (RA;UA;In Russian)
Ultrasonic Testing
Inverse ray tracing in anisotropic elastic solids, 9:26710 (BA;US)
Ultrasonic 3-D reconstruction of inclusions in solids using the Inverse Born Approximation, 9:26713 (BA;US)

SOLITONS
Elastic Scattering
Some specific features of scattering on solitons in the model of current-current interaction. Phases and cross section of scattering in kinematic region of $t=(q^2)$ contains (0.4 m^2), 9:27378 (R;SU;In Russian)
Many-Dimensional Calculations
Anisotropic solitons in a space of dimension $n > 1$ in theories with the abelian global gauge group, 9:27374 (R;SU;In Russian)
Reviews
Soliton experiments in plasmas, 9:27499 (J;GB)

SOLUTION MINING
Compressed Air Energy Storage
Factors affecting storage of compressed air in solution mined salt cavities, 9:26070 (J;US)

SOLVENT EXTRACTION
Comparative Evaluations
Mobile phase in coals: its nature and modes of release. Technical progress reports, September-November 1983 and December 1983-February 1984, 9:25214 (R;US)
Efficiency
Extraction efficiency of anthracene form sediments, 9:27078 (J;US)
Sensitivity
Application of selective solvent extraction to carbonaceous aerosols, 9:26986 (RA;US)

SOLVENT-REFINED COAL
Combustion Properties
Study of the combustion of various alternate fuels, 9:25625 (B;US)
Fuel Substitution
Study of the combustion of various alternate fuels, 9:25625 (B;US)

SOLVENT-REFINED COAL PROCESS
See SRC PROCESS

SOLVENT-REFINING COAL PLANTS

MAGNETIC SPECTROMETERS
MASS SPECTROMETERS
NEUTRON SPECTROMETERS
X-RAY SPECTROMETERS
Tunable atomic line molecular (TALM) spectrometer, 9:27266 (J;GB)
Calibration
Spectrometer sensitivity calibration in the extreme uv by means of branching ratios of magnetic dipole lines, 9:27482 (R;US)
Modifications
Absorption cell with fiber optics for concentration measurements in a flowing gas stream, 9:26498 (J;US)
Soft X Radiation
Multilayers for soft x-ray analysis, 9:26829 (RA;GB)
SPEED REGULATORS
Energy Efficiency
Pacing plant motors for energy savings, 9:25874 (J;US)
Research Programs
Pacing plant motors for energy savings, 9:25874 (J;US)
SPENT FUEL CASKS
Storage and transportation of spent fuel and high-level waste using dry storage casks, 9:25419 (RA;US)
Accidents
Experimental determination of radionuclide release and transport from spent fuel exposed to cask fire environment, 9:25546 (RA;US)
Criticality
Criticality control of packagings designed for nuclear spent fuel, 9:25464 (RA;US)
Safety analysis code systems for spent fuel cask in JINS, 9:26628 (RA;US)
Decontamination
Hands-off technique for the internal decontamination of fuel transport flasks, 9:26626 (RA;US)
Deformation
Safety analysis code systems for spent fuel cask in JINS, 9:26628 (RA;US)
Design
Design and fabrication of 100-ton class spent fuel shipping cask (100-ton cask), 9:26620 (RA;US)
Design of a transportation cask for irradiated CANDU fuel, 9:26611 (RA;US)
Super Phenix spent fuel storage cask, Castor SPX, 9:25416 (RA;US)
Thermal analysis for the design of a CANDU irradiated fuel transportation cask, 9:26616 (RA;US)
TN-12Y packaging for rail transport of irradiated fuel, 9:26613 (RA;US)
TN 1300 transport/storage cask system, 9:25418 (RA;US)
TN 17/3: a cask designed for the transport of irradiated fuel to a post-irradiation examination facility, 9:26586 (RA;US)
Evaluation
TN cask capabilities for transport of extended burnup fuel assemblies, 9:26612 (RA;US)
Fabrication
Design and fabrication of 100-ton class spent fuel shipping cask (100-ton cask), 9:26620 (RA;US)
TN 1300 casting process and material qualification, 9:26582 (RA;US)
Widely useful stainless-steel forging B(U) packaging, 9:26603 (RA;US)
Feasibility Studies
Feasibility study for scaling ferritic spent fuel casks for drop tests, 9:26609 (RA;US)
Heat Transfer
Natural convection cooling of circumferentially finned transport casks, 9:26617 (RA;US)
Safety analysis code systems for spent fuel cask in JINS, 9:26628 (RA;US)
Impact Tests
Drop from the reactor building crane: an event covered by the 9-m drop test requirement, 9:26606 (RA;US)
Feasibility study for scaling ferritic spent fuel casks for drop tests, 9:26609 (RA;US)

Study of the influence of target material on impact damage, 9:26608 (RA;US)
Inspection
Experience and future prospects in maintenance and reinspection of LWR irradiated fuel transport flasks, 9:26625 (RA;US)
Widely useful stainless-steel forging B(U) packaging, 9:26603 (RA;US)
Leak Testing
Criteria for and proof of leaktightness concerning casks for dry transport and intermediate storage of spent LWR-fuel elements, 9:26597 (RA;US)
Licensing
Widely useful stainless-steel forging B(U) packaging, 9:26603 (RA;US)
Loading
Operational experience in loading spent fuel casks in European LWRs, 9:25424 (RA;US)
Maintenance
Experience and future prospects in maintenance and reinspection of LWR irradiated fuel transport flasks, 9:26625 (RA;US)
Materials Testing
Properties of nodular ductile graphite cast iron used in GNS-manufactured spent fuel casks, 9:26581 (RA;US)
Selection and certification of materials for casks intended for the transport and intermediate storage of spent fuel, 9:26614 (RA;US)
TN 1300 casting process and material qualification, 9:26582 (RA;US)
Operation
Operating experience with two transport storage casks for surface storage of spent HTGR fuel elements, 9:25442 (RA;US)
Operational experiences with the HZ-75T spent fuel shipping cask, 9:26630 (RA;US)
Performance
Operating experience of cask-type dry storage and spent fuel performance, 9:25417 (RA;US)
Performance Testing
Argentine developments for a Type B cask, 9:26594 (RA;US)
Results of fire resistance tests of spent fuel transporting container (50-ton type cask) using a furnace and investigation of a method of numerical analysis, 9:26618 (RA;US)
Thermal analysis for the design of a CANDU irradiated fuel transportation cask, 9:26616 (RA;US)
Scaling
Feasibility study for scaling ferritic spent fuel casks for drop tests, 9:26609 (RA;US)
Shielding
Benchmark for the qualification of gamma shielding calculation methods for light-water type reactor spent fuels, 9:26639 (R;XE;In French)
Experimental and analytical study on shielding of spent fuel shipping casks, 9:26629 (RA;US)
Safety analysis code systems for spent fuel cask in JINS, 9:26628 (RA;US)
Shock Absorbers
Analysis method for the design of transport packaging shock absorbing end covers, 9:26635 (RA;US)
Analysis of the behaviour under impact loads of a shell-type shock absorber for LWR spent fuel transport packaging, 9:26634 (RA;US)
Development of a toroidal shell-type shock absorber for an irradiated fuel shipping cask, 9:26633 (RA;US)
Impact limiter design methodology, 9:26636 (RA;US)
Specifications
Family of casks for transport of LWR spent fuel, 9:26602 (RA;US)
Qualification and certification criteria of casks for the intermediate dry storage of spent fuel in the Federal Republic of Germany, 9:26585 (RA;US)
Storage Facilities
Storage facility for casks awaiting shipment, 9:25425 (RA;US)
Surface Contamination
Contamination studies on pond-loaded casks, 9:25552 (RA;US)
Fundamental studies of the ionic contamination of painted surfaces, 9:25553 (RA;US)
Temperature Effects
Experimental determination of radionuclide release and transport from spent fuel exposed to cask fire environment, 9:25546 (RA;US)
Results of fire resistance tests of spent fuel transporting container (50-ton type cask) using a furnace and investigation of a method of numerical analysis, 9:26618 (RA;US)
Thermal analysis for the design of a CANDU irradiated fuel transportation cask, 9:26616 (RA;US)
Thermal Testing
Thermal trials on a water-cooled LWR flask, 9:26601 (RA;US)

SPENT FUEL ELEMENTS
Head End Processes
Behaviour of the gaseous radionuclides released during the first reprocessing operations, 9:25501 (R;XE;In French)
Heat Transfer
Heat transfer in a dry, horizontal LWR spent fuel assembly, 9:25452 (RA;US)
Post-Irradiation Examination
Characterization of activities associated with irradiated fuel element claddings, 9:25396 (R;XE)
Transport
Experience in the transport of spent nuclear reactor fuel assemblies, 9:25897 (RA;US)

SPENT FUEL STORAGE
See also DRY STORAGE
MONITORED RETRIEVABLE STORAGE
Combined storage system for LWR spent fuel and high-level waste, 9:25440 (RA;US)
Implementation of DOE's spent fuel program: a first anniversary report, 9:25479 (R;US)
Operating experience with two transport storage casks for surface storage of spent HTGR fuel elements, 9:25442 (RA;US)
Storage and transportation of spent fuel and high-level waste using dry storage casks, 9:25419 (RA;US)
Accidents
Characterization of spent fuel for disposal without reprocessing, 9:25405 (R;DE;In German)
Safety
Characterization of spent fuel for disposal without reprocessing, 9:25405 (R;DE;In German)

SPENT FUELS
Benchmarks
Benchmark reference data on post irradiation analysis of light water reactor fuel samples, 9:25887 (R;XE)
Delivery
Facility - transportation system interface at COGEMA (experience in taking delivery of spent fuel), 9:25422 (RA;US)
Forecasting
Use of SAS in the IDB, 9:25495 (R;US)
Information Systems
Use of SAS in the IDB, 9:25495 (R;US)
Inventories
Use of SAS in the IDB, 9:25495 (R;US)
Land Transport
Transport of irradiated fuel to the La Hague reprocessing plant, 9:25466 (RA;US)
Maritime Transport
Notes on the design of ships used in international transport of irradiated nuclear fuel, 9:25461 (RA;US)
Proposal of guidelines for selecting optimum options in packagings and transportation systems of spent fuel, 9:25454 (RA;US)
Realization of a sea transport system for radioactive material, 9:25462 (RA;US)
Transport of irradiated fuel to the La Hague reprocessing plant, 9:25466 (RA;US)
Monitored Retrievable Storage
Simulation of the MRS receiving and handling facility, 9:25478 (R;US)

Packaging
Construction and inservice inspection rules for nuclear spent fuel and high-level waste transport packagings, 9:25468 (RA;US)
Design rules for containment systems of nuclear spent fuel and high-level waste transport packagings, 9:25470 (RA;US)
Proposal of guidelines for selecting optimum options in packagings and transportation systems of spent fuel, 9:25454 (RA;US)
Post-Irradiation Examination
Benchmark reference data on post irradiation analysis of light water reactor fuel samples, 9:25887 (R;XE)
Rail Transport
Transport of irradiated fuel to the La Hague reprocessing plant, 9:25466 (RA;US)
Transport
20 years experience of large-scale movement of irradiated fuel by the CEGB, 9:25465 (RA;US)
Goal system for comparative assessments of nuclear fuel transport under security aspects, 9:25576 (RA;US)
MTR irradiated fuel transports, 9:25467 (RA;US)
OLDAGE, a computer program for calculating nuclear fuel cycle flow balances. Monitored Retrievable Storage study. FY-83 studies. Task C (Computer program used to calculate amount of spent fuel and/or high-level waste transferred to and from various fuel cycle facilities), 9:25477 (R;US)
Storage and transportation of spent fuel and high-level waste using dry storage casks, 9:25419 (RA;US)

SPENT SHALES
Combustion
Combustion heater for oil shale, 9:25375 (P;US)
Process for oil shale retorting using gravity-driven solids flow and solid-solid heat exchange, 9:25376 (P;US)
Leaching
Mathematical model for leaching of organic carbon from in-situ retorted oil shale, 9:25387 (RA;US)
Waste Product Utilization
Development of low-cost grouts from spent oil shale, 9:25383 (RA;US)

SPHEROMAK DEVICES
See also CTX SPHEROMAK
Plasma Instability
Current driven instabilities of the kinetic shear Alfven wave: application to reversed field pinches and spheromaks, 9:27483 (R;US)

SPONTANEOUS FISSION
Configuration Mixing
Effects of magnetic monopoles on nuclear wave functions and possible catalysis of nuclear beta decay and spontaneous fission, 9:27414 (J;NL)

SPRAY COATING
Electrical Properties
Contribution to the manufacture and the study of photovoltaic mechanisms of Cu$_2$S-Cdsub(1-y)Znsub(y)S (0<=y<=0,15) solar cells prepared by aerosol pyrolysis ("spray"), 9:25681 (R;FR;In French)
Fabrication
Contribution to the manufacture and the study of photovoltaic mechanisms of Cu$_2$S-Cdsub(1-y)Znsub(y)S (0<=y<=0,15) solar cells prepared by aerosol pyrolysis ("spray"), 9:25681 (R;FR;In French)
Ion Exchange
Spray solar cell research: CdS/Cu$_2$S cells by ion exchange - CSD. Final report, 1 September 1980-28 February 1981 (Chemical spray deposition), 9:25691 (R;US)
Performance
Contribution to the manufacture and the study of photovoltaic mechanisms of Cu$_2$S-Cdsub(1-y)Znsub(y)S (0<=y<=0,15) solar cells prepared by aerosol pyrolysis ("spray"), 9:25681 (R;FR;In French)

SPRAY SYSTEMS (CONTAINMENT)
See CONTAINMENT SPRAY SYSTEMS

SRC PROCESS
Demonstration Plants
Critical Technology List update. Final technical report, 9:25193 (R;US)
Phenol extraction studies: solvent screening, tar acid removal, and organic volatilization. Final technical report, 9:25196 (R;US)
Equipment
Critical Technology List update. Final technical report, 9:25193 (R;US)
Risk Assessment
Critical Technology List update. Final technical report, 9:25193 (R;US)
Waste Water
Phenol extraction studies: solvent screening, tar acid removal, and organic volatilization. Final technical report, 9:25196 (R;US)

SRRC-UTR-100 REACTOR
Research Programs
Report on session 1981-1982, 9:25994 (R;GB)

STABLE ISOTOPES
For specific terms, consult the Appendix.
See also BORON 10
CARBON 12
DEUTERIUM
GERMANIUM 76
LEAD 208
NICKEL 58
OXYGEN 18
Electromagnetic Isotope Separation
Capability of the electromagnetic isotope enrichment facility at ORNL, 9:25586 (BA;NL)
Research Programs
Capability of the electromagnetic isotope enrichment facility at ORNL, 9:25586 (BA;NL)

STAINLESS STEEL-304
Chemical Reactions
Chemical interactions of tellurium vapors with reactor materials, 9:26038 (R;US)
Crack Propagation
Joint exercise to compare fatigue crack growth data obtained on type 304/316 stainless steel. Final report, 9:26315 (R;XE)
Creep
Creep-fatigue effects in structural materials used in advanced nuclear power generating systems, 9:25978 (BA;US)
Fatigue
Creep-fatigue effects in structural materials used in advanced nuclear power generating systems, 9:25978 (BA;US)
Joint exercise to compare fatigue crack growth data obtained on type 304/316 stainless steel. Final report, 9:26315 (R;XE)
Permeability
Tritium permeability and pressure dependence of 304L stainless steel in the temperature range 723 to 1023 K, 9:26377 (J;US)

STAINLESS STEEL-304L
Corrosion
Determination of corrosion rates for steel alloys in process solvent. Final technical report, 9:26312 (R;US)

STAINLESS STEEL-310
Scaling
Oxidation-sulfidation behavior of Fe-Cr-Ni alloys containing additions of Zr, Nb, OR Ti, 9:26279 (R;US)
Sulfidation
Oxidation-sulfidation behavior of Fe-Cr-Ni alloys containing additions of Zr, Nb, OR Ti, 9:26279 (R;US)

STAINLESS STEEL-316
Cold Working
Controlled biaxial strain-rate testing of 20% cold-worked type 316 stainless steel fast reactor cladding, 9:25974 (J;US)
Compatibility
Compatibility studies of structural alloys with solid breeder materials, 9:26307 (RA;US)
Corrosion
Corrosion of type 316 stainless steel in flowing Pb-17 at. % Li, 9:26306 (RA;US)
Environmental effects on properties of structural alloys, 9:26309 (RA;US)
Crack Propagation
Joint exercise to compare fatigue crack growth data obtained on type 304/316 stainless steel. Final report, 9:26315 (R;XE)

Creep
Creep-fatigue effects in structural materials used in advanced nuclear power generating systems, 9:25978 (BA;US)
Embrittlement
Microstructural design of PCA austenitic stainless steel for improved resistance to helium embrittlement under HFIR irradiation, 9:26288 (RA;US)
Fatigue
Creep-fatigue effects in structural materials used in advanced nuclear power generating systems, 9:25978 (BA;US)
Joint exercise to compare fatigue crack growth data obtained on type 304/316 stainless steel. Final report, 9:26315 (R;XE)
Low cycle fatigue of 316 s/steel at 350-550 deg C, 9:26336 (RA;GB)
Gas Production Rates
Neutronics calculations in support of the ORR-MFE-4A and -4B spectral tailoring experiments, 9:26286 (RA;US)
Microstructure
Microstructural design of PCA austenitic stainless steel for improved resistance to helium embrittlement under HFIR irradiation, 9:26288 (RA;US)
Neutron Reactions
First blanket experiment by FNS, 9:27534 (RA;JP;In Japanese)
Neutron Transport
Neutronics calculations in support of the ORR-MFE-4A and -4B spectral tailoring experiments, 9:26286 (RA;US)
Physical Radiation Effects
Design of D9: a radiation damage-resistant alloy, 9:25943 (J;US)
Growth of cavities during irradiation, 9:26341 (RA;GB)
Influence of a temperature change on in-reactor creep, 9:26311 (R;US)
Ion damage in 316 stainless steel over a broad dose range, 9:26398 (BA;US)
Strain Rate
Controlled biaxial strain-rate testing of 20% cold-worked type 316 stainless steel fast reactor cladding, 9:25974 (J;US)
Swelling
Improved swelling resistance for PCA austenitic stainless steel under HFIR irradiation through microstructural control, 9:26287 (RA;US)
Tensile Properties
Controlled biaxial strain-rate testing of 20% cold-worked type 316 stainless steel fast reactor cladding, 9:25974 (J;US)
Welding
Simple test for dissimilar-metal welds, 9:25876 (J;US)

STAINLESS STEEL-316L
Corrosion
Determination of corrosion rates for steel alloys in process solvent. Final technical report, 9:26312 (R;US)

STAINLESS STEEL-321
Fatigue
Low cycle fatigue of 316 s/steel at 350-550 deg C, 9:26336 (RA;GB)

STAINLESS STEEL-347
Corrosion
Some aspects of the corrosion of buried stainless steel pipe at the Hanford Works, 9:26318 (R;US)

STAINLESS STEELS
STAINLESS STEEL-304
See also STAINLESS STEEL-304L
STAINLESS STEEL-310
STAINLESS STEEL-316
STAINLESS STEEL-316L
STAINLESS STEEL-321
STAINLESS STEEL-347
Corrosion
Materials compatibility with the volcanic environment. Final report, 9:26285 (R;US)
Electric Conductivity
Thermal conductivity, electrical resistivity, and Seebeck coefficienct of SRM-735, 9:26393 (BA;US)
Hydrogenation
Arsenic and platinum deposition during cathodic hydrogenation, 9:26547 (J;US)
Microstructure
Microstructural analysis for series 300 stainless steel sheet welds and tensile samples, 9:26351 (R;US)
Seebeck Effect
Thermal conductivity, electrical resistivity, and Seebeck coefficienct of SRM-735, 9:26393 (BA;US)
Swelling
Swelling in several commercial alloys irradiated to very high neutron fluence, 9:26290 (RA;US)
Tensile Properties
Influence of processing on the cryogenic mechanical properties of high strength high manganese stainless steel, 9:27547 (R;US)
Thermal Conductivity
Thermal conductivity, electrical resistivity, and Seebeck coefficienct of SRM-735, 9:26393 (BA;US)
Welded Joints
Microstructural analysis for series 300 stainless steel sheet welds and tensile samples, 9:26351 (R;US)

STANDING CROP
See BIOMASS

STANFORD 20-GEV LINAC
Beam Injection
New injector (NPI) for nuclear physics at SLAC, 9:26810 (R;US)
Electron Guns
Isolated grid electron gun and pulser system for long/short pulse operation, 9:26809 (R;US)

STANFORD LINEAR COLLIDER
Beam Emittance
Measuring emittances and sigma matrices, 9:26792 (R;US)
Beam Monitors
Cable fabrication procedures for the BPM System, 9:26777 (R;US)

STARFIRE TOKAMAK
Materials Testing
Radioactivation characteristics for the tokamak fusion test reactor, 9:27604 (J;US)
Radioactivation
Radioactivation characteristics for the tokamak fusion test reactor, 9:27604 (J;US)

STATE BUILDINGS
See PUBLIC BUILDINGS

STATE GOVERNMENT
Emergency Plans
Emergency response planning guidelines for state and local governments for radioactive materials transportation accidents, 9:25547 (RA;US)
Energy Audits
RCS index: a comparative guide to the implementation of the Residential Conservation Service Program for the reporting period April 1, 1981 - March 31, 1982 covering 179 utilities and 33 states, 9:26218 (B;US)

STATISTICAL MECHANICS
Boltzmann Equation
Influence of closure on the behaviour of the Yvon-Born-Green equation for a system of hard rods, 9:27458 (J;GB)

STATISTICS
Limited to the indexing of information on the mathematical discipline of statistics or its application in other scientific disciplines; for indexing numerical values of a statistical nature use STATISTICAL DATA.
Data Base Management
Automated cell suppression to preserve confidentiality of business statistics, 9:27700 (RA;US)
Complex data types and a data manipulation language for scientific and statistical databases, 9:27680 (RA;US)
Computer-independent data compression for large statistical databases, 9:27694 (RA;US)
Development implications of an interactive, portable, user-friendly, statistical database management system, 9:27706 (RA;US)
Diversification in statistical data bases, 9:27671 (RA;US)
Evolution in storage and retrieval: the LABSTAT data base and software system, 9:27673 (RA;US)
Extension of relational algebra for summary tables, 9:27682 (RA;US)
Features of a system for statistical databases, 9:27656 (RA;US)

How baroque should a statistical database management system be?, 9:27683 (RA;US)
How far should a database system go? (to support a statistical one), 9:27684 (RA;US)
Index coding: a compression technique for large statistical databases, 9:27695 (RA;US)
Information theoretic approach to statistical databases and their security: a preliminary report, 9:27701 (RA;US)
Integrated research support system for inter-package communication and handling large volume output from statistical database analysis operations, 9:27665 (RA;US)
Integrated macro-economic data management system based on multi-dimensional arrays, 9:27685 (RA;US)
Integrating data and documentation in a multi-national research project: the IEA second international mathematics study, 9:27666 (RA;US)
Interactive statistical database management system, 9:27668 (RA;US)
Interactive information management with EPS, 9:27674 (RA;US)
Issues related to medical statistical databases, 9:27657 (RA;US)
Logical and physical modeling of statistical/scientific databases, 9:27689 (RA;US)
Meta data: an experience of its uses and management, 9:27675 (RA;US)
Model for a clinical research database, 9:27658 (RA;US)
Multi-tree automation for efficient data transmission, 9:27660 (RA;US)
Overview of cantor: a new system for data analysis, 9:27696 (RA;US)
PASTE: a tool to put application systems together easily, 9:27667 (RA;US)
Problems, plans and activities concerning the economic databases at Statistics Sweden, 9:27676 (RA;US)
Proposal of a logical model for statistical data base, 9:27690 (RA;US)
Relational database machine for efficient processing of statistical queries, 9:27661 (RA;US)
Research needs and database development: push and pull, 9:27659 (RA;US)
SAS applied to statistical databanks via a command language, 9:27678 (RA;US)
Security model for the statistical database problem, 9:27703 (RA;US)
SIBYL: an economist's workbench, 9:27662 (RA;US)
Some experiments in evaluation of an expert system for statistical estimation on databases, 9:27687 (RA;US)
Statistical data manipulation language, 9:27679 (RA;US)
Statistical data management research at Lawrence Berkeley Laboratory, 9:27691 (RA;US)
Statistical database component of a data analysis and modelling system: lessons from eight years of user experience, 9:27692 (RA;US)
Statistical database research project in Japan and the CAS SDB project, 9:27697 (RA;US)
Statistical databases: their model, query language and security, 9:27704 (RA;US)
Strategy for implementing a computer efficient database management system preliminary research report, 9:27698 (RA;US)

Information Systems

CANSIM, the Canadian socio-economic management information system, 9:27670 (RA;US)
Simulators, statistical analysis, and databases, 9:27669 (RA;US)

STEAM

Chemical Reactions

Method and system for producing lower alcohols, 9:25640 (P;US)

STEAM COOLANT

See STEAM

STEAM GENERATION

See also COGENERATION

Cost

Update of comparative analysis of steam delivery costs for surface and downhole steam drive technologies, 9:25304 (R;US)

STEAM GENERATORS

Computer Codes

COSTEAM: an industrial steam generation cost model. Phase III. Users' guide and model description, 9:26235 (R;US)

Design

Comments on US LMFBR steam generator base technology, 9:25933 (R;US)

Fouling

Evaluation of on-line chelant addition to PWR steam generators. Steam generator cleaning project, 9:25899 (R;US)

Fuel Consumption

Update of comparative analysis of steam delivery costs for surface and downhole steam drive technologies, 9:25304 (R;US)

Heat Transfer

Prototypical steam generator (MB-2) transient testing program. Task plan/scaling analysis report (PWR), 9:26053 (R;US)

Hydraulics

Prototypical steam generator (MB-2) transient testing program. Task plan/scaling analysis report (PWR), 9:26053 (R;US)

Inspection

Eddy-current inspection of energy-system components, 9:25976 (J;US)

Materials

Simple test for dissimilar-metal welds, 9:25876 (J;US)

Mathematical Models

COSTEAM: an industrial steam generation cost model. Phase III. Users' guide and model description, 9:26235 (R;US)

Performance

Comments on US LMFBR steam generator base technology, 9:25933 (R;US)
Effect of creep-fatigue damage relationships upon HTGR heat exchanger design, 9:25922 (R;US)

Radioactivity

Steam Generator Group Project. Annual report, 1982, 9:25914 (R;US)

Test Facilities

Prototypical steam generator (MB-2) transient testing program. Task plan/scaling analysis report (PWR), 9:26053 (R;US)

Tubes

Eddy-current inspection for steam generator tubing program. Quarterly progress report for period ending September 30, 1983, 9:25913 (R;US)

STEAM INJECTION

Bench-Scale Experiments

Development of a downhole steam generator system, 9:25303 (R;US)

STEEL-ASTM-A106

Fracture Properties

J-integral tearing instability analyses for 8-inch diameter ASTM A106 steel pipe, 9:26333 (R;US)

STEEL-ASTM-A302

Physical Radiation Effects

Light water reactor pressure vessel surveillance dosimetry improvement program. Volume 1. Notch ductility and fracture toughness degradation of A 302-B and A 533-B reference plates from PSF simulated surveillance and through-wall irradiation capsules, 9:26331 (R;US)

STEEL-ASTM-A533-B

Mechanical Tests

The use of the temperature dependence of ultrasonic velocity to measure residual stress, 9:26725 (BA;US)

Physical Radiation Effects

Light water reactor pressure vessel surveillance dosimetry improvement program. Volume 1. Notch ductility and fracture toughness degradation of A 302-B and A 533-B reference plates from PSF simulated surveillance and through-wall irradiation capsules, 9:26331 (R;US)

Residual Stresses

The use of the temperature dependence of ultrasonic velocity to measure residual stress, 9:26725 (BA;US)

Ultrasonic Testing

The use of the temperature dependence of ultrasonic velocity to measure residual stress, 9:26725 (BA;US)

STEELS

STOVES

Bibliographies
Bibliography: wood for fuel, 9:26202 (R;US)

Indoor Air Pollution
Pollutant emissions rates from indoor combustion appliances and sidestream cigarette smoke, 9:26949 (RA;US)

STRAIN GAGES

Design
Application of proving-ring technology to measure thermally induced displacements in large boreholes in rock, 9:25522 (R;US)

Performance
Analysis of borehole inclusion stress measurement concepts proposed for use in the Waste Isolation Pilot Plant (WIPP), 9:25521 (R;US)

STRAND BREAKS

Radioinduction
Role of hydroxyl radical svengers in preventing DNA strand breaks induced by X irradiation of toluene-treated Escherichia coli, 9:27176 (J;US)
Similar ultraviolet action spectra for the protection by glycerol of transforming DNA against single-strand breaks and inactivation of biological activity, 9:27173 (J;US)

Ultraviolet Spectra
Similar ultraviolet action spectra for the protection by glycerol of transforming DNA against single-strand breaks and inactivation of biological activity, 9:27173 (J;US)

STRATEGIC PETROLEUM RESERVE
Leached salt cavern design using a fracture criterion for rock salt, 9:25331 (R;US)

Computerized Simulation
AUTSKED: automated scheduling technique for leaching and filling activities at the Strategic Petroleum Reserve, 9:25332 (R;US)

Mission Analysis
DOE analysis of the appropriate size of the Strategic Petroleum Reserve, 9:25318 (R;US)

Site Preparation
AUTSKED: automated scheduling technique for leaching and filling activities at the Strategic Petroleum Reserve, 9:25332 (R;US)

Waste Disposal
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Annual report for the Bryan Mound site, September 1982-August 1983. Volume III. Executive summary, 9:25324 (R;US)

STREAK PHOTOGRAPHY

Cameras
Fast imaging applications in the nuclear test program, 9:26913 (J;US)

Measuring Methods
Streak camera measurement of tryptophan and rhodamine motions with picosecond time resolution, 9:26676 (J;GB)

STREAMER SPARK CHAMBERS

Design
Main parameters of the GIBS spectrometer, 9:26817 (RA;SU;In Russian)

Photon Emission
Photon emission in self-quenching streamer chambers, 9:26830 (R;CA)

STREAMS

Mineral Cycling
Phosphorus dynamics in a woodland stream ecosystem, 9:27241 (J;US)

Water Pollution
Transport of trace metals in the Magela Creek system, Northern Territory. I. Concentrations and loads of iron, manganese, cadmium, copper, lead and zinc during flood periods in the 1978-1979 wet season, 9:25529 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. II. Trace metal concentrations in the Magela Creek billabongs at the end of the 1978 dry season, 9:25530 (R;AU)

STRESSES
Mechanics.

Application of thermal analysis and photoelectron spectroscopy for the characterizatoin of particulate matter, 9:26984 (RA;US)
Catalytic Effects
Methanation of carbon dioxide on Ni(100) and the effects of surface modifiers, 9:25626 (J;US)
Deposition
Estimation of wet and dry deposition of pollutant sulfur in eastern Canada as a function of major source regions, 9:27008 (J;NL)
Environmental Transport
Chemistry of western Atlantic precipitation at the mid-Atlantic coast and on Bermuda, 9:27079 (J;US)
Phase Diagrams
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Quarterly progress report 8, July 1-September 30, 1983, 9:25287 (R;US)
Pollution Sources
Estimation of wet and dry deposition of pollutant sulfur in eastern Canada as a function of major source regions, 9:27008 (J;NL)
Removal
Fluidized-bed coal combustion: in-bed sorbent sulfation model, 9:25288 (J;GB)
Sorption
Fluidized-bed coal combustion: in-bed sorbent sulfation model, 9:25288 (J;GB)
SULFUR 32 TARGET
Proton Reactions
Scattering of polarized protons on ^{24}Mg, ^{27}Al, and ^{32}S and anomalies in the giant resonance region of ^{29}Al, of ^{28}Si, and of ^{33}Cl, 9:27392 (J;NL;In French)
SULFUR COMPOUNDS
See also SULFATES
SULFUR FLUORIDES
Gas Analysis
Portable instrument and method for detecting reduced sulfur compounds in a gas, 9:26899 (P;US)
SULFUR CYCLE
Input-Output Analysis
Sulfur input, output and distribution in two oak forests, 9:27055 (R;US)
SULFUR DIOXIDE
Air Pollution Abatement
Pollutant emission rates from indoor combustion appliances and sidestream cigarette smoke, 9:27199 (RA;US)
Air Samplers
Multipollutant sampler for indoor and outdoor ambient air, 9:26952 (RA;US)
Atmospheric Chemistry
Aqueous reactions of nitrite with bisulfite ions in sulfate aerosol formation, 9:26983 (RA;US)
SO_2 oxidation of soot particles exposed to water, 9:26982 (RA;US)
Biological Effects
Sulfur dioxide and ammonium sulfate effects on pulmonary function and bronchial reactivity in human subjects, 9:27205 (J;US)
Chemical Reaction Kinetics
Wet flue gas simulataneous desulfurization and denitrification system, 9:25254 (RA;US)
Chemical Reactions
Thermochemical splitting of sulfur dioxide with cerium (IV) oxide, 9:26520 (J;US)
Combustion Products
Influence of thiophene on the selective reduction of NO by NH_3, 9:25256 (J;US)
Deposition
Simulated deposition rates for SO_2 on a Southeastern US landscape, 9:27223 (J;NL)
Diffusion
Evaluation of three first-order closure models - Plains Site. Final report, 9:26974 (R;US)

Ecological Concentration
Effects of ventilation on residential air pollution due to emissions from a gas-fired range, 9:26976 (RA;US)
Low-infiltration housing in Rochester, New York: a study of air-exchange rates and indoor air quality, 9:26981 (RA;US)
Environmental Transport
Simulated deposition rates for SO_2 on a Southeastern US landscape, 9:27223 (J;NL)
Fluorescence
Method of using a nuclear magnetic resonance spectroscopy standard (SO_2 in gases by fluorescence), 9:26490 (P;US)
Health Hazards
Effects of ambient urban air pollution on asthmatics, 9:26955 (RA;US)
Health effects of air pollution due to coal combustion in the Chestnut Ridge Region of Pennsylvania: results of cross-sectional analysis in adults, 9:27212 (J;US)
Indoor Air Pollution
Indoor air quality in new energy-efficient houses and retrofitted houses, 9:26957 (RA;US)
Spectroscopy
Tunable atomic line molecular (TALM) spectrometer, 9:27266 (J;GB)
Toxicity
Effects of SO_2 dosage kinetics and exposure frequency on photosynthesis and transpiration of kidney beans (Phaseolus vulgaris L.), 9:27224 (J;GB)
Photosynthetic recovery in Arctic caribou forage lichens following a long-term field sulfur dioxide fumigation, 9:27216 (J;CA)
SULFUR FLUORIDES
Diffusion
Evaluation of three first-order closure models - Plains Site. Final report, 9:26974 (R;US)
Photolysis
Reaction of fluorine atoms with alkyl iodides: a possible observation of the Walden inversion in the gas phase, 9:26535 (J;US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR SULFIDES
See SULFUR
SULFURIC ACID
Biological Effects
Deposition of sulfuric acid mist in the respiratory tracts of guinea pigs and rats, 9:27004 (J;US)
Inhalation
Deposition of sulfuric acid mist in the respiratory tracts of guinea pigs and rats, 9:27004 (J;US)
Tissue Distribution
Deposition of sulfuric acid mist in the respiratory tracts of guinea pigs and rats, 9:27004 (J;US)
SUPER PHENIX REACTOR
Spent Fuel Storage
Super Phenix spent fuel storage cask, Castor SPX, 9:25416 (RA;US)
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCONDUCTING COILS
Critical Current
Calculation of superconducting sectionized solenoids, 9:26802 (R;SU;In Russian)
Critical Field
Calculation of superconducting sectionized solenoids, 9:26802 (R;SU;In Russian)
SUPERCONDUCTING COMPOSITES
Mathematical Models
Superconducting proximity effects for in situ and model layered systems. Metallurgy, fabrication, and applications, 9:26664 (BA;US)
SUPERCONDUCTING MAGNETS
Combined ($NbTi+V_3Ga$) superconducting solenoid, 9:26644 (R;SU;In Russian)
Coupling
Normal zone detectors for a large number of inductively coupled coils. Revision 1, 9:27564 (R;US)
Design
Tokamak poloidal field systems. Progress report, January 1-December 31, 1983, 9:27537 (R;US)
Energy Losses
Stability and rate of superconducting magnet winding transition into normal state as a result of energy losses during energy removal, 9:26646 (R;SU;In Russian)
Materials Testing
Influence of processing on the cryogenic mechanical properties of high strength high manganese stainless steel, 9:27547 (R;US)
Safety
Some considerations on silicone oil in high-current and energy-disconnecting mechanisms, 9:27538 (R;US)
Toroidal Configuration
Influence of processing on the cryogenic mechanical properties of high strength high manganese stainless steel, 9:27547 (R;US)
SUPERCONDUCTING SUPER COLLIDER
Beam Dynamics
6.5 Tesla SSC lattice example, 9:26789 (R;US)
Comparison of some SSC beam parameters for pp and p anti p, 9:26769 (R;US)
Computerized Simulation
Tracking and computing, 9:26770 (R;US)
Photon Beams
High energy high intensity coherent photon beam for the SSC, 9:26771 (R;US)
Specifications
Comparison of some SSC beam parameters for pp and p anti p, 9:26769 (R;US)
SUPERCONDUCTORS
Fabrication
Metallurgy of continuous filamentary A15 superconductors. Metallurgy, fabrication, and applications, 9:26665 (BA;US)
Niobium-titanius superconducting materials, 9:26663 (BA;US)
Physical Properties
Niobium-titanius superconducting materials, 9:26663 (BA;US)
SUPERCRITICAL FLOW
See TURBULENT FLOW
SUPERCRITICAL FLUID CHROMATOGRAPHY
Equipment Interfaces
Mass spectrometry with direct supercritical fluid injection, 9:26479 (J;US)
SUPERGRAVITY
Graded Lie Groups
Supersymmetry and non-compact groups in supergravity, 9:27377 (J;NL)
Reviews
Supersymmetry and supergravity: a short review, 9:27375 (R;CA)
SUPEROXIDE RADICALS
O_2
Chemical Reaction Kinetics
Kinetics of the superoxide radical oxidation of[cobalt sepulchrate](2+). A flash photolytic study, 9:26552 (J;US)
Oxidation
Mechanisms of the dismutation of superoxide catalyzed by the copper(II) phenanthroline complex and of the oxidation of the copper(I) phenanthroline complex by oxygen in aqueous solution (Gamma Radiation), 9:26561 (J;US)
Radioinduction
Mechanisms of the dismutation of superoxide catalyzed by the copper(II) phenanthroline complex and of the oxidation of the copper(I) phenanthroline complex by oxygen in aqueous solution (Gamma Radiation), 9:26561 (J;US)
Reduction
Mechanisms of the dismutation of superoxide catalyzed by the copper(II) phenanthroline complex and of the oxidation of the copper(I) phenanthroline complex by oxygen in aqueous solution (Gamma Radiation), 9:26561 (J;US)
SUPERSYMMETRY
Review of e^+e^--physics with PETRA, 9:27279 (R;DE)
Reviews
Supersymmetry and supergravity: a short review, 9:27375 (R;CA)

Symmetry Breaking
Geometric hierarchy for the supersymmetry breaking scale, 9:27354 (R;GB)

SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY

SUPPLY DISRUPTION
Emergency Plans
Oil-price shock: market response and contingency planning, 9:25317 (R;US)

SUPPORTS
Flexural Strength
Flexural support member having a high ratio of lateral-to-axial stiffness, 9:26660 (P;US)

SURFACE COATING
See also SPRAY COATING
Performance
Improved performance of TiC-coated graphite limiters by surface texturing, 9:27560 (R;US)

SURFACE CONTAMINATION MONITORS
Design
Portable instrumentation for quantitatively measuring radioactive surface contaminations, including 90 Sr, 9:26847 (J;US)
Ge Semiconductor Detectors
Portable instrumentation for quantitatively measuring radioactive surface contaminations, including 90 Sr, 9:26847 (J;US)

SURFACE PROPERTIES
Measuring Methods
Evaluation of highly polished surface quality using grazing incidence soft X-ray reflection and scattering, 9:26879 (RA;GB)

SURFACE WATERS
See also COASTAL WATERS
ESTUARIES
LAKES
PONDS
SEAS
STREAMS
SWIMMING POOLS
WATER RESERVOIRS
Radionuclide Migration
Multimedia radionuclide exposure assessment modeling. Annual report, October 1980-September 1981, 9:27035 (R;US)
Neutralizing barrier for reducing contaminant migration from a uranium mill tailings disposal pond, 9:25533 (R;US)

SURFACE-ACTIVE AGENTS
See SURFACTANTS

SURFACES
See also SPECTRALLY SELECTIVE SURFACES
Field Emission
Photostimulated field emission - image rounded barrier model, 9:27443 (J;NL)
Probes
Optical second-harmonic generation for surface studies, 9:26471 (R;US)
Research Programs
On the surface, 9:26359 (J;US)

SURFACTANTS
Development of mobility control methods to improve oil recovery by CO_2. Final report, 9:25300 (R;US)
Enhanced oil recovery by CO_2 foam flooding. Final report, 9:25301 (R;US)
Chemical Analysis
Phase compositions of aqueous/hydrocarbon systems containing organic salts, alcohol, and sodium chloride, 9:26540 (J;US)

SURRY POWER STATION UNIT-2
See SURRY-2 REACTOR

SURRY-2 REACTOR
Steam Generators
Steam Generator Group Project. Annual report, 1982, 9:25914 (R;US)

SURVEY MONITORS
Miniaturization
New generation low power radiation survey instruments, 9:27043 (J;US)
Power Supplies
New generation low power radiation survey instruments, 9:27043 (J;US)

SUSPENSIONS (FUEL)
See FUEL SLURRIES

SUSQUEHANNA STEAM ELECTRIC STATION UNIT-1
See SUSQUEHANNA-1 REACTOR

SUSQUEHANNA STEAM ELECTRIC STATION UNIT-2
See SUSQUEHANNA-2 REACTOR

SUSQUEHANNA-1 REACTOR
Reactor Licensing
Technical specifications: Susquehanna Steam Electric Station, Unit No. 2 (Docket No. 50-388). Appendix A to License No. NPF-22, 9:25890 (R;US)
Reactor Operation
Technical specifications: Susquehanna Steam Electric Station, Unit No. 2 (Docket No. 50-388). Appendix A to License No. NPF-22, 9:25890 (R;US)
Reactor Safety
Technical specifications: Susquehanna Steam Electric Station, Unit No. 2 (Docket No. 50-388). Appendix A to License No. NPF-22, 9:25890 (R;US)

SUSQUEHANNA-2 REACTOR
Reactor Licensing
Technical specifications: Susquehanna Steam Electric Station, Unit No. 2 (Docket No. 50-388). Appendix A to License No. NPF-22, 9:25890 (R;US)
Reactor Operation
Technical specifications: Susquehanna Steam Electric Station, Unit No. 2 (Docket No. 50-388). Appendix A to License No. NPF-22, 9:25890 (R;US)
Reactor Safety
Technical specifications: Susquehanna Steam Electric Station, Unit No. 2 (Docket No. 50-388). Appendix A to License No. NPF-22, 9:25890 (R;US)

SWIMMING POOLS
Solar Water Heating
Solar heating for indoor community swimming pool, 9:25774 (R;US)

SWITZERLAND
Cogeneration
Contribution of new combined heat and power generation plants to electricity supply, 9:26250 (R;CH;In German)
Dual-Purpose Power Plants
Contribution of new combined heat and power generation plants to electricity supply, 9:26250 (R;CH;In German)
Energy Supplies
Contribution of new combined heat and power generation plants to electricity supply, 9:26250 (R;CH;In German)

SWPA
See SOUTHWESTERN POWER ADMINISTRATION

SYMPTOMS
Correlations
Survey of indoor formaldehyde levels and apparent building-related illness in conventional housing in Delaware County, Indiana, 9:27192 (RA;US)

SYNCHROTRON RADIATION
Small Angle Scattering
Ultra-high resolution small-angle x-ray diffractometry: measurements of very large periods in biological fibres, 9:27421 (RA;GB)
Uses
Investigation of monocrystal surface structure disturbances using synchrotron radiation, 9:26438 (R;SU)
Investigation of bent monocrystals structural perfection using synchrotron radiation diffraction peculiarities, 9:27439 (R;SU)
Techniques for materials research with synchrotron radiation x-rays, 9:26267 (RA;GB)
Use of synchrotron radiation for study of structural changes in polymers, 9:26426 (RA;GB)
X-ray diffraction using the time structure of the SRS, 9:27420 (RA;GB)

X-Ray Diffraction
Application of synchrotron radiation technique to the assessment of thin layers grown on III-V semiconductor substrates, 9:26435 (RA;GB)
Diffraction studies of grain boundary structure using synchrotron radiation, 9:26281 (RA;GB)
X-Ray Spectroscopy
Applications of EXAFS to studies of the structure of amorphous and microcrystalline solids, 9:26433 (RA;GB)

SYNCHROTRON RADIATION SOURCES
See also NSLS
Optical Systems
Damage introduced into silicon by diamond turning, 9:26775 (RA;GB)

SYNCRUDE
See SYNTHETIC PETROLEUM

SYNTHESIS GAS
Chemical Composition
Liquid phase methanol update, 9:25630 (RA;US)
Chemical Reactions
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, January 1-March 31, 1984, 9:25211 (R;US)

SYNTHETIC CRUDE OIL
See SYNTHETIC PETROLEUM

SYNTHETIC FUELS
See also SYNTHETIC PETROLEUM
Economic Analysis
Analytical framework for assessing federal R and D strategies on liquid and gaseous fuels, 9:26150 (R;US)
Financial Incentives
Future energy supply/demand relationships and the effects of selected synfuels' subsidies, 9:25224 (R;US)
Production
Microalgal production of oils and lipids, 9:25701 (BA;US)
Research Programs
Analytical framework for assessing federal R and D strategies on liquid and gaseous fuels, 9:26150 (R;US)
Energy and Environment Division, annual report, FY 1981, 9:25603 (R;US)

SYNTHETIC PETROLEUM
Biological Effects
Effects of a synthetic crude oil on pond benthic insects, 9:27210 (J;GB)
Chemical Analysis
Characterization of products from direct biomass liquefaction, 9:25622 (RA;US)

SYNTHINE PROCESS
See FISCHER-TROPSCH SYNTHESIS

T

TADPOLES
See LARVAE

TANDEM ELECTROSTATIC ACCELERATORS
Prior to February 1979, information was indexed to Van de Graaff Accelerators.
Electric Sparks
Intershield to tank sparks at the Daresbury tandem, 9:26772 (R;GB)

TANDEM MIRROR DEVICES
See TMR REACTORS
TMX DEVICES

TANDEM MIRROR TYPE REACTORS
See TMR REACTORS

TANDEM MIRRORS
Prior to September 1983 this concept was indexed to TMX DEVICES.
See also TMX DEVICES
Kinetic Equations
rf-induced stability and transport in axisymmetric tandem mirrors, 9:27485 (R;US)
Magnet Coils
Octupole anchor for tandem mirrors, 9:27561 (R;US)
Magnetic Surfaces
Locally omnigenous tandem mirror design, 9:27598 (J;AT)
Transport Theory
rf-induced stability and transport in axisymmetric tandem mirrors, 9:27485 (R;US)

TANK FARMS
See STORAGE FACILITIES

TANKS
Sensible Heat Storage
Storing solar energy in thermally stratified tanks, 9:25811 (J;US)

TANTALUM
Alpha Reactions
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
Carbon 12 Reactions
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
Deuteron Reactions
Size of an emission region of secondary pions produced in multinucleon collisions of D, He and C nuclei with C and Ta nuclei at 4.2 GeV/c per nucleon, 9:27294 (R;SU;In Russian)
Proton Reactions
Experimental estimation of the contribution of secondary inelastic interactions in the multiplicity of πp mesons in pA-interactions, 9:27284 (R;SU;In Russian)

TANTALUM ALLOYS
See also INCONEL 625
Production
Tantalum-copper alloy and method for making, 9:26373 (P;US)

TANTALUM ALLOY-T111
Creep
Experimental research facility for creep-rupture testing of tantalum alloy T-111, 9:26345 (R;US)

TAR SANDS
See OIL SANDS

TARGETS

SILICON 28 TARGET
SULFUR 32 TARGET
URANIUM 238 TARGET
Positioning
Positioning apparatus, 9:27616 (P;US)
Quality Control
Use of a visible light spectrophotometer for nuclear target production control, 9:26801 (R;XE)

TAU LEPTONS
See TAU PARTICLES

TAU NEUTRINOS
Mass
Recent results on weak decays from the Mark II experiment, 9:27298 (R;US)

TAU PARTICLES
Particle Decay
Review of e^+e^--physics with PETRA, 9:27279 (R;DE)
Weak Particle Decay
Recent results on weak decays from the Mark II experiment, 9:27298 (R;US)

TAUONS
See TAU PARTICLES
TBP
Combustion Kinetics
Behaviour of burning kerosene, aerosol formation and consequences, 9:26572 (RA;US)
TEARING INSTABILITY
3-D MHD stability of high-beta free-boundary tokamak plasmas with finite edge-pressure-gradient and limiter stabilization, 9:27466 (R;US)
Instability Growth Rates
Linear model for the tearing mode of a tokamak plasma with flow and a resistive wall boundary condition, 9:27501 (J;GB)
Stabilization
Linear model for the tearing mode of a tokamak plasma with flow and a resistive wall boundary condition, 9:27501 (J;GB)
TECHNETIUM
Mass Spectroscopy
Analytical capabilities of RIMS: absolute sensitivity and isotopic analysis (Resonance ionization mass spectrometry), 9:26470 (R;US)
Polarography
Simultaneous determination of uranium and technetium by differential pulse polarography, 9:26468 (R;US)
Separation Processes
Separation of uranium from technetium in recovery of spent nuclear fuel, 9:25400 (P;US)
TECHNETIUM 99
Chemical Preparation
Evaluation of Amerscan Technetium (tin colloid) Agent for liver scintigraphy, 9:27163 (R;AU)
Radiopharmaceuticals
Technetium-99 levels in pertechnetate solutions from (n,γ) and (n,f) molybdenum-99 generators, 9:27126 (R;AU)
Tissue Distribution
Evaluation of Amerscan Technetium (tin colloid) Agent for liver scintigraphy, 9:27163 (R;AU)
TECHNOLOGY UTILIZATION
Environmental Impacts
Department of Energy fiscal year 1984 budget on environment programs. Hearing before the Subcommittee on Natural Resources, Agriculture Research and Environment, U.S. House of Representatives, Ninety-Eighth Congress, first session, 19 Apr 1983, 9:26126 (B;US)
Health Hazards
Department of Energy fiscal year 1984 budget on environment programs. Hearing before the Subcommittee on Natural Resources, Agriculture Research and Environment, U.S. House of Representatives, Ninety-Eighth Congress, first session, 19 Apr 1983, 9:26126 (B;US)
TELESCOPES
Coatings
Design of multilayer coatings for soft x-rays and their application for imaging and spectroscopy, 9:26882 (RA;GB)
Mirrors
Current status of grazing incidence optics, 9:26880 (RA;GB)
Reflection
Design of multilayer coatings for soft x-rays and their application for imaging and spectroscopy, 9:26882 (RA;GB)
Replica Techniques
Current status of x-ray and XUV replica optics, 9:26881 (RA;GB)
Soft X Radiation
Design of multilayer coatings for soft x-rays and their application for imaging and spectroscopy, 9:26882 (RA;GB)
X Radiation
Current status of grazing incidence optics, 9:26880 (RA;GB)
Current status of x-ray and XUV replica optics, 9:26881 (RA;GB)
Diamond turned X-ray optical systems for high sensitivity X-ray astronomy, 9:26885 (RA;GB)
TELLURIUM
Chemical Reactions
Chemical interactions of tellurium vapors with reactor materials, 9:26038 (R;US)
TELLURIUM COMPOUNDS

THERMITE PROCESS
Ignition Systems
Integral low-energy thermite igniter, 9:26764 (P;US)

THERMOCOUPLES
Timing Properties
Method and apparatus for measuring response time, 9:26893 (P;US)

THERMONUCLEAR DEVICES
Magnetic Field Configurations
Magnetic field line Hamiltonian, 9:27554 (R;US)
Radioactivation
Preface: Radioactivation of Fusion Structures, 9:27602 (J;US)

THERMONUCLEAR FUELS
Breeding
ICF Reactor using A ^{3}He-AFLINT tritium self-sufficient target, 9:27595 (BA;US)
Comparative Evaluations
Blankets for tritium catalyzed deuterium (TCD) fusion reactors, 9:27510 (R;US)
Polarization
Method of controlling fusion reaction rates, 9:27619 (P;US)

THERMONUCLEAR POWER PLANTS
Thermionic Converters
Thermoemission power. Pt. 2, 9:26170 (R;SU;In Russian)
THERMONUCLEAR REACTIONS
(For use only with the phenomenon, not with THERMONUCLEAR REACTORS.)
Method of controlling fusion reaction rates, 9:27619 (P;US)
THERMONUCLEAR REACTOR COOLING SYSTEMS
Radioactivation
Preface: Radioactivation of Fusion Structures, 9:27602 (J;US)
Stresses
Magnetic forces on a ferromagnetic HT-9 first wall/blanket and coolant pipe, 9:27523 (RA;US)
THERMONUCLEAR REACTOR MATERIALS
Activation Analysis
An analysis of activation and the impact of tritium breeding media and structural materials for a commercial tokamak fusion reactor design, 9:27606 (J;US)
Contribution of activation products to fusion accident risk: part II. Effects of alternative materials and designs, 9:27605 (J;US)
Radioactivation characteristics for the tokamak fusion test reactor, 9:27604 (J;US)
Comparative Evaluations
Contribution of activation products to fusion accident risk: part II. Effects of alternative materials and designs, 9:27605 (J;US)
Low activation fusion rationale, 9:27608 (J;US)
Compatibility
Chemical compatibility between lithium compounds and transition metals, 9:27557 (RA;GB)
Ductility
Disk-bend ductility tests for irradiated materials, 9:27525 (RA;US)
Materials Testing
Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1983, 9:27520 (R;US)
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Mechanical Properties
Disk-bend ductility tests for irradiated materials, 9:27525 (RA;US)
Neutron Reactions
An analysis of activation and the impact of tritium breeding media and structural materials for a commercial tokamak fusion reactor design, 9:27606 (J;US)
Contribution of activation products to fusion accident risk: part II. Effects of alternative materials and designs, 9:27605 (J;US)
Radioactivation characteristics for the tokamak fusion test reactor, 9:27604 (J;US)
Physical Properties
Fuels and materials chemistry, 9:25882 (RA;US)
Physical Radiation Effects
Fuels and materials chemistry, 9:25882 (RA;US)
Influence of a temperature change on in-reactor creep, 9:26311 (R;US)
Relation between neutron and proton irradiation damage structures in metals, 9:26339 (RA;GB)
Theoretical studies of fusion materials, 9:27558 (RA;GB)
Thermonuclear reactor materials. Chapter 6, 9:27622 (BA;SU;In Russian)
Radiation Effects
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Radiation Protection
Low activation fusion rationale, 9:27608 (J;US)
Radioactivation
An analysis of activation and the impact of tritium breeding media and structural materials for a commercial tokamak fusion reactor design, 9:27606 (J;US)
Contribution of activation products to fusion accident risk: part II. Effects of alternative materials and designs, 9:27605 (J;US)
Low activation fusion rationale, 9:27608 (J;US)
Preface: Radioactivation of Fusion Structures, 9:27602 (J;US)
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Radioactivation characteristics for the tokamak fusion test reactor, 9:27604 (J;US)
Radioactivation characteristics for deuterium-tritium fusion reactors, 9:27607 (J;US)
Radioactivity
Low activation fusion rationale, 9:27608 (J;US)
THERMONUCLEAR REACTOR WALLS
See also FIRST WALL
Radioactivation
Preface: Radioactivation of Fusion Structures, 9:27602 (J;US)
THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.
See also D-T REACTORS
I-BEAM TYPE REACTORS
LASER FUSION REACTORS
MAGNETIC MIRROR TYPE REACTORS
TOKAMAK TYPE REACTORS
After-Heat Removal
Low activation fusion rationale, 9:27608 (J;US)
Breeding Blankets
Cross section sensitivity and uncertainty analysis for European INTOR and U.S. FED designs, 9:27529 (R;CH)
Prospects for low-activity aluminum structures, 9:27601 (J;US)
Commercialization
Summary report of findings and recommendations. Workshop panel on commercializing inertial confinement fusion, 9:27549 (R;US)
Design
Conceptual design of ICF reactor SENRI, Part II. Advances in design and pellet gain scaling, 9:27596 (BA;US)
Fuel Pellets
Conceptual design of ICF reactor SENRI, Part II. Advances in design and pellet gain scaling, 9:27596 (BA;US)
Materials
Materials for fusion, 9:27609 (J;US)
Radiation effects in metals and alloys, 9:25975 (J;US)
Neutron Transport
Variable control of neutron albedo in toroidal fusion devices, 9:27618 (P;US)
Radiation Hazards
Contribution of activation products to fusion accident risk: part II. Effects of alternative materials and designs, 9:27605 (J;US)
Radiation Protection
Low activation fusion rationale, 9:27608 (J;US)
Radioactivation
Preface: Radioactivation of Fusion Structures, 9:27602 (J;US)
Radioactivity
Low activation fusion rationale, 9:27608 (J;US)
Reactor Accidents
Contribution of activation products to fusion accident risk: part II. Effects of alternative materials and designs, 9:27605 (J;US)
Reactor Safety Experiments
Comparison of one- and two-dimensional cross-section sensitivity calculations for a fusion reactor shielding experiment, 9:27623 (J;US)
Reactor Shutdown
Low activation fusion rationale, 9:27608 (J;US)
Risk Assessment
Contribution of activation products to fusion accident risk: part II. Effects of alternative materials and designs, 9:27605 (J;US)
Shielding
Comparison of one- and two-dimensional cross-section sensitivity calculations for a fusion reactor shielding experiment, 9:27623 (J;US)
Specifications
Laser or charged-particle-beam fusion reactor with direct electric generation by magnetic flux compression, 9:27610 (P;US)
THERMOPLASTICS
Stability
Characterization of polyetheretherketone and other engineering thermoplastics, 9:26428 (R;US)

THERMOSTATS
See also CRYOSTATS
Performance Testing
Rating of thermostatic radiator valves - criteria and testing methods, 9:26173 (R;DE;In German)
Quality Control
Rating of thermostatic radiator valves - criteria and testing methods, 9:26173 (R;DE;In German)
THETA PINCH
Radiative Cooling
Measurement of radiation loss rate of an iron-seeded plasma, 9:27494 (J;AT)
THICKNESS GAGES
Design
Control for monitoring thickness of high temperature refractory, 9:26738 (P;US)
THORIUM
Biological Accumulation
Natural chelates for radionuclide decorporation, 9:27184 (P;US)
Biological Radiation Effects
Measurement of lymphoblastogenic activity from thorium workers, 9:27181 (J;GB)
Chelating Agents
Natural chelates for radionuclide decorporation, 9:27184 (P;US)
Segregation
Thorium segregation to grain boundaries in Ir + 0.3% W alloys containing 5-1000 ppM thorium, 9:26383 (J;US)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
THORIUM 232
Radioecological Concentration
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)
THORIUM COMPLEXES
Catalytic Effects
Supported f-element complexes: surface chemistry and catalysis. Progress report, April 1, 1983-April 1, 1984, 9:26513 (R;US)
Electronic Structure
Quasirelativistic SCF-Xα scattered-wave study of uranocene, thorocene, and cerocene, 9:26562 (J;US)
Molecular Structure
Quasirelativistic SCF-Xα scattered-wave study of uranocene, thorocene, and cerocene, 9:26562 (J;US)
THORIUM D
See LEAD 208
THORIUM OXIDES
Catalytic Effects
Syngas conversion and chemisorption studies on metal-zeolite catalysts, 9:25615 (RA;US)
Chemical Preparation
High surface area ThO_2 catalyst, 9:26416 (P;US)
Creep
Fuels and materials chemistry, 9:25882 (RA;US)
Enthalpy
Enthalpies of thoria-urania from 2300 to 3400 K, 9:26413 (J;NL)
THREE MILE ISLAND-2 REACTOR
Corium
TMI-2 core debris grab sample quick look report, 9:26019 (R;US)
Uranium recovery from a nuclear fuel, 9:25911 (R;US)
Decontamination
Answers to frequently asked questions about cleanup activities at Three Mile Island, Unit 2, 9:26035 (R;US)
Strippable coating used for the TMI-2 reactor building decontamination, 9:26006 (R;US)
Electrical Equipment
TMI-2 Technical Information and Examination Program 1983 annual report, 9:25912 (R;US)
Materials Recovery
Uranium recovery from a nuclear fuel, 9:25911 (R;US)
Radioactive Waste Processing
TMI-2 Technical Information and Examination Program 1983 annual report, 9:25912 (R;US)
Reactor Cores
TMI-2 Technical Information and Examination Program 1983 annual report, 9:25912 (R;US)
Reactor Decommissioning
Answers to frequently asked questions about cleanup activities at Three Mile Island, Unit 2, 9:26035 (R;US)
Repair
Application of solid state track recorder neutron dosimetry for Three Mile Island Unit 2 reactor recovery, 9:26877 (J;GB)
TMI-2 Technical Information and Examination Program 1983 annual report, 9:25912 (R;US)
THREE-BODY PROBLEM

Derivatization
Di- and tri-benzotriazole substituted tri-hydroxybenzenes, 9:26538 (P;US)
Process for the preparation of benozotriazoles and their polymers, and 2(2-hydroxy-5-isopropenylphenyl)2H-benzotriazole produced thereby, 9:26539 (P;US)
Polymerization
Process for the preparation of benozotriazoles and their polymers, and 2(2-hydroxy-5-isopropenylphenyl)2H-benzotriazole produced thereby, 9:26539 (P;US)
Synthesis
Di- and tri-benzotriazole substituted tri-hydroxybenzenes, 9:26538 (P;US)
Process for the preparation of benozotriazoles and their polymers, and 2(2-hydroxy-5-isopropenylphenyl)2H-benzotriazole produced thereby, 9:26539 (P;US)
TRIBUTYL PHOSPHATE
See TBP
TRICHODERMA REESEI
See TRICHODERMA VIRIDE
TRICHODERMA VIRIDE
Cellulolytic Activity
Production of sugars from cellulose, 9:25635 (RA;US)
TRIGA-PENNSYLVANIA REACTOR
See PSTR REACTOR
TRIGGER CIRCUITS
Lasers
UV laser triggering of crowbars used in the Sandia lightning simulator, 9:26671 (R;US)
TRIPLET PARTICLES
See QUARKS
TRITIATED WATER
See TRITIUM OXIDES
TRITICUM
See WHEAT
TRITIUM
Beta-Minus Decay
Calculation of molecular final states and their effect on a precision neutrino mass experiment, 9:27302 (R;US)
Breeding
An analysis of activation and the impact of tritium breeding media and structural materials for a commercial tokamak fusion reactor design, 9:27606 (J;US)
FIRST STEP towards ICF commercialization, 9:27540 (R;US)
ICF Reactor using A ^{3}He-AFLINT tritium self-sufficient target, 9:27595 (BA;US)
Tritium breeding and activation in the cascade reactor, 9:27563 (R;US)
Tritium inventories and associated tritium breeding requirement for fusion power reactors, 9:27508 (R;US)
Breeding Ratio
Blankets for tritium catalyzed deuterium (TCD) fusion reactors, 9:27510 (R;US)
Cross section sensitivity and uncertainty analysis for European INTOR and U.S. FED designs, 9:27529 (R;CH)
Containers
Safety analysis report for packaging: the ORNL DOT specification 6M - tritium trap package (Tritium absorbed as solid uranium tritide in depleted uranium trap), 9:26653 (R;US)
Containment
Assessment of problems associated with tritium containment, 9:27511 (R;US)
Diffusion
Tritium permeability and pressure dependence of 304L stainless steel in the temperature range 723 to 1023 K, 9:26377 (J;US)
Distribution
Tritium production and distribution in a Zircaloy-clad Li_7Pb_2 assembly irradiated in the Oak Ridge Research Reactor, 9:26366 (J;NL)
Energy Absorption
On the energy and momentum deposition in the ion beam-pellet interaction, 9:27621 (J;US)

Inventories
Tritium inventories and associated tritium breeding requirement for fusion power reactors, 9:27508 (R;US)
Isotope Separation
Homogenous tritium production reactor, 9:25584 (P;US)
Packaging
Safety analysis report for packaging: the ORNL DOT specification 6M - tritium trap package (Tritium absorbed as solid uranium tritide in depleted uranium trap), 9:26653 (R;US)
Production
Homogenous tritium production reactor, 9:25584 (P;US)
Tritium production and distribution in a Zircaloy-clad Li_7Pb_2 assembly irradiated in the Oak Ridge Research Reactor, 9:26366 (J;NL)
Radioactive Waste Processing
Behaviour of the gaseous radionuclides released during the first reprocessing operations, 9:25501 (R;XE;In French)
Radioecological Concentration
1983 environmental monitoring report, Sandia National Laboratories, Albuquerque, New Mexico, 9:27037 (R;US)
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)
Transport
Safety analysis report for packaging: the ORNL DOT specification 6M - tritium trap package (Tritium absorbed as solid uranium tritide in depleted uranium trap), 9:26653 (R;US)

TRITIUM OXIDES
Road Transport
Evaluation of the radiological risk resulting from road transportation of tritiated water, 9:25413 (RA;US)

TRITIUM PRODUCTION REACTORS
Fuel Assemblies
Fuel assembly for the production of tritium in light water reactors, 9:25997 (P;US)

TRITON REACTIONS
Capture
Polarized triton capture on ^{12}C, 9:27389 (J;NL)

TROUT
Aquaculture
Summary of channel catfish and rainbow trout production at the Gallatin Waste Heat Aquaculture Facility, 1979-1980, 9:27161 (R;US)
Production
Summary of channel catfish and rainbow trout production at the Gallatin Waste Heat Aquaculture Facility, 1979-1980, 9:27161 (R;US)

TRU WASTES
See ALPHA-BEARING WASTES

TRUCKS
Fuel Substitution
Cost effectiveness of converting to alternative motor vehicle fuels. A technical assistance study for the City of Longview, 9:26265 (R;US)

TRW PROCESS
Bench-Scale Experiments
Bench-scale development of the TRW process for cleaning coal (Gravimelt Process). Quarterly technical progress report, 17 August 1983-4 November 1983, 9:25216 (R;US)

TRX-1
See REVERSE-FIELD PINCH

TRYPTOPHAN
Emission
Streak camera measurement of tryptophan and rhodamine motions with picosecond time resolution, 9:26676 (J;GB)
Motion
Streak camera measurement of tryptophan and rhodamine motions with picosecond time resolution, 9:26676 (J;GB)

TSCHEBYSCHEFF APPROXIMATION
See POLYNOMIALS

TSH
Biochemical Reaction Kinetics
Monoclonal antibodies as physiologic probes, 9:26566 (BA;US)
Monoclonal Antibodies
Monoclonal antibodies as physiologic probes, 9:26566 (BA;US)

TSL PROCESS
Bench-Scale Experiments
Advanced direct coal liquefaction. Quarterly technical progress report No. 2, December 1983-February 1984, 9:25209 (R;US)

TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Corrosion
Analysis of an oxidant tube from the Westinghouse Coal Gasification PDU, 9:25181 (R;US)
Eddy Current Testing
Eddy-current inspection for steam generator tubing program. Quarterly progress report for period ending September 30, 1983, 9:25913 (R;US)
Fluid Flow
Experiments on tubes conveying fluid, 9:26682 (R;US)
Fracture Properties
Role of geometry in plastic instability and fracture of tubes and sheet, 9:26384 (J;NL)
Inspection
Eddy-current inspection for steam generator tubing program. Quarterly progress report for period ending September 30, 1983, 9:25913 (R;US)
Materials Testing
Experiments on tubes conveying fluid, 9:26682 (R;US)
Plasticity
Role of geometry in plastic instability and fracture of tubes and sheet, 9:26384 (J;NL)

TUBES (CONDUITS)
See PIPES

TUFF
Explosive Fracturing
Rock mechanics effects observed subsequent to multiple fracturing of wellbores, 9:25338 (R;US)
Geochemistry
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Hydraulic Conductivity
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Hydrology
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Mechanical Properties
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Shear Properties
Geotechnical aspects of hackroy sandy loam and crushed tuff, 9:25506 (R;US)
Specific Heat
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Stratigraphy
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Stratigraphic and volcano-tectonic relations of Crater Flat Tuff and some older volcanic units, Nye County, Nevada, 9:25523 (R;US)
Stress Analysis
Geotechnical aspects of hackroy sandy loam and crushed tuff, 9:25506 (R;US)
Tectonics
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Stratigraphic and volcano-tectonic relations of Crater Flat Tuff and some older volcanic units, Nye County, Nevada, 9:25523 (R;US)

Temperature Effects
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)
Thermal Conductivity
Identification of characteristics which influence repository design: tuff. Final report (Task 1), June 1981-March 1982, 9:25508 (R;US)

TUMORS
See NEOPLASMS

TUNGSTEN ALLOYS
Charpy Test
Effect of specimen size and nickel content on the impact properties of 12 Cr-1 MoVW ferritic steel, 9:26298 (RA;US)
Chemical Composition
Hard metal composition, 9:26415 (P;US)
Corrosion
Corrosion of path A PCA and 12 Cr-1 MoVW steel in thermally convective lithium, 9:26305 (RA;US)
Ductility
Thorium segregation to grain boundaries in Ir + 0.3% W alloys containing 5-1000 ppM thorium, 9:26383 (J;US)
Fracture Properties
Thorium segregation to grain boundaries in Ir + 0.3% W alloys containing 5-1000 ppM thorium, 9:26383 (J;US)
Impact Tests
Effect of specimen size and nickel content on the impact properties of 12 Cr-1 MoVW ferritic steel, 9:26298 (RA;US)
Microstructure
Microstructure of 9 Cr-1 MoVNb and 12 Cr-1 MoVW ferritic steels after irradiation at elevated temperatures in HFIR, 9:26294 (RA;US)

TUNGSTEN SULFIDES
Electrodeposited Coatings
Improvement of the photoelectrochemical oxidation of halides by platinization of metal dichalcogenide photoanodes, 9:26555 (J;US)

TURBINE BLADES
Spray Cooling
Investigation of two-component two-phase channel flow with heat supply for application in inside cooled turbine blades. Final Report, 9:26679 (R;DE;In German)
Two-Phase Flow
Investigation of two-component two-phase channel flow with heat supply for application in inside cooled turbine blades. Final Report, 9:26679 (R;DE;In German)

TURBINES
See also GAS TURBINES
WIND TURBINES
Ultrasonic Testing
Experimental determination of grain noise and crack inversion parameters, 9:26686 (RA;US)
Ultrasonic flaw detection and sizing in turbine rotor component bore geometries, 9:26685 (RA;US)

TURBOGENERATORS
Stability
Phase rotation as a means of augmenting transient stability, 9:25870 (R;US)

TURBOJET ENGINES
Rotors
Progress on ultrasonic flaw sizing in turbine engine rotor components: bore and web geometries, 9:26715 (BA;US)

TURBULENT FLOW
Mathematical Models
Critical confrontation of standard and more sophisticated methods for modelling the dispersion in air of heavy gas clouds; evaluation and illustration of the intrinsic limitations of both categories, 9:26926 (R;XE)

TURKEY POINT-3 REACTOR
Spent Fuel Casks
Experience in the transport of spent nuclear reactor fuel assemblies, 9:25897 (RA;US)
Spent Fuel Elements
Experience in the transport of spent nuclear reactor fuel assemblies, 9:25897 (RA;US)

TURKEY POINT-4 REACTOR
Spent Fuel Casks
Experience in the transport of spent nuclear reactor fuel assemblies, 9:25897 (RA;US)
Spent Fuel Elements
Experience in the transport of spent nuclear reactor fuel assemblies, 9:25897 (RA;US)

TVA
See TENNESSEE VALLEY AUTHORITY

TWO-BODY PROBLEM
Equations of Motion
Integrable models of two interacting particles motion in an external field, 9:27454 (R;SU;In Russian)
Hamiltonian Function
Integrable models of two interacting particles motion in an external field, 9:27454 (R;SU;In Russian)

TWO-NUCLEON TRANSFER REACTIONS
Transition Amplitudes
Properties of the transition amplitude for two-nucleon transfer reactions, 9:27415 (J;NL)

TWO-PHASE FLOW
Mathematical Models
Numerical treatment of pipe boundary conditions in two-phase flow, 9:25960 (R;US)

U

UCLLL
See LAWRENCE LIVERMORE LABORATORY

UJM
See JET MODEL

ULTRASONIC TESTING
Direct and inverse methods for scattering by cracks at high frequencies, 9:26689 (RA;US)
Preparation of internal crack samples and ultrasonic measurements in composites, 9:26700 (RA;US)
Review and discussion of the development of synthetic aperture focusing technique for ultrasonic testing (SAFT-UT), 9:25972 (R;US)
Ultrasonic flaw detection and sizing in turbine rotor component bore geometries, 9:26685 (RA;US)
Ultrasonic sizing of cracks in web geometries, 9:26692 (RA;US)
Detection
Probability of detection, 9:26687 (RA;US)
Interferometry
Interferometric techniques using embedded optical fibers for the quantitative NDE of composites, 9:26734 (BA;US)
Optimization
Ultrasonic flaw detection in turbine rotor component web geometries, 9:26684 (RA;US)
Pulse Generators
A computational tool for the design of ultrasonic systems, 9:26736 (BA;US)
Scattering
Ultrasonic scattring from flaws near surfaces, 9:26691 (RA;US)
Transducers
A computational tool for the design of ultrasonic systems, 9:26736 (BA;US)

ULTRASONIC WAVES
Attenuation
Detection of strain induced microstructural changes in aluminum (6061-T6) using ultrasonic signal analysis, 9:26726 (BA;US)
Effects of microstructure on the speed and attenuation of elastic waves: formal theory and simple approximations, 9:26707 (BA;US)
Backscattering
The maximum entropy formulation of inverse problems of NDE, 9:26711 (BA;US)
Born Approximation
On the effects of a finite aperture on the Inverse Born Approximation, 9:26718 (BA;US)

Progress on ultrasonic flaw sizing in turbine engine rotor components: bore and web geometries, 9:26715 (BA;US)
Rough surface effects of aluminum castings on ultrasonic sizing algorithms, 9:26717 (BA;US)
The Inverse Born Approximation: Exact determination of shape of convex voids, 9:26712 (BA;US)
Ultrasonic 3-D reconstruction of inclusions in solids using the Inverse Born Approximation, 9:26713 (BA;US)

Elastic Scattering
Effects of microstructure on the speed and attenuation of elastic waves: formal theory and simple approximations, 9:26707 (BA;US)
Elastic wave scattering from multiple voids (porosity), 9:26708 (BA;US)

Inverse Scattering Problem
Inverse ray tracing in anisotropic elastic solids, 9:26710 (BA;US)
On the effects of a finite aperture on the Inverse Born Approximation, 9:26718 (BA;US)
Progress on ultrasonic flaw sizing in turbine engine rotor components: bore and web geometries, 9:26715 (BA;US)
Rough surface effects of aluminum castings on ultrasonic sizing algorithms, 9:26717 (BA;US)
The Inverse Born Approximation: Exact determination of shape of convex voids, 9:26712 (BA;US)
Ultrasonic 3-D reconstruction of inclusions in solids using the Inverse Born Approximation, 9:26713 (BA;US)

Line Widths
A computational tool for the design of ultrasonic systems, 9:26736 (BA;US)

Nucleation
Detection of strain induced microstructural changes in aluminum (6061-T6) using ultrasonic signal analysis, 9:26726 (BA;US)

Phase Shift
Absolute determination of stress in textured materials, 9:26724 (BA;US)

Phase Velocity
Effects of microstructure on the speed and attenuation of elastic waves: formal theory and simple approximations, 9:26707 (BA;US)
The use of the temperature dependence of ultrasonic velocity to measure residual stress, 9:26725 (BA;US)

Scattering
Ultrasonic determination of grain size in uranium, 9:26728 (BA;US)

Scattering Amplitudes
Elastic wave scattering from multiple voids (porosity), 9:26708 (BA;US)
Progress on ultrasonic flaw sizing in turbine engine rotor components: bore and web geometries, 9:26715 (BA;US)

Shear
Imaging and characterization of defects with digital signal processing of ultrasonic data, 9:26732 (BA;US)

Temperature Dependence
The use of the temperature dependence of ultrasonic velocity to measure residual stress, 9:26725 (BA;US)

Transducers
Theory for cross-coupling in ultrasonic transducer arrays, 9:26748 (R;US)

ULTRASONICS
See ULTRASONIC WAVES

ULTRASONOGRAPHY

Digital Systems
A shear-wave transducer array for real-time imaging, 9:26733 (BA;US)

Holography
A portable high speed ultrasonic imaging system, 9:26729 (BA;US)

Image Processing
A portable high speed ultrasonic imaging system, 9:26729 (BA;US)
Imaging and characterization of defects with digital signal processing of ultrasonic data, 9:26732 (BA;US)

Real Time Systems
A shear-wave transducer array for real-time imaging, 9:26733 (BA;US)

ULTRAVIOLET RADIATION

Absorption
Ultraviolet light absorbers having two different chromophors in the same molecule, 9:26537 (P;US)

UNCERTAINTY

UNCORRELATED-JET MODEL
See JET MODEL

UNDERGROUND GASIFI(.TION
See IN-SITU GASIFICATION

UNDERGROUND MINING
See also LONGWALL MINING

Abandoned Sites
Socio-economic, subsidence, transportation, and legal ramifications of potential liquefaction plant sitings. Task B. Prediction of subsidence potential over abandoned mine land. Quarterly report, October 1-December 31, 1983, 9:25266 (R;US)

Display Devices
Information evaluation by CRT display in district control, 9:26765 (R;DE;In German)

Ground Motion
Drawing up the mathematical basis for the advanced calculation of ground movement elements under the conditions of the coal deposits in the Saar district, 9:25257 (R;DE;In German)

Ground Subsidence
Prediction of strata stability from instrumentation and modelling data (Report on ECSC contract 7220-AC/811), 9:25267 (R;XE)

Mine Roadways
Mine roadway floor stabilisation (Report on ECSC contract 7220-AE/810), 9:25269 (R;XE)

Strata Movement
Prediction of strata stability from instrumentation and modelling data (Report on ECSC contract 7220-AC/811), 9:25267 (R;XE)

Ventilation
Forecasting of firedamp release and means of combating firedamp. Summary report of INIEX research (Report on ECSC contract 7220-AC/205), 9:25268 (R;XE)

UNIPOLAR TRANSISTORS
See FIELD EFFECT TRANSISTORS

UNITED KINGDOM

Energy Demand
Reference case 2 UK, 9:26095 (R;XE)

Energy Models
Reference case 2 UK, 9:26095 (R;XE)

Occupational Safety
Proposed UK legislation to provide radiological protection for workers, with emphasis on its application to the transport of radioactive materials, 9:25430 (RA;US)

Research Programs
Report on session 1981-1982, 9:25994 (R;GB)

UNITED STATES OF AMERICA

UPSHOT PROJECT

Fallout
Results of calculations of external gamma radiation exposure rates from fallout and the related radionuclide composition from the SIMON Event of Operation Upshot-Knothole, 1953, 9:27066 (R;US)

UPSILON-10000 RESONANCES

Hadronic Particle Decay
First results from the Crystal Ball at DORIS II, 9:27281 (R;DE)

Radiative Decay
First results from the Crystal Ball at DORIS II, 9:27281 (R;DE)

UPSILON-9500 RESONANCES

Hadronic Particle Decay
Y decay into two gluinos, 9:27349 (J;NL)

Semileptonic Decay
Limits on J/PSI and Y production in e^+e^- interactions at $\sqrt{s}$=29 GeV, 9:27305 (J;NL)
Weak Hadronic Decay
Limits on J/PSI and Y production in e^+e^- interactions at $\sqrt{s}$=29 GeV, 9:27305 (J;NL)

URANINITES
See also PITCHBLENDE
Leaching
Numerical simulation of uranium in-situ mining, 9:25391 (J;GB)

URANIUM
Biological Accumulation
Natural chelates for radionuclide decorporation, 9:27184 (P;US)
Chelating Agents
Natural chelates for radionuclide decorporation, 9:27184 (P;US)
Dissolution
Dissolution of uranium fuel tubes in nitric acid, 9:25395 (R;US)
Grain Size
Ultrasonic determination of grain size in uranium, 9:26728 (BA;US)
Laser Spectroscopy
Determination of uranium in aqueous samples by laser-induced fluorescence spectrometry, 9:26501 (J;US)
Polarography
Simultaneous determination of uranium and technetium by differential pulse polarography, 9:26468 (R;US)
Radioecological Concentration
1983 environmental monitoring report, Sandia National Laboratories, Albuquerque, New Mexico, 9:27037 (R;US)
Recovery
Uranium recovery from a nuclear fuel, 9:25911 (R;US)
Solvent Extraction
Reductive stripping process for uranium recovery from organic extracts, 9:25393 (P;US)
Separation of uranium from technetium in recovery of spent nuclear fuel, 9:25400 (P;US)
Spectrophotometry
Influence of uranyldibutyl phosphate on the uv/vis spectrophotometric online monitoring of uranium in tributylphosphate/hydrocarbon solvent, 9:25399 (R;US)
Ultrasonic Testing
Ultrasonic determination of grain size in uranium, 9:26728 (BA;US)

URANIUM 234
Biogeochemistry
Aquatic chemistry of plutonium in seasonally anoxic lake waters, 9:27080 (J;GB)
Radioecological Concentration
Aquatic chemistry of plutonium in seasonally anoxic lake waters, 9:27080 (J;GB)

URANIUM 235
Radioecological Concentration
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)

URANIUM 238
Biogeochemistry
Aquatic chemistry of plutonium in seasonally anoxic lake waters, 9:27080 (J;GB)
Radioecological Concentration
Aquatic chemistry of plutonium in seasonally anoxic lake waters, 9:27080 (J;GB)
Environmental monitoring at the Lawrence Livermore National Laboratory. 1983 annual report, 9:27038 (R;US)

URANIUM 238 REACTIONS
Fission
Dynamical features of Coulomb-fission, 9:27405 (R;DE;In German)

URANIUM 238 TARGET
Lead 208 Reactions
Dynamical features of Coulomb-fission, 9:27405 (R;DE;In German)
Uranium 238 Reactions
Dynamical features of Coulomb-fission, 9:27405 (R;DE;In German)

URANIUM ALLOYS
Bonding
Method for fabricating laminated uranium composites, 9:26369 (P;US)

URANIUM CARBIDES
Density
Uranium-plutonium carbide fuel for fast breeder reactors, 9:25942 (J;US)
Thermal Conductivity
Thermodynamic measurement and modeling of (UC/sub 1-x O/sub x), 9:25394 (J;US)
Uranium-plutonium carbide fuel for fast breeder reactors, 9:25942 (J;US)

URANIUM CHLORIDES
Chemical Composition
Synthesis and characterization of uranium(VI) chloride fluorides, 9:26565 (J;GB)
Chemical Preparation
Synthesis and characterization of uranium(VI) chloride fluorides, 9:26565 (J;GB)
Pyrolysis
Synthesis and characterization of uranium(VI) chloride fluorides, 9:26565 (J;GB)
Stability
Synthesis and characterization of uranium(VI) chloride fluorides, 9:26565 (J;GB)

URANIUM COMPLEXES
See also URANYL COMPLEXES
Catalytic Effects
Supported f-element complexes: surface chemistry and catalysis. Progress report, April 1, 1983-April 1, 1984, 9:26513 (R;US)
Electronic Structure
Quasirelativistic SCF-Xα scattered-wave study of uranocene, thorocene, and cerocene, 9:26562 (J;US)
Molecular Structure
Quasirelativistic SCF-Xα scattered-wave study of uranocene, thorocene, and cerocene, 9:26562 (J;US)

URANIUM COMPOUNDS
See also URANIUM CARBIDES
URANIUM CHLORIDES
URANIUM FLUORIDES
Chemical Analysis
Laser induced phosphorescence uranium analysis, 9:25583 (P;US)
Fluorination
Fluorination process using catalysts, 9:25392 (P;US)
Laser Spectroscopy
Laser induced phosphorescence uranium analysis, 9:25583 (P;US)

URANIUM DEPOSITS
Exploration
Catahoula Formation of the Texas Coastal Plain: depositional systems, composition, structural development, ground-water flow history, and uranium distribution, 9:25388 (R;US)
Prospecting
Geochemical Atlas of Alaska, 9:25389 (R;US)

URANIUM DIOXIDE
Creep
Fuels and materials chemistry, 9:25882 (RA;US)
Enthalpy
Enthalpies of thoria-urania from 2300 to 3400 K, 9:26413 (J;NL)
Road Transport
Test and analysis on impact characteristics evaluation of nuclear fuel packaging loaded on vehicle, 9:25420 (RA;US)
Thermal Conductivity
Ex-reactor determination of thermal gap conductance between uranium dioxide: Zircaloy-4 interfaces, 9:26422 (BA;US)

URANIUM FLUORIDES
See also URANIUM HEXAFLUORIDE
URANIUM PENTAFLUORIDE
Chemical Composition
Synthesis and characterization of uranium(VI) chloride fluorides, 9:26565 (J;GB)

Chemical Preparation
Synthesis and characterization of uranium(VI) chloride fluorides, 9:26565 (J;GB)
Pyrolysis
Synthesis and characterization of uranium(VI) chloride fluorides, 9:26565 (J;GB)
Stability
Synthesis and characterization of uranium(VI) chloride fluorides, 9:26565 (J;GB)
Thermodynamic Properties
Basic energy science, 9:26528 (RA;US)
URANIUM HEXAFLUORIDE
Absorption Spectra
Absorption cell with fiber optics for concentration measurements in a flowing gas stream, 9:26498 (J;US)
Chemical Preparation
Fluorination process using catalysts, 9:25392 (P;US)
Packaging
Packaging of United States Department of Energy toll enriched UF_6-experience, responsibilities, and improvements, 9:26631 (RA;US)
Rail Transport
Cost-effectiveness of safety measures applying to uranium hexafluoride transportation in France, 9:25536 (RA;US)
Road Transport
Cost-effectiveness of safety measures applying to uranium hexafluoride transportation in France, 9:25536 (RA;US)
Thermal Conductivity
Behaviour of UF_6 package in fire: comparison of calculations with fire experiment, 9:26600 (RA;US)
URANIUM II
See URANIUM 234
URANIUM IONS
Ion-Atom Collisions
Observation of a peak structure in positron spectra of U + Cm collisions, 9:27257 (R;DE)
URANIUM MILLS
See FEED MATERIALS PLANTS
URANIUM MINES
Environmental Impacts
Transport of trace metals in the Magela Creek system, Northern Territory. I. Concentrations and loads of iron, manganese, cadmium, copper, lead and zinc during flood periods in the 1978-1979 wet season, 9:25529 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. II. Trace metal concentrations in the Magela Creek billabongs at the end of the 1978 dry season, 9:25530 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. III. Billabong sediments, 9:25531 (R;AU)
URANIUM ORES
Exploration
Display techniques for integrated data sets, 9:25390 (J;GB)
URANIUM PENTAFLUORIDE
Chemical Analysis
Transport measurements of UF_5 using a precision analysis for U^{+4}, 9:26469 (R;US)
URANYL COMPLEXES
DBP
Influence of uranyldibutyl phosphate on the uv/vis spectrophotometric online monitoring of uranium in tributylphosphate/hydrocarbon solvent, 9:25399 (R;US)
URANYL FLUORIDES
Thermodynamic Properties
Basic energy science, 9:26528 (RA;US)
URBAN AREAS
Air Pollution
Characterization of particles from several sources and three urban areas by solvent extraction, 9:27000 (J;GB)
Clean air targets and the politics of urban travel: a case study, 9:26973 (R;US)
Cogeneration
Environmental regulatory requirements of hot water district heating systems in the Minneapolis-St. Paul metropolitan area, 9:26251 (R;US)
District Heating
Environmental regulatory requirements of hot water district heating systems in the Minneapolis-St. Paul metropolitan area, 9:26251 (R;US)
Energy Conservation
Modification of the surface temperature by an artificial cirrus cloud. Final report, September 1, 1980-November 30, 1983, 9:26247 (R;US)
Indoor Air Pollution
Technique of urban mapping of potential indoor air pollution intensity for public health management, 9:26923 (RA;US)
Temperature Effects
Modification of the surface temperature by an artificial cirrus cloud. Final report, September 1, 1980-November 30, 1983, 9:26247 (R;US)

Energy efficient windows and daylignting, 9:26206 (RA;US)
Thermal Insulation
Energy efficient windows: a key to energy performance, 9:26201 (R;US)
WISCONSIN
Environmental Policy
Coastal zone assessment program, 9:26122 (RA;US)
WNP-1 REACTOR
Transients
Scram transient analysis (3/26/82), 9:26064 (R;US)
WOOD
Adhesives
Status and forecast for supply, demand, and cost of wood adhesives and binders, 9:26229 (R;US)
Binders
Status and forecast for supply, demand, and cost of wood adhesives and binders, 9:26229 (R;US)
Briquetting
Biomass Alternative Fuels Program: results of the feasibility studies awarded under PL 96-126. Final report, 9:25619 (R;US)
Carbonization
Biomass Alternative Fuels Program: results of the feasibility studies awarded under PL 96-126. Final report, 9:25619 (R;US)
Combustion
Selecting a biomass boiler system, 9:25648 (RA;US)
Flash Hydropyrolysis Process
The flash methanolysis of wood for the production of fuels and chemicals, 9:25628 (BA;US)
Gasification
Biomass Alternative Fuels Program: results of the feasibility studies awarded under PL 96-126. Final report, 9:25619 (R;US)
Catalytic steam gasification of biomass for methanol and methane production, 9:25699 (BA;US)
Environmental characterization studies of a high throughput wood gasifier, 9:25700 (BA;US)
Production of chemical feedstock by the methanolysis of wood, 9:25627 (P;US)
Harvesting
Evaluation of logging systems designed to recover harvesting residues for energy, 9:25694 (R;US)
Liquefaction
Characterization of products from direct biomass liquefaction, 9:25622 (RA;US)

Chemistry and mechanism of wood liquefaction, 9:25623 (RA;US)
Operation of the continuous bench-scale unit for direct liquefaction of biomass, 9:25621 (RA;US)
Pyrolysis
Biomass Alternative Fuels Program: results of the feasibility studies awarded under PL 96-126. Final report, 9:25619 (R;US)
WOOD ALCOHOL
See METHANOL
WOOD BURNING APPLIANCES
See also WOOD BURNING FURNACES
Bibliographies
Bibliography: wood for fuel, 9:26202 (R;US)
WOOD BURNING FURNACES
Bibliographies
Bibliography: wood for fuel, 9:26202 (R;US)
WOOD FUELS
Use of this term is limited to policy, feasibility, and socio-economic studies. For wood properties use WOOD.
Economic Impact
Energy from biomass: short-run economic effects of increased biomass production, 9:25629 (R;US)
Interest Groups
Role of NWEA, 9:26160 (RA;US)
WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
Indoor Air Pollution
Chemical dusts, vapours and fumes as causes of asthma, 9:26956 (RA;US)
WOOD WASTES
Combustion
High efficiency fuel utilization, 9:25646 (RA;US)
Gasification
Gasifiers - past, present and future, 9:25604 (RA;US)
Harvesting
Evaluation of logging systems designed to recover harvesting residues for energy, 9:25694 (R;US)
Pyrolysis
Energy conservation using the waste heat from Herreshoff furnace (1982), 9:26234 (R;US)
WORKERS
See PERSONNEL
WORKING FLUIDS
Comparative Evaluations
Preliminary considerations for the selection of a working medium for the solar sea power plant, 9:25739 (R;US)
Thermodynamic Properties
Preliminary considerations for the selection of a working medium for the solar sea power plant, 9:25739 (R;US)
WORKING (MATERIALS)
See MATERIALS WORKING
WORLD
See EARTH PLANET
WPPSS NUCLEAR PROJECT NO. 1
See WNP-1 REACTOR
WYOMING
Economic Development
Growth and energy development in the rural west, 9:27089 (RA;US)
Geochemical Surveys
Basic data for thermal springs and wells as recorded in GEOTHERM: Wyoming, 9:25842 (R;US)
Geothermal Wells
Basic data for thermal springs and wells as recorded in GEOTHERM: Wyoming, 9:25842 (R;US)
Thermal Springs
Basic data for thermal springs and wells as recorded in GEOTHERM: Wyoming, 9:25842 (R;US)

X

XENON
Pion Reactions
Asymmetries in angular distributions of nucleon emission intensity in high energy hadron-nucleus collisions, 9:27293 (R;SU)
Radioactive Waste Processing
Behaviour of the gaseous radionuclides released during the first reprocessing operations, 9:25501 (R;XE;In French)
X-RAY DETECTION
Beam Monitors
X-ray beam finder, 9:26896 (P;US)
Proportional Counters
Photoelectron range limitations to the spatial resolution for x-rays in gas proportional chambers, 9:26859 (J;US)
X-RAY DIFFRACTION
X-ray diffraction using the time structure of the SRS, 9:27420 (RA;GB)
Research Programs
Characterizing materials by x-ray, 9:26354 (J;US)
WKB Approximation
Application of the WKB method to x-ray diffraction by one dimensional periodic structures, 9:27457 (J;NL)
X-RAY DIFFRACTOMETERS
Small Angle Scattering
Ultra-high resolution small-angle x-ray diffractometry: measurements of very large periods in biological fibres, 9:27421 (RA;GB)
X-RAY FLUORESCENCE ANALYSIS
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Use of synchrotron radiation for trace element analysis and element mapping by scanning X-ray fluorescence, 9:26465 (RA;GB)
X-RAY SPECTROMETERS
Photoemissive materials for 0.35μm laser fiducials in x-ray streak cameras, 9:27565 (R;US)
XYLENOLS
Chemical Properties
New methods for obtaining industrial chemical compounds from the by-products of coal gasification and carbonisation processes (Report on ECSC contract 7220-EC/201), 9:25217 (R;XE;In French)
Physical Properties
New methods for obtaining industrial chemical compounds from the by-products of coal gasification and carbonisation processes (Report on ECSC contract 7220-EC/201), 9:25217 (R;XE;In French)
XYLOSE
Fermentation
Production of sugars from cellulose, 9:25635 (RA;US)

Y

YANG-MILLS THEORY
Conformal Invariance
Conformal invariance in the gauge theories. Yang-Mills theory, 9:27362 (R;SU)
Mass Renormalization
Mass renormalization in supersymmetric Yang-Mills theories, 9:27366 (R;SU)
Renormalization
Renormalization of N=4 supergauge theory, 9:27352 (R;SU)
Supersymmetry
Mass renormalization in supersymmetric Yang-Mills theories, 9:27366 (R;SU)
Renormalization of N=4 supergauge theory, 9:27352 (R;SU)

YEASTS
Filtration
Tratamiento de mostos utilizando el filtro anaerobio (treatment of must using an anaerobic filter). Master thesis, 9:27155 (R;US)
YTTRIUM
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
YTTRIUM ALLOYS
Corrosion Resistance
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Deposition
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983 (CoCrAlY; ZrO_2; Al_2O_3; Ni-SiC; quartz-SiC), 9:26334 (R;US)
Microstructure
Heterogeneous growth in transition metal/rare earth films during bias sputter-deposition (Ni-La and Ni-Y), 9:26335 (R;US)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM OXIDES
Sintering
Role of Al2O3 in sintering of submicron yttria-stabilized ZrO2 powders. Technical report No. 8 (final) Oct 80-30 Sep 83, 9:26402 (R;US)
YTTRIUM PHOSPHATES
Radiation Effects
Vibrational Raman studies of particle induced damage in oxide glass, 9:26450 (R;US)

Z

Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
ZEA MAYS
See MAIZE
ZEOLITES
Catalytic Effects
Correlation of zeolites Nul and ZSM-5 acid site strength with catalytic activity and selectivity. Final report, 9:26514 (R;US)
Syngas conversion and chemisorption studies on metal-zeolite catalysts, 9:25615 (RA;US)
Performance Testing
Immobilization of radioactive cesium in pyrolytic-carbon-coated zeolite, 9:25528 (J;US)
PH Value
Correlation of zeolites Nul and ZSM-5 acid site strength with catalytic activity and selectivity. Final report, 9:26514 (R;US)
Sorptive Properties
Correlation of zeolites Nul and ZSM-5 acid site strength with catalytic activity and selectivity. Final report, 9:26514 (R;US)
Surface Coating
Immobilization of radioactive cesium in pyrolytic-carbon-coated zeolite, 9:25528 (J;US)
Temperature Effects
Correlation of zeolites Nul and ZSM-5 acid site strength with catalytic activity and selectivity. Final report, 9:26514 (R;US)
Thermodynamic Properties
Basic energy science, 9:26528 (RA;US)
ZERO POWER REACTORS
Reactor Kinetics
Calculational methodology and associated uncertainties: Sensitivity and uncertainty analysis of reactor performance parameters, 9:25963 (J;US)
Integral experiment information for fast reactors: Sensitivity and uncertainty analysis of reactor performance parameters, 9:25964 (J;US)
ZINC
Environmental Transport
Transport of trace metals in the Magela Creek system, Northern Territory. I. Concentrations and loads of iron, manganese, cadmium, copper, lead and zinc during flood periods in the 1978-1979 wet season, 9:25529 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. II. Trace metal concentrations in the Magela Creek billabongs at the end of the 1978 dry season, 9:25530 (R;AU)
Transport of trace metals in the Magela Creek system, Northern Territory. III. Billabong sediments, 9:25531 (R;AU)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
Nondestructive X-ray fluorescence spectrometry for determination of trace elements along a single strand of hair, 9:27220 (J;US)
ZINC COMPLEXES
Photolysis
Reactions of photoexcited triplet states of zinc porphyrin with transient radicals in aqueous solutions, 9:26556 (J;IL)
Radiolysis
Reactions of photoexcited triplet states of zinc porphyrin with transient radicals in aqueous solutions, 9:26556 (J;IL)
ZINC OXIDES
Synthesis
Precursor chemistry effects on development of particulate morphology during evaporative decomposition of solutions (Powder synthesis), 9:26409 (R;US)
ZINCATES
Magnetic Properties
Magnetic properties of $HfZn_3$, 9:26381 (J;NL)
ZINC-BROMINE BATTERIES
Research Programs
Zinc/bromine batteries: a status review, 9:26083 (R;US)
ZION STATION UNIT-1
See ZION-1 REACTOR
ZION STATION UNIT-2
See ZION-2 REACTOR
ZION-1 REACTOR
Reactor Cooling Systems
Response margins of the dynamic analysis of piping systems, 9:26060 (R;US)
Seismic Effects
Response margins of the dynamic analysis of piping systems, 9:26060 (R;US)
ZION-2 REACTOR
Reactor Cooling Systems
Response margins of the dynamic analysis of piping systems, 9:26060 (R;US)
Seismic Effects
Response margins of the dynamic analysis of piping systems, 9:26060 (R;US)
ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 2
ZIRCALOY 4
Scaling
Deposition of model crud on boiling zircaloy surfaces at high temperature, 9:26367 (J;US)
Surface Treatments
Deposition of model crud on boiling zircaloy surfaces at high temperature, 9:26367 (J;US)
ZIRCALOY 2
Chemical Reactions
Chemical interactions of tellurium vapors with reactor materials, 9:26038 (R;US)
ZIRCALOY 4
Thermal Conductivity
Ex-reactor determination of thermal gap conductance between uranium dioxide: Zircaloy-4 interfaces, 9:26422 (BA;US)

ZIRCONIUM
Electronic Structure
Excitation-autoionisation of Ti^{3+}, Zr^{3+} and Hf^{3+} in the distorted-wave approximation with exchange, 9:27263 (J;GB)
X-Ray Fluorescence Analysis
Development and application of x-ray fluorescence analytical techniques, 9:26990 (RA;US)
ZIRCONIUM ALLOYS
Corrosion Resistance
Improved oxidation sulfidation resistance of Fe-Cr-Ni alloys, 9:26372 (P;US)
ZIRCONIUM OXIDES
Compression Strength
Compressive strength and damage mechanisms in partially stabilized zirconia. Interim technical report 1 Aug 82-31 Dec 83, 9:26403 (R;US)
Corrosion Resistance
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983, 9:26334 (R;US)
Deformation
Compressive strength and damage mechanisms in partially stabilized zirconia. Interim technical report 1 Aug 82-31 Dec 83, 9:26403 (R;US)
Deposition
Sputter-deposited metallic and ceramic coatings for heat engines. Work performed from October 1980 to September 1983, 9:26334 (R;US)
Sintering
Role of Al2O3 in sintering of submicron yttria-stabilized ZrO2 powders. Technical report No. 8 (final) Oct 80-30 Sep 83, 9:26402 (R;US)
ZOOPLANKTON
Animal Growth
Laboratory-measured grazing and ingestion rates of the salp, Thalia democratica Forskal, and the doliolid, Dolioletta gegenbauri Uljanin (Tunicata, Thaliacea), 9:27125 (J;GB)
Grazing
Laboratory-measured grazing and ingestion rates of the salp, Thalia democratica Forskal, and the doliolid, Dolioletta gegenbauri Uljanin (Tunicata, Thaliacea), 9:27125 (J;GB)
Growth
Laboratory determined mortality, fecundity and growth rates of Thalia democratica Forskal and Dolioletta gegenbauri Uljanin (Tunicata, Thaliacea), 9:27115 (J;GB)
Metabolism
Laboratory-measured grazing and ingestion rates of the salp, Thalia democratica Forskal, and the doliolid, Dolioletta gegenbauri Uljanin (Tunicata, Thaliacea), 9:27125 (J;GB)
Mortality
Laboratory determined mortality, fecundity and growth rates of Thalia democratica Forskal and Dolioletta gegenbauri Uljanin (Tunicata, Thaliacea), 9:27115 (J;GB)
Reproduction
Laboratory determined mortality, fecundity and growth rates of Thalia democratica Forskal and Dolioletta gegenbauri Uljanin (Tunicata, Thaliacea), 9:27115 (J;GB)
ZT-40 DEVICES
Plasma Diagnostics
Two novel plasma diagnostics, 9:27475 (R;US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AC01-76ET13049	**Mitre Corp., McLean, VA (USA). METREK Div.**	
	9:25224	MTR—7814

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and TIC, an order number in the form, DE82000001 or TI82000001, appears in column 3. Order numbers with DE prefixes may be used in ordering from both NTIS and TIC. Numbers with TI prefixes are valid at TIC only. Requesters are urged to use this order number where provided. In column 4, one or more DOE distribution categories are indicated, e.g. , STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from TIC. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 1 to 5% illegibility, available PC and MF; 2 = 6 to 10% illegibility, available MF only; 3 = 11% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Technical Information Center (TIC); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and TIC accession/order number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($4.50).

TIC — Available from the Office of Scientific and Technical Information, Technical Information Center, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from TIC; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE					
A01	$4.50	E01	$6.50	T01	$125.00
PAPER COPY		E02	7.50	T02	140.00

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from TIC.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., DA83-22350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R:SU:In Russian). The language designator does not appear if the document is published in English.

A Series of Bibliographies

Radioactive Waste Management

A series of annual bibliographies initiated by the Department of Energy, Office of Scientific and Technical Information, Technical Information Center, addressing various facets of radioactive waste management.

The information covered in these bibliographies includes that from research reports, journal articles, books, patents, theses, and conference proceedings from worldwide sources. Corporate author, personal author, subject, contract number, and report number indexes are included in the publications. These bibliographies are available from the National Technical Information Service. Prices apply to the United States, Canada, and Mexico. Purchasers outside the United States, Canada, and Mexico should write NTIS for prices.

The citations in these publications, as well as other citations to information on radioactive waste back to January 1948, are available for on-line searching and retrieval by using the DOE/RECON system. Citations from June 1976 to the present are available also on the Department of Energy's Energy Data Base, which can be searched through the commercial on-line retrieval systems.

Airborne Radioactive Effluents: Releases and Processing, DE82012264 (DOE/TIC-3397), $16.00.

Decontamination and Decommissioning, DE82012270 (DOE/TIC-3391), $13.00.

Formerly Utilized Sites: Remedial Action, DE82012269 (DOE/TIC-3392), $8.50.

High-Level Radioactive Wastes, DE82012272 (DOE/TIC-3389), $16.25.

Low-Level Radioactive Waste, DE82004645 (DOE/TIC-3387), $10.00.

Low-Level Radioactive Waste, DE83007212 [DOE/TIC-3387(Suppl.1)], $14.50.

Nuclear Fuel Cycle: Reprocessing, DE82012265 (DOE/TIC-3396), $16.25.

Radioactive Waste Inventories and Projections, DE82012267 (DOE/TIC-3394), $7.00.

Spent Fuel Storage, DE82012266 (DOE/TIC-3395), $12.00.

Transuranic Wastes, DE82012271 (DOE/TIC-3390), $14.50.

Uranium Mill Tailings, DE82012268 (DOE/TIC-3393), $13.00.

Waste Isolation, DE82012273 (DOE/TIC-3388), $17.50.

*U. S. GOVERNMENT PRINTING OFFICE: 1984-746-063/10004

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.

DOE/RECON SYSTEM

COMPUTER SEARCH SERVICE

DOE/RECON is an interactive on-line information retrieval system developed to provide rapid and easy access to energy-related data bases. It is available to DOE and contractor offices and to other federal government and state agencies with energy-related missions. The acronym RECON stands for REmote CONsole, which signifies that the system can be accessed by users located at various sites across the United States.

The system permits users to carry on a dialogue with the computer. This dialogue allows browsing through large data bases and can result in retrieval of citations which answer specific needs. Desired information can be selectively retrieved via simple yet powerful commands sent to the computer from the terminal keyboard.

Search logic may be formulated by the use of indexed terms, such as keywords, authors, categories, or corporate authors. As the search session progresses, AND, OR and NOT Boolean logic may be used to improve precision, i.e., the specificity of the retrieved set. For most data bases, the user may limit the scope of the search to particular years or volumes of data. Upon completion of a search, the user may choose to have the results displayed or printed at his/her terminal or to have the results printed and mailed the following day.

The DOE/RECON system is supported by dual IBM 370/3033 computers. Two IBM 3705 front-end communications computers are used to perform the message switching. Although most of the 40 data bases are bibliographic in content, DOE/RECON is not limited to this type; the Research in Progress (RIP) data base is one that is non-bibliographic. Presently, over 2 million references are available.

Requests for information concerning authorization to access the DOE/RECON system should be addressed to
